PREFACE

In view of Gary Herion's comprehensive Introduction to the *Anchor Bible Dictionary*, very little needs to be added byway of preface, but a few words may be helpful. The project itself was initiated early in the 1980s by conversations between Robert Heller, then head of the Religion Department at Doubleday, and me. Because of the widespread acceptance and use of the Anchor Bible Critical Commentaries, we felt that a companion work, the *ABD*, was an appropriate undertaking. As a consequence, I prepared a master plan, which called for a set of fives: five volumes, five years, five hundred contributors, and five million words. As such, it would have matched generally earlier major works of the same kind: the justly regarded classic work of the turn of the century, *The Hastings'*

Dictionary of the Bible (in five volumes, 1898–1904), and the well-known *Interpreter's Dictionary of the Bible* (also in five volumes, the first four appearing in 1962, with a fifth, supplemental volume in 1976). Now, at the end of the first major stage of this enterprise (the submission of the manuscript), the *ABD* has turned out to consist of six volumes, with nearly a thousand contributors, well over six million words, with the completed manuscript submitted to the publisher in just six years. That it was done within this period is a tribute to the last of the associate editors, Gary Herion, who delivered all six volumes in manuscript form from the beginning of June to the latter part of August, 1990. While a project of such magnitude is difficult to manage in its various aspects, the hardest part of all is to finish it and close it down. Getting started certainly was not easy, but once this huge vehicle was well under way, it threatened to become a runaway, moving faster and growing larger (like a snowball coursing down a mountainside) and sweeping everything in its path. It is difficult to imagine how dangerous a prospect this can be, of continuing and unlimited expansion, a never-ending process. It is not readily recognized that for each topic assigned there are many more that could be assigned, and between every two entries there could exist any number of others, all worthy of consideration. Even before the project has reached maximum speed and efficiency, and manuscripts are pouring in in large numbers, it is necessary to call a halt, turn off the power, and apply the brakes. The next most dramatic moment in the work comes with the decision to call a halt and the declaration that the dictionary is done. Of course it isn't (and never will be) "done" because the task of scholarship goes on, old entries need to be revised, and new entries need to be written; but when the deadline arrives, the work is finished. It takes a person of character and courage to make such a determination in the midst of the endless flow of words, but it is necessary. Not every assigned article is received within the time limits, and not every one that is received is finally acceptable. But at some point the declaration must be made, and the editors and the publisher must take what they have and go on to the second major stage: producing the work of a whole generation of scholars in book form. Gary Herion proved to be the right person in the right place at the right time. He came onboard after others had started the project and moved it along. But he finished it, and for that a special accolade is in order. He organized and coordinated the work force for this powerful push to the finish line, and he himself contributed a major effort in negotiating with authors, bringing in the manuscripts, reading and editing the latter. He set an example of conscientiousness and dedication that stirred the rest to emulation as well as embarrassment: he came earlier and stayed later as time wore on and the deadlines approached. He was the ideal coadjutor and chief of operations, and when the time came and the last whistle blew, he had successfully completed what others had started.

I wish to add a personal word of gratitude to all those who had a hand in this undertaking, and whose names are listed in Herion's Introduction. I want to mention in particular the administrative officers of the University of Michigan, who provided substantial material assistance for the *ABD*, in particular the several vice presidents for academic affairs who held the office during the life of the *ABD* project: Billy Frye, James Duderstadt, Charles Vest, and Gilbert Whitaker. Each VPAA in turn renewed the commitment and the support, the continuity being established and maintained by that most modest and self-effacing of associate vice presidents, Robert Holbrook, who has been a faithful backer of this project since its inception.

A final word of gratitude is owing to Astrid B. Beck, without whose constant and diligent oversight of the Project and the Program on Studies in Religion, neither would have succeeded or even survived. She maintained both at the highest levels of efficiency and equanimity during the most trying periods, when the entire building was being torn apart and rebuilt, and when the work force threatened to overwhelm the facilities, and the work load reached a crisis point. There is an unpayable debt owed by all of us.

Ann Arbor, Michigan

INTRODUCTION

Every generation needs its own Dictionary of the Bible. Within its pages one can expect to find presented the essence of critical scholarship on subjects pertaining to the Bible, as those subjects are understood by students of that generation. Thus while such encyclopedic reference works provide a valuable service to their readers, in a larger sense they can never transcend the limits of their own historical contexts. In time they inevitably become outdated, and after a generation or so they can hope to achieve a sort of "second shelf life" as a valuable period piece, witness to where the field of biblical studies was at one point in its history.

It has been thirty years since the last major Bible dictionary appeared in America. The Biblical Theology movement was in its heyday, and a certain "consensus" on matters pertaining to the history and literature of both testaments had been established. When reviewing English-language Bible dictionaries of the time, one cannot help but notice the preponderance of word studies and of sweeping historical reconstructions that were characteristic of the field at midcentury. One critic at the time noted this and lamented that more attention was not being devoted to the critical issues of methods and assumptions. Baldly stated, it seems that scholarship at that time was more interested in presenting "the facts" than in considering critically how we know them to be "facts."The emphasis in biblical studies has changed considerably since then. The mainstream American consensus that held in the 1950s and early '60s unravelled during the 1970s. Sweeping historical reconstructions became increasingly rare as OT and NT scholars alike began to engage in often fierce debates over methods and assumptions (e.g., about the role and value of archaeology, and about the "literary" nature of biblical historiography).And when syntheses were attempted, one would very often find scholars moving beyond the venerable limits of the canon itself: the vocation of "biblical scholar" increasingly required one to be competent in dealing with a wide range of later, extrabiblical texts attesting to the complex emergence of early Judaism and early Christianity (or, as many would now insist, "early Judaisms and early Christianities").

The *Anchor Bible Dictionary* is no less a product of its time. In some respects, the situation since the 1960s is now reversed: scholars now tend to be more preoccupied with considering how we know something to be a "fact" than in assembling those "facts" into a meaningful whole. Thus the overwhelming majority of major articles found in the following pages devotes a good deal of space to the basic epistemological question: "How do we know what we know about this topic?" One will be hard pressed to find in these pages any sort of sweeping historical synthesis that presumes a scholarly consensus. Scholarly consensus simply does not exist here at the end of the twentieth century.

Nevertheless in these six volumes there are still many new and refreshing insights one can discover about biblical texts, about histories and personalities referred to therein, about religious ideas and themes that find expression in its pages, about ancient Oriental and Hellenistic intellectual and cultural contexts that almost invariably lie just beneath the surface of the text (if not on the surface itself), and about the processes that helped to ensure the Bible's central place in nascent Judaism and Christianity. In short, the *ABD* provides the scholarly world and the general public with an up-to-date and comprehensive treatment of all biblical subjects and topics. Our goal has been to provide an eminently readable and yet authoritative reference source for all readers of the Bible. To achieve this, we have assembled an international host of scholars—including prominent archaeologists, Assyriologists, Egyptologists, classicists, philosophers, and ancient historians—who have been selected on the basis of their expertise and special contributions to biblical scholarship. They come with diverse professional and confessional backgrounds, reflecting the growing pluralism and interdisciplinary interests of the field.

A review of *ABD* entries should quickly convince the interested student of the Bible that the *ABD* is indeed an invaluable reference source and a powerful research tool. Yet the perceptive reader scanning these pages and comparing its entries with those of other Bible dictionaries will also discover that there is something to be learned here about the field of biblical studies itself. One may note, for example, the

preponderance of new articles pertaining to the cultural history and social institutions that lie in the background of ancient Israel and early Christianity; this is so because these days there is a relatively large number of scholars with social science interests working in these areas. One will also note the large number of articles dealing with archaeological sites and excavations; this is so because the last twenty-five years have seen a veritable explosion of archaeological activity in the lands of the Bible. One will also note specific entries treating pseudepigraphic and apocryphal texts, Nag Hammadi tractates, and individual Dead Sea scrolls; this is so because the scope of scholarly interest has now extended beyond the conventional limits of the canon. One will note that the so-called "minor entries" on personal and place names usually go beyond the one- or two-sentence recapitulations often found in other Bible dictionaries; this is so because scholars today seem to have a keener interest in the often minute details associated with genealogies and toponyms, and they appreciate how a careful reexamination of these details can sometimes lead to fresh insights about the relationship between tradition and history. Conversely one will not find as many minor or midlevel entries dealing with biblical lexical items; this is so because we could not find many scholars interested in these subjects or able to push their presentations beyond those found in other Bible dictionaries. What this means is that in some areas related particularly to word studies the *ABD* simply does not replace such major English-language works as the *IDB* or the still-incomplete *TDOT*. This also reveals something about the agenda and the priorities of biblical scholarship in the 1970s and '80s.

One will also appreciate the extent to which biblical studies has become increasingly specialized and even fragmented during the past thirty years. This first became apparent to us during the assignment phase of the project, as more and more contributors expressed reservations about taking on assignments that did not lie within the immediate bounds of their particular "subject" or area of expertise. On the positive side, this means that most *ABD*entries devote greater attention to crucial matters of data and methodology, so that the reader usually gets an expert presentation of the basic issues associated with the study of this or that topic. However, as noted above, the drawback is a certain reluctance to place a given topic within a larger picture—to provide the sweeping and definitive synthesis that some readers desire and expect in a dictionary of the Bible. When presented, syntheses in *ABD* entries tend to be developed more cautiously than in earlier Bible dictionaries, and conclusions are frequently hedged with significant qualifications. That is simply the way responsible critical biblical scholarship tends to be practiced today. One ramification of this increased specialization is evident in our long list of contributors: those who would lament all this as "overspecialization" will no doubt delight in noting that in 1962 only 253 contributors were needed to write more than 7,500 entries for the IDB, while thirty years later almost four times as many were needed to write 6,200 entries for the *ABD*. This is an honest reflection of the nature of biblical scholarship here in the final decades of the second millennium.

If it really will be another generation before the next major English-language dictionary of the Bible is attempted, one senses that the *ABD* may in fact be one of the last of its kind. Somehow one suspects that the next major English-language Bible dictionary may not be something one "purchases" but something to which one "subscribes" (complete with annual updates and revisions); that—like money—its primary medium will not be ink-on-paper but electronic impulses (complete with three-dimensional, interactive, color graphics); that it will not be something you place on your shelf but that you load into your computer. Despite all the exciting possibilities this presents, it is also a bit discomforting. Perhaps more than anyone else, we who study the Bible should appreciate the power and the impact of the immutably printed word that, for better or worse, reflects an age and a perspective that cannot easily be erased or revised.

* * *

One of the happy duties associated with writing "introductions" is to acknowledge all those whose labors helped to bring these printed words before the reader. In the case of the *Anchor Bible Dictionary* this is a particularly happy assignment because of the camaraderie and friendships that developed over the

years as dedicated people applied their respective talents to the common task. This is not to imply that the production of the *ABD* was without serious practical challenges. No one affiliated with its production was a professional "dictionary maker." Rules and procedures tended to be invented as the need arose. In short, we learned how to create a Bible dictionary primarily by creating a Bible dictionary.

Challenges such as this (especially when they are associated with omnipresent deadlines) either fray people's nerves and drive them apart or draw them closer together. Fortunately the latter was the case. Those bonds tended to be strengthened as together we faced hardships such as unpredictable power failures and periodic fire alarms, incessant jackhammers operating just outside the office door, day after day of dust, and (not surprisingly) chronic computer malfunctions. But in the long run what held the bonds intact was the sense that the work was meaningful. Everyone involved in the *ABD* project soon came to share David Noel Freedman's passionate commitment to the field of biblical studies, and his belief that the time was right for a new multivolume encyclopedic reference work on the Bible. Few other scholars can command the worldwide respect and admiration that are prerequisite to a major collaborative venture such as this. Fewer still possess the ability and skill needed to orchestrate effectively the many necessary resources and personalities. David Noel Freedman could. If indeed the *ABD* should reflect the epitome of biblical scholarship in the last half of this century, who can be surprised that he should be its chief editor? At the beginning of the project, David F. Graf assisted Freedman as the first associate editor. One of Graf's initial tasks was to draw up a preliminary list of entries and to estimate projected lengths for each. Graf also expanded the enterprise from a purely textual project to a more comprehensive purview integrating the perspective of other related disciplines. In particular, there was an expansion of the archaeological entries for both the Ancient Near East and the Classical world. David R. Seely, a graduate student in biblical studies at the University of Michigan at the time, helped Graf in this initial process of preparing lists of entries.

Perhaps Graf's most important task was to identify leading scholars who could write the major *ABD* entries. He assembled a staff of consultants from leading specialists in various biblical fields and related disciplines. These scholars were extremely helpful in recommending potential authors for specific dictionary assignments, not only in the first year of the project but also over the years that followed. In making contact with potential authors, Graf was a tireless and ubiquitous presence at professional conferences, not only in the United States but also throughout Europe and the Middle East, cornering scholars one-on-one and enlisting them for the project. Initially the challenges were formidable: many scholars needed to be convinced of the need for yet another multivolume Bible dictionary, while almost all needed to come to terms with the sacrifices they were being asked to make to ensure that this new dictionary would be available soon and at an affordable price. Graf's perseverance and success ensured not only that the very finest and most appropriate authorities would write the major entries for the *ABD*; it also seems to have helped characterize the emerging relationship between the project and its contributors, most of whom came to envision their association with the *ABD* not simply as another professional transaction but as a personal investment in the future of biblical studies.

In 1985 John David Pleins joined Graf and assisted in the administration and organization of the project, which by then had already expanded to involve almost twice as many contributors as had been involved in earlier major Bible dictionary projects. In 1986 he assumed the duties of associate editor while Graf, who had accepted a faculty position at the University of Miami, continued to serve in a consulting capacity, assisting in the assignment of the remaining major entries. Pleins concentrated on assigning the midlevel entries, reading the growing number of major entries that were beginning to arrive, and streamlining office procedures for managing the growing stable of authors and assignments.

During the summer of 1987 Pleins accepted a faculty position at Santa Clara University, and I was asked to serve as the third associate editor of the *ABD*. In the months before his departure, Pleins did a masterful job of orienting me about all the complexities of the project. Together we drafted a comprehensive style guide for authors, thereby facilitating the editorial process by ensuring that all contributions would now display a higher level of uniformity and standardization. In the months that followed, both Pleins and Graf continued to be a valuable and accessible resource to me. Many other

projects would have been jeopardized by the number of staff transitions that affected the*ABD*, but Graf's and Pleins' continued cooperation and commitment to the project—and the good rapport that developed among the three of us—guaranteed significant continuity and made my task of completing the project much easier.

By early 1988 the *ABD* project had grown to include more than three times as many contributors as other dictionary projects, while the bulk of minor entries still remained unassigned. It became obvious that we would never be able to manage such a growing number of authors and assignments without a computerized data base. Robert Croninger of the Programs for Educational Opportunity in the University of Michigan's School of Education provided crucial advice and assistance as we initially began setting up this data base. Two graduate students at the University of Michigan, John Kutsko and Harry Weeks, played key roles in gathering data for these minor entry subjects and matching them with potential authors working in related areas of biblical studies. An emphasis in assigning minor entries was to recruit contributors from among the young scholars, women and men, who will be shaping the next generation of biblical studies. Mark Fretz, another graduate student, began researching and writing dozens of these entries to see how they might be improved beyond the usual one- or two-sentence recapitulations of the biblical text. His important work resulted in an *ABD* "Style Guide for Minor Entries," which contributors clear guidelines on how ideally to proceed. Although everyone realized that many minor entries simply cannot be expanded beyond one or two sentences, it was gratifying to observe that many of our contributors were able to provide far more informative"minor entries" than those typically found in other Bible dictionaries. The basic task of editing manuscripts began as soon as the first entries arrived in 1985. Not surprisingly, the dual responsibilities of reading manuscripts and managing assignments proved more than any single editor could handle. Especially with the major entries, various consultants and other editors m specific areas (such as New Testament and Intertestamental literature) had opportunities initially to read and respond to many manuscripts: among these editors who deserve special thanks are Herbert Grether, James Mueller, Paul Mirecki, and William Ward. Also, beginning m the fall of 1988, various graduate students in biblical studies provided part-time assistance, editing the minor entries but also copy editing other manuscripts to ensure uniform use of abbreviations, bibliographic style, and other format conventions. In addition to Fretz, Kutsko, and Weeks, these included Arnold Betz, April DeConick, Marianna Giovino, John Huddlestun, Brian Keck, Glenn LaPoint, Tim LaVallee, Robert Miller, and Helen Richards. In the last hectic year we added to the *ABD* staff a number of full-time assistants to help complete the editing of manuscripts. The first addition was Philip C. Schmitz, who joined the project full-time in the spring of 1989. In addition to editing a large number of manuscripts, Schmitz played a crucial role in supervising and coordinating the editorial activities of our various part-time graduate students and was a strong force in helping to guarantee that the bibliographies accompanying *ABD* articles met the most exacting standards of scholarly usefulness. In many respects Schmitz functioned as a fourth associate editor actively involved in every phase of the project providing extremely helpful advice and expertise on a wide range of matters.

Dale W. Manor, a doctoral candidate in archaeology at the University of Arizona, moved to Ann Arbor in the fall of 1989 to work full-time editing a large number of manuscripts dealing with archaeological and historical geographical matters. In implementing various editorial decisions for standardizing and improving the presentations of these subjects, Manor helped to set new standards that future dictionaries covering biblical places and archaeology must now strive to match.

In the spring of 1989 Leslie Barkley joined the project as Production Assistant, essentially serving as a full-time work coordinator. Within the first two months she learned how to direct the office routine and personnel better than I had done in the previous two years, as a consequence, our productivity and output increased significantly. She was extremely effective in identifying and anticipating problems and in establishing procedures for resolving them. In the year after we submitted manuscripts to the publisher, she remained on staff to help coordinate the final preparation of illustrations, prefatory material, corrigenda, and proofreading. She demonstrated a keen interest in the subject matter, an attention to detail, and a commitment to professional standards that would be the envy of many biblical scholars.

Between 1985 and 1990 the *ABD* project benefited from a rotating staff of part-time secretaries who handled the routine clerical duties associated with form letters, manuscripts, files, and phone calls. At various times this staff included Lisa Anderson, Kathleen Haviland, Amy Polack Catherine Kiah, Lisa O'Donnell, Daniel Slager, Paul Slager, Debra Abbott, Shawn Herkimer, Pamela Rejniak, Tina O'Donnell, and Sharon Manor. During the sometimes hectic times of transitions, Diane Feikema, Theresa Nehra, Lynette Lowey, and Jacqueline Phillips provided notable stability and continuity. Shereen Sauer of the University of Michigan Printing Services took an active interest in the *ABD* project, and consistently provided us with reliable and efficient photocopying assistance. In the final six months of the project, Dennis Moser provided invaluable assistance in the proofreading and in ensuring that the "mechanics" of the finished product indeed worked as intended.

The impression one may have from all of this is that the *ABD* office was always a crowded place buzzing with activity. That was not always the case. During the 1988–89 academic year—a critical phase in the life of the project—the *ABD* essentially had two staff persons: myself and my wife Carol. Although it is common for spouses to be mentioned in introductions, Carol's involvement in the project was uncommon. The year preceding the hiring of several full-time staff members was in many respects the most demanding (that was what justified the full staff), but Carol was there to handle the enormous onslaught of mail, the multitude of daily changes that needed to be made on the data base, the problems that seemed to be surfacing all around us, and all the minute details of managing workflow. She thereby freed me for the task of reading and editing the rapidly growing stack of manuscripts. While many people, thankfully, were on hand to share in the satisfactions of bringing this project to a close, I was very glad to have Carol with me during those months when the future of the project was most in doubt. (In addition, our third child, Daniel, was born in April of that year, and he became an intimate member of the "team.")Not the least we need to give credit and express appreciation to the donors who made significant contributions to the dictionary through financial support. First and foremost among these is the University of Michigan through the office of the vice president for academic affairs, specifically through support from Robert S. Holbrook, who never wavered in his goodwill for this research project and who lobbied for us with the higher powers for continued funding. The University of Michigan supported us not only with funds, but also with space and equipment. We are indeed grateful. Drs. Charles C. and JoAnne Walton Dickinson were also very generous with their financial support. Their contributions made it possible for us to fund our first research assistant for the dictionary, Mark Fretz, and it came at a crucial time of necessary expansion for the project. They continued their support over time; we owe them a great vote of thanks. In addition, we received financial help from Joy Ungerleider-Mayerson through the Dorot Foundation early in the project, again at a crucial time when resources were slim. We heartily thank all our donors.

A word of appreciation is also due to the Religion Department of the Bantam, Doubleday, Dell Publishing Group. At various key moments in the life of this project, certain individuals were on hand to help move this project closer to publication. Theresa D'Orsogna provided helpful advice throughout most of the project, and James Bell was instrumental in helping us to coordinate our editorial work with that of the publisher. Michael Iannazzi was instrumental in steering the *ABD* through its final production stages.

One colleague stands out as deserving special notice. Dr. Astrid Beck, the Program Associate for the University of Michigan's Program on Studies in Religion, has been a constant source of support to all of us who worked on the project and a key to its success. Had she done nothing more than serve as chief financial officer for the project, meticulously ensuring that the costs of editing the *ABD* were covered, she would merit abundant accolades. But she has done considerably more. She was our principal liaison with the university community: in addition to managing the university's religious studies curriculum and maintaining her own teaching load, she provided for all the space, equipment, and personnel needs of the dictionary project. She was an untiring and effective advocate of the project and a particularly graceful and calming presence whenever we confronted the frustrations of bureaucratic "red tape." She always promised to resolve problems, and she always managed to do so. Astrid was also our principal liaison with the publisher; she taught all of us the ins and outs of dealing with a major publisher, and she

especially sensitized me to publishing concerns of which I was completely ignorant. Furthermore she served the project directly as an author and as a translator; and whenever my own writing needed editing, I regularly turned to her. At every stage of the project—from its inception to its completion, in happy times and in sad ones—she has been a model of professionalism, a key adviser, and a good friend.

If it is true that one learns how to create a Bible dictionary simply by creating one, then it follows that the Bible dictionary in question will contain numerous mistakes and reflect occasional bad judgments. So it is with the *Anchor Bible Dictionary*. It also follows that the best time to start a major Bible dictionary project such as the *ABD* is immediately after one has completed a major Bible dictionary project such as the *ABD*—and then to make everything perfect and exactly right. That task, however, is perhaps best left to the next generation.

GARY A. HERION
ASSOCIATE EDITOR
DECEMBER 6, 1990
Ann Arbor, Michigan

A

AARON (PERSON) [Heb *ʾahărōn* (אַהֲרֹן)]. AARONITES. The son of Amram and the brother of Moses and Miriam who was the eponymous ancestor of the priestly Aaronites and the paradigm for later priests. He dies at Mount Hur (Deut 32:50) and is succeeded by his son Eleazar (Num 20:22–29). Aaronites are the priests who claim descent from Levi through Aaron. They are often referred to as the "sons of Aaron" (Heb *bĕnê ʾahărōn*) (cf. Lev 3:8; 21:1; Num 10:8; Josh 21:4; 1 Chr 24:1; Neh 12:47) or as "belonging to Aaron" (Heb *lĕʾahărōn*) (cf. 1 Chr 12:28—Eng12:27; 27:17). The meaning of the name "Aaron" is uncertain, although it is perhaps derived from Egyptian.

B. Images of Aaron in the Biblical Literature
C. Aaron/Aaronite Relations with Others
D. The Priestly Functions of Aaron and the Aaronites
E. Summary

———

A. Introduction

The first task in understanding Aaron and the Aaronites is to examine the varied images of them in the biblical accounts. Sometimes there is a strong positive image of Aaron as the officially ordained priest of God. At other times, the picture is rather negative, portraying Aaron at odds with Moses and "mainline" religious practices. In examining these portrayals, it becomes clear that positive images appear in the later biblical materials and negative images are prominent in the earlier materials. It is also true that there is a significant body of biblical literature (the prophets—especially Ezekiel—and the Deuteronomistic History) in which priests are present but there is little or no reference to Aaron or his followers. Thus, in order to understand the images of Aaron and the Aaronites, one needs to be aware of the particular

literature in which these references to Aaron are found, and the specific time frame in which that literature emerged.

A second set of concerns when discussing Aaron and the Aaronites focuses on their relationship to other people or priestly groups. In terms of individuals, the question is primarily Aaron's relationship with Moses. In terms of the Aaronites, the question is how they relate to the Levites and Zadokites, two other major priestly factions.

Finally, Aaron and his descendants are the preeminent models of what it means to be a priest. They are the ones who perform the most holy of rituals, who handle the holiest of sacred objects and who enter the holiest of places. In addition, they are the ones who oversee all priestly functions and groups, and monitor the activities of the priests at both the temple and the tabernacle.

B. Images of Aaron in the Biblical Literature

It is clear that there is some ambivalence in the biblical texts toward Aaron. On the one hand, he becomes involved with the construction of the GOLDEN CALF (Exodus 32) and joins Miriam in opposing Moses (Numbers 12). On the other hand, Aaron and his sons are singled out to serve God as priests (Exodus 28–29; Leviticus 8–9). Somewhere amid these two perspectives stands a remarkable silence on the Aaronites (e.g. 1–2 Kings, Ezekiel), in which they are neither good nor bad. There are other priests or priestly groups present, but Aaron and the Aaronites are not part of that presence.

This confusing portrayal has been the subject of speculation for some period. As early as Wellhausen *(WPHI)* and Kennett (1905), it was suggested that the positive portrayal of Aaron emerged only in the post-exilic period and that the negative or neutral portrayals dated from the pre-exilic period. Since those early discussions, Meek (1929), Welch (1939), North (1954) and Cody (1969, 1977) have offered slight variations on the same basic position—that the positive image of Aaron is a product of the post-exilic period.

Their arguments are based on an examination of the materials in which Aaron appears. There are 346 references to Aaron in the Hebrew Bible (several in the Apocrypha and Pseudepigrapha and 5 in the NT). A vast majority (296) appear in Exodus, Leviticus, and Numbers. The remainder are spread out in Deuteronomy (4), Joshua (6), Judges (1), 1 Samuel (2), Micah (1), Psalms (9), Ezra (1), Nehemiah (3), 1 Chronicles (16), and Chronicles (7). The lack of appearances in Ezekiel, who is very concerned with priests, and the scarcity in Deuteronomy (4), where Moses plays a predominant role, are very curious. However, prior to drawing any conclusions, specific passages need to be investigated, and this investigation must be cognizant of the historical situation from which the passages emerge.

A safe place to begin such an examination is the work of the Chronicler, whose postexilic date is essentially undisputed. In 1–2 Chronicles one sees a prominent positive role for Aaron. He is the brother of Moses (1 Chr 5:29—Eng6:3); he and his sons make sacrifices, offerings, and atonement in the most holy place in the temple (1 Chr 6:34—Eng6:49); and Aaron and his sons are "set apart" to perform the most sacred of duties—to burn incense, to minister, and to bless (1 Chr 23:13; 24:19). Furthermore, in 2 Chr 26:16–21, it is explicitly indicated that only the sons of Aaron, and *not* King Uzziah, could burn incense to Yahweh.

There are many other positive portrayals of Aaron, but most are found in P (Priestly) material, a collection of material more problematical in terms of dating than the Chronicler's materials. The general consensus, albeit certainly not uniform, is that the present form of the P material reflects the understandings and perspectives of the early Second Temple period (i.e., postexilic period). Following that consensus yields a perspective on Aaron which is consistent with what emerged in the postexilic work of the Chronicler.

When one looks at the P material, one sees a very positive understanding of Aaron. A few examples from Exodus will support this point. Following the description of the ark and tabernacle (Exod 25:1–27:20), Aaron and his sons (the Aaronites) are to "tend" the tent of meeting (Exod 27:21), to serve Yahweh as priests (Exod 28:1), to wear priestly garments (Exod 28:3–43), including the Urim and Thummim (Exod 28:30), to be consecrated to Yahweh (Exod 29:1) and to be ordained (Exod 29:9, 35). To celebrate this ordination, a bull and two rams are to be sacrificed in Aaron's honor (Exod 29:10–37).

Finally, Aaron and his sons shall be anointed and consecrated as priests of Yahweh with "holy oil" (Exod 30:30–31). This positive image of Aaron continues through most of Exodus (with the exception of Exodus 32, which will be discussed later), throughout all of Leviticus and most of Numbers.

In Leviticus, much time is spent describing specific offerings and the procedures for those offerings. Consistently, Aaron, or "Aaron's sons, the priests" are specified as the only people authorized to perform these rituals. In Lev 6:1–9:24—Eng6:8–9:24, Aaron and his sons are instructed as to the law of the various offerings and their crucial role in these offerings. The ritual for anointing Aaron and his sons is spelled out in Lev 6:12–16—Eng6:19–23. The actual ceremony for the ordination of Aaron and his sons is prescribed in Leviticus 8–9. The regulations for the actions of the Aaronites—"the priests, the sons of Aaron"—are spelled out in Leviticus 21. The concern is to maintain the holy status of the priests so that they do not become defiled by such actions as marrying a divorced woman (v 7), letting one's hair hang loose (v 10), or coming in contact with a dead body (v 11). In addition, no person with a blemish may "offer bread" to Yahweh (v 18).

In Numbers 1–4, Moses and Aaron conduct a census of the people in preparation for war. Three factors should be considered when examining the role of Aaron in this census. First, the Levites, another priestly group, are numbered separately from the rest of the people (Num 1:47; 3:16–37), and are to be given to Aaron to stand (Heb *ʿmd*) before and serve (Heb *šrt*) him (3:6). The second point is that the line of succession to Aaron is established. In Num 3:2–3 Aaron's sons are listed and identified as anointed priests "ordained to minister in the priest's office" (literally "whose hands are filled for the priesthood" [Heb *mlʾ yd lkhn*], "to fill the hand," is the common Hebrew expression used to indicate ordination). Since Nadab and Abihu, two of Aaron's sons, have died (Leviticus 10), Eleazar and Ithamar, Aaron's other sons, are the successors to Aaron. Finally, *only* Aaron and his sons are to be priests. All others who seek to come near the tent of meeting should be killed (Num 3:10).

This perspective on Aaron's exclusive role as priest is continued in Numbers 16. The account records the rebellion of Korah, Dathan, and Abiram against Moses and Aaron (Num 16:1–3) and contains the statement that only the descendants of Aaron can be priests (Num 17:5—Eng 16:40). This is curious since Korah, the son of Ishar, and Aaron, the son of Amram, are both seen as descendants of the priestly family of Levi (Exod 3:16–18; Num 3:17–19; 16:1). However, for the Priestly writer it is only Aaron's branch of the Levitical family which can claim the legitimate right to the priesthood at the temple and tabernacle. Other material in Numbers (except Numbers 12) conveys the same basic positive evaluation of Aaron. As with the Chronicler, the Priestly writer presents a positive image of Aaron.

In contrast to that perspective, one can find materials in which there is a negative, or at least neutral, image of Aaron. One example is in Deuteronomy. This material is examined first because it can be identified, with a comfortable degree of certainty, as having originated in a pre-exilic context. One example, in particular, is Deuteronomy 9, which contains part of Moses' presentation to the people. Of interest here is the telling of the story of Moses' descent from Mount Horeb after having received the two tablets of stone. Moses comes upon the people who have sinned and made a GOLDEN CALF (Deut 9:15–16). The story continues with a statement that Yahweh is so angry toward Aaron that he was about to destroy him. It appears that it is only Moses' intercessory prayer and his utter destruction of the Golden Calf which saves Aaron. It is certainly not a glowing recommendation of Aaron. Indeed, the only other appearance of Aaron in Deuteronomy is in 32:50, where Aaron is merely mentioned as a brother of Moses. Thus Deuteronomy neither presents a positive image of Aaron, nor contains a reference to Aaron as priest (unless one considers Aaron's role in the building of the Golden Calf as priestly—but even then it would not be seen as consistent with the mainline worship of Yahweh).

This negative perspective is not confined to this passage in Deuteronomy. In Exodus 32, although there is some discussion as to the integrity of the passage, Aaron is portrayed as the villain who receives the gold from the people (Exod 32:4a), makes the calf (Exod 32:4a, 35), declares, "These are your gods, O Israel, who brought you out of the land of Egypt!" (Exod 32:4b), and builds an altar before the calf (Exod 32:5). When Moses returns from the mountain, he indicates that Aaron has brought a great sin upon the

people (Exod 32:21) and has allowed the people to "break loose" (Exod 32:25). While Aaron seeks to redirect Moses' anger (Exod 32:22–24), his culpability is clearly indicated.

A third example of this negative image of Aaron is found in Numbers 12. Here Aaron and his sister Miriam challenge Moses' authority (12:1) and claim that Yahweh speaks through them as well as through Moses (12:2). The response of Yahweh is clear; Moses is the specially chosen spokesperson, and no one should challenge him (12:5–8). As punishment, Yahweh makes Miriam leprous and subsequently heals her only after Aaron pleads with Moses to petition Yahweh on their behalf.

All three of these passages which convey either a negative or a nonpriestly image of Aaron are generally considered to be preexilic in date. The single reference to Aaron in the prophets (Mic 6:4), which is preexilic, merely refers to Aaron as having been sent to Egypt with Moses and Miriam. In addition, there are precious few references to Aaron in the pre-exilic and exilic work of the Deuteronomistic Historian, which is surprising, given the number of times priests or priestly factions are mentioned. It is only in Joshua, where cities are distributed to the Levites (Josh 21:4, 13, 19), that Aaron is referred to as a priest. Finally, Ezekiel, an exilic work which spends much time discussing the roles and functions of the priests and priestly groups, never refers to Aaron or the Aaronites.

The implication of this examination of the biblical passages which refer to Aaron is that the positive image of Aaron and the Aaronites, and of their role as priests, arises in the post-exilic period. This may be expected since it reflects, in general, the prominent position of priests in the postexilic period, and, in particular, the emergence of the role of the high priest. In contrast, in the pre-exilic period Aaron is mentioned only a few times, often in a neutral or negative way, and very rarely as a priest. Thus one must conclude that the prominence of Aaron and the Aaronites as priests is a post-exilic phenomenon.

C. Aaron/Aaronite Relations with Others

A second area of consideration is the relationship of Aaron to other individuals and of the Aaronites to other priestly groups. Aaron's relationship to Moses is of primary importance. In terms of the associations of the Aaronites, there are two other priestly factions which have a significant role in the Hebrew Bible—the Zadokites and the Levites. It is clear that there is struggle, conflict, and competition among these three groups over who is going to have control of the priesthood. As indicated in the previous section, one must remember that all of these relationships are fluid and that Aaron's priority is emphasized in the later biblical materials.

The close association of Moses and Aaron is a common theme in the Pentateuch (although not exclusively found there [Josh 24:5; 1 Sam 12:6; Ps 77:21—Eng 77:20, 99:6]), particularly in the later (Priestly) writings of the Pentateuch. The association begins with the claim that Aaron is Moses' brother (Exod 4:14; 6:20; 28:1; Num 26:59; 27:12–13; Deut 32:50; 1 Chr 5:29—Eng6:3; 23:13). There are also over 65 instances where the phrase "Moses and Aaron" appears, almost like a word pair, and only a few instances where the phrase "Aaron and Moses" occurs (Exod 6:26; Num 3:1). What is striking about many of these instances is that the presence of "Aaron" is not crucial to the passage. It could easily be removed without a significant impact on the passage or its meaning (cf. Exod 7:8; 10:3; 16:6; Lev 9:23; 11:1; Num 4:1; 14:5; 33:1). So the evidence for a close association of Moses and Aaron is not absolutely certain, and it is primarily found in the later materials.

In the relationship between Moses and Aaron, it is clear that Moses has a more prominent role. Most often in the Torah, Yahweh speaks to Moses, who in turn speaks to Aaron (Exod 7:19; 16:32–34; Lev 17:1–2; Num 6:22–23; 8:1–2), or Yahweh speaks to Moses and Aaron at the same time (Exod 12:43; Lev 11:1; 14:33; Num 2:1; 19:1; 20:12). Only rarely does Yahweh speak directly to Aaron (Lev 10:8; Num 18:1). In addition, when one looks at the dynamics of the plague stories, there is a clear but subtle shift in the relationship between Moses and Aaron. At the beginning, Moses fumbles for words and pleads his incompetence until in anger Yahweh appoints Aaron to be Moses' spokesperson. Even then Aaron receives Yahweh's words through Moses (Exod 4:1–17; 7:19). Thus at the beginning of the plague stories Aaron has an important role. When both Moses and Aaron appear before Pharaoh (Exod 5:1, 7:10), it is Aaron's rod which becomes the serpent (7:10), swallows the rods of Pharaoh's magicians (7:12), is used to turn the Nile into blood (7:19), causes the plague of frogs (8:1—Eng8:5), and brings about the plague

of gnats (8:16–17). However, with Exodus 9, Aaron begins to fade from the scene, and it is Moses who brings the boils (9:10) and uses his own rod to bring hail and fire (9:23) and the locusts (10:12–13). One explanation of this shift is that the earlier plagues tend to be from the P writer and the later plagues tend to be from the older pentateuchal source, the J writer. Although there is considerable and justifiable discussion about the degree to which one can identify a particular passage or verse as J or P, the general perspective suggests that the older materials do not place an emphasis on Aaron whereas the newer materials do. Thus, like the prominence of Aaron as priest in the postexilic period, it seems that the association of Aaron with Moses also finds its greatest emphasis in the post-exilic materials.

Moses and Aaron also appear together when the people are "murmuring" during the Exodus. Usually this murmuring involves the rebellion of the people against the leadership. In Exodus 17 the people murmur against Moses (v 2). Aaron is not the target of the rebellion and his role in the incident is only that of holding up Moses' arms, along with Hur (v 12). In Numbers 12, the rebellion is again directed at Moses (v 1). However, this time it is Aaron and his sister Miriam who lead the rebellion against Moses. Finally, in Numbers 14 and 16, the rebellion is directed not just against Moses but also against Aaron (Num 14:2, 16:3). This confused situation becomes clear when one realizes that the early materials (Numbers 12, Exodus 17) either ignore Aaron or are negative toward him, whereas in the later materials (Numbers 14, 16) there is a positive picture of Aaron and a link with Moses.

When one turns to the priestly groups, it is apparent that the relations between the Zadokites and Aaronites change over time. During the monarchy, it is the Zadokites who play a prominent role in the priesthood and little is said about the Aaronites. One merely needs to look at the dearth of references to Aaron or Aaronites in Kings and Samuel (only 2 Samuel) in contrast to the 26 references to Zadok as the priest of the monarchy. At the end of David's reign, there is a conflict over the succession to the throne between Solomon and his followers and Adonijah and his followers (1 Kings 1–2). When Solomon is victorious in the struggle, he appoints Zadok as the priest of the Temple and expels Abiathar (1 Kgs 2:27), the associate of Adonijah. While there may be some debate over the actual association of Abiathar—whether he is Levite or Aaronite—it is clear that Zadok and his followers, the Zadokites, are the priests in good standing. That perspective continues in the late exilic work of Ezekiel; he never mentions the Aaronites. Rather, it is the Zadokites with the assistance of the Levites who are the priests (Ezek 40:46; 44:15; 48:11).

It is only in the post-exilic material of the Chronicler that any association between Aaron and Zadok appears, and the perspective is always that Zadok the priest is a descendant of Aaron (1 Chr 5:29–34—Eng6:3–8; 6:35–38—Eng6:50–53; Ezra 7:1–5), which preserves the priority of Aaron. In addition, the Chronicler seeks to clarify the relationship of Zadok and Abiathar, the two priests of David (2 Sam 8:17, cf. 1 Sam 22:20) who are rivals after his death. According to 1 Chr 24:3, Zadok is a descendant of Eleazar, the son of Aaron, and Abiathar is a descendant of Ithamar, also a son of Aaron. Thus, for the Chronicler, all priests are descendants of Aaron, which again stresses the post-exilic prominence of the Aaronites.

The relationship between the Aaronites and the Levites is much more confusing and more prone to be hostile than that between the Aaronites and the Zadokites. Nevertheless, this relationship also shows development and change. A prime example of the hostility emerges in Exodus 32. The complicity of Aaron in the Golden Calf apostasy has already been mentioned. At the end of that account, there is the punishment for those involved in the idolatry (Exod 32:25–29). Moses calls for those "on Yahweh's side" to join him in opposition to the people who "broke loose," and presumably that included Aaron. It is the Levites who respond to Moses' call and slay 3,000 people who participated in the apostasy. As a result of the Levites' actions, they are "ordained" to the service of Yahweh (Exod 32:29). The Hebrew text says "their hands are filled," which is a clear reference to their ordination as priests. It thus appears that the Levites' rise in status is directly related to their opposition to Aaron and his followers.

This same perspective is present when one examines 1 Kings 12. In this passage Jeroboam establishes two cultic centers in the Northern Kingdom at Dan and Bethel (vv 25–33), and makes two calves of gold for these centers (v 28). Jeroboam erects these calves and declares, "Behold your gods, O Israel, who

brought you out of the land of Egypt," the same phrase as was used by Aaron in Exod 32:4. In addition, when Jeroboam selects priests for his temple he explicitly excludes Levites (1 Kgs 12:31). (According to 2 Chr 13:8–9, Jeroboam excludes both Levites and Aaronites, which reflects the later post-exilic perspective of the Chronicler in which Aaron is the only true priest and could not have participated in the apostasy of the Northern Kingdom.) A further piece of data which links these two golden calf incidents of Exodus 32 and 1 Kings 12 together is that the two eldest sons of Aaron and the sons of Jeroboam have virtually the same names: Nadab and Abihu for Aaron (Exod 6:23) and Nadab and Abijah for Jeroboam (1 Kgs 14:1, 20). Furthermore, all four of these sons die as a result of their idolatry (cf. Leviticus 10; 1 Kgs 14:1–14; 15:25–30). So based on these early materials, the improper cultic practices of Jeroboam are associated with those of Aaron, and the Levites either do not participate or actively oppose those idolatrous religious practices.

Numbers 16 is another passage in which there is opposition between Aaron and the Levites. However, in this instance, it is Aaron who is declared the righteous follower of God; and it is Korah, the descendant of Levi, who revolts against Moses and Aaron. Indeed, the followers of Aaron (Aaronites) are explicitly identified as the priests of Yahweh to the exclusion of Korah (Num 16:1–5—Eng16:36–40).

This change in perspective on Aaron, where Aaron is now seen as the dominant priest, is reflective of the post-exilic materials of the Priestly writer and the Chronicler and again exemplifies the post-exilic relationship of Aaronites and Levites. It also shows that although all priestly factions traced their ancestry back to Levi, and Levi is considered ordained by God, the Levites' primary function is to serve the Aaronites.

When the census of the people is being taken by Aaron and Moses in Numbers, the Levites are explicitly set aside (Num 1:47) and not numbered at the beginning, since they have special tasks around the tabernacle. Later, however, the Levites are numbered and chosen by God to stand (Heb *ʾmd*) before Aaron and to "minister" (Heb *šrt*) to Aaron, since they are given to Aaron and his sons (Num 3:5–10; cf. 4:27). What is clear in this passage is that there is a distinction between the Aaronites as priests and the Levites, who, although also ordained, are secondary priests subordinate to Aaron.

Aaron is then to collect the Levites and consecrate them to service (Heb *ʿbd*) (Num 8:5–26; cf. 18:1–7). This perspective is continued in Chronicles, where there is a clear distinction between priests, understood to be Aaronites, and Levites (1 Chr 23:2; 24:31; 28:13, 21; and 2 Chr 7:6; 11:13; 13:9; 19:8; 23:4, 6). The Levites are to stand (Heb *ʾmd*) before the priests, the sons of Aaron (1 Chr 23:27–28), and guard (Heb *šmr*) the sons of Aaron (1 Chr 23:32; cf. 2 Chr 13:10; 35:14; Neh 12:47).

The priority of the Aaronites is illustrated in no better way than in the account in Num 17:16–28—Eng 17:1–13. According to the passage, each of the twelve tribes has a rod or staff, and each is to have the tribal ancestor's name placed on the rod. However, the rod representing Levi's tribe has Aaron's name written upon it. When all twelve rods are deposited in the tent of meeting to determine which of them will be chosen by God, it is the "rod of Aaron" which sprouts and bears "ripe almonds." This, of course, indicates Yahweh's selection of Aaron over all other (cf. *Ps-Philo* 17:1–4; 53:9). Finally, Aaron's rod, which is put before the "testimony" in the tent of meeting, is to become a sign that the people should not murmur against Yahweh (cf. Numbers 16).

In the following chapter (Numbers 18), where Aaron's priesthood and the role of the tribe of Levi are again discussed, the priority of Aaron and his sons as priests and the secondary status of the tribe of Levi are reiterated. The Levites are to minister to (Heb *šrt;* Num 18:2), to guard (Heb *šmr*; Num 18:3), and to serve (Heb *ʿbd;* Num 18:6) Aaron and his sons. This role of attending to Aaron and the Aaronites is given exclusively to the Levites (Num 18:4). However, the Levites are firmly cautioned *not* to approach the altar, lest they die (Num 18:3). This material in Numbers is late, again suggesting that the priority of Aaron and the Aaronites and the secondary status of the tribe of Levi (the Levites) emerges in the time of the Second Temple. In the material from the earlier periods, the Levites are often preferred, and it is the Aaronites whose activities are questionable and whose status is secondary to the Levites.

In general, it appears that Aaron's relationship with others has had the same mixed history as was seen in the review of Aaron in the biblical literature. In the monarchical period, Aaron and the Aaronites have a

secondary, nonexistent, or negative status in relation to the other priestly groups. That perspective changes in the post-exilic period of the high priest, when Aaron and his sons (the Aaronites) become the high priests and establish their superiority over other groups. They do this by a genealogical link which traces their ancestry back to Moses and beyond to Levi, and by the accounts of Yahweh's selection of Aaron as the chosen priest, the paradigm—preferred over the other priestly factions (Levites and Zadokites). Indeed, the other priestly factions became servants to Aaron and the Aaronites.

D. The Priestly Functions of Aaron and the Aaronites

The role of Aaron as priest emerges in the activities and functions he and his descendants, the Aaronites, perform. Of course, one of their main functions is to preside at cultic ceremonies. However, there are other related activities in which they are involved.

There are numerous references in which Aaron (or his descendants) officiate at and participate in cultic rituals. In fact, the majority of the discussion in Leviticus is devoted to the priestly functions of Aaron and the Aaronites. They perform the "burnt offering" (Lev 1:3–17; 9:12–14), the "cereal offering" (Lev 2:1–16), and the "peace offering" (Lev 3:1–17; 9:18–21). Aaron is not explicitly mentioned when the "sin offering" (Lev 4:1–5:13) or "guilt offering" (Lev 5:14–26—Eng5:14–6:7) are discussed. However, when the laws (Heb *tôrāt*) of the "sin offering" are presented (Lev 6:17–23—Eng6:24–30; cf. 9:8, 16:6), it is the Aaronites who are addressed. For the "guilt offering" Aaron is again not specified, but it is always a priest who officiates (Lev 5:16, 5:25–26—Eng6:6–7, 7:1–5), and Aaron is in charge when the offering of atonement is made (Leviticus 16). Thus the presumption that this anonymous priest should be understood as Aaron seems valid (cf. 1 Chr 6:34—Eng6:49).

Another priestly function of the Aaronites is participation in ordination. Indeed, the Aaronites participate in their own ordination ceremony (Leviticus 8). It is run by Moses at Yahweh's command, but Aaron and his sons participate by laying their hands upon the bull of the "sin offering" (8:14), the ram of the "burnt offering" (8:18), and the ram of the "ordination" (8:22). Finally, they are to eat from the ordination offering (8:31–36).

An important passage which outlines Aaron's duties is Leviticus 10:8–11. This passage is unusual because it is one of the few places where Yahweh speaks directly to Aaron rather than through Moses. Here Aaron is told to do three things: avoid drinking when going into the tent of meeting; distinguish between the holy and the common and between the clean and the unclean; and teach the people Yahweh's statutes. One curiosity about the passage is how closely it echoes Ezekiel 44. In Ezekiel the reference is not to Aaron but to the priests who are the sons of Zadok and who also claim descent from Levi. Nevertheless, the functions of the priests are very similar: the sons of Zadok are told not to drink before going into the temple (Ezek 44:21); to distinguish between clean and unclean (Ezek 44:23b); to teach the people the difference between holy and common (Ezek 44:23a); to act as judge (Ezek 44:24a; cf. Exod 28:29–30); and to keep Yahweh's laws (Ezek 44:24b). Although the priestly faction in charge may have changed, the priestly functions relative to the central shrine remain essentially the same.

The distinction between clean and unclean is the focus of Leviticus 11–14. Moses and Aaron (Lev 11:1) are to speak to the people about this distinction, and people who are thought to be diseased are to be brought before Aaron and his sons for examination (Lev 13:1–2). It is Aaron who is to determine clean and unclean in relation to disease, and to deal with unclean houses and how to cleanse them (Lev 14:33–57). The same standards of purity apply to the Aaronites themselves. They are to be without blemish and pure in all ways (Leviticus 21). This is another means of distinguishing Aaron from others, and supports the contention that Aaron is chosen above the others to be priest (Ps 105:26, 106:16) and to have access to the holy things (1 Chr 23:13) in the temple (1 Chr 24:19) or in the tent of meeting (Exod 27:21, Num 17:1–5—Eng 16:36–40).

In Joshua 21, the Aaronites are to receive 48 Levitical cities from among the cities recently conquered by the twelve tribes (vv 4, 10, 13, 19). These cities, along with their pasture lands (but not, presumably, the agricultural lands [Num 35:1–8]), are to be set aside as land in which the priests can live and raise herds. This perspective is reiterated in 1 Chr 6:39–66—Eng6:54–81, where there is a special reference to the sons of Aaron receiving cities of refuge (1 Chr 6:42–45—Eng6:57–60). They are said to receive 13

cities, although only 11 are listed by name, in which a criminal may find refuge from pursuers. In the other major references to the cities of refuge (Num 35:9–15; Deut 19:1–10; Joshua 20), only 6 cities are set aside, and there is no mention of the cities being given to Aaron. The Aaronite control of these cities of refuge may well reflect the Chronicler's post-exilic perspective, in which there is a positive image of Aaron, and the Aaronites are in charge of the priesthood.

Finally, the Aaronites are given the Urim and Thummim (Exod 28:30, Lev 8:5–9). These "sacred lots" are used to determine the will of Yahweh (Num 27:21; 1 Sam 14:36–42, 27:6; cf. 1 Sam 10:20–24) and to indicate the juridical role of Aaron (Exod 28:29–30a; cf. Ezek 44:24). In Num 27:21, it is Eleazar, the son of Aaron, the next in the priestly line (cf. Num 20:22–29), who uses the Urim to inquire whether Joshua should succeed Moses. The Urim and Thummim are thus symbols of special access to God's will; and, according to parts of the biblical tradition, they belong in the hands of the Aaronites.

It is clear that Aaron and the Aaronites play a prominent role as priests. Their fulfillment of that role is emphasized in the Hebrew Bible, especially in the later materials. That perspective continues in the intertestamental literature (4 Macc 7:11; *3 En.* 2:3; 48A:7), although there are surprisingly few references to Aaron in this material. In the New Testament, the book of Hebrews speaks of Jesus being called by God, just like Aaron (Heb 5:4–5). However, to distinguish Jesus from the priests of his contemporary time, Jesus is said to be of the order of Melchizedek, not that of Aaron and the Levites (Heb 7:4–22). Thus the writer of Hebrews is claiming a priestly authority for Jesus which predates that of Aaron or Levi and comes through Melchizedek at the time of Abraham (Gen 14:17–24; Ps 110:4; Heb 7:1–3).

E. Summary

Aaron and the Aaronites play an important role in the religious structure of ancient Israel. The emphasis upon them and their functions clearly indicates their place as the preeminent priests. However, close examination of the biblical literature suggests that this prominent role was not present at the beginnings of Israel and was not won without a struggle. The earlier materials indicate a more significant role for the Levite and Zadokite priestly factions than for the Aaronites. It is only with the realignment and reorganization forced upon the Israelites by the trauma of the fall of Jerusalem in 586 B.C.E. that the Aaronites assume center stage. Then, in the writings of the post-exilic period, the Aaronites are portrayed as the paradigm of priests, and the other priestly groups are relegated to secondary or servant status. (See also PRIESTS AND LEVITES.)

JOHN R. SPENCER

AB [Heb *ʾāb* (אָב)]. The fifth month of the Hebrew calendar, roughly corresponding to July and August. See CALENDAR.

ABADDON [Heb *ʾăbaddôn* (אֲבַדּוֹן)]. Derived from Heb *ʾābad,* "became lost," "be ruined, destroyed," "perish," Abaddon has a variety of nuanced meanings.

A poetic synonym for the abode of the dead, meaning "Destruction," or " (the place of) destruction." Abaddon occurs in parallel and in conjunction with Sheol (Job 26:6 and Prov 15:11; 27:20). It is also found in conjunction with Death (Job 28:22) and in parallel with the grave (Ps 88:12—Eng 88:11).

Although a place of mystery which is hidden from human eyes, Abaddon is clearly known by God (Job 26:6; Prov 15:11). It is twice personified: (1) along with Death, it speaks (Job 28:22); and (2) along with Sheol, it is insatiable (Prov 27:20). It is also remote: in Job 31:12, adultery becomes "a fire that consumes unto [as far as] Abaddon." See also DEAD, ABODE OF THE.

In Rev 9:11, the word "Abaddon" is personified as "the angel of the bottomless pit." It is also identified as the king of the demonic "locusts" described in Rev 9:3, 7–10, and is explained for Greek-speaking readers as Apollyon (Gk *apollyōn*), "destroyer."

The LXX usually translates Heb ›*abaddon* as Gk *apōleia*, "destruction"; the Vg renders it as Latin *perditio*, "ruin, destruction" (whence Eng "perdition," which ordinarily means "hell"); in Syr (Peshitta), the cognate word means "destruction," and is sometimes used in the Psalms to render "the Pit," which is another OT synonym of Sheol.

In rabbinic literature, the word has come to mean the place of punishment reserved for the wicked. Current English versions render this word variously in the OT: "Abaddon," "Destruction/destruction," "the place of destruction," "Perdition/perdition," "the abyss," "the world of the dead." In the single NT occurrence, the word is consistently transliterated as "Abaddon."

HERBERT G. GRETHER

ABAGTHA (PERSON) [Heb ›*ăbagtā*‹ (אֲבַגְתָא)]. See MEHUMAN (PERSON).

ABANA (PLACE) [Heb ›*ăbānâ* (אֲבָנָה)]. One of two rivers of Damascus, which Naaman the Syrian considered to be superior to the Jordan (2 Kgs 5:12). The Awaj and the Barada are now the chief streams that flow through the city of Damascus, the former representing the Pharpar of the Hebrew text and the latter the Abana. The Barada (Abana) has as its source a large pool of great depth on a high plain rising 1149 feet (383 m) in the Anti-Lebanon Mountains, 23 miles (37 km) northwest of Damascus. Making a rapid descent down the mountains, the stream flows through a picturesque gorge, across a plain, through Damascus, and loses itself in the marshy lake Bahret el-Kibliyeh about 18 miles (29 km) east of the city.

RAY LEE ROTH

ABARIM (PLACE) [Heb ‹*ăbārîm* (עֲבָרִים)]. A mountain range generally located east of the mouth of the Jordan river and northeast of the Dead Sea forming the northwestern rim of the Moabite tableland, thus separating the latter from the rift valley (Num 33:47–48). The highest peaks of this range rise about 600 feet above the Moabite plateau and overlook the Dead Sea some 4000 feet below their summits.

The mountains of Abarim, a southern extension of the Transjordan range, are located "in front of [the town of] Nebo" (Num 33:47). One of the peaks of this ridge is Mount Nebo (see also NEBO, MOUNT), which Moses ascended from the Plains of Moab (Num 27:12) and from which he viewed the land of Canaan prior to his death (Deut 32:49). The Israelites camped in the mountains of Abarim after leaving Almon-diblathaim and before reaching the Plains of Moab, the final stage of the exodus from Egypt (Num 33:47–48).

In Jer 22:20 the RSV treats ‹*ābārîm* as a proper name, assuming it to be a region as are Lebanon to the north and Basham to the northeast. However, the KJV translates ‹*ābārîm* by "passages." Similarly, several ancient versions (LXX, Vg and Pesh) reflect in their translations of ‹*ābārîm* in Jer 22:20 the verbal root meaning "to cross over" or "to pass over." Abarim may originally have been an appellative (reflected in the Gk of the LXX translation of Num 27:12 "*to oros to en tō peran*" i.e. "[places] on the other side [of Judah])" before it became the proper name "Abarim." The NEB emends the RSV reading "valley of the travelers" in Ezek 39:11 to read "the valley of Abarim" (see also TRAVELERS, VALLEY OF).

While most maps confine the Abarim range to the highland north of the river Arnon, several scholars (*GP* 1:379; *GTTOT*: 261; van Zyl 1960: 51) infer from Jer 22:20 and the name of the encampment Iye-abarim, which by definition appears to be associated with the Abarim range, that the hills of Abarim also

describe the mountains east of the southern end of the Dead Sea. Though the precise location of IYE-ABARIM is uncertain, scholars generally place it south of the Arnon gorge.

In antiquity Josephus (*Ant* 4. 8,§48), Jerome and Eusebius made reference to the Abarim hills (Lagarde 1966: 16,5; 89,8; 216,4). For references, see BEER (PLACE).

ARTHUR J. FERCH

ABBA. A form of the Aramaic word for "father" found in Gal 4:6; Rom 8:15; and Mark 14:36 alongside the Greek *ho patēr* as an address to God. The presence of *ho patēr* in every case (instead of the vocative *pater*) shows that the NT writers saw *abba* as a determinative form: *ʾabbāʾ*, "the father"; cf. Matt 11:16; Luke 10:21. Such forms are frequently used in Aramaic and Hebrew when a vocative is required: another example is *talitha* (Aram. *ṭalyētāʾ/ṭalyĕtāʾ*), rendered *to korasion* in Mark 5:41. Accordingly the explanation of *abba* as the determinative form of *ab* ("father") is almost certainly correct.

Alternatively the form has been explained as a rare vocative (in which case it could just as well be Hebrew as Aramaic) or as derived from children's baby talk (cf. "Papa," "Daddy"). If the last explanation were right, then the use of *abba* as an address to God in Mark 14:36 might be thought to imply a special, indeed a unique, intimacy. This view was held at one time by J. Jeremias, but he later came to regard it as "a piece of inadmissible naivety" (1967: 63). Wrong as it is, it deserves mention not only because of its extensive dissemination beyond the walls of academia but also because its influence can be detected even in the work of respected scholars such as J. G. D. Dunn (1975: 21–26; 1980: 22–23) and is explicit in the most recent writing of M. J. Borg (1987: 45). Apart from the intrinsic unlikelihood of the idea that Jesus ever addressed God as "Daddy," the suggestion is ruled out of court by one important fact: wherever *abba* is found with the meaning "father" or "my father" (in Mishnaic Hebrew or Targumic Aramaic), it is equally employed of the fathers of grown-up sons. One instance cited by G. Vermes (1983: 42) is Judah's threat to his unrecognized brother, Joseph, in the *Tg. Neof.* version of Gen 44:18: "I swear by the life of the head of *abba*, as you swear by the life of the head of Pharaoh your master …" And as J. Barr (1988) emphasizes, inferences concerning the meaning of words must be based upon function, not upon origin or derivation.

There is no evidence in pre-Christian Palestinian Judaism that God was ever addressed as *abba* by an individual Jew in prayer. Jeremias (1967: 59) adduces two instances in the Babylonian (*Talmud b. Taʿan.* 23ab) from stories told of sages who lived in the 1st century B.C.; but Schelbert (1981: 398–405) has shown these attributions to be insecure, a point reemphasized by Fitzmyer (1985: 27) in the most comprehensive of all recent discussions of the subject. Though God is frequently alluded to as the father of his people in the OT and elsewhere, the earliest attestation of *abba* as a personal address to God is Gal 4:6. This should not be taken to imply that the sense of God as the father of the individual supplicant was not pre-Christian: there are a few passages that perhaps indicate it: Sir 23:1, 4; Wis 2:16; 14:3. This evidence, however, is neither abundant nor strong.

The question why the Aramaic *abba* was retained in the Spirit-inspired prayer of Greek-speaking communities cannot be answered with certainty. But even the single attribution of the term to Jesus (in the prayer in Gethsemane) lends plausibility to the suggestion that Christian usage was prompted by an authentic tradition of Jesus' own prayer. This is supported by Paul's association of the prayer of the community with the divine sonship of Christ "God has sent the spirit of his Son into our hearts, crying, 'Abba! Father!' " (Gal 4:6). The fact that Matthew and Luke have different renderings of Jesus' prayer to God in Gethsemane (*pater mou*, Matt 26:39; *pater*, Luke 22:42) may be explained in one of two ways: either the memory of Jesus' own prayer did not survive beyond the first written account; or else the use of *abba* in Christian prayer was no longer current in the Matthean and Lucan communities.

Finally, what are the christological implications of the use of the term by Jesus? Since the address was taken over by Christians in their own prayer, they cannot have seen it as evidence of an *exclusive* relationship between Jesus and God. Moreover, postbiblical usage (the only comparative material available) suggests that the nuance of *abba* as an address is closer to "Father" than the earlier Hebrew and Aramaic forms (*ʾābî* and *ʾăbî* respectively), which mean specifically "my father." These, like *abba*, can

be used in speaking about one's father as well as in addressing him; but unlike *abba,* they are not used of another person's father. Besides, the Gospels portray Jesus as urging his disciples to regard God as a father and to address him as their father in prayer. Nevertheless, taken in conjunction with other gospel evidence (e.g. Matt 11:25–27 = Luke 10:21–22) for Jesus' own awareness of God as Father, the use of *abba* constitutes one especially strong argument for the view that the personal sense of the fatherhood of God was a typically Christian development of the Judaic tradition, and that this probably originated in a recollection of Jesus' teaching and of the example of his own prayer.

JOHN ASHTON

ABDA (PERSON) [Heb ‹*abdā*› (עַבְדָּא)]. **1.** The father of Adoniram (1 Kgs 4:6), an official in charge of forced labor during King Solomon's reign (1 Kgs 5:27—Eng5:14). Abda appears in a list of Solomon's high officials (1 Kgs 4:1–6).

2. The son of Shammua, and descendant of Jeduthun, one of 284 Levites listed among those who performed their duties in "the holy city" (Jerusalem) under Nehemiah (Neh 11:17; LXX variants of the name include *ōbēb* and *abdas*). As a descendant of Jeduthun, Abda was a member of a family set apart for musical service by King David (1 Chr 25:1–6). A parallel biblical list (1 Chr 9:14–16) mentions not Abda but Obadiah (also derived from the Heb root ‹*bd*), but the Neo-Babylonian Murašu Archive (dated ca. 429–428 B.C.E.) refers to an *Ab-da-*› son of *Aplā* (Hilprecht 1898: 45.5; Zadok 1976: 17), demonstrating the contemporaneous use of this name in Babylon.

MARK J. FRETZ

ABDEEL (PERSON) [Heb ‹*abdĕ›ēl* (עַבְדְּאֵל)]. The father of Shelemiah, an official of unspecified status under Jehoiakim, King of Judah (Jer 36:26—LXX 43:26). Together with Jerahmeel and Seraiah, Shelemiah was ordered by the king to seize Baruch the scribe and Jeremiah the prophet (cf. Jer 26:20–24—LXX 33:20–24, where Uriah the prophet was similarly seized, and then executed). The MT phrase including "Shelemiah the son of Abdeel" (Jer 36:26) is missing in the LXX, and was likely lost through homoioteleuton (note the similarities between Heb *ben-‹abdĕ›ēl* and the preceding *ben-‹azrî›ēl*).

MARK J. FRETZ

ABDI (PERSON) [Heb ‹*abdî* (עַבְדִּי)]. **1.** A Levite of the clan of Merari, and father of Kishi and grandfather of Ethan (1 Chr 6:29—Eng6:44). His name appears in an extended genealogy listing Levi's descendants (1 Chronicles 1–9). Abdi's son Kishi (Heb *qyšy*) is probably the Kushaiah (Heb *qwšyhw*) of 1 Chr 15:17. His grandson, Ethan, served as temple singer under King David and eventually supplanted Jeduthun as head of the third clan of temple singers (1 Chr 6:16–34—Eng6:31–48; see Williamson 1979: 263).

2. The father of Kish, a Levite who helped cleanse the temple during the reign of King Hezekiah (2 Chr 29:12). See KISH. This Abdi is mentioned in a short list of Levites who cleansed the temple, rather than in an extended genealogy. However, the appearance of the name "Abdi" in lists from both the Davidic-Solomonic period (see above) and the Hezekiah period is noteworthy: both Abdi's were Levites of the clan of Merari, their sons had similar names (Kish/Kishi), and their descendants appear to have been involved in various aspects of temple service. On the one hand, this similarity may be historical: there may well have been two Levites named Abdi living three hundred years apart, the second of whom named his offspring Kish and thereby recalled the earlier "golden age" of David and Solomon. On the other hand, the similarity may be a purely literary creation, a technique whereby the Chronicler supported his portrayal of Hezekiah as a "second Solomon" (Williamson 1977: 119–25). A third view is that "Kish the son of Abdi" means "Kish the descendant of Abdi." According to this view, the legitimizing function of the Levitical genealogies (1 Chronicles 6) was utilized to indicate not a literal, biological father, but a real or fictive ancestor for this important Levite, who assisted in cleansing the temple in Hezekiah's time.

3. A descendant of Elam who returned from Babylonian exile. This Abdi was one of a number of returnees who married foreign women from "the people of the land" (Ezra 10:26 = 1 Esdr 9:27 [*abdia* is a variant of *ōabdeios* in 9:27]). Under Ezra, he was subsequently forced by a covenant made with God to separate himself from his foreign wife and her children (Ezra 10:1–44 = 1 Esdr 8:88–9:36; see also Neh 13:23–31).

MARK J. FRETZ

ABDIEL (PERSON) [Heb *ʿabdîʾēl* (עַבְדִּיאֵל)]. The father of Ahi, a prominent member of the tribe of Gad (1 Chr 5:15) in the northern Transjordan during the reigns of King Jotham of Judah and Jeroboam II of Israel (mid-8th century B.C.E.). According to various LXX manuscripts, Abdiel is not the father of Ahi but instead the father of either *zaboucham,* or *achibouz,* or simply the brother (Heb *ʾḥy*) of Buz (Gk *bouz*). The name "Abdiel" occurs in an extended genealogy of Israel that also identifies tribal locations within Palestine (1 Chronicles 2–8).

MARK J. FRETZ

ABDON (PERSON) [Heb *ʿabdôn* (עַבְדּוֹן)]. Four individuals mentioned in the OT bear this name, which is formed on the root *ʿbd* with an abstract or diminutive ending, thus evoking the sense of "service" or, possibly, "servile."

1. Abdon son of Hillel was from the town of Pirathon in Ephraim (possibly at or near Farʿata, ca. 10 km southwest of Shechem). He is one of the tribal leaders who "judged Israel," for "eight years," in the premonarchy period (Judg 12:13–15). Information about him is sketchy. That he had "forty sons and thirty grandsons," an odd progression, "who rode on seventy donkeys" may indicate declining wealth and prominence of one extended family in the central hill country where the territory of Ephraim and Manasseh merged. Territorial claims were still so unsettled that the area where Abdon lived is also called "Amalekite hill country" (12:15).

2. Another Abdon is the first-mentioned (1 Chr 8:23) of eleven sons of Shashak in a second genealogy of Benjamin. In contrast to the genealogy in the preceding chapter (1 Chr 7:6–12), chapter 8 is organized to show distribution of Benjaminite families, at some time not specified, outside as well as within the "Deuteronomic" description of Benjamin's territory (Josh 18:11–28; Myers *1 Chronicles* AB, 53). Seemingly contradictory, or inconsistent, genealogies may coexist because they have different functions (Wilson 1977:203).

3. Another Abdon is the firstborn of Jeiel's 9 sons in a list of Saul's ancestors which is recorded twice (1 Chr 8:30 and 9:36).

4. Abdon son of Micah (2 Chr 34:20) is a member of the board of inquiry sent by King Josiah to the prophetess Huldah, for authentication of the rediscovered "book of the law." In the parallel account, however, the name is ACHBOR (2 Kgs 22:14).

Bibliography

Mullen, E. T. Jr. 1982. The "Minor Judges." *CBQ* 44: 185–201.

ROBERT G. BOLING

ABDON (PLACE) [Heb *ʿabdôn* (עַבְדּוֹן)]. Var. EBRON. Located in the tribe of Asher, Abdon is mentioned three times in the OT, once in the territorial allotment to Asher in Josh 19:28 (MT *ʿebrōn;* RSV Ebron) and twice in the Levitical City lists, Josh 21:30 and 1 Chr 6:59—Eng6:74. The biblical site has been identified with Khirbet ʿAbda (M.R. 165272), a site located 6 km E of the coastal city, Tell ʾAchzib. (See Boling and Wright *Joshua* AB; Noth *Joshua* HAT; Peterson 1977: 29–39.)

Khirbet ʿAbda is situated in the coastal plain of Acco and on the important Wadi el-Qarn. Tell ʾAchzib is located at the W end of the wadi, and Khirbet ʿAbda is situated where the wadi emerges from the Galilean hills. The importance of this site should not be minimized since it appears to have dominated an important trade route from Phoenicia to the Galilee region. The remains lie on a fairly large natural hill, and so the tell itself is actually smaller than at first appears. The surrounding countryside is lush, with the coastal plain able to support much agricultural activity. There is an ample water supply at the site.

Since the mid-18th century many geographers have visited the site, identifying it with different degrees of probability. They include Guérin (1868: 2:67), Kitchener (1881: 170), Garstang (1931: 98), Saarisalo (1929: 39–40), a survey team from the Palestine Department of Antiquities, and most recently the Levitical City survey team. From the surface surveys conducted at Khirbet ʿAbda, there is indication of occupation in the LB Age, Iron I, Iron II, Roman, Byzantine, and Arabic periods.

JOHN L. PETERSON

ABEDNEGO (PERSON) [Heb *ʿābēd nĕgô* (עֲבֵד נְגוֹ)]. See SHADRACH, MESHACH, ABEDNEGO.

ABEL (PERSON) [Heb *hebel* (הֶבֶל)]. Second son of Adam and Eve (Gen 4:2). Abel was a herdsman who gave as a sacrifice to the Lord the firstborn of his flock and their fat portions. Yahweh's acceptance of this sacrifice and the rejection of the gift of Abel's brother, Cain, set the latter at enmity with him, prompting Cain to murder Abel in a field (Gen 4:8). The subsequent birth of Seth to Adam and Eve is understood by Eve as a replacement for Abel (Gen 4:25). In the gospels, Jesus assigns the guilt of all righteous blood—from that of Abel to that of Zechariah—to the Pharisees of his generation (Matt 23:35; Luke 11:51). The writer of Hebrews notes that by faith Abel brought a more acceptable sacrifice than his brother, Cain (Heb 11:4). The next chapter of Hebrews argues for the superiority of the blood of Jesus to that of Abel (Heb 12:24). Three issues surround the figure of Abel in the Bible: the question as to why God looked with favor on the offering of Abel; the meaning of the phrase "the blood of Abel" as it is used in the NT; and the meaning of the name "Abel" and its usage in the story of Genesis.

The biblical text gives no explicit reason for God's preference for Abel's offering. This has given rise to speculation. Even the writer of Hebrews does little more than observe the offering as characteristic of

faith. Explanations which focus on the difference in the type of offering of Cain and Abel (Gunkel *Genesis* HKAT, 37; Skinner *Genesis* ICC, 105) or on the difference in their disposition, like those which emphasize the inscrutable choice of God (von Rad *Genesis* OTL, 104; Westermann *Genesis 1–11* BKAT, 403–4), rely upon suppositions not explicit within the text. Nor is there any support for a rivalry between farmers and herdsmen (as disputed by Sarna 1970: 28). Note that *minḥāh,* "offering," can refer to a grain offering as well as to a meat offering. The text makes a distinction between Abel's offering of the "first" and Cain's offering of "some" (Cassuto 1961: 206–7; Sarna 1970: 29; Waltke 1986; Wenham *Genesis 1–15* WBC, 103–4). In offering the firstborn, Abel's act parallels that of Israelite sacrifices in which the firstborn represents both that which belongs to God as well as the entirety of the flock. By giving the firstborn and the best of the animal (i.e., the fat), Abel would be understood as having given everything to God.

Jesus' observation on the blood of Abel refers to the murder of Abel, which is interpreted as similar to that of a "prophet"; and to that of a martyr, apparently due to its association with the worship of God (Hill, *Matthew* NCBC, 315; Marshall, *Luke* NIGTC, 506; Légasse 1982; Fitzmyer, *Luke 20–24* AB, 946, 951).

The focus of Heb 11:4 is on the faith of Abel. He represents the first example of the righteous who are put to death for their faithfulness. In Heb 12:24 Abel's blood represents the murder of an innocent victim. It cries out for vengeance (Gen 4:10). The blood of Jesus could also represent the murder of an innocent victim. However, instead of a cry for vengeance, the blood of Jesus provides mercy before God (Le Déaut 1961:30–36; Moffatt, *Hebrews* ICC, 163–65, 218–19; Hughes 1977:453–57, 551–52).

Attempts to trace the meaning of the name "Abel" to the Akkadian *aplu,* "heir" (*IDB* 1: 4) or the Sumerian synonym, *ibila* (Landersdorfer 1916: 67–68), seem to be speculative. This is true despite the occurrence of these elements in Mesopotamian personal names. Nor is a relationship with the names Jabal and Jubal at the end of chapter 4 clear from the text (contra Skinner, *Genesis* ICC, 103). A simpler origin for the name can be found in the Hebrew root *hbl,* those meaning, "breath," reflects the more basic idea of that which is transitory (Cassuto 1961:202; von Rad, *Genesis* OTL, 104; Westermann, *Genesis 1–11* BKAT, 398; *TWAT* 2:337–38; Wenham, *Genesis 1–15* WBC, 102). In the narrative of Genesis 4, Abel represents a figure whose life is cut short before its full time is accomplished. Although one may argue that Abel's name was intended to signify the general condition of humanity as subject to death, it is better to see the name as an anticipation of Abel's premature death.

RICHARD S. HESS

ABEL-BETH-MAACAH (PLACE) [Heb *ʾābēl bêt-maʿăkâ* (אָבֵל בֵּית־מַעֲכָה)]. Var. ABEL OF BETH-MAACAH. A town in the N part of Israel conquered by Ben-hadad at the beginning of the 9th century B.C. (1 Kgs 15:20) and then by Tiglath-pileser III in 734 B.C. (2 Kgs 15:29). Its identification with *ʾbw€ m* in the Execration texts (E47) (Alt 1941: 33) is doubtful, but it can be identified with *ibr* no. 92 in the list of Thutmoses III (*LBHG,* 150) and thus must have been one of the Canaanite centers in the country. Its role during the revolt of Sheba (2 Sam 20:14–18) may indicate both a certain independence during the reign of David and the continuation of the Canaanite population. According to the proverb in 2

Sam 20:18, Beth-Maacah must have been famous for its council. The city has been identified with Tell Abel el-Qamḥ (M.R. 204296), 7 km WNW of Dan.

VOLKMAR FRITZ

ABEL-KERAMIM (PLACE) [Heb *ʾābēl kĕrāmîm* (אָבֵל כְּרָמִים)]. A town on the border of the Ammonites (Judg 11:33), probably identical with *Abila* in Eusebius' *Onomast.* (32, 14–16 Klostermann). According to Eusebius, the distance from *Abila* to Philadelphia/Rabbath Ammon/Amman is 6 roman leagues. Based on this reference, suggestions for the location of Abel-Keramim form a circle around Amman: Nāʿūr (M.R. 228142; *GP* 2: 233f), Khirbet es-Suq (*KISchr* I: 159, n. 3), and Kōm Yājūz (M.R. 237160; Mittmann 1969: 75). These identifications were all ruled out by Redford (1982a; 1982b), who identified Abel-Keramim with the *krmm* of Thutmosis' III list of Asiatic toponyms (see *ANET*, 242). However, Redford's own identification of Abel-Keramim at Tell el-ʿUmeiri (M.R. 234142) is open to criticism, since excavations there did not corroborate the LB occupation assumed by Redford on the basis of his survey. See UMEIRI, TELL EL-. Knauf (1984) adduced evidence from the Islamic conquest narratives, and proposed identifying Abel-Keramim with Saḥāb. According to early Islamic tradition, in A.D. 634 a battle was fought between "Ābil, Zīzaʾ, and Qasṭal" (cf. Donner 1981: 113f). The plain N of Zīzaʾ, NE of Qasṭal, and S of the Ammonite hill country, now transversed by the Hijaz railway and the location of Amman's international airport, would indeed have formed a splendid battleground for cavalry. To the N, this plain is dominated by Saḥāb. Sahab was a walled city in the 15th century B.C., and extensively occupied during the Iron Age. See SAHAB. Its vicinity was densely occupied by hamlets and farmsteads in the Late Byzantine and Umayyad periods (Gustavson-Gaube and Ibrahim 1986).

Abel-Keramim can be translated "pasture of vineyards," or since *Karamīm/Karamen is previously attested as this place's name, "the pasture of the vineyard town." Place names containing the *abel* element have a high frequency in the OT and in the present toponymy of S Syria, Jordan, and Palestine. These names seem to have originated among the nonurban population of this area in the course of the LB and Early Iron Age transition. These names may indicate the sociopolitical change which took place in this period, i.e. the demise of the city-states and the formation of the Aramaean, Israelite, and Ammonite tribal states.

ERNST AXEL KNAUF

ABEL-MEHOLAH (PLACE) [Heb. *ʾābēl mĕḥôlâ* (אָבֵל מְחוֹלָה)]. A town located in the western Jordan ghor (Judg 7:22; 1 Kgs 4:12). It was the hometown of the prophet Elisha, son of Shaphat (1 Kgs 19:16), and probably also of Adriel ben Barzillai the Meholathite, the son-in-law of Saul, the first King of Israel (1 Sam 18:19; 2 Sam 21:8). The name of the settlement means "meadow of dancing." It is one of a group of compound names formed with *ʾābēl,* "meadow, well-watered land," as a descriptive first element. Other examples include Abel-maim, Abel-shittim, Abel-keramim, Abel-mizraim, and Abel-beth-maacah. While the present spelling and vocalization of the second element means "dancing," it is possible that before the medial *waw* was added as a vowel marker, the nonvocalized consonantal text *mḥlh* designated the Manassite clan of Mahlah (Num 26:33; 27:1; 36:11; Josh 17:3; 1 Chr 7:18), indicating that the meadow where the town was founded belonged to the Mahlah clan.

The location of the ancient settlement is disputed. 20th-century proposals have included two sites on the eastern side of the Jordan: Tell Maqlub (M.R. 214201) inland on the north bank of the Wadi el-Yabis (Glueck 1945–48: 215–23) and Tell el-Meqbereh/Tell Abu Kharaz, in the eastern ghor at the mouth of the Wadi el-Yabis (Alt 1928:44–46; Noth 1959: 52–60); and four sites in the western Jordan ghor; Ras Umm el-Harrube (M.R. 196175) in the hills above the north bank of the Wadi Faria (Burney 1914: 94–96); Tell Abu Sifri (S)/Khirbet Tell el-Hilu, which lies at the junction of Wadi el-Helwah and Wadi el-Malih north of the Wadi Faria (Albright 1925: 18; Alt 1928:45; *GP*, 234; Simons 1959: 294; *LOB*, 284, n. 222); Tell el-Hamme, which lies at the mouth of the Wadi Losm el-hamme, about 5.25 km north of Tell Abu Sifri (Hölscher 1910: 17–18); and Tell Abu Sus, which lies about 15 km south of Beth She›an, at the southern edge of the Beth She›an Valley (Naor 1947:90–93; Zobel 1966: 97–101; Mittmann 1970: 128; Rosel 1976: 15; Zori 1977: 38–9; *LOB* 313; *HGB*, 63). The town's location on the western side of the Jordan River is clearly indicated by the description of the fifth Solomonic district in 1 Kgs 4:12. The district included the lowland areas forming an arc around the Gilboa spur, from Taanach in the Esdraelon Plain, westward, through the Beth She›an Valley, swinging south to include the western bank of the ghor to the southern boundary of Abel-Meholah, opposite Jokmeam.

A location in the western ghor is also indicated by the description of the flight of the Midianites from the Jezreel Valley in Judg 7:22–8:5. Attempting to return to their home in the east, which required the crossing of the Jordan (Judg 6:33), they are said to have moved southward from the Valley, to Beth-Shittah, as far as the riverbank of Abel-Meholah, near or opposite Tabbath. Gideon is to have sent mesengers to the inhabitants of the hill country of Ephraim to seize the waters as far as Beth-barah and also the Jordan against the retreating Midianites, to prevent them from fording the Jordan and escaping into Gilead or down the eastern ghor to the arabah region south of the Dead Sea. Their failure to act allowed the Midianites to cross the Jordan, forcing Gideon to cross in pursuit (Judg 8:1–5). Regardless of one's stance as to the historical reliability and date of the Gideon narrative (Payne 1983: 163–72), one can presume that the author of the story would have been familiar with the geography and the ancient road systems in the regions depicted in the story, which would not have changed significantly over time. The information provided requires a location for Abel-Meholah in the western ghor near the Jordan River, north of Beth-barah and near or opposite Tabbath, and north of the latitude of Succoth on the eastern bank of the Jordan, which was the first settlement Gideon reached after crossing the river. Eusebius places Abel-Meholah in the western ghor, identifying it with the Roman settlement known as Bethmaela ten Roman miles south of Scytholpolis (Beth She›an). In light of the available information, Tell el-Meqbereh/Tell Abu Kharaz, Tell Maqlub, and Ras Umm el-Harrube can be eliminated from potential candidacy.

Archaelogical surveys at Tell Abu Sifri (S)/Khirbet Tell el-Hilu have indicated occupation during the EB I, MB I, IIB, LB, Iron I-II, Pers, Hell, Rom, Byz, Medieval, and Ottoman periods (Zertal 1986: 141; cf. Gophna and Porat 1972: 218; Mittmann 1970: 336), while similar surveys at Tell el-Hamme have uncovered evidence of occupation during EB I, MB I, IIB, LB, Iron I-II, Pers, Hell, Byz, Medieval, and Ottoman periods (Gophna and Porat 1972: 214; Mittmann 1970: 338; cf. Zori 1977: 37). Excavations were begun at Tell el-Hamme in 1988. A preliminary survey at Tell Abu Sus yielded diagnostic shards from EB I-II, Iron I, Byz, and Arabic periods (Zori 1977: 38–39).

Of the three proposed locations in the western ghor, Tell abu Sifri (S)/Khirbet Tell el-Hilu and Tell el-Hamme would both seem to be located too far inland from the Jordan to have been along the theoretical Midianite retreat path in Judg 7:22. While settlements often controlled outlying fields or territory beyond the settlement proper, the reference to Abel-Meholah's "riverbank" suggests that the town was located close to the Jordan. Tell Abu Sus seems to be the best candidate in light of the description in both Judg 7:22 and 1 Kgs 4:12. In order for the equation with Tell Abu Sus to be upheld, future survey work or excavations would need to confirm occupation during the Roman period, to corroborate Eusebius testimony, and probably also Iron II occupation, the period when the Gideon story may first have become part of the Deuteronomistic History.

DIANA V. EDELMAN

ABGAR, EPISTLE OF CHRIST TO. This correspondence consists of two letters, one from Abgar V Ukkama "the Black," toparch of Edessa to Jesus of Nazareth, and Jesus' reply. Both are pseudepigraphic. The earliest surviving versions of this apocryphal epistle, which appear in Eusebius' *Hist. Eccl.* 1.13.6–10 (ca. A.D. 303) may be summarized as follows: Addressing Jesus as "good Savior," Abgar professes admiration for his cures accomplished "without medicines or herbs" and asserts that he must be "God, and came down from heaven to do these things, or … a Son of God." He invites Jesus to come to Edessa, on the one hand, to heal him of an illness [*pathos*] and, on the other, to take refuge since "the Jews are mocking you and wish to ill-treat you." In response, Jesus praises the ruler for his belief "not having seen me" (cf. John 20:29). Yet he replies that he cannot come since he "must first complete here all for which I was sent, and after thus completing it be taken up to him who sent me" (cf. John 16:5; 17:4). He promises to send one of his disciples to cure Abgar and to "give life to you and all those with you."

Eusebius claimed to have translated the letters from Syriac documents in the archives of Edessa (*Hist. Eccl.* 1.13.5), and he concluded, again claiming to follow his Syriac source, with the story of the fulfillment after Pentecost of Jesus' promises to Abgar, when the apostle Thomas sent Thaddeus (= Syriac "Addai"), one of the seventy, to Edessa (*Hist. Eccl.* 1.13.11–22). The letters appear in their earliest Syriac versions at the beginning of the *Doctrine of Addai* ca. A.D. 400 (Howard 1981: 6–8 = *Doc.Add.*). Here Jesus' reply is spoken to Hanan, Abgar's messenger and archivist, who puts it into writing. The wording of the letters themselves in Syriac is almost identical to Eusebius' Greek version. Here, however, and in later references two new features appear: (1) Jesus' letter adds a blessing or promise of protection for the city of Edessa (*Doc.Add.* 8:19–20; cf. CChr Ser. Latina 175: 27–105) and (2) Hanan also paints a portrait of Jesus and brings it back to Abgar with the letter from Jesus (*Doc.Add.* 8:20–9:4; Evagrius *h.e.* 4.27). Apotropaic powers were subsequently ascribed to copies of the letter as well as to the painting, which came to be known as an *acheiropoietos* icon (Dobschütz 1899: 102–96; Segal 1970: 75; Runciman 1931: 245–51). Despite the fact that Jesus' letter to Abgar was included in the Gelasian decretals' list of apocrypha (A.D. 494), the story of King Abgar and Jesus retained its popularity into the medieval period (Segal 1970: 75). Early scholarly acceptance of the letters as genuine has given way to various degrees of skepticism. Following Gutschmid (1887), Burkitt (1904: 10–38) argued that the ruler in question was Abgar IX (d. ca. A.D. 216) rather than Abgar V (d. A.D. 50) since he is mentioned in the Bardaisanite *Book of the Laws of the Countries* (= *BLC, see* BARDAISAN OF EDESSA) as having forbidden emasculation in honor of Atargatis when he "came to the faith" (*BLC* 607). Burkitt held further that, although the letters were pseudepigraphic, together with the rest of the *Doctrine of Addai* they shed light on Jewish-Christian evangelization of Edessa, which began in the latter half of the 2d century. In 1934 Bauer denied any

historical basis for the Abgar legend (Bauer 1971:2–12). Literary models for the legend have been seen in Josephus' account of the conversion of the Jewish rulers of Adiabene (Marquart 1903; Segal 1970: 67–69; cf. Murray 1975: 8–9) or in Manichaean literature (Drijvers 1980).

KATHLEEN E. MCVEY

ABI (PERSON) [Heb *ʾăbî* (אֲבִי)]. Var. ABIJAH. Wife of Ahaz, king of Judah, and mother of Hezekiah (2 Kgs 18:2 = 2 Chr 29:1). Abi's name appears in the regnal formula of her son, Hezekiah. She is the daughter of Zechariah, whose place of origin is unknown. In the Chronicler's parallel account she is called Abijah [Heb *ʾabîyâ*]. See QUEEN.

LINDA S. SCHEARING

ABI-ALBON (PERSON) [Heb *ʾăbî-ʿalbôn* (אֲבִי־עַלְבוֹן)]. An Arbathite listed in a roster of King David's thirty chief warriors (2 Sam 23:31). His native town is probably Beth-arabah, possibly to be identified with *el-Gharabeh,* southeast of Jericho (cf. Jos 18:18, 22). The confusion associated with this name is signaled by the substitution of the name "Abiel" in the 1 Chr 11:32 parallel list. Several significant opinions about the name have been offered. Zadok (1979: 105) believes that Heb *ʾăbî-ʿalbôn* may be an altered form of an unattested *ʾabi-baʿlon,* and that the MT tendency to change pagan theophoric elements (such as *baʿlon*) to *ʾēl* accounts for the variant "Abiel" in 1 Chr 11:32. Mazar (1986: 94) holds that the original text read "Abibaal son of the Arbathite"; the replacement of the *baʿal* element with *ʾēl* rendered the Abiel associated with "the Arbathite" (preserved in 1 Chr 11:32), while the dropping of the *b* consonant in *bʿl* and fusion with the following word "son of" (Heb *bn*) rendered *ʾbyʿlbn* Abi-albon (2 Sam 23:31). McCarter (*2 Samuel* AB, 492) suggests that an even more complex textual history lies behind the MT reference to Abi-Albon. He believes that 2 Sam 23:31 originally read "Abial the Beth-arabathite" (Heb *ʾbyʿl bt hʿrbty*), but that the common prefix for town names, *bêt,* had been misread *bat,* "daughter of," and was "corrected" to *ben,* "son of." This "corrected" version is reflected in the LXX: *abiēl huios tou Arabōthitou,* "Abiel son of the Arabathite." Finally, a fusion of the name "Abial" with the word "son of" resulted in the name *ʾbyʿlbn,* vocalized Abi-Albon.

MARK J. FRETZ

ABIASAPH (PERSON) [Heb *ʾăbîʾāsāp* (אֲבִיאָסָף)]. One of three sons of Korah (Exod 6:24), who led an uprising against Moses and Aaron in the wilderness (Numbers 16). Abiasaph is listed as the head of a Korahite clan in a genealogy relating Aaron and Moses to the Levitical order (Exod 6:14–25; cf. Num 26:5–11).
MARK J. FRETZ

ABIATHAR (PERSON) [Heb *ʾebyātār* (אֶבְיָתָר)]. The son of Ahimelech and priest of David (1 Sam 22:20–23). Abiathar fled to David with an ephod after the massacre of the priests of Nob at the hands of Doeg the Edomite. Saul had ordered the slaughter after hearing that Ahimelech had harbored David, supplied him with bread and a sword, and also inquired of God on his behalf. The text is not consistent concerning the precise location of Abiathar's delivery of the ephod to David. Earlier David is reported to have been in the forest of Hereth in Judah (1 Sam 22:5), yet we are later informed that Abiathar had fled to David at Keilah (1 Sam 23:6). A common solution, based on the LXX, is to understand this verse as referring to Abiathar's earlier flight and that he later accompanied David to Keilah. There is some confusion concerning the relationship between Abiathar and Ahimelech. In 2 Sam 8:17 the MT reads "Ahimelech the son of Abiathar," which conflicts with 1 Sam 23:26 and 30:7, whereas the Syriac reads "Abiathar son of Ahimelek." The Hebrew of 1 Chr 18:16 points to a similar confusion, but reads "Abimelech son of Abiathar." The LXX, Syr, and Vg suggest "Ahimelech" in line with 2 Sam 8:17. The reference to Abiathar in Mark 2:26 is usually explained as a result of this confusion in 2 Sam 8:17. However, it is difficult to see how Mark could have made such an error when the reference was to the incident with David at Nob where he accepted the consecrated bread from Ahimelech. The parallel passages in Matt 12:1–8 and Luke 6:1–5 both omit any reference to Abiathar.

The episode represents an important transition in the narrative of Saul's decline and David's rise since Saul has become increasingly isolated, culminating in his complete estrangement from Yahweh. The murder of the priests of Nob and the transfer of the ephod to David by Abiathar symbolizes Yahweh's complete withdrawal from Saul and his continuing presence with David. Abiathar provides an important medium of communication between Yahweh and David by consulting the ephod on David's behalf (1 Sam 23:9–12). McCarter (*1 Samuel* AB, 366) understands the episode as depicting David as the protector and preserver of the priesthood of Nob, whereas Saul is depicted as its destroyer. Gunn (1980: 88) understands the episode in literary terms; Abiathar provides David with access to the ephod and thus access to the divine realm of foreknowledge.

Those who treat the narratives in historical terms also see the relationship between David and Abiathar as particularly significant. During the rebellion of Absalom, Abiathar is willing to accompany David in his flight from Jerusalem (2 Sam 15:24–36). He and Zadok are said to be responsible for the ark of the covenant of God. Zadok and Abiathar are told by David to return to Jerusalem (15:27–28). They later (17:15–22) inform David, through their sons, of Hushai's warning not to wait at the fords of the wilderness. Bright (*BHI,* 200–1) sees David's strategy here as a brilliant move to combine Abiathar, as the representative of tribal Israel, with Zadok, as the representative of the indigenous Jerusalemite priesthood. Abiathar's support for Adonijah and Zadok's support for Solomon in the struggle for succession to the throne of David is often understood in similar terms. The representatives of tribal Israel were ousted in a purge at the beginning of Solomon's reign with Abiathar being exiled to Anathoth. Solomon spared him only because of his service to David (1 Kgs 2:26). Zadok's appointment in his place (1 Kgs 2:35) is understood in terms of the victory of urban Canaanite religious specialists. However, in the subsequent list of Solomon's officers, Abiathar is still recorded as priest alongside Zadok (1 Kgs 4:4); presumably, this refers to the beginning of the reign. The exile of Abiathar is presented in the Deuteronomistic History as the fulfillment of the word of Yahweh against Eli (1 Sam 2:30–36). This forms part of the common prophecy-fulfillment scheme in Deuteronomistic History. The implicit assumption that Abiathar was a descendant of Eli presumably rests upon 1 Sam 14:3.

ABIB [Heb *ʾābîb* (אָבִיב)]. The first month of the Canaanite calendar, roughly corresponding to March–April. See the CALENDARS articles.

ABIB, TEL. See TEL-ABIB (PLACE).

ABIDA (PERSON) [Heb *ʾăbîdāʿ* (אֲבִידָע)]. The son of Midian and grandson of Abraham's second wife, Keturah (Gen 25:4 = 1 Chr 1:33). The name "Abida" may be either a patronym or a toponym. Abida is used as a patronym both in the genealogy at the end of the Abraham narrative (Gen 25:1–4), and in the genealogy connecting Adam to Israel/Jacob (1 Chronicles 1). This patronym has traditionally been associated with the Arabian tribe of Ibadidi (*ANET*, 286; Glaser 1890: 259; Musil 1926: 292; Abel *GP*, 287); however, Ephʿal (1982: 89, 217) rejects this identification because it involves two radical a spelling change of the name "Ibadidi." Abida may also be a toponym associated with the modern town named *al-Badʿ* (or *al-Bedʿ;* a shortened form of Heb *ʾăbîdāʿ?*), located 25 km east of the Gulf of ʿAqaba and 120 km south of *al-ʿAqaba* in northwest Arabia, (Winnett 1970: 192; see also von Wissmann PWSup 12: 544 on *al-Badʿ* and *Mughayir Šuʿayb*).

MARK J. FRETZ

ABIDAN (PERSON) [Heb *ʾăbîdān* (אֲבִידָן)]. The son of Gideoni and leader of the Benjaminites (Num 2:22; 10:24) who assisted Moses in taking a census of the Israelites in the wilderness of Sinai (Num 1:1–16). Abidan also contributed offerings on behalf of the Benjaminites on the ninth day of the tabernacle dedication (Num 7:60–65).
MARK J. FRETZ

ABIEL (PERSON) [Heb *ʾăbîʾēl* (אֲבִיאֵל)]. **1.** A Benjaminite, the father of Kish and Ner, and the grandfather of Saul and Abner (1 Sam 9:1; 14:51). The name probably means "my father is [the god] El." Abiel represents the fourth generation in the Saulide genealogy in 1 Sam 9:1. An identification of Abiel with Abijah, the son of Becher in the Chronicler's genealogy of Benjamin (1 Chr 7:8), has been suggested on the presumption that Becher can be equated with the Saulide ancestor Becorath, and that the final divine name elements have been interchanged (Malamat 1968: 171–72, n. 28).

Abiel's absence from the Saulide genealogy in 1 Chr 8:29–32 and 9:39–44 has been explained in different ways. One approach has been to argue that the name was dropped as the ancient records were adjusted to reflect altered rankings within Saul's extended family for possible succession to the Israelite throne (Flanagan 1981:59). A second approach has been to posit that the name is found in the Chronicles lists in the corrupted form Baʿal in 8:30 and 9:36 (Demsky 1971:17). In order for this view to be possible, it would also need to presume the principle espoused in the first approach to explain why Abiel becomes the son or brother of Kish in Chronicles instead of his father, as in Samuel. A third approach would be to suggest that Abiel has been deliberately removed from the genealogies in Chronicles and replaced by Ner as a means of secondarily linking the Saulide genealogy with the post-exilic genealogy of Gibeon (1 Chr 9:35–38 = 1 Chr 8:29–32). The occurrence of a Ner in the late Gibeonite list (1 Chr 9:36) seems to have led to the truncation of the early Saulide genealogy and to the substitution of Ner, Saul's uncle, for Abiel,

his grandfather. In this way the Ners would appear to be a single individual and the Saulide genealogy could be grafted onto the Gibeonite one (see NER).

2. The Arbathite, named in 1 Chr 11:32 as one of the "mighty men" of David's armies. In a list detailing the same group of individuals in 2 Sam 23:31 he appears as Abialbon, one of the military elite group known as the "Thirty." The variant reading in 2 Sam 23:11, Abiel *son* of the Arbathite, may indicate that the original text of that verse read "Abiel/Abial son of the Arbathite," or "Abi‹al/Abiba‹al the Beth-Arabathite" (Mc Carter *2 Samuel* 492; Mazar 1963: 316 n. 4). The name "Abial" would mean "my (divine) father is ‹Al (= the "High One"), while the name "Abibaal" would mean "my (divine) father is Baal (or 'the Lord')." The gentilic Arbathite indicates the person's town of origin, or clan association (see ARBATHITE).

Abiel's status within David's army is somewhat obscured by his twofold designation as a member of the "Mighty Men" and of "the Thirty." The correct vocalization and identity of the term usually translated "the Thirty," *šlyšm,* is disputed. One group understands it to designate the group of men who served as the third person of the chariot team (i.e., Haupt 1902). A second group suggests that it designated an institution not necessarily limited to thirty members that served either as the king's bodyguard (Elliger 1935: 68) or supreme command (Mazar 1963: 310). According to a third approach, the single form was a title meaning "of the third rank" that designated high-ranking officers (Mastin 1979: 153–54; Na›aman 1988: 71, 75). Of the three possibilities, the last one requires the least number of textual emendations and provides the most cogent explanation for the required equation of the functions "military elite" (*gibbôrîm*) and "officers" (*šālîšîm*) that are assigned to the same list of individuals in the two texts in 2 Sam 23:8–39 and 1 Chr 11:10–47. The group of officers apparently was headed by the commander of the entire militia, Abishai, and he was followed in rank by "the Three," Josheb-bassebeth, Eleazer, and Shammah, who served as commanders of the three subunits of the professional army. The remaining individuals, including Abiel, then served as commanders over smaller divisions within the three subunits (Na›aman 1988: 75). See also DAVID'S CHAMPIONS.

ABIEZER (PERSON) [Heb *›ăbî‹ezer* (אֲבִיעֶזֶר)]. ABIEZRITE. Var. IEZER; IEZERITE. The name of two individuals in the Hebrew Bible. Although Abiezer may mean "father of help," or "my father is help," *›ab* (father) is here a relational noun used as a theophoric (or divine name) element and the subject of a nominal clause: "Ab is help" (*IPN,* 33, 67–75, 154). The use of the relational nouns *›ab* and *›aḥ* (brother) in a theophoric sense, according to Noth, derives from a period in early Semitic tribal history when the tribe maintained a familial identification with the tribal deity. This special relationship to the god of the tribe allowed that god to be designated "father" or "brother." Thus the name "Abiezer" would designate not a single god, universally identified as *›ab,* but the deity of the respective tribe (cf. Abijah "Yahweh is father"). The NT use of the Aramaic *Abba* for the deity would therefore appear to have its antecedents in ancient Semitic tribal religion.

1. The name of one of the families of Manasseh (Josh 17:2), named for its male progenitor (1 Chr 7:18). This Abiezer was the "son" of Gilead, a descendant of Machir; the reference to Iezer (Heb *›iy‹ezer*) among the "sons" of Gilead and to the family of the Iezerites in Numbers 26:30 probably applies to the

same group. This family received its inheritance west of the Jordan, and the judge and deliverer Gideon belonged to it (Judg 6:11, 34; 8:2).

2. A Benjaminite warrior among David's champions, who was a native of Anathoth (2 Sam 23:27 = 1 Chr 11:28). The same village was home to Abiathar the priest, and his likely descendant, the prophet Jeremiah. This same Abiezer is listed as the officer over David's monthly levies of 24,000 in the ninth month (1 Chr 27:12). The historicity of this second list, however, and its concomitant figures, is doubtful. It is more likely that 1 Chronicles 27 reflects more of an idealized view of David's military organization than a real one. As one of David's champions (Heb *šālišîm;* RSV: The Thirty), Abiezer was more likely a member of an elite corps of fighters loyal only to the king, rather than an officer over his monthly levies. See DAVID'S CHAMPIONS .

D. G. SCHLEY

ABIGAIL (PERSON) [Heb *ʾăbîgayil* (אֲבִיגַיִל)*; ʾăbîgal* (אֲבִיגַל)]. **1.** Wife, first of Nabal, then of David (1 Samuel 25). She appears as the second wife/mother mentioned in two lists of David's sons born in Hebron (2 Sam 3:2–5 and 1 Chr 3:1–3). The name of her son is problematic, being either Chileab (2 Sam 3:3), Daluiah (LXX—2 Kgdms 3:3), or Daniel (1 Chr 3:1). Abigail first appears in 1 Samuel 25 as the wife of Nabal the Calebite. She is portrayed as the "ideal wife"—both beautiful and intelligent—while her husband is presented as ill behaved and rude. When Nabal refuses to accommodate David's request for food, it is Abigail who, unknown to her husband, hastily amasses the food and delivers it to David. Her speech to David, a masterful example of tact and diplomacy (vv 24–31), succeeds in averting David's wrath at Nabal (vv 32–35). Upon hearing of his wife's generosity, Nabal's heart "died within him" (v 37) and ten days later he was dead. 1 Samuel 25 concludes with David's marriage to both Abigail of Carmel, and to Ahinoam of Jezreel.

Abigail's name appears five times in the OT outside of 1 Samuel 25. Three times it is linked with Ahinoam of Jezreel. Both Abigail and Ahinoam accompany David to Gath (1 Sam 27:3), where they are later captured by an invading group of Amalekites (1 Sam 30:5). After their rescue (1 Sam 30:18), they journey with David to Hebron (2 Sam 2:2) where they bear David children (2 Sam 3:3 = 1 Chr 3:1). Of the five times Abigail's name appears outside of 1 Samuel 25, all except one (1 Chr 3:1) carry with it the epithet "widow of Nabal."

Recent literary approaches to 1 Samuel 25 underscore Abigail's speech and character. J. D. Levenson (1978) argues 1 Samuel 25 is a "narrative analogy" presenting a "proleptic glimpse" of 2 Samuel 11. Unlike Bathsheba, Abigail is the "ideal woman" whose "rhetorical genius" prevents David from killing her husband (Levenson 1978: 11–28). D. Gunn (1980: 98–100), while sharing Levenson's appreciation for the speech's artistry, rejects (1980: 154, n. 13) his conclusion that the episode is a "moral allegory." Abigail's speech reveals her to be "shrewd" rather than good, while Nabal is "unwise" rather than evil. While both Levenson and Gunn analyze Abigail's speech, A. Berlin focuses on Abigail's characterization. Abigail is an exaggerated stereotype—the model wife. David's treatment of her (as well as of Michal, Abishag, and Bathsheba) represents an "indirect presentation" of David. Moreover, each "private" response to the women in his life corresponds to a phase of David's "public" life. Thus, David's "eager but gentlemanly response" to Abigail mirrors his "self assurance as a popular leader" (Berlin 1983: 30–33).

Behind the literary presentation of Abigail lies the socio-political realities of her marriage to David. Nabal was a wealthy and probably influential Calebite. David's marriage to Nabal's widow was useful in bringing David much needed support from the south. This support might have been instrumental in David's being crowned king at Hebron—an area associated with the figure of Caleb in the text (Levenson 1978: 24–28).

2. Sister of David (1 Chr 2:16) and Zeruiah (2 Sam 17:25, 1 Chr 2:16); mother of Amasa (2 Sam 17:25, 1 Chr 2:17). The name of Abigail's father is unclear. 1 Chr 2:13–16 identifies Jesse as the father of Abigail, while 2 Sam 17:25 says she was the "daughter of NAHASH." Most critics prefer the reading in 1 Chronicles 2, explaining the discrepancy by either: (1) understanding "Nahash" as the mother of Abigail

rather than the father; (2) declaring the reading in 2 Sam 17:25 corrupt, an intrusion from v 27; or (3) positing an earlier husband (Nahash) of Jesse's wife, who fathered Abigail and Zeruiah.

The name of Abigail's husband is also problematic. The MT of 2 Sam 17:25 gives the name of Amasa's father as "ITHRA the Israelite," while 1 Chr 2:17 says it was "JETHER the Ishmaelite." The issue is further complicated by the variant reading in the ^{M} which identifies him as a "Jezreelite."

J. D. Levenson and B. Halpern (1980) argue that Ithra/Jethro was the real name of Abigail's husband ("Nabal") mentioned in 1 Samuel 25. They find it highly unlikely that the only two Abigails in the OT would be: (1) contemporaries, (2) sister-in-laws, and (3) married to men from the same geographical area (assuming Ithra/Jethro/Nabal to be from Jezreel and Jezreel to refer to the Judean town near Hebron). They therefore conclude there was only one Abigail—David's sister—who later became David's wife. Later tradition suppressed the memory of this incestuous union.

LINDA S. SCHEARING

ABIHAIL (PERSON) [Heb *ʾăbîḥāyil* (אֲבִיחָיִל)]. **1.** Father of Zuriel; descendant of Merari, Levi's youngest son (Num 3:35). Abihail's name appears in the epithet of his son found in the third and last division of the census list in Num 3:14–39. The census, ordered by Moses, involved the three Levitical branches of Gershon, Kohath, and Merari. Abihail's son was leader of the Merarite branch during their journey in the wilderness.

2. Wife of Abishur, of the House of Judah; mother of Ahban and Molid (1 Chr 2:29). Her name appears in a genealogy of Jerahmeel, the great-grandson of Judah and Tamar.

3. A Gadite (1 Chr 5:14). Abihail is mentioned in the Gadite genealogy found in 1 Chr 5:11–17.

4. Mother of Mahalath; wife of Jerimoth; and daughter of Eliab (2 Chr 11:18). Abihail's name occurs in a genealogical note concerning Rehoboam's wives. The reading of the verse, however, is problematic:

KJV: And Rehoboam took him Mahalath the daughter of Jerimoth the son of David to wife, *and Abihail* the daughter of Eliab the son of Jesse;

RSV: Rehoboam took as wife Mahalath the daughter of Jerimoth the son of David, *and of Abihail* …

Some translators (i.e. KJV) conclude v 18 mentions two wives (Mahalath and Abihail) while others (i.e. RSV) assume only one (Mahalath). Although the Hebrew of v 18 is unclear, the context is helpful in determining its meaning. Since the following verses (vv 19–20) refer to v 18 using only the feminine singular, it can be concluded that only one wife, Mahalath, is mentioned. Thus, the reading which understands Abihail as Mahalath's mother (RSV), is to be preferred.

Abihail's daughter, Mahalath, is one of eighteen wives credited to Rehoboam, king of Judah. The marriages of both mother and daughter are particularly interesting. Abihail's husband (Jerimoth) and father (Eliab) were both sons of David. Her daughter married David's grandson (Rehoboam). Thus both Abihail and Mahalath married their cousins. Their marriages reflect a period of intermarriage within the Davidic house not witnessed elsewhere in the text.

5. Father of Queen Esther; uncle of Mordecai (Esth 2:15; 9:29; cf. also 2:7). His name appears twice in the epithet of his daughter, the alleged wife of King Ahasuerus.

LINDA S. SCHEARING

ABIHU (PERSON) [Heb *ʾăbîhû* (אֲבִיהוּא)]. One of four sons born to Aaron, the brother of Moses, by Elisheba (Exod 6:23). At Sinai, Abihu was singled out by God, along with Aaron and Nadab, as one of those leaders who would accompany Moses up the mountain (Exod 24:1, 9). He also performed priestly services for God as one of Aaron's sons (Exod 28:1; Num 3:2; 26:60; 1 Chr 5:29—Eng6:3; 24:1). When

Abihu and his brother Nadab offered "unholy fire" to the Lord, they were devoured by God's holy fire as punishment (Lev 10:1; Num 26:61; cf. Numbers 16). Although the sin committed by Abihu was not clearly defined (Lev 10:1–4; see Laughlin 1976 for various opinions), it served as a point of reference in identifying Abihu within the Bible (Num 3:4; 1 Chr 24:2). In Rabbinic literature the sins of Nadab and Abihu were multiplied and this incident (Lev 10:1–4) became the basis for teachings on cultic and ethical behavior in Judaism (see Shinan 1979).

MARK J. FRETZ

ABIHUD (PERSON) [Heb *ʾăbîhûd* (אֲבִיהוּד)]. A grandson of Ben-jamin through Bela (1 Chr 8:3), the name "Abihud" is preserved in an extended genealogy of Israel that also identifies tribal locations within Palestine (1 Chronicles 2–8). According to the MT, the first three sons of Bela were "Addar, and Gera, and Abihud" (Heb *ʾaddār wĕgērāʾ waʾăbîhûd*); however, the text could easily be emended to read "Addar, and Gera, *that is,* the father of Ehud" (Heb *ʾaddār wĕgērāʾ waʾăbîʾēhûd*). Baker (1980) argues that the two separate individuals named Gera listed as sons of Bela (1 Chr 8:3, 5) were distinguished by the waw explicative, which followed the first Gera, providing a detail about him being the father of Ehud. Thus, MT *waʾăbîhûd* is divided into *waʾăbî,* "that is, the father of," plus *ʾēhûd* "Ehud," the judge mentioned elsewhere in his own right as the son of Gera (Judg 3:15). Note also the EHUD who had a son named Gera (1 Chr 8:6–7). Kuhn (1923) observed that a misunderstanding of the phrase *ʾby hwdyh* produced the name *ʾăbîhûd* ("Abihud"), and the Gk *abioud* (Matt 1:13) was based on the LXX rendering of this synthetic name (see ABIUD).

MARK J. FRETZ

ABIJAH (PERSON) [Heb *ʾăbîyâ* (אֲבִיָּה)]. Var. ABIJAM; ABI. **1.** According to the MT, a man from the tribe of Benjamin (1 Chr 7:6, 8). He was the grandson of Benjamin, being the son of Becher who was Benjamin's son. But some scholars are suspicious of the text of 1 Chr 7:6a. Curtis and Madsen (*Chronicles* ICC, 145–49) present a detailed explanation in support of the contention that "Benjamin" in v 6 is a corruption of "Zebulun" and that 1 Chr 7:6–12 contains a Zebulunite genealogy. In that case Abijah would be from the tribe of Zebulun.

2. The second son of Samuel (1 Chr 6:13—Eng6:28). When Samuel appointed him and his older brother, Joel, as judges over Israel (1 Sam 8:1), they were corrupted by bribery. This perversion of justice contributed to Israel's disillusionment with the office of judge, which in turn aroused among the people the desire for a king (1 Sam 8:5).

3. A chief among the descendants of either Eleazar or Ithamar, sons of Aaron (1 Chr 24:3–4, 10). When David assigned the priests to service in the temple according to divisions determined by lot, Abijah became the leader of the 8th (1 Chr 24:10) from among 24 divisions. In their service the members of his division (as of all divisions) were obligated to observe the procedures first instituted by Aaron (1 Chr 24:19). Zechariah, the father of John the Baptist, was serving in the temple with the division of Abijah (Luke 1:5) when he received the announcement that he would have a son.

4. According to the MT of 1 Chr 2:24, she was the wife of Hezron, the mother of Ashhur, and the grandmother of Tekoa. She was probably the daughter of Machir (1 Chr 2:21). But the MT is uncertain here, an uncertainty which the LXX confirms by giving a different reading for v 24a, though it follows the MT in identifying Abijah as the wife of Hezron. Noting the LXX's dissatisfaction with the MT, modern scholars have attempted to reconstruct the text, and in the process they have altered also the name

"Abijah" and its immediate syntax. Curtis and Madsen (*Chronicles* ICC, 92) offer one reconstruction. In this reconstruction "Abijah" is corrected to "Abiu," or "Abihu," meaning "his father." The reconstructed passage then reads, "Caleb went in unto Ephrath, the wife of his father, and she bore …" In this reading, "Abijah" is no longer a proper name. Williamson (1979: 353–55) offers another reconstruction. He considers the phrase "and the wife of Hezron was Abijah" to be a gloss; this eliminates the word "Abijah," in any of its possible forms or meanings, from the original text. Both Curtis and Madsen and Williamson provide detailed accounts of their process of reconstruction. The RSV translates: "Caleb went in to Ephrathah, the wife of Hezron his father, and she bore …" This translation also eliminates "Abijah" as a proper name.

5. A son of Jeroboam, king of Israel (1 Kgs 14:1). During Jeroboam's reign he fell seriously ill, which prompted Jeroboam to seek from Ahijah the prophet a favorable word on the issue of the illness. But in his quest, Jeroboam proceeded in a manner which determined some of the details of a melancholy conclusion to Abijah's illness. Having conducted himself wickedly as king, Jeroboam had already gained the disfavor of Ahijah, who had designated him king (1 Kgs 11:28–30) in the name of Yahweh. Therefore he sent his wife in disguise to Shiloh to seek the word from the prophet. But the design failed. Through Yahweh's intervention, the prophet identified her when she arrived and spoke judgment on Abijah: he would die when she reentered Tirzah to return to her residence. The boy died in accordance with the prophet's word. After his death, the seal on his father's wickedness, Israel awarded him a dubious distinction: Israel mourned him and buried him with proper ceremony. By contrast, all other members of Jeroboam's family upon their death were unceremoniously eaten by either dogs, if they died in the city, or birds, if in the country (1 Kgs 14:1–18). Abijah was awarded this distinction because in him was found "something pleasing to the Lord" (1 Kgs 14:13); the text does not identify what in the child pleased the Lord. The LXX includes this account (3 Kgdms 12:24g–n) in another version and earlier in the narrative of Jeroboam's life, immediately after his return from a flight to Egypt and before his accession. It also preserves details about Abijah which are lacking in the MT. According to the LXX, Abijah was born in Egypt. His mother's name was Ano; she was an Egyptian and a sister-in-law of Susakim, king of Egypt. Accordingly, Abijah was Susakim's nephew. Debus (1967: 55–92) discusses in detail the differences between the versions of the narrative in the MT and the LXX.

6. See ABIJAH, KING OF JUDAH.

7. The mother of King Hezekiah (2 Chr 29:1 = 2 Kgs 18:2). She was the wife of King Ahaz and the daughter of Zechariah. In 2 Kings she is called "ABI" in the MT, and "Abou" in the LXX.

8. A priest during the governorship of Nehemiah (Neh 10:8—Eng10:7). He endorsed, by the impress of his seal, a covenant which the people under Ezra's leadership made with Yahweh at the conclusion of the Feast of Tabernacles.

9. A priest, perhaps a Levitical priest, who returned from Babylon with Zerubbabel and Jeshua (Neh 12:1, 4). He was one of the chiefs of the priests in the days of Jeshua (Neh 12:7), and he was the father of Zichri upon whom his authority devolved (Neh 12:17) in the days of Jeshua's son, Joiakim (Neh 12:12).

GERALD J. PETTER

ABIJAH, KING OF JUDAH. Var. ABIJAM. The son of Rehoboam and king of Judah (1 Kgs 14:31), whose mother was Maacah, daughter of Abishalom (1 Kgs 15:2). The spelling of the same varies. In the MT of 1 Kings the name appears as Abijam (*ʾăbîyām*); some mss and the MT of Chronicles have Abijah (*ʾăbîyâ*), while the LXX has *Abiou.* It is also possible that the king's name was a theophoric compounded with the divine name "Yam," the Canaanite god of the sea, who is known from Ugaritic literature. Gray (*1–2 Kings*[3] OTL, 347, n. c) thinks that such a name of a king of Judah is inconceivable and that the divine element would have been a form of Yahweh. He argues that the LXX reading *Abiou*

suggests a variant *Abiyo* in which the final *w* may have been corrupted to *m*, which it closely resembles in the photo-Hebraic script.

He is said to have reigned three years (ca. 913–911 B.C.E.), but it appears it may have been only two (1 Kgs 15:2; 2 Chr 13:2; cf. 1 Kgs 15:1, 9). LXX reads "6 years" for the length of his reign: this would suggest a confusion between *šš,* "6," and *šlš,* "3." Miller and Hayes (*HAIJ,* 240) speculate that, owing to the short length of his reign and the extended length of the reign of his successor, Abijah either died early and Asa was a minor when he became king, or the queen mother acted as regent during the early years of his son Asa.

The evidence concerning Abijah's mother is confusing and inconsistent. 1 Kgs 15:2 records that his mother's name was Maacah the daughter of Abishalom (*ʾăbîšālôm*) whereas 2 Chr 11:20 reads "Absalom" (*ʾabšālôm*). Gray (*1–2 Kings*[3] OTL, 347–78, n. g) accepts the reading "Absalom" and argues that Maacah may well have been the "granddaughter" of Absalom, David's son, particularly since the usual place of origin of the father of the queen mother has been omitted. A further difficulty is that at the accession of his son, Asa's mother is also said to be Maacah the daughter of Abishalom (1 Kgs 15:10 = 2 Chr 15:16). Gray (*1–2 Kings*[3] OTL, 348, n. f) believes that 1 Kgs 15:10 may indicate that Abijah and Asa were brothers rather than son (cf. *HAIJ,* 240). He offers the alternative explanation that since Abijah reigned for such a short time Maacah may have remained as "the principal lady," while the mother of Asa was omitted. However, the MT and Vg of 2 Chronicles 13 record the name of Abijah's mother as Micaiah, daughter of Uriel of Gibeah. The LXX and Syr follow 1 Kgs 15:2 in suggesting that the queen mother was Maacah.

Although Abijah was condemned in typical Deuteronomistic terms for apostasy, nevertheless the dynasty was established for David's sake. It is stated that despite his apostasy, Yahweh gave him a lamp in Jerusalem, set up a son after him, and established Jerusalem (1 Kgs 15:4). The establishment of Jerusalem is important in the theology of the Deuteronomistic History as the site of the central sanctuary. The treatment of the reign of Abijah admirably illustrates the theological bias and selectivity of the Deuteronomistic History. The negative presentation of his reign invites a direct comparison with that of Asa his son who is portrayed as a cultic reformer in line with Deuteronomistic principles, who even removed the Asherah of Abijah's wife Maacah (1 Kgs 15:13). The one political aspect of the reign which is mentioned briefly, without comment, is that Abijah and Jeroboam I ben Nebat were at war. The Deuteronomistic History provides little, if any, useful information for the historian.

The Chronicler presents a significantly different account, representing Abijah as righteous and divinely blessed (2 Chr 13). His 14 wives, 22 sons, and 16 daughters are presented as a sign of favor from Yahweh (2 Chr 13:21). Whereas the Deuteronomistic History merely notes that Abijah was involved in the continuing border warfare with the north (1 Kgs 15:7), the Chronicler preserves a tradition of a major military conflict near mount Zemaraim in the hill country of Ephraim (2 Chr 13:13–20). Abijah's moralizing speech to Jeroboam and Israel is in distinct contrast to his rejection in 1 Kgs 15:3 for apostasy. The speech is usually understood as representing the Chronicler's own ideology since it justifies the Davidic dynasty and the Jerusalem cult installed by David. It then acts as a rejection of the apostasy of the north with a strong claim that Yahweh is the god of Judah as demonstrated in the military victory. Williamson (1977: 114), however, rejects the common interpretation that this is a piece of anti-Samaritan polemic, arguing that, although the speech criticizes the northern kingdom, it carries within it an appeal for repentance. Following Abijah's speech of justification to Jeroboam, he wins an overwhelming victory capturing Bethel, Jeshanah, and Ephron with their villages (2 Chr 13:19). The historical reliability of this information is difficult to assess; Miller and Hayes (*HAIJ,* 247) think that at most it can only refer to a border skirmish. The exaggerated numbers (see Dillard *2 Chronicles* WBC, 106–7) are a further reason for questioning the veracity of this report. Williamson (1977: 114–17) has demonstrated the importance of 2 Chronicles 13 within the structure of the work of the Chronicler, who draws a sharp distinction between the faithfulness of Abijah and the apostasy of Ahaz in 2 Chronicles 28. Ahaz is utterly condemned in terms which echo Abijah's rejection of the north in his speech to Jeroboam.

ABIJAM (PERSON) [Heb *ʾabîyām* (אֲבִיָם)]. See ABIJAH (PERSON).

ABILA OF THE DECAPOLIS (M.R. 231231). A city belonging to a league of cities called the Decapolis, originally having ten members.

A. Location and Identification

Abila of the Decapolis has been identified with Quailibah (M.R. 231231) in N Jordan. Eusebius (*Onomast.* 32.16) states that Abila was located twelve Roman miles E of Gadara. The name from this ancient site has continued to modern times—Schumacher (1889) found that local tradition attached the name Abil to the N tell. In the 1984 excavations a stone inscription with the name "Abila" written in Greek was found on the site. An inscription (A.D. 133–44) at Tayibeh near Palmyra speaks of "Well-heralded Abila of the Decapolis." Ptolemy (*Geog.* 5.14), lists this Abila separately from the Lysanias Abila (W of Damascus), and Hierokles (*Synekdemos* 720, 721) identifies it as part of Provincia Arabia. Abila probably became a Decapolis city sometime between Alexander's conquests and the zenith of Seleucid power (ca. 198 B.C.). Polybius (5.69–70) states that Antiochus III (ca. 218 B.C.) conquered Abila, Pella, and Gadara. The Decapolis as a region is mentioned in the Gospels (Matt 4:25, Mark 5:20; 7:31), but no specific cities are mentioned.

Abila consists of two tells, Abila (N) and Umm el ʿAmad (S) with a "saddle" joining the two. The site is bordered on the E by Wadi Quailibah, on the N by Wadi Abila, and on the S by Ain Quailibah and its wadi. Tombs and graves are cut into the soft limestone mainly along the wadi ledges on the E, S, and N.

B. Survey and Excavation

The major inquiry into the site began in 1978 when W. Harold Mare of Covenant Seminary visited Abila as part of an overview of several Decapolis cities. A cooperative effort ensued with Dr. Adnan Hadidi, Director of the Department of Antiquities of Jordan, and W. H. Mare as principal investigators to survey the area and excavate the site over several seasons beginning in 1980.

In 1980 a small survey team, using a time-controlled transect surface sherd collection technique in segments across the site, determined that there was occupation on the site at various times from the EB through the Umayyad periods. The heaviest concentration was in the Byzantine and Umayyad periods, diminishing in the Roman, Hellenistic, Iron Age II, and EB periods, with minimal evidence from the Chalcolithic, Neolithic, and Islamic periods. The subsequent excavations have confirmed the evidence of the 1980 survey project.

Ruins of a large rectangular building were found N of the stub of an E-W acropolis wall which stretches along the S crest of the tell. This building proved to be the remains of a 5th–6th-century triapsidal Byzantine basilica, with evidence at the central apse that it was built over an earlier Roman building (a temple?). The Umayyad rebuilding over the basilica and stockpiling of basilica architectural fragments for further use imply an Umayyad presence and possible construction of a mosque. Excavation N of the Byzantine basilica produced Byzantine and earlier materials—Byzantine loci and a water channel, remains of earlier Roman buildings, and reuse of still earlier Hellenistic walls. On the N slope was found a city wall preserved to a height of ca. 5 m; this proved to be at least of Roman-Byzantine origin. The S slope of the N tell had remains of a stairway and gate (?).

On the W side of the acropolis of Umm el ʿAmad were ruins of a residential section (areas D 5–7, 8–10) including a street, market, and a palaestra or residence with a two-column entrance. To the E of the residential section were the remains of a basilica (areas D 1–4, 11, 12), which Schumacher (1889) had suggested was a "temple," but which was another Byzantine basilica. Farther still to the E, was a theater nestled along the slopes of the "saddle." The theater overlooked the remains of a massive ruined building (a Roman bath?) and an ancient road which led eastward over a bridge crossing wadi Quailibah. A third Byzantine basilica was located on a ledge E of the theater. The three basilicas so far found at the site suggest a possible Byzantine bishopric headquarters at Abila.

Three underground aqueducts have been investigated. The Khureibah Aqueduct stretches 2.5 km, bringing water from the S to the Ain Qualibah area on the S of Umm el ʿAmad; this aqueduct was apparently dug during the Roman period. Two other aqueducts (ca. 1400 m long) direct water N from Ain Quailibah under the E edge of Umm el ʿAmad to the saddle area between the two tells. The upper aqueduct (one to two m higher on the ledge) seems to date from the Roman-Byzantine period, while the lower aqueduct was probably built in Hellenistic-Roman times or earlier (Persian or Iron Age).

The excavation of fourteen tombs (both loculus and arcosolium types) and nine simple graves along the E band of Wadi Quailibah (areas H and J) and the bank S of Ain Quailibah (area K) revealed important aspects of Early and Late Roman and Byzantine culture. Males and females and children (36 percent of the persons found had died before their 16th birthday) were buried with a variety of grave goods which imply a wide range of social stratification. Nine limestone anthropoid busts found in Tomb K 1 point to cult feasts or annual family reunions.

C. Summary

The research at Abila points to an Early Roman Abila of moderate size, with considerable expansion in the Late Roman and Byzantine periods. Evidence of the later Umayyad and earlier Hellenistic city is just emerging. The extent of later Islamic presence and earlier Hellenistic, Persian, Iron, and Bronze Age periods and still earlier habitations will be revealed through future excavation seasons.

W. HAROLD MARE

ABILENE (PLACE) [Gk *Abilene* (Ἀβιλενε)]. A tetrarchy named after its chief town, Abila, which is located on the bank of modern Barada (Abana) 18 miles NW of Damascus en route to Heliopolis (Baalbec). A Moslem legend places Abel's tomb near the ruins of an Abilenian temple, thereby preserving the ancient name. Luke 3:1 identifies Abilene as the tetrarchy of Lysanias (II) at the incipient stage of John the Baptist's ministry. Josephus is careful to associate Abila and Abilene with Lysanias, *he Lusaniou* (*JW* 2, 11.5; *Ant* 17, 6.10), an association found as late as the time of Ptolemy (ca. A.D. 170). Two Gk inscriptions from Abila support this association, and coincide with the chronology of Luke 3:1, i.e., between the years A.D. 14–29 (Yamauchi 1981: 99).

Abilene was originally part of the Ituraean kingdom of Ptolemy Menaeus (ca. 85–40 B.C.). In 36 B.C., M. Antonius executed Ptolemy's son, King Lysanias I, and divided Ituraea. Cleopatra received part of the kingdom, which in turn was transferred by her conqueror, Augustus, to Herod the Great in 20 B.C. (Bruce: 1971: 20, 248). Except for an Abila inscription identifying a second Lysanias (above), Abilene's history remains obscure until A.D. 37 when Gaius conferred the title "king" on his friend Herod Agrippa I, along with Abilene and additional territory. Procurators governed Abilene from the time of Agrippa I's death (A.D. 40) until Claudius conferred it upon Herod Agrippa II in A.D. 53. Upon the latter's death, Abilene became part of the province of Syria.

ABIMAEL (PERSON) [Heb *ʾăbîmāʾēl* (אֲבִימָאֵל)]. A son of Joktan and thus the name of an Arabian tribe (Gen 10:28; 1 Chr 1:22), which has not been identified nor localized in a satisfactory way. The name is either to be analyzed as *ʾăbî* + *mā* (as an emphasizing enclitic particle) + *ʾēl* " (my) father is truly God" or, less probably, as Old S Arabic *ʾbm* (in the absolute state) + *ʾl*, i.e., "Father is God," which may be compared to the apotropaic formula *ʾbm wdm* "Father is (the God) Waddum" (*CIS* IV, 475 and 476; etc.), or to the Akkadian name *abumilum* "Father is God."

Hommel (1893: 16) has already pointed out that Old Arabic has a name type that contains the enclitic *-m*, e.g., *ʾlmnbṭ* "God has truly brought to light," *ʾlmydʿ* "God truly knows," and *ʾbmʿṯtr* "Father is truly *ʿAṯtar."* The last-mentioned name occurs as the name of a clan, *ʾhl/ʾbmʿṯtr*, in the early Sabaean inscription *RES* 2740,4 which was written not later than the 5th century B.C. and which had been found in the ruined ancient town of Haram in the Yemenite Jawf on the N side of the main wadi. The Sabaean boustrophedon text *CIS* IV, 516, in which the name *ʾlmnbṭ* is found (line 26), comes from the same place; and the fragmentary inscription *RES* 2847, in which the name *ʾlmydʿ* occurs, was discovered in the neighboring ancient site of Kamnā. From this epigraphic evidence, it can be concluded that proper names with the enclitic *-m* were only in use in the region of the town of Haram and are to be reckoned among the dialectal peculiarities which the inscriptions from this town show. With due reservation, it may therefore be supposed that the Hebrew form *ʾăbîmāʾēl* reflects a hitherto unattested Sabaean name **ʾbmʾl* which might have originated from the area of the ancient town of Haram.

The first who connected the biblical name *ʾăbîmāʾēl* with the Sabaean name *ʾbmʿṯtr* was Halévy (1885: 6–7); he thought, however, that both names contain the contracted form of the word for mother, *ʾm*, and are therefore to be interpreted respectively as "father of the mother of God" and "father of the mother of *ʿAttar*." The explanation of *ʾăbîmāʾēl* as "father of *māʾēl*" must likewise be rejected, since at such an early time no names are attested which are compounded with the element *ʾabû* (or *ʾăbî*) "father of," which later on became common among the Arabs. Another rejected interpretation is the comparison of the last part of the name, proposed for the first time by Bochartus (1674: 144–45), with the people or region *mali* mentioned by the Greek author Theophrastus (*Hist. Pl.* 9.4); this is, however, only a variant of *mamali*, the designation of the W Arabian mining region.

W. W. MÜLLER

ABIMELECH (PERSON) [Heb *ʾabîmelek* (אֲבִימֶלֶךְ)]. Two or three persons in the Hebrew Bible bear this name.

1. A king of Gerar mentioned in Genesis 20 and 26:1–33. He is tied to the patriarchal narratives with regard to their pastoral nomadic activities and the fear Abraham and Isaac display whenever entering the political domain of a powerful ruler. Each enter Gerar, between Kadesh and Shur, seeking pasturage and water. They obtain both through the use of the "Wife-Sister" deception in which the patriarch, to save his life, hides his true relationship with his wife (note the first use of this motif in Gen 12:10–20, where the Pharaoh is the dupe). Once the king has mistakenly taken the patriarch's wife, Yahweh's displeasure is aroused against him and his people. Subsequently, Abimelech returns the wife to her husband, and is forced (through embarrassment and fear) to grant to him, in the form of a parity treaty, grazing rights and the use of wells within his territory.

The fact that this preliminary episode is found in both the Abraham and Isaac narratives suggests a literary doublet. It is possible, however, that the name "Abimelech," like Pharaoh, is simply a throne name used by all kings of Gerar. Thus whenever the "Wife-Sister" deception is used, it is applied to a

different ruler, but for the same reason, as a measure of self-defense by an immigrant against a powerful, indigenous ruler.

One additional problem in the Abimelech stories is found in Gen 26:1, where he is referred to as the "king of the Philistines." This is generally explained as an anachronism since the Philistines did not inhabit the area around Gerar until after the Sea Peoples' invasion of the Near East (*ca.* 1200 B.C.E.). Van Seters (1975: 52), however, takes this as evidence of the lack of historicity in the narrative, while Wiseman (1980: 150) points to the Gerarites as part of a settlement of Philistines prior to the mass invasions of the 13th century.

2. The name "Abimelech" also appears in the superscription of Psalm 34. The writer is either using the name as a generic title for all Philistine kings, or perhaps has confused Achish of Gath (1 Sam 21:10–15) with Ahimelech of 1 Sam 21:2.

VICTOR H. MATTHEWS

3. One of the sons of Jerubbaal who administered the central hill country (and by dint of conquest—Judg 8:1–17—Gilead) in the aftermath of their father's demise. The historian equates Jerubbaal with Gideon, and although the equation has often been questioned (e.g., Richter 1963: 157–67), the absence of any obvious reason for the historian to have inferred it (he could simply have introduced Abimelech as a filibuster) suggests that the equation was already traditional.

The name "Abimelech" means "the (divine) king is my father," and is of a type attested in Israel as well as its environs: cf. Ahimelech ("the king is my brother"; Old Palestinian variant Abimelech) in 1 Sam 21:2–9 (> Ps 34:1; 52:2); 22:10–16; 23:6; 26:6; 30:7; Abimilki, king of Tyre in the Amarna archive (EA 146–55); and the Philistine king Abimelech in Gen 20:2–18; 21:22–32; 26:1–26, where the name is evidently retrojected. It has no necessary monarchic overtones; but it is interesting that the earliest "king" in Israelite memory should have such a name, and it is possible that it is in fact a throne name.

Abimelech persuades the men of Shechem to prefer his personal kingship over the oligarchy of Gideon's sons. Killing his brothers, therefore, he enters into a covenant of kingship (9:5–21), characterized by a fable drawing on the normal topoi of Near Eastern royal apology, and sealed by the ordinary ceremony of blessings and curses (see Halpern 1978: 92–96). Abimelech resides in "*trmh*" (9:31; cf. Dossin 1957), probably identical with the "*ʾrmh*" of 9:41 (by interchange of *t* and *ʾ*), or Khirbet el-ʾUrma, about 7 km SE of Shechem (*WHJP* 1/3: 319 n. 56). Shechem's acceptance of his sovereignty makes him master of the central hills.

During Abimelech's reign, the Shechemites prey upon the trade routes leading through their territory (9:25), and sedition comes to the town (9:27–29). The name of the instigator, Gual (with Josephus) ben-Ebed, is probably invented—it means "despised, son of a slave." Abimelech's principal there is also named as in a folktale, Zabul ("prince," "magnate"). Zabul informs Abimelech that Gual plans to march from the temple of Baal/El Berit ("the lord/god of the covenant"), which was outside the town (9:46–49), in the aftermath of the feast of the vintage, and to lay siege to Shechem, the acropolis of which, at least, Zabul held (9:31–33). Abimelech therefore sets four ambushes in the field, and as Gual takes the field, his forces descend from all directions (those to the E are first confused with shadows, which, with 9:48, may have inspired the use of Burnam Wood in Macbeth). They worst Gual, who during the night is expelled from the town. The next day, therefore, Abimelech ambushes Gual and assaults and demolishes Shechem, and the "temple of El Berit" (9:30–49).

A similar action at Thebez (for an identification with Tirzah, see *WHJP* 1/3: 320 n. 61) ends in Abimelech's demise. Abimelech drives the defenders from the lower city to the citadel, and dies while attempting to burn the citadel. The manner of his death is proverbial—David cites it in 2 Sam 11:21: he is

crushed by a grindstone a woman drops from atop the wall (9:50–54). The short flirtation with kingship ends just after it begins, and it is another century before monarchy is reintroduced in the hills.

The tradition concerning Abimelech is to be dated quite early (see Halpern 1978; Rösel 1983, both with bibliography), although different critics identify various pieces of the textual formulation as deriving from later retelling (see Soggin *Judges* OTL, 163–66). In any case, the archaeological record at Shechem dovetails nicely with the story: the site was apparently abandoned after a destruction in the mid-12th century B.C.E. (Wright 1967: 365–66; Campbell 1976: 41), its reoccupation in the 10th century B.C.E. coinciding with the return of a monarchic government (Shechem commands the interior trade routes of Ephraim and Manasseh, and is a natural seat of government for the region N of Jerusalem). The reference in 2 Sam 11:21 to Abimelech's death is generally understood to be a token of an early composition. And Abimelech campaigns for the kingship of Shechem with the slogan that he is their "flesh and blood" (9:2)—that is, he qualifies to be their king because he is their kin. This expression, which must be linked to the insistence on endogenous kingship in Deut 17:14–16, appears elsewhere only in 10th century B.C.E. contexts, principally in connection with David (2 Sam 5:1–3; cf. 1 Chr 11:1–3; 12:23–40; and 2 Sam 19:11–13; note the transformation in J in Gen 2:23–24; 29:14, where Jacob ends by "serving" his kinsman). The slogan that repudiates the claim to kinship and kingship is "Who is Abimelech?" (9:28)—denouncing the claimant as a stranger. It, too, is used only in 10th century B.C.E. contexts, or in connection with 10th century figures (1 Sam 25:10; 2 Sam 20:1; 1 Kgs 12:16; see *BAR* 3: 170; Buccellati 1967: 100). Furthermore, it may be that the later historian misunderstood this tradition—which would be evidence that he inherited it: Abimelech becomes the son of Gideon's Shechemite concubine (Judg 8:31), i.e., a brother Shechemite, rather than a brother Israelite.

Finally, the memories of fighting at the city gate, differences between lower cities and citadels, dealing with citadels by burning them down, and socioethnic distinctions in Shechem all bear the mark of authenticity. The Shechemite depradations on the trade routes also probably reflect premonarchic reality (and cf. Judg 5:6). A 10th century B.C.E. date for the oldest version of the tale is the latest possible; the tradition itself probably extends at least into the 11th and perhaps into the 12th century B.C.E. It is possibly one of the oldest historical traditions Israel has preserved.

BARUCH HALPERN

ABINADAB (PERSON) [Heb *ʾăbînādāb* (אֲבִינָדָב)]. The name of three individuals. It means "my father is noble."

1. The father of Eleazar, Uzzah, and possibly Ahio, if the latter is a proper name and not a reference to Eleazar "his brother" (1 Sam 7:1; Sam 6:3, 4; 1 Chr 13:7). The men of the Gibeonite enclave town of Kiriath-jearim are reported to have moved the ark from Beth-Shemesh to "the palace/temple of Abinadab on the hill" (1 Sam 6:19–7:1) at the request of the latter group. Abinadab's son Eleazar is said to have been consecrated as priest to have charge of the ark (1 Sam 7:1). The context suggests that the ambiguous Hebrew term *bêt,* which can mean simply "house," but also "palace" or "temple," here refers to a temple or place complex containing a temple. Since it is unlikely that the townspeople would have moved the ark to the home of a common citizen for safekeeping, and in light of the purported need to seek out someone who could minister to Yahweh appropriately (cf. Klein *1 Samuel* WBC, 60), without invoking divine wrath (1 Sam 6:19–20), it is likely that Abinadab was himself a well-known priest.

Abinadab need not have been a priest in Kiriath-Jearim; he could have been the high priest for the entire Gibeonite enclave, connected to the enclave's main sanctuary. Kiriath-jearim was one of four cities in the

Benjaminite territory that formed a separate Hivite enclave. The main city of the enclave was Gibeon, and the remaining two were Chephirah and Beeroth. If the main goal of the author was to have the men of Beth-Shemesh turn the ark over to members of the neighboring Hivite enclave, it would have been natural to have them contact the closest Gibeonite city, Kiriath-jearim. It does not necessarily follow, however, that the men from the latter town are to be understood to have taken the ark home; it would have been more natural for them to have delivered it to the main Gibeonite sanctuary.

By having the men of Beth-Shemesh call out the nearest members of the Gibeonite enclave to remove the ark to their territory to deal with the wrathful Yahweh, who had just slain seventy of their men for looking into the ark, the biblical writer has indirectly implied that the Gibeonites would have known how to assuage the deity connected with the ark. The logical implication is that Yahweh was at home among the Gibeonites. An alternative understanding would see the choice of Kiriath-jearim to be based on the site's nodal point as the boundary between Judah, Benjamin, and Dan. Kiriath-jearim, Beth-Shemesh, and Ekron, the three reported stopping places of the ark on its return journey from Philistia, all occur in the Judahite boundary list in Josh 15:9b–11a, suggesting that the author of the narrative in 1 Sam 6:19–7:2 wanted to emphasize the ark's return within the boundaries of Judah, so linking it closely to the later tribe (Blenkinsopp 1969:147–48).

The "hill of Abinadab" is identified as KIRIATH-JEARIM in 1 Sam 7:2, compared to BAALE-JUDAH in 2 Sam 6:2. Both seem to be later glosses (Blenkinsopp 1969:156). The conflicting traditions are harmonized elsewhere in the Bible by equating the latter two names (Josh 15:9; 18:14; 1 Chr 13:6). Baale-Judah might itself be an artificial hybrid created by equating the town of Baalah (Josh 15:9; 1 Chr 13:6) with Kiriath-jearim (Blenkinsopp 1969:146; Mazar 1960:66). The site of "Abinadab's hill" is commonly linked with the place name "Gibeat-Kiriath (Jearim)" in the list of Benjaminite cities in Josh 18:28, although the final element in the name ("jearim") must be restored to the reading on the basis of purported haplography. It has been proposed that the Hill was the older Hivite-turned-Benjaminite town as opposed to the later Judahite settlement built on the adjoining hill (Aharoni 1959: 229), or simply a particular quarter of the city (McCarter *1 Samuel* 137).

An alternative identification of "Abinadab's hill" can be made on the basis of historical consideration. The ark almost certainly played a central role within Saul's national cult, a fact that led David to move it to his new capital at Jerusalem. As the site of the ark prior to David's reign, it is plausible to conclude that "Abinadab's hill" is an oblique reference to the religious capital of Saul's state. Textual tradition (esp. 1 Kings 3–9 and 2 Chronicles 1–2) tends to indicate that the great *bāmâ* sanctuary of Gibeon served as Saul's religious capital (Schunk 1963: 131–38; Blenkinsopp 1974; Edelman 1990). It has been suggested that the actual sanctuary might have been located southwest of Gibeon proper on the height of Nebi Samwil (see bibliography cited in Blenkinsopp 1969: 151, n. 32; Edelman 1990). No Iron I remains have been detected from surface survey, however, so the latter proposal remains conjecture (Kallai 1972: 185–86).

2. The second son of Jesse and older brother of David (1 Sam 16:8, 1 Chr 2:13). He is reported to have been a soldier in Saul's army along with his brothers Eliab and Shamma. The three are said to have been among the Saulide forces at the battle against the Philistines in the Elah Valley, when Goliath was killed (1 Sam 17:13). David is depicted as having been sent by his father to deliver the three older brothers provisions while in camp during this confrontation, providing the biblical writer a motive for David's presence at the time of the battle and his eventual reported slaying of Goliath. Since a variant tradition in 2 Sam 21:19 reports that Elhanan son of Jaareoregim the Bethlehemite slew Goliath, the historical reliability of the narrative account in 1 Samuel 16 is doubtful (for bibliography, see Klein *1 Samuel* WBC, 268). Nevertheless, it is conceivable that Abinadab and his two brothers had been present at the battle where Goliath was killed, as members of Saul's professional military forces (1 Sam 14:52).

3. A son of Saul, probably the fourth-born son and sixth child born to Ahinoam, who died in battle alongside his father and two brothers, Jonathan and Malchishua, on Mt. Gilboa. He and his brother Eshbaal do not appear in the two-generation Saulide genealogy in 1 Sam 14:49, but both are named subsequently in the fourteen-generation genealogy in 1 Chr 8:33–39; 9:39–44. The logical conclusion is

that they were both born after the first list was made. Abinadab must have been in his early twenties when he died, since he was eligible for military service, but apparently had not yet married or had any children. According to Num 26:2, 4, the military draft began at age twenty, although it is not certain whether this standard would have applied at the beginning of the monarchy. The age of marriage for ancient Israelite males, either for royalty or the common citizenry, is unknown.

4. For "son of Abinadab" (1 Kgs 4:11), see BEN-ABINADAB.

DIANA V. EDELMAN

ABINOAM (PERSON) [Heb *ʾăbînōʿam* (אֲבִינֹעַם)]. The father of Barak, the military leader summoned by Deborah the prophetess to lead the Israelites into battle against Sisera, commander of the Canaanite army (Judg 4:2, 6–7, 12). In the "Song of Deborah" (Judg 5:2–31), two out of the three occurrences of the name "Barak" (vv 1, 12) are identified by the patronym "Abinoam."

MARK J. FRETZ

ABIR. See NAMES OF GOD (OT).

ABIRAM (PERSON) [Heb *ʾăbîrām* (אֲבִירָם)]. **1.** Son of Eliab, a Reubenite, who with DATHAN, KORAH, and 250 leaders of Israel conspired against the exclusive leadership of Moses and Aaron in the wilderness (Num 16:1–40). The conspiracy ended when, in the aftermath of a ritual contest with Aaron, the earth "swallowed" the leaders and fire devoured the 250. The name is theophoric, meaning "the exalted one is (my) father" (same as Abram). In the LXX the name occurs as Abiron.

It is generally agreed that this narrative represents the later editing of two such independent conspiracy traditions. Owing to the interest of the postexilic priestly redactor, the dominant strand in the present text is that concerning the attempted encroachment of the Levite Korah upon Aaronide priestly rights. However, underlying the story of Abiram is a quite different conspiracy against Moses' political leadership attributable to the epic tradition (J). Here the concern is Moses' sole claim to be "prince" (*śar,* v 13) over the people. The reference to "putting out the eyes" of the conspirators (v 14) is not to be dismissed as a figure of speech (so Budd *Numbers* WBC, 187), but is to be understood as a typical punishment for political treason. Whereas the Korah tradition ended in conflagration (a case of the punishment matching the offense), the theme of the earth swallowing the conspirators is at home in the Dathan-Abiram tradition. This earlier form of the tradition lies behind both Deut 11:6 and Ps 106:17. If Ps 106:17 predates the present form of the story in Numbers, then the mention of fire in the psalm could account for the development of the "Korah" tradition. That the tradition in the psalm is early is suggested by the fact that it places the conspiracy prior to both the apostasy at Horeb and the aborted invasion of Canaan, clearly out of synchronization with the present form of the narrative. The story of Abiram is often understood as a reflection of the loss of prestige by the tribe of Reuben following the period of settlement.

2. The firstborn son of Hiel of Bethel, the man who rebuilt the city of Jericho in the days of Ahab (1 Kgs 16:34). The text suggests that Abiram was offered by his father as a sacrifice at the laying of the foundation in order to effect the successful completion of the building program, just as his brother SEGUB was offered at its conclusion. The offering of such "foundation sacrifices" reflects a custom attested by archaeological discovery in which infants placed in jars have been found buried within the gate complex of a city. Whether the children were sacrificed or died of natural causes, the deuteronomist regards this action as the working out of the curse on Jericho spoken by Joshua in Josh 6:26 (Gray *Kings*

OTL, 334–35). He also links the episode to the evil deeds of Ahab, particularly Ahab's building projects. The rebuilding of Jericho is thus placed within the context of the deuteronomistic judgment on "the sins of Jeroboam" (1 Kgs 16:31).

RODNEY R. HUTTON

ABISHAG (PERSON) [Heb *ʾăbîšag* (אֲבִישַׁג)]. A beautiful young woman from Shunem whose parents are unknown (1 Kgs 1:1–4). Her name, with the epithet "the Shunammite," occurs five times in the succession narrative in 1 Kgs 1–2 (1:3, 15; 2:17, 21, 22). Seeking a young maiden to attend the ailing king, David's servants locate Abishag "the Shunammite," who is "very beautiful." They bring her to David, but David "knows" her not (vv 3–4). Aside from a brief note about her ministering to David (1:15), nothing more is heard about Abishag until after David's death. Adonijah (Solomon's brother) asks Bathsheba to intercede with Solomon on his behalf. The purpose of this intercession is to secure Abishag as Adonijah's wife (2:16–18). Bathsheba does as Adonijah requests, but Solomon replies, "Ask for him the kingdom also …" (2:19–22) and has Adonijah put to death (2:24–25).

Attempts to reconstruct the historical Abishag focus on her relationship to David, the nature of her activities in David's court, and the political significance of Adonijah's request and Solomon's refusal.

Abishag's relationship to David is defined by her function in court. Commentators have alternatively suggested she was David's nurse (Montgomery *Kings* ICC, 72), his concubine (Gray *Kings* OTL, 77), or his queen (Mulder 1972: 43–54). The issue is whether Abishag's job was to cure or to test David. If Abishag's primary task was to cure him, then she is best likened to a nurse. Her actions constitute a kind of "contactual medicine" whereby the warmth of a beautiful young maiden was imbued—through contact—to an aging body. Both Josephus (*Ant* 7.14.3) and Galen (cited by Montgomery *Kings* ICC, 72) attest the practice. If, however, the issue was not David's health but his ability to rule, then Abishag's presence is better explained in terms of a test. The king's authority (and the nation's future) corresponded to his virility (Gray *Kings* OTL, 77). Abishag's presence "tests" the elderly David's sexual prowess. His failure to "know" Abishag (1:4) indicates his failure as king and precipitates the fight for succession which follows. If Abishag's function was to test David's virility, then it is possible she was admitted into David's harem either as concubine or wife.

After David's death, Adonijah's request for Abishag became the catalyst for his own death. What motivated this request and why did Solomon refuse? What was Abishag's political significance? Assuming Abishag was part of David's harem, Adonijah's request can be interpreted as an attempt to seize Solomon's throne. Since the appropriation of a king's harem appears to be tantamount to a bid for the throne itself (cf. 2 Sam 3:7ff.; 16:21ff.), the possession of Abishag as wife would be politically significant. One could argue, however, that Adonijah would have been a fool to make such an open bid. Instead, his request might have reflected nothing more ambitious than his desire for Abishag. Regardless of Adonijah's motives, however, Solomon chose to interpret his request as a direct threat (2:22). One can only speculate as to Solomon's reasons for this move. Either Solomon intentionally misunderstood Adonijah's motives; Adonijah did attempt to seize the throne; the whole accusation was a figment of Solomon's paranoid imagination (Gunn 1978: 137 n. 4); or Solomon realized Abishag—as witness to Bathsheba's conspiracy (cf. 1:15)—could be dangerous wed to his rival (Sanda, cited in Montgomery *Kings* ICC, 79).

Aside from historical considerations, the story and characterization of Abishag have been the object of recent literary analysis. David Gunn traces the political (David as King) and the personal (David as Man) themes found in the story of David and sees both converging in the story of Abishag. David's impotence as a man is echoed by his impotence as a ruler (Gunn 1978: 90–91). Adele Berlin accepts Gunn's observations, but focuses on the characterization of Abishag. For Berlin, Abishag is neither a fully developed character like other women in David's story (cf. Michal, Bathsheba), nor is she a stereotypical character (cf. Abigail). Rather, Abishag functions as an agent—a character about whom little is known

that is not necessary for the plot. The reader knows Abishag only through the eyes of the narrator or the other characters in the story. Thus Abishag is the "younger woman" to Bathsheba, a token of kingship to Solomon, and a symbol of impotence to David (Berlin 1983: 23–33).

LINDA S. SCHEARING

ABISHAI (PERSON) [Heb *ʾăbîšay* (אֲבִישַׁי)]. One of the three sons of Zeruiah, David's sister (1 Chr 2:16; 2 Sam 17:25; see ZERUIAH). These men belonged to David's "inner circle" and presumably had served as his advisors and retainers since his early days as a fugitive from Saul (1 Sam 22:1).

The name Abishai is of obscure origin. It may be based on a theophoric element in a nominal clause, meaning something like "Father (Heb *ʾab-;* i.e., the god) is a gift (Heb *šay*)." It is also possible that the second particle is a shortened form of a longer three-radical root such as *šālôm,* in which case Abishai would be the equivalent of Absalom/Abisalom (see NAMES, HYPOCORISTIC). A third possibility is that Abishai is the Hebrew form of the Egyptian name *A/Ibša* (*AOT*², 51; cf. LXX *Abessa*) or the Akkadian name *Ibašši (-ilum).*

Abishai, who served as one of the chiefs of DAVID'S CHAMPIONS (Heb *šālišîm;* RSV: The Thirty; 2 Sam 23:8–39), is depicted as intensely combative toward the enemies of David, especially Saul (1 Sam 26:6–9) and Saul's kinsman Shimei (2 Sam 16:9–11). The narrator also implicates Abishai in the murder of Abner, the son of Ner (Saul's cousin and commander of the army) by his brother JOAB (2 Sam 3:30). Still, no mention of Abishai's complicity in this act is made in the account of Abner's death (2 Sam 3:20–27), in David's curse upon the perpetrator (2 Sam 3:29), or in David's avenging of this deed (1 Kgs 2:5–6).

Abishai is also credited with having saved David's life during the Philistine wars when he struck down Ishbi-benob, one of the descendants of the Rephaim (2 Sam 21:16–17). Thus, he was a valiant warrior about whom heroic tales were told—the true mark of a great warrior in ancient society. (Examples from Greek legend are Achilles, Ajax, Diomedes, and Odysseus at Troy.) Indeed, David appears to have retired from active military service as a result of this incident, so that the sons of Zeruiah, Abishai and Joab, appear as the leaders of David's army in the campaigns from the time of the Ammonite wars (2 Samuel 10–11; 12:26–31) on. According to 2 Sam 23:18–19, Abishai was commander of the *šālišîm* (RSV: The Thirty), an elite corps of renowned warriors within David's private army. This position gave Abishai a command in the army second only to his brother, Joab, the commander-in-chief. Abishai served in this capacity during the Ammonite wars and in the revolt of Absalom (2 Sam 18:1–5). Prior to the revolt of Sheba ben Bichri, however, David had removed Joab from his command (probably for killing the rebel Absalom against the king's express orders), so that Abishai initially appeared as the commander of the Cherethites and Pelethites in that conflict (2 Sam 20:6–7). By the end of the campaign, Joab returned to his command after killing the tardy Amasa. Thus, not only was Abishai one of David's warrior elite, but he served as second-in-command of the army after Joab, probably because of his status as commander of the *šālišîm* (although this status is not mentioned in the summary lists of David's officials: 2 Sam 8:15–18; 20:23–25).

Because Abishai generally appears working closely with his brother Joab, his absence from the intrigue surrounding the selection of David's successor is remarkable (1 Kings 1–2). A logical explanation for this absence is that Abishai by this time was dead. Certainly, had he been alive, he would have lent his support to the cause of Adonijah, whom Joab had backed in place of Solomon. Indeed, David's warrior elite is depicted as supporting Solomon, and Joab's nemesis emerges in the figure of Benaiah ben Jehoiada, another of David's warrior elite who is variously described as commander of the foreign mercenaries (the Cherethites and Pelethites; 2 Sam 8:18; 20:23) or commander of the bodyguard (the *mišmaʿâ;* 2 Sam 23:23). Since Abishai had commanded the foreign mercenaries during the revolt of Sheba (2 Sam 20:7), it

is likely that Benaiah was a latecomer to this position (Benaiah's most prominent role was as commander of the army under Solomon). It is perhaps not too bold to assume that Abishai had died prior to the attempt to crown Adonijah, necessitating the promotion of Benaiah. Abishai's departure from his accustomed command allowed for the entry of Benaiah into the drama surrounding Solomon's succession and guaranteed the victory of Solomon's party, and eventually, Joab's death.

Yet Abishai plays more than an historical role within the Davidic narratives: along with his brother, Joab, he is made a violent foil for the pious David. Thus the impetuous Abishai accompanies David into Saul's camp at night and urges David to let him kill the sleeping monarch (1 Sam 26:6–12). David righteously restrains the warrior, however, refusing to put his hand forth against the Lord's anointed. A further incident occurs in the murder of Abner. Although Abner's murder by men who are, after all, David's henchmen appears all too convenient to modern observers, the narrator seeks to exculpate David in the matter and lays the blame squarely on the heads of Joab and Abishai (2 Sam 3:30). Again David stands forth as the righteous man who refuses to shed the blood of the innocent and *who rejects stealth in killing,* while Joab and Abishai are portrayed as treacherous murderers (note the threat to kill Saul while he sleeps, and the slaying of Abner under the pretense of friendship). David says of Abner's death, "as one falls before the wicked you have fallen." Abishai appears as a foil a third time when David and his followers are abandoning Jerusalem in the face of Absalom and his rebel army (2 Sam 16:5–14). A man of the house of Saul, Shimei ben Gera, meets David and his retainers and curses them:

> Begone, begone you man of blood, you worthless fellow!
> The Lord has avenged upon you all the blood of the house of Saul, in whose place you have reigned.
> And the Lord has given the kingdom into the hand of your son Absalom.
> See! Your ruin is upon you—for you are a man of blood. (2 Sam 16:7–8)

Shimei's curse highlights a major *Tendenz* of the Davidic narratives: David's burden of guilt for his hand in the death of Saul and the extermination of Saul's line, and the writer's efforts to exonerate David in the matter. As in the camp of Saul, Abishai seeks David's permission to kill Shimei on the spot. David again refuses, rebuking Abishai and implying that Shimei has a right to curse him. Furthermore, David appeals to the Lord to look upon him in his affliction, and to repay him with good for this cursing. The impression thus created is that the sons of Zeruiah (who are addressed collectively here, though it is only Abishai who acts) are ruthless men of blood. Conversely, David righteously rejects even that claim upon his enemy's life and person which normally would have been granted him. Seen in this light, David emerges as the Wisdom tradition's paradigm of the righteous man who leaves vengeance in the hands of the Lord and does not put forth his hand in violence. Joab and Abishai are, conversely, the paradigmatic violent men—men of blood, ruthless and unrestrained in their wickedness. While Abishai fulfills this archetype in several instances, the final curse falls upon Joab, who is said to have avenged "in time of peace blood which had been shed in war," and to have put "the blood of war upon the girdle about his loins and upon the sandals on his feet" (1 Kgs 2:5, MT; *contra* RSV "*my* loins," "*my* feet"). It is precisely the juxtaposition of these two archetypes—the righteous man who will not put forth his hand to shed blood versus the wicked who is only too quick to draw his sword—that allows the author (or authors) of the Davidic narratives to place the blame for the blood shed under David (especially that of Saul's house) upon his nephews and loyal retainers, the sons of Zeruiah.

Thus two pictures of Abishai emerge from the Davidic narratives. As an historical figure, Abishai was probably one of David's staunchest supporters, a member of the king's own family who had probably been with him since his days as an exile from Saul in the Judean wilderness (1 Sam 22:1–2). As a literary figure, Abishai, along with his brother Joab, provides a violent foil for the self-renunciatory David, who will not lift his hand in to harm either his enemy, Saul, Saul's kinsmen, Abner and Shimei, or even his own rebellious son, Absalom.

D. G. SCHLEY

ABISHALOM (PERSON) [Heb *ʾăbîšālôm* (אֲבִישָׁלוֹם)]. See ABSALOM (PERSON).

ABISHUA (PERSON) [Heb *ʾăbîšûaʿ* (אֲבִישׁוּעַ)]. **1.** A high priest of the tribe of Levi and grandson of Eleazar (1 Chr 5:30–31—Eng6:4–5; 6:35—Eng6:50). In the post-exilic Jewish community, Ezra's authority was legitimized by proof of descent through the high priest Abishua (Ezra 7:5; 1 Esdr 8:2; 2 Esdr 1:2). Wilson (1977) notes that this is one of the functions of genealogical lists; sometimes these lists simply function to legitimize the positions of important individuals, rather than to transmit all the names of that person's ancestors and/or descendants.

2. A son of Bela the Benjaminite (1 Chr 8:4). This Abishua appears only in this extended genealogy of Israel (1 Chronicles 2–8), which also identifies tribal locations within Palestine.

MARK J. FRETZ

ABISHUR (PERSON) [Heb *ʾăbîšûr* (אֲבִישׁוּר)]. One of two sons of the Judahite Shammai, a descendant of Hezron (1 Chr 2:28–29). Abishur, his wife Abihail, and his two sons appear in an unparalleled list of Jerahmeel's descendants (1 Chr 2:25–33) contained within the Chronicler's larger genealogy of Israel (1 Chronicles 2–8).

MARK J. FRETZ

ABITAL (PERSON) [Heb *ʾăbîṭāl* (אֲבִיטָל)]. The mother of Shephatiah and a wife of King David (2 Sam 3:4 = 1 Chr 3:3). Abital's name occurs in two lists of sons born to David at Hebron. In one case (2 Sam 3:2–5), this list is inserted within the narrative concerning the strife between the houses of Saul and David; in the other case, its parallel (1 Chr 3:1–4) forms part of a larger genealogy of Israel (1 Chronicles 2–8).

MARK J. FRETZ

ABITUB (PERSON) [Heb *ʾăbîṭûb* (אֲבִיטוּב)]. A son of Shaharaim the Benjaminite by Hushim, one of the two women whom Shaharaim subsequently sent away while he was living in Moab (1 Chr 8:8–11). The textually questionable MT refers to Hushim and Baara as "his (Shaharaim's) women" (Heb *nāšāyw*), but then calls Hodesh "his wife" (Heb *ʾištô*). Also, the children of the wife Hodesh are distinguished by the designation "heads of fathers' houses" (1 Chr 8:10), and are listed before the sons of the woman Hushim, who are simply named Abitub and Elpaal. Moreover, the text lists the descendants of Elpaal (1 Chr 8:12), but does not mention Abitub again, which may indicate Abitub's relative unimportance or else the author's disfavor of this son of Shaharaim.

MARK J. FRETZ

ABIUD (PERSON) [Gk *Abioud* (Ἀβιουδ)]. The son of Zerubbabel and father of Eliakim, according to Matthew's genealogy tying Joseph, the husband of Mary, to the royal house of David and Solomon (Matt 1:13). The name "Abiud," however, occurs neither in Luke's parallel genealogy of Joseph's ancestors (Luke 3:23–38), nor in the OT list of Solomon's descendants (1 Chr 3:10–24). This paradox has yielded no easy explanations. Kuhn (1923), for example, noted that the Chronicler lists a "HODAVIAH" (Heb *hôd-awyāhû*) as a descendant of Zerubbabel (1 Chr 3:24), and that the Heb form *hôdîyâ* "HODIAH" is frequently confused with this term (1 Chr 4:19; Neh 10:10). He then suggests that Matthew's *abioud* represents Heb *ʾăbîhûd,* and that *ʾăbîhûd* resulted from a combination of *ʾby* and *hwdyh* in the (unattested) phrase *zrbbl ʾby hwdyh ,* "Zerubbabel (was) the (fore)father of Hodiah," a phrase which perhaps telescopes the genealogy by conveniently leaping over all the names between Zerubbabel and Hodaviah/Hodiah. Kuhn believes that this "Hodiah" (Heb *hōdîyâ*) is rendered in Luke's parallel genealogy (3:26) as "JODA" (Gk *iōda*). Gundry (1982: 17) takes a less direct approach: he suggests that Matthew noted the name "Eliezer" in Luke's genealogy (3:29) and was reminded of the priestly lineage of

Aaron (1 Chr 5:29—Eng 6:3), whose sons' names included a similarly spelled Eleazar and Abihu (MT *ʾăbîhûʾ*, but LXX *abioud*). Gundry proposes that Matthew mistakenly believed that LXX *abioud* represented Heb *ʾăbî yĕ-hûd (â)* ("My father is Judah"), and that he lifted the name from its priestly context and inserted it into the genealogy of Joseph to help underscore his Judaean royal lineage.

MARK J. FRETZ

ABNER (PERSON) [Heb *ʾabner* (אַבְנֵר)] Var. ABINER. The son of NER and cousin of Saul ben Kish. The name means "father is Ner" or "father is a lamp." The variant form "Abiner" means "my father is Ner"; "my father is a lamp." Abner served as commander of the first national Israelite army during the reigns of Saul and Eshbaal (1 Sam 14:50, 17:55; 2 Sam 2:8 etc.). The circumstances of his appointment are not related in the biblical texts, but it was common practice in ancient times to place blood relatives in positions of trust. The importance of Abner's position is indicated by his being seated beside King Saul at the observance of the New Moon festival (1 Sam 20:25). His status as commander seems to have prompted the Chronicler to report that he had dedicated war spoils for the maintenance of the temple, alongside Samuel, Saul, and Joab (1 Chr 26:27–28). Since the temple of Jerusalem did not exist during the time of any of those named, the tradition should probably be seen to derive from the Chronicler's pious imagination.

By having Saul request Abner to find out David's identity after the youth confronted Goliath (1 Sam 17:55–58), the biblical writer introduces irony into his narrative and at the same time, provides a basis from which to explore the motifs of loyalty and treachery. As Saul's loyal and trusted servant responsible for the kingdom's security, Abner is made responsible for the first formal introduction of David, the divinely chosen successor to Saul, the divinely rejected king. In addition, Saul's request to discover David's identity leads Abner to establish formal ties to the youth who will become his rival both within the Saulide military ranks, and within the political arena, for control of the Saulide throne.

The narrative tradition in 1 Samuel 26 portrays Abner in the additional role of the king's personal bodyguard. It reports that Abner slept next to the king in the camp during the pursuit of David, with the army surrounding the two, for protection. After David allegedly infiltrates the Saulide camp by night, stealing the king's spear and water jug, David chides Abner for not having kept a close enough watch over Saul in camp.

The historical reliability of Abner's depicted role as Saul's personal bodyguard in 1 Samuel 26 is doubtful. 1 Sam 22: 14 reports that David had served as the commander of Saul's personal bodyguard before his flight from the Saulide court. It appears that Saul had established a separate elite corps of professional soldiers who were not an official branch of the professional army but were loyal directly to him. David had a similar group, known as The Thirty (2 Sam 23:18). Abner apparently served as commander of the regular Israelite forces but was not involved directly with the royal bodyguard, which was under the command of another officer. It might be possible to presume that Saul was unable to find a suitable replacement the ranks of his bodyguard after David's flight and appointed Abner interim commander of both groups. It seems more likely, however, that the depiction of Abner in 1 Samuel 26 is to be understood as shaped by literary rather than historical concerns. Perhaps the author wanted to contrast David's superior service in protecting the king prior to his flight from court with that of Saul's most trusted servant, Abner. In this way he could illustrate the theme of David's blamelessness before Saul and Saul's unfounded suspicion and rejection of David.

In the wake of the disastrous battle at Mt. Gilboa that left Saul and his three eldest sons dead, Abner took Saul's remaining son ESHBAAL and crowned him as the new king of Israel at Mahanaim, the district capital of Saulide holdings in Gilead (2 Sam 2:8–9). Eshbaal was probably a youth under twenty at the time of his coronation. It can be presumed that Eshbaal's kingship would have been acclaimed by the surviving troops accompanying Abner, commander of the Saulide forces, to Mahanaim. (The army

played a similar role, serving as a convenient quorum of assembled Israelite citizens, in the subsequent coronations of Omri [1 Kgs 16:16] and Joram [2 Kgs 11:4–12]). During Eshbaal's brief two-year reign, Abner continued to serve as commander of the national Israelite army.

Abner's first task as Eshbaal's commander-in-chief was to secure the town of Gibeon, which may have served as the Saulide capital (2 Kgdms 21: 1–9), against seizure by David (2 Sam 2:12–32). Engaging in representative combat with David's men, each side chose 12 men to fight and determine who would control the city. All 24 died, leading to a draw. In the wake of the fighting that ensued, Abner killed Asahel, the brother of JOAB, commander of David's forces (2 Sam 2:23). Both Asahel and Joab were David's nephews. Three hundred and sixty of Abner's men from Benjamin are reported slain in the ensuing melee, while only nineteen of David's men were killed (2 Sam 2:30–31). A desire to portray Judah as the stronger of the two, and as the unofficial victor, is evident.

According to 2 Sam 3:1, 6, during Eshbaal's 2-year reign, there was war between the house of Saul and the house of David, during which time Abner was making himself strong in the house of Saul. It seems that Abner decided to take advantage of Eshbaal's youth and inexperience in his effort to gain the Israelite throne. As the longtime commander of the Israelite forces, he would have had most of the army's support in his bid to replace Eshbaal. Abner made further attempt to usurp the throne by having sexual relations with Saul's concubine RIZPAH (2 Sam 3:7), for possession of the royal harem gave a person title to the throne (de Vaux 1965:115–19). David is later reported to have received Saul's wives when he became king over Israel (2 Sam 12:8). Likewise, Absalom asserted his claim to kingship in Jerusalem by erecting a tent on the palace roof and having sexual relations with the ten concubines whom David had left behind "to keep the house" when he fled to Gilead (2 Sam 15:16; 16:20–22). After his return, David put the ten concubines under guard in a separate house, where they were provided for but were left to live out their lives as if in widowhood (2 Sam 20:3).

The Bible reports that Eshbaal chastised Abner for his actions with Rizpah; in response, Abner vowed to set up the throne of David over both Israel and Judah, in fulfillment of the divine promise to David (2 Sam 3:9–10). To this end, Abner is said to have negotiated with David, with the consent and support of the elders of Israel and Benjamin, to make David king over Israel in place of Eshbaal (2 Sam 3:12–21). The course of historical events underlying the present narrative depiction may have been slightly different. Abner's negotiations with David may have taken place as part of a larger plan for a coup d'état, in which Abner sought David's help in accomplishing his coup in exchange for promised cooperation between the two neighboring states. The incident with Rizpah would have been an additional step in the planned coup. Alternatively, Abner may have offered to deliver Israel to David in exchange for a position as commander of the combined forces of Israel and Judah, thereby ousting Joab from his post as commander of the Judahite forces (Josephus *Ant* 7.1.5; Hertzberg *Samuel* OTL, 260; VanderKam 1980: 531; cf. Grønbaek 1971:234–42). The occurrence of some sort of collusion between David and Abner is indicated by David's later appointment of Abner's son Jaasiel to be the leader of Benjamin, after he succeeded Eshbaal to the throne of Israel (1 Chr 27:21).

During his negotiations with David, Abner was killed by Joab, David's commander, and Joab's brother Abishai, to avenge Abner's slaying of their brother Asahel at the battle at Gibeon. Upon learning that Abner had been conferring with David, Joab tried to convince David that Abner was acting as a spy on Eshbaal's behalf. Without David's knowledge, Joab sent messengers after Abner to have him return to Hebron, whereupon he slew Abner in the city gate while talking to him in private (2 Sam 3:22–30). In spite of the biblical apologetic, there is growing recognition that David was actively involved in Abner's murder, either directly in a murder plot with Joab; indirectly, through manipulation of Joab by allowing him to murder Abner as part of a standing blood feud; or independently in some unknown fashion covered up in the biblical account (i.e. Hertzberg *Samuel* OTL, 261; Lemche 1978: 16–17; VanderKam 1980: McCarter *2 Samuel* AB, 120–22; Cryer 1985: 392).

David cursed Joab and his father's house for the act of blood revenge, and had Abner buried in Hebron with a great display of public lamentation in order to convince both Judah and Israel that he had not plotted Abner's death (2 Sam 3:31–39). Ironically, Eshbaal's head would later be entombed with Abner's

remains (2 Sam 4:12) after his similar assassination, probably at David's command. David's brief dirge over Abner (2 Sam 3:33–34), written with the chiastic structure abb´a´, may artfully maintain the ambiguity of his cause of death by carrying over the initial interrogative *he* to the fourth line, rendering the answer to the initial question with a further question (Freedman 1987:127; cf. McCarter *2 Samuel* AB, 111).

ABODE OF THE DEAD. See DEAD, ABODE OF THE.

ABOMINATION OF DESOLATION. A phrase occurring in the OT book of Daniel (11:31, 12:11, and perhaps 9:27), in 1 Maccabees 1:54, and in the teaching of Jesus as recorded in the synoptic gospels (Matt 24:15, Mark 13:14; see GOSPELS, LITTLE APOCALYPSE IN). The phrase refers in Daniel and 1 Maccabees to the desecration of the temple by the pagan emperor Antiochus Epiphanes in 167 B.C.E. and in the teaching of Jesus to some analagous disaster which he anticipates.

A. Daniel and 1 Maccabees

1. The Hebrew Phrase in Daniel. There are a number of textual and translational difficulties in the three Daniel texts. Dan 11:31 is most simply translated: "And they shall set up the abomination making desolate" (*wĕnātĕnû haš-šiqṣ mĕšōmēm*). Dan 12:11 speaks of "the time … for the setting up of an abomination being/making desolate" (*lātēt šiqṣ šōmēm*). Dan 9:27 reads literally: "and upon wing abominations making desolate" (*wĕ ʿal kĕnap šiqṣîm mĕšō-mēm*), which may mean: "upon the wing of abominations shall come one who makes desolate" (so RSV), or if the participle "making desolate" is construed with the noun "abominations" (even though in our texts the participle is singular and the noun plural), the text may mean: "On a wing … he will set up an abomination causing desolation" (so NIV). The meaning of the "wing" in 9:27 is in any case problematic, being variously explained by scholars, e.g. as referring to the "pinnacle" of the Jerusalem temple, to the "horns" of the altar in the temple, and/or to the "wings" of Baal portrayed as an eagle or winged sun. Other commentators have suggested emendation of the text, e.g. reading "and in its place" or "on their base" (*wĕ ʿal kannô/kannām*). (On these possibilities see Daniel commentaries and Goldstein *1 Maccabees* AB, 147.)

Despite the uncertainty of such details, the overall sense of the passages in Daniel is clear and the same in all three passages (cf. also 8:13). They refer to the coming to Jerusalem of a pagan invader, who will forcibly end the traditional worship of the temple, as epitomized by the daily burnt offering, and who will introduce pagan worship ("the abomination of desolation") until the time of the end.

2. Antiochus Epiphanes. Almost all commentators, including those who question the scholarly consensus that Daniel in its present form is to be dated in the second century B.C.E., see in the Danielic "abomination" a reference to the profanation of the temple by Antiochus IV ("Epiphanes") in 167 B.C.E. The phrase in 1 Macc 1:54 refers quite explicitly to this event: "On the fifteenth day of Chislev, in the one hundred and forty-fifth year, they erected a desolating sacrilege upon the altar of burnt offering." Antiochus was ruler of the Seleucid empire, of which Palestine was a part, and he responded to an act of defiance on the part of the Jews by attacking Jerusalem and by seeking to abolish the practice of the Jewish religion. His most horrifying action was the desecration of the temple and the introduction there of pagan worship (i.e. "the abomination of desolation"). His action met with courageous resistance, inspired and led by the family of Judas Maccabeus. Against all odds, the Jews defeated the Seleucid armies and regained a significant amount of control of their own affairs, including of the temple; this was cleansed of

the "abomination" in 164 B.C.E., an event recalled ever after by the Jews in the feast of Hanukkah or Dedication (see MACCABEES, 1–2).

3. Further Observations. A number of further points about the Danielic "abomination" should be noted.

a. The unusual phrase "abomination of desolation" is commonly seen by scholars as a derogatory reference to the deity to whom Antiochus rededicated the Jerusalem temple. The new dedication was probably to Zeus Olympios (so 2 Macc 6:1), who may have been identified with, or at least given the Semitic name of, the Phoenician god *Baʿal šāmên* (= "Lord of heaven"). In order to avoid referring to the pagan deity directly, the author of Daniel parodies, substituting the term *šiqṷṣ* (i.e. abomination) for the name Baal (or Zeus) and the word *šōmēm* (i.e. desolating) for the consonantally similar *šāmêm* (i.e. of heaven). The term *šiqquṣ* is frequently used in the OT to designate something filthy or disgusting, and in particular idols; the substitution of this term for the name "Baal" can be compared to the use elsewhere in the OT of the word *bôšeth* ("shame") for Baal, as in the names in 2 Sam 4:1, 4, etc. (For a modification of this view, see Goldstein *1 Maccabees* AB, 143–52).

b. There is some doubt as to whether "of desolation" is the best translation for the relevant Hebrew word(s) in the Daniel texts. The Heb root *šmm* can have the sense of "being desolate," e.g., of deserted places; but it can also mean "to be appalled." The Greek versions of the OT opt for the first sense, using the verb *erēmoō;* but many modern scholars consider that the second meaning is more likely in Daniel, and that we should translate the whole phrase as "appalling sacrilege." It is possible, however, that the author of Daniel intended several connotations: the term may have been a parody of the name of the pagan god (see above), and may have suggested both the desolation brought to the temple (spiritual desolation at least), and the appalling nature of what had taken place; it is just possible that there is also an allusion to Antiochus' supposed madness, since the root *šmm* sometimes has this sense in postbiblical Hebrew (Rowley 1932: 265).

c. What form did the "abomination" set up by Antiochus take? A reading of 1 Maccabees (1:54,59) and of Josephus (*Ant* 12 §252) suggests that a pagan altar was erected on top of the altar of burnt offering in the temple. There is no explicit mention of an idol being erected, nor of one being destroyed when the temple was cleansed (1 Macc 4:43). However, the later Christian and Jewish tradition that a statue of Zeus was erected in the rededicated temple (perhaps also statues of Antiochus himself) may have some historical foundation. The phrase "abomination of desolation" could be a reference to such an unmentionable thing, or to some other stone structure(s) associated with pagan worship (Rowley 1953: 310–12; Goldstein *1 Maccabees* AB, 143–52). It has been suggested that Antiochus saw his rededication of the temple as the restoration of the original religion of the Jews rather than as the introduction of a new religion and deity; but whether this was his theory or whether he more simply saw himself as suppressing one undesirable and politically subversive religion and replacing it with something superior, the effect on the Jews was the same. (On Antiochus and his religious outlook, see Mørkholm 1966, and Goldstein *1 Maccabees* AB, 104–60).

d. The suggestion that the Babylonian creation myth with its account of Marduk slaying the chaos monster Tiamat has influenced the Danielic portrayal of the "abomination" is of interest (Heaton *Daniel* TBC, 92–96). However, while it is plausible to postulate connections between the Babylonian myth and the four sea beasts of Daniel 7 and then also with the "beast" of Revelation, it is not clear that the myth has contributed at all directly to the Danielic description of the abomination.

B. The Gospels and New Testament

The LXX translates the Danielic phrase "abomination of desolation" in 12:11 with the words *to bdelugma tēs erēmōseōs* (similar phraseology being used also in 9:26, 11:31; cf. *bdelugma erēmōseōs* in 1 Macc 1:54). Matthew and Mark use precisely this Greek phrase in their parallel accounts of Jesus' eschatological discourse (Matt 24:15; Mark 13:14). In speaking of the future, Jesus warns generally of sufferings to come, and then says particularly, "When you see the abomination of desolation standing where it ought not to be [so Mark; Matt "in the holy place"], then let those who are in Judea flee to the mountains …" The picture is of a disaster in Judea and of enormous and widespread suffering, to be

ended only by the coming of the heavenly Son of Man. Luke's parallel passage does not have the phrase "abomination of desolation," but says, "When you see Jerusalem surrounded by armies, then know that its desolation has come near" (21:20).

The synoptic "abomination" has been variously interpreted (for a survey of views see, e.g., Ford 1979: 158–69). Many scholars have linked it to specific events in the 1st century, for example to the crisis that occurred in Palestine in 39–40 C.E., when the emperor Caligula ordered that his statue be placed in the Jerusalem temple (an order not eventually implemented, thanks to the emperor's death), or to the events leading up to the destruction of Jerusalem in 70 C.E. More particularly some have identified the "abomination" with the disgraceful and bloody wrangling of the Zealots during the Jewish war (Jos *JW* 4 §196–207, 377–94, etc.), or with the Roman standards advancing on Jerusalem.

Other scholars have declined to see such historical significance in the phrase, preferring instead to interpret the "abomination" as the coming of an eschatological anti-christ figure, akin perhaps to the Pauline "man of lawlessness" and to the "beast" of Revelation. Others again have argued for a double reference to historical events in the 1st century and also to a future eschatological catastrophe.

To decide between such interpretations is a complicated task, entailing judgments about many related questions, e.g., about the history and authenticity of the traditions in question, about the respective dates of the synoptic Gospels, and about the nature of NT prophecy. And it may, of course, be that there are several interpretations of the "abomination" represented in the NT. However, a few further points may be noted.

1. The Origin of the Tradition. The Gospels ascribe the Christian "abomination" tradition to Jesus, but many scholars have questioned that attribution, arguing that the synoptic eschatological discourse contains a considerable amount of material that had its origin in the church (or even in Jewish tradition) rather than in Jesus' own teaching. They have argued on literary grounds for the composite nature of the eschatological discourse, and on theological and historical grounds for the tradition having its origin after Jesus' ministry, perhaps in the crisis situation provoked by Caligula in 39 C.E. This argument has been disputed by other scholars, who see the tradition as entirely congruous with other aspects of Jesus' teaching. (On the history of the discourse see commentaries, also Wenham 1984 for references.)

2. Background Considerations. In order to understand the NT use of the phrase "abomination of desolation," it is helpful, first, to be reminded of the historical and emotional importance of the Maccabean period and experience for the Jews of the 1st century C.E. It was natural for them to see parallels between their experience of Roman rule and the Maccabean experience of Seleucid rule and for them to regard the courageous stand of the Maccabees as an example and inspiration at times of tension or confrontation with Rome (even though there were differing views about what sort of resistance was called for). It was natural, too, for the Jews to be particularly sensitive to anything resembling the outrage perpetrated by Antiochus; thus, when Pilate ordered Roman legionary standards to be taken into Jerusalem, he was surprised by the massive outcry among the Jews (Jos *JW* 2 §175).

It is helpful, second, to recognize the importance of the book of Daniel within the Christian tradition of the NT period. It is not just the "abomination of desolation" that has a Danielic background, but also the tradition of the heavenly Son of Man, as now found in the Gospels; and it is possible that Jesus' kingdom teaching derives more from Daniel than anywhere else (Dan 2:44; 7:14, 27 etc.). It is hard to exaggerate the importance of Daniel for NT eschatology as a whole; Jesus' eschatological discourse in particular has been viewed as a midrash on Daniel (so Hartman 1966). The indebtedness of the NT to the book of Daniel is no doubt connected with the general interest of 1st-century Palestinian Jews in the Maccabean experience. That experience was seen as paradigmatic and prophetic.

Such an understanding is clear in Luke, who makes no reference to "the abomination," but who explicitly refers to "armies" surrounding Jerusalem, to the city's desolation, and then to the people being killed and taken captive, while the Gentiles trample the city. Luke's significant differences at this point from Matthew and Mark are often supposed to be a reflection of his post 70 C.E. standpoint; he has modified the Markan tradition in the light of his knowledge of the events and in order to distinguish clearly between the events of 70 C.E. and the eschatological coming of the Son of Man. Against this view

it has been argued that Luke's changes betray no specific knowledge of the events of 70 C.E., and that they could be simple clarifications of the obscure Markan wording, or even independent early tradition.

Although it is less obvious what Mark and Matthew intend when they refer to the "abomination of desolation standing," it is quite likely that Luke has correctly conveyed their meaning. Mark intriguingly has a masculine participle "standing" (*hestēkota*) with the neuter noun "abomination" (*bdelugma*), suggesting that he associated the awful event with an evil individual; he also refers to the abomination standing "where it ought not," whereas Matthew says more clearly "in the holy place." One possible explanation of Mark's obscurity is that he may have been writing at a sensitive time, when caution was appropriate; his gospel has often been dated to the period 66–70 C.E.. It is of interest to note that the Jewish writer Josephus sees Daniel's "abomination" as prophesying both the desolation of Antiochus and that perpetrated by the Romans (*Ant* 10 §276); the NT evangelists may have had the same understanding.

3. Concluding Observations on the Synoptic Phrase. If the Maccabean experience and the book of Daniel were so important in the 1st century C.E., then this is probably a clue that the NT "abomination" will have been understood by something analogous to the action of Antiochus, i.e., as an idolatrous attack on the people and temple of God by a powerful pagan force. The Gospels' own evidence supports the view that this was their understanding: Matthew specifically invites his readers to think back to Daniel (24:15), and it is possible that Mark's much debated "let the reader understand" is a similar invitation (13:14). All three evangelists include the injunction to those in Judea to "flee to the hills," a phrase reminiscent of 1 Macc 2:28 (cf. Matt 24:16; Mark 13:14; Luke 21:21). Luke has probable echoes of Daniel when he refers to the Gentiles treading down Jerusalem (Luke 21:24; cf. Dan 8:13).

Another clue to the evangelists' understanding of the abomination is the prediction of the destruction of the temple which in each Gospel precedes the eschatological discourse. Since the discourse, including the warning of the "abomination," is presented as explanatory of that prediction, there is a strong case for linking the setting up of the abomination with the predicted destruction of the temple (which is otherwise not mentioned in the discourse, unless the "coming of the Son of Man" is interpreted as a reference to that destruction). The picture, then, would appear to be of a major catastrophe, analogous to 167 B.C.E., but involving the profanation and destruction of the temple. The "desolation" in the synoptic phrase was probably understood literally.

4. Other Parts of the New Testament. Although the phrase "abomination of desolation" is not found in the NT outside the Gospels, the Danielic idea is probably reflected in the Pauline "man of lawlessness" in 2 Thessalonians 2, in the Johannine "Antichrist" of 1 John 2:18, 4:3, and in the "beast" of Revelation 13, 18. If we have in these different writings variations on a common eschatological theme and tradition, then 2 Thessalonians, if it is Pauline, is our earliest written contact with the tradition, showing it to be quite primitive. It may be that when Paul calls the lawless one "the man of perdition" or "of destruction," this is equivalent to the synoptic phrase "of desolation." But it is notable that both Paul and John, perhaps because they are writing in a Gentile context, describe the future evil in rather general religious terms without obvious political or military allusions (i.e., with no explicit reference to an attack on Jerusalem, though note Paul's reference to the man of lawlessness being in the "temple of God" and his remark about the Jews of Judea in 1 Thess 2:16), and also in terms of the appearance of an individual antichrist figure rather than in terms of an "abomination" being set up. It has been suggested that Paul was influenced in his thinking by Caligula's outrageous threat to the temple in 39–40 C.E., but his "man of lawlessness" is entirely explicable on the basis of the Danielic tradition. In Revelation the beast is clearly political in character, being the Roman empire, but the attack is now (after 70 C.E.?) not on the city of Jerusalem, but on the reconstituted people of God, i.e. the church.

ABORTION IN ANTIQUITY. Abortion, natural and induced, is attested as a legal matter as early as the mid-2d millennium B.C. This article will consider abortion and related topics in the OT and the Ancient Near East, in ancient Judaism, the Greco-Roman world, and in early Christianity.

D. Conclusion

———

A. Abortion in ANE Law and the OT

With the exception of the Middle Assyrian Laws (ca. 1600 B.C.), the earliest Near Eastern law codes (including the legal materials in the OT) do not deal with the willful destruction of the fetus with the consent of the mother, but mention only natural miscarriages caused by a blow from another party. According to the injunctions outlined in the Middle Assyrian Laws, if a woman has had a miscarriage by her own act, when they have prosecuted her (and) convicted her, they shall impale her on stakes without burying her (Middle Assyrian Laws 53, in *ANET* 185). This code further directs that if the woman dies in the process of inducing the abortion, her body will still be impaled (as a kind of poetic justice) and will be denied burial.

Several of the law codes of the Ancient Near East, the Code of Hammurabi (ca. 1950 B.C.), the Lipit-ištar Laws, the Sumerian Laws (ca. 1800 B.C.), the Hittite Laws (ca. 1300 B.C.), as well as the Middle Assyrian Laws contain stipulations providing for compensation when a woman has been caused to miscarry because of a blow that she received from another person, thus providing at least indirect evidence concerning the status of the fetus in these societies. The Code of Hammurabi directs that if a seignior [a man of rank or authority] struck a (nother) seignior's daughter and caused her to miscarry, he shall pay ten shekels of silver for her fetus. If that woman has died, they shall put his daughter to death (Code of Hammurabi 209–10, *ANET,* 175). The Code of Hammurabi further provides for compensation for miscarriages caused to the daughter of a commoner and of a female slave. In each of these cases the penalty is commensurately smaller: the miscarriage of the fetus of a commoner's daughter is assessed at five shekels of silver, while her death must be compensated by a half mina of silver; causing the miscarriage of a female slave was fined at two shekels of silver, while the one causing her death was obliged to pay one third of a mina of silver (Code of Hammurabi 211–14). The Sumerian Laws (4.1–2, *ANET* 525), the Lipit-ištar Laws (iii.2′–5′, 7′–13′; Civil 1965: 5), and the Middle Assyrian Laws (21, 50–52, *ANET* 181, 184–85), contain provisions similar to those in the Code of Hammurabi, although the penalties in the Middle Assyrian Laws are somewhat more stringent: the man causing the miscarriage by his blow must compensate for her fetus with a life. Further, in both the Lipit-ištar and Middle Assyrian Laws, if the woman dies, the man himself will be put to death (Lipit-ištar iii.7′–8′, Civil 1965: 5; Middle Assyrian Laws 50, *ANET* 184). The Hittite Laws provide a further refinement: the fine assessed for a miscarriage caused in the tenth (lunar) month of pregnancy is twice the amount of the fine when the miscarriage occurred during the fifth month (Hittite Laws 1.17–18, *ANET* 190). The fine assessed for a miscarriage in the tenth (lunar) month of pregnancy suggests a distinction made in the status of the fetus and the loss that it implies for the father or family. Unlike the other law codes, in the Hittite Laws the assault on the woman and her possible death as a consequence are not considered.

The codes discussed above were not designed primarily to protect the unborn, although that was certainly one result of these injunctions, because the exposure or killing of abnormal, deformed, or otherwise unwanted children was both tolerated and practiced among them (Ebeling *RLA* 1:322). These

laws and prohibitions were primarily sociopolitical in intent and protected the community from the potential loss of strength that a normal, healthy child could provide.

Exod 21:22–25 is frequently referred to in discussions of abortion. According to this passage, "When men strive together, and hurt a woman with child, so that there is a miscarriage, and yet no harm follows, the one who hurt her shall be fined, according as the woman's husband shall lay on him; and he shall pay as the judges determine. If any harm follows, then you shall give life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burn for burn, wound for wound, stripe for stripe" (RSV). These verses present numerous exegetical difficulties that have resulted in widely differing interpretations. According to one view, the "harm" (Heb *ʾāsôn*) in the Hebrew text refers to an injury done to the woman, since (according to this interpretation of the passage) the miscarriage is explicitly mentioned in contrast or juxtaposition to the "harm." Thus, the *ʾāsôn* done the woman, through either serious injury or death, is punished more severely than the miscarriage of the fetus, thereby indicating that the fetus was not viewed as fully human. Those holding to this view also note that this interpretation closely parallels evidence from other Near Eastern codes (Paul 1970: 71; Loewenstamm 1977: 356; Weinfeld 1977: 129; Sinclair 1978: 179–82; Sinclair 1980: 110). According to others, the first instance refers to a blow that results in a premature birth, but produces no further complications (*ʾāsôn*) to the child, while the second case refers to an instance in which the miscarriage results in the death of the fetus. Thus, according to this view, the fetus could be viewed as having a status similar or identical to that of human beings (Cottrell 1973: 8–9[604–15]; Jackson 1973: 273–304; Waltke 1976: 3–13; House 1978–79: 117–20). While these differing interpretations of Exod 21:21–25 influence the view of the status of the fetus in Hebrew law, they provide at best only indirect evidence for the case of induced abortions.

B. Abortion in the Hellenistic and Roman World

Greek philosophers offered opinions on abortion that diverged as widely as did their perspectives on the moment of ensoulment. Plato believed that the fetus is a living being (Plutarch *De placitis philosophorum* 5.15). Still, he recommended abortions for women who conceived after the age of forty (*Resp.* 5.9). Aristotle (*Pol.* 7.15.25[1335b]) allowed abortions only before "sense and life have begun" in the fetus, which he viewed as coming as forty days for males and ninety for females (*HA* 7.3; *GA* 4. 1), and indicated by the movement of the fetus in the mother's womb. According to the Stoics, the fetus remains a part of the mother until it is born. Although no Greek Stoic whose writings are preserved takes a position on induced abortion, the Roman Stoic Musonius Rufus (whose views may have paralleled those of the earlier Greek Stoics) forbade induced abortions. However, it may also be here that the views of Aristotle and Musonius Rufus were more the result of a concern for the welfare of the state than for the fetus itself. The exposure of children was a practice tolerated, and in some instances even encouraged, by the same Greek philosophers and ethicists who took clear positions against abortion, probably for the same reasons, mentioned above, in the ancient Near Eastern societies: abortion was forbidden in order to protect the potential contribution to the society that the child would provide. However, once the child was born and found to be deformed in some way and, thus, a potential drain on the resources of the society, its death through exposure was allowed (Bennett 1923: 341–51; Eyben 1980–81: 12–19).

The paucity of Greek legislation on abortion makes it difficult to draw any definite conclusions concerning its legal status. According to a document falsely attributed to Galen, the lawmakers Lycurgus and Solon both enacted legislation prohibiting abortion and punishing its practice (Moòssides 1922: 64). While corroborating evidence is wanting, in the light of parallel laws in the ancient Near East, in particular the Middle Assyrian law punishing induced abortion, it is certainly not beyond the realm of possibility for induced abortion to have been forbidden in early Greek law as well. Indeed, according to the 1st-century Stoic philosopher, Aelius Theon, one of the orations by the Attic orator Lysias concerned "whether the fetus was human and whether abortions might be subject to penalty" (Dölger 1934: 10–12).

The Hippocratic oath forbids administering abortifacients (Nardi 1970: 59–60) except to expel a fetus that was already dead. On the other hand, there are reports of other methods recommended by Greek physicians in order to abort in the very earliest stages of pregnancy (Moòs-sides 1922: 68; Hèhnel 1936: 235; Crahay 1941: 14–15; Dickison 1973: 160). An inscription from Philadelphia in Asia Minor dating

from about 100 B.C. includes prohibitions against the taking of drugs to prevent birth (*atokeion*) or to cause abortions (*phthoreion* [Nardi 1970: 193–94]). This differs from other *Kultsatzungen* of the Hellenistic period in that the use of birth control devices and abortifacients are not merely viewed as the source of cultic impurity, but as ethical and moral failings (Dölger 1934: 19–20; Weinfeld 1977: 132; but cf. Crahay 1941: 17).

While induced abortion is only occasionally mentioned in Rome during the period of the Republic, it seems to have been very common during the early centuries of the Empire. In reaction to this growing permissiveness, eminent writers of the period raised their voices in praise of those who avoided it and against those who practiced it. Borrowing a military metaphor, Ovid says that the woman who first aborted a fetus "deserved to die by her own weapons" (*Am.* 2.14. 5–6). Seneca pays tribute to his own mother for never having "crushed the hope of children that were being nurtured in [her] body" (*Helv.* 16.3). Suetonius, Juvenal, and Pliny the Younger each report the tragic account of Julia, the niece of the emperor Domitian, whom he seduced and later compelled to undergo an abortion that resulted in her death (Suet. *Dom.* 22; Juv. 2.32–33; Pliny *Ep.* 4.11.16). Further, the exposure of unwanted infants, rare during the Republican period, appears also to have been commonplace under the Empire (Eyben 1980–81: 14).

C. Abortion in Ancient Judaism and in the NT

The LXX translators rendered Exod 21:22–23 in a manner that is markedly different from the received Hebrew text, apparently reflecting an awareness of the various strands of Greek philosophical thought on the status of the fetus: "If two men fight and they strike a woman who is pregnant, and her child comes out while not yet fully formed, he will be forced to pay a fine; whatever the woman's husband imposes, he will pay with a valuation. But if it is fully formed, he will give life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe." Whereas in the Hebrew text the term *ʾāsôn* may be understood as referring either to the fetus or to the woman, the LXX rendering of this phrase as "fully formed" makes explicit its reference to injuring the fetus, not the woman. Further, the use of the term "not fully formed" and "fully formed" is reminiscent of Aristotle's distinction between fetuses in which "sense and life have begun" and those that have not. The LXX translation implies a view about the status of the fetus that is basically Aristotelian and takes a middle position between the Stoic and Platonic views (Gorman 1982: 34–35; cf. Salvoni 1975: 27). It stipulates the death penalty in the event of the death of a fully developed fetus that was caused to miscarry when the woman was struck by another person.

Philo of Alexandria (25 B.C.–A.D. 41), in his treatise on the Ten Commandments and other Jewish laws, *Special Laws* (*Spec Leg* III 108–9), discusses in the section on the commandment "Thou shalt not kill" the situation reflected in Exod 21:22–23. In this passage Philo says that if a man assaults a pregnant woman and strikes her in the belly, he will be required to pay a fine if the fetus is as yet unformed, as compensation both for the blow itself and for the fact that he has deprived "nature of bringing a human being into existence. However, if the fetus is formed, he will be put to death." Philo compares the formed fetus in the womb to "a statue lying in the sculptor's workshop needing nothing more than to be taken outside and released from confinement."

While retaining the LXX's distinction between the fetus that is "fully formed" and one that is not, Philo changes the specific situation that results in harm to the fetus from a fight between two men into one man's intentional assault on a pregnant woman. Most significant, however, is the moral tenor of his discussion. Unlike the text of Exodus, which is primarily concerned with nice legal distinctions, Philo emphasizes the moral wrongness of such an assault on the unborn. In Philo's view, one who injures a fetus that is not fully formed is guilty of an outrage against nature, while one who harms the formed fetus is guilty of the murder of a human being and is thus deserving of death (Gorman 1982: 35–36).

It is significant to note that the context in which Philo is speaking is part of an a fortiori argument against exposure. According to Philo, although Moses never includes exposure among prohibited practices, it is certainly implied, since Philo understands the law as prohibiting the destruction of life in utero. He is also challenging the justification of abortion by legal, medical, and philosophical authorities

who, he declares, claim that "the child while still adhering to the womb below the belly is part of its future mother" (Philo *Spec Leg* III 117). Philo's perspective also differs significantly from those of the Hellenistic world and the ancient Near East in that he is not primarily concerned with the prerogatives of the father, or the needs of the state, but with the rights of the mother and unborn child.

The Jewish historian Flavius Josephus briefly discusses the injunction in Exod 21:22–25 (*Ant* 4§278). However, unlike Philo, Josephus follows the Hebrew text rather than the LXX in his rendering of this passage. Further, Josephus has recast the statute sufficiently that the ambiguity inherent in the Hebrew original concerning the object of the "harm" (Heb. *ʾāsôn*) is eliminated: in the view of Josephus, it is the woman, and not the fetus, who is intended. According to Josephus, whoever kicks a pregnant woman, thereby causing the fetus to miscarry, will be fined according to the judges' determination (which fine will be given to the aggrieved husband) "for having by the destruction of the fruit of her womb, diminished the population." He further indicates that if the woman dies from the blow she received, he will be put to death.

In his apology for Judaism, Josephus writes: "The Law orders all of the offspring to be brought up and forbids women either to abort or to do away with a fetus, but if she is convicted, she is viewed an infanticide because she destroys a soul and diminishes the race" (*AgAp* 2.202). It is somewhat difficult to reconcile Josephus' statement here with his view expressed in *Ant*. In the former, a clear distinction in penalty is made for the death of the fetus and the death of the woman. Here, however, Josephus explicitly states that the willful destruction of the fetus is equivalent to murder (although, strikingly, no penalty is stated). The contradictions in the two statements may, perhaps, be reconciled (if they are to be harmonized at all) in the following manner: although the willful destruction of a fetus is viewed in a manner not unlike murder, because Josephus regarded the woman and not the fetus as the primary target of the attack in the passage in Exodus 21, he may be treating the death of the fetus in a manner somewhat different from the death of the woman. In any case, it is significant that Josephus describes the fetus as having a soul, and clearly forbids a deliberate abortion of the fetus.

The rabbinic writings reflect an interest in the status of the fetus as well as a concern for the health and well-being of the mother. A passage in the *Mekilta* (*Nez.* 8) indicates that the blow to a woman that results in a miscarriage described in Exodus 22 is an act to be punished by a fine, but not by death, as it would be in the case of a capital crime. Similarly, according to the Mishnah (*Nid.* 5:3), only the killing of a child already born ("one day old") is an offense subject to the death penalty, whereas no mention is made of abortion as a capital offense. A fetus only becomes a person after it is born, when the "greater part of the head" (i.e., the forehead) emerges from the womb (Mishnah *Ohol.* 7:6; *Nid.* 3:5). If the mother's life is endangered by the pregnancy, then the obligatory principle of *piqǎaḥ-nepeš* ("safeguarding of life") is invoked, and the termination of the pregnancy is mandated. Thus, "if a woman is suffering hard labor, the child must be cut up while in her womb and brought out member by member, since the life of the mother takes precedence over that of the child" (*m. Ohol.* 7:6). On the other hand, this same passage indicates that if the greater part of its head has already emerged, then nothing is done to it since no preference may be given to one life over another. Subsequent Talmudic discussions reiterate these same principles (Sinclair 1980: 122–14, 119–22).

The early Christians opposed both abortion and infanticide. While there is no direct reference to either practice in the NT, the *pharmakoi* mentioned in Rev 21:8 and 22:15 may refer to those who obtained abortifacients (cf. 9:21; 18:23; Gal 5:20). However, other writings of the early period of Christianity, such as the *Didache* and the so-called *Epistle of Barnabas,* expressly condemn both abortion and infanticide. *Didache* 2:2, in writing about the "two ways," notes that there is a great difference between these two ways. In an exposition of the second great commandment ("Love thy neighbor as thyself") as part of the "Way of Life," the author makes a list of prohibitions modeled on the Ten Commandments, including: "Thou shalt not murder a child by abortion/destruction" (*ou phoneuseis teknon en phthora*). The *Ep. Barn.* (19:5) contains the same prohibition immediately preceded by "thou shalt love thy neighbor more than thyself" (cf. *Apos. Con.* 7.3.2). According to *Did.* 5:2, among those who are on the "Way of Death" are "infanticides" and "those destroying the image of God" (cf. *Ep. Barn.* 20:2). Apparently, then, the

fetus was viewed as being a neighbor with the same rights—including the right to life—that the neighbor would have. Similarly, the early Christian apocalyptic literature reflects a moral abhorrence of willful abortion. The *Apocalypse of Peter,* roughly contemporary with the *Did.* and the *Ep. Barn.* and at one time included in the canon of scripture (in the *Muratorian Fragment* and by Clement of Alexandria), paints a graphic portrait of hell's population, which includes a scene in which women who have obtained abortions are in a gorge, up to their throats in excrement, while fire shoots forth from the infants who were aborted and strikes the women on the eyes. The *Apocalypse* continues by stating that the infants will be given to Temlakor, while the women who aborted them "will be tortured forever" (*Apoc. Pet.* [Ethiopic 8 = Akhmim Fragment 26]; cf. Clement of Alexandria *Ecl.* 41, 48–49 = *PG* 9.717–20; Quasten 1950: 144; Gorman 1982: 50–51).

From the 2d century on, opposition by Christian writers to induced abortion on ethical grounds continued, if not increased. The Christian apologist Athenagoras, in response to the charge that the Christians engaged in the ritual slaughter of children, asked what reason they might have to commit murder when they already assert that women who induce abortions are murderers and will have to give account of it to God. The same person, Athenagoras reasons, would not regard the fetus in the womb as a living thing and, therefore, an object of God's care and then kill it (*Presbeia* 35 = *PG* 6.969) For Clement of Alexandria (*Ecl.* 50.1–3 = *PG* 9.720–21; cf. Dölger 1934: 28–29), Tertullian (*An.* 27; cf. Emmel 1918: 33–44, 90–97), and Lactantius (*De opificio Dei* 17.7 = CSEL 27.56), ensoulment takes place at or immediately after conception. Thus, abortion at any stage of the pregnancy is viewed by them as unacceptable. The view in subsequent centuries is equally insistent on the moral right of the fetus to life. The councils of Elvira in A.D. 305 (Canons 63, 68 = *PL* 84:308–9; cf. Connery 1977: 46–49) and Ancyra in 314 (Canon 21; Cf. Nardi 1970: 496–501) contained canons against abortion. Similarly, the voices of Jerome (*Ep. 22 ad Eustochium* 13 = CSEL 54:160; *Ep. 121 ad Algasiam* 4 = CSEL 56:16), Ambrose (*Exameron* 5.18.58 = CSEL 32:184–85), and Augustine (*De nuptiis et concupiscentiis* 1.17 = CSEL 42:230) in the Latin West, and Basil of Caesarea (*Ep.* 188.2 = *PG* 32:671) and John Chrysostom (*Hom. in Rom.* 24 = *PG* 60:626–27) in the Greek East were raised against abortion and in defense of the life of the unborn (Nardi 1970: 483–582; Eyben 1980–81: 62–74; Gorman 1982: 53–73). See also *RAC* 1: 55–60; 2: 176–83.

D. Conclusion

In the ancient Near East, only the Middle Assyrian Laws provide explicit sanctions against those practicing the pre-meditated abortion of a fetus. The text in Exodus 22 gives only implicit evidence for the question of willful abortion. As a result, some scholars have attempted to elicit from other biblical texts an ethic that could be applied to the question of abortion (Waltke 1976: 3–13; Kline 1977: 193–201; Kurz 1986: 668–80). However, even where the evidence concerning the status of the fetus is somewhat ambiguous, there is no indication that premeditated abortion was tolerated in ancient Israel. On the other hand, the relatively permissive attitude in the ancient Near East toward the exposure of unwanted infants (for which there is no evidence available in ancient Israel) suggests that the prohibition of abortion, even where it existed, was designed more to protect the society from the loss of potentially productive members than from any particular concern with the rights of the fetus itself. A roughly analogous situation existed among the Greeks during the Hellenistic period: there was a general, though by no means uniform or monolithic, indisposition toward premeditated abortion, while the exposure of unwanted infants was widely tolerated. In Imperial Rome, the attitude toward abortion was more permissive than in the Hellenistic world, while exposure was also widely tolerated under the Empire. A significant development in attitude toward abortion can be seen in the writings of formative Judaism, particularly in Philo, as well as in early Christianity: not only is abortion prohibited—and exposure, too—but this prohibition rests upon an ethical concern for the fetus and the newly born. A further dimension to the discussion on abortion is added in the rabbinic writings, where the health and well-being of the expectant mother are taken into consideration.

A. The Biblical Information

1. Outline of Abraham's Career. Abraham is portrayed as a member of a family associated with city life in Southern Babylonia, moving to Haran in Upper Mesopotamia *en route* to Canaan (Gen 11:31). In Haran, God called him to leave for the land which he would show him, so he and Lot, his nephew, went to Canaan. At Shechem in the center of the land, God made the promise that Abraham's descendants would own the land (Gen 12:1–9). Famine forced Abraham to seek food in Egypt, where the Pharaoh took Abraham's wife, Sarah, who Abraham had declared was his sister. Discovering the deception, the Pharaoh sent Abraham away with all the wealth he had acquired, and Sarah (Gen 12:10–12). In Canaan, Abraham and Lot separated in order to find adequate grazing, Lot settling in the luxuriant Jordan plain. God renewed the promise of Abraham's numberless descendants possessing the land (Genesis 13). Foreign invaders captured Lot, so Abraham with 318 men routed them and recovered Lot and the booty. This brought the blessing of Melchizedek, the priest-king of Salem to whom Abraham paid a tithe (Genesis 14). Following a reassuring vision, Abraham was promised that his childless condition would end and that his offspring would occupy the land, a promise solemnized with a sacrifice and a covenant (Genesis 15). Childless Sarah gave Abraham her maid Hagar to produce a son, then drove out the pregnant maid when she belittled her barren mistress. An angel sent Hagar home with a promise of a harsh life for her son, duly born and named Ishmael (Genesis 16). Thirteen years later God renewed his covenant with Abraham, changing his name from Abram, and Sarai's to Sarah, and imposing circumcision as a sign of membership for all in Abraham's household, born or bought. With this came the promise that Sarah, then ninety, would bear a son, Isaac, who would receive the covenant, Ishmael receiving a separate promise of many descendants (Genesis 17). Three visitors repeated the promise of a son (Gen 18:1–15). Lot meanwhile had settled in Sodom, which had become totally depraved and doomed. Abraham prayed that God would spare the city if ten righteous people could be found there, but they could not, so Sodom and its neighbor were destroyed, only Lot and his two daughters surviving (Gen 18:16–19:29). Abraham living in southern Canaan encountered the king of Gerar, who took Sarah on her husband's assertion that she was his sister. Warned by God, King Abimelech avoided adultery and made peace with Abraham (Genesis 20). Now Isaac was born and Hagar and Ishmael sent to wander in the desert, where divine provision protected them (Gen 21:1–20). The king of Gerar then made a treaty with Abraham to solve a water-rights quarrel at Beersheba (Gen 21:22–34). When Isaac was a boy, God called Abraham to offer him in sacrifice, only staying the father's hand at the last moment, and providing a substitute. A renewal of the covenant followed (Gen 22:1–19). At Sarah's death, Abraham bought a cave for her burial, with adjacent land, from a Hittite of Hebron (Genesis 23). To ensure the promise remained within his family, Abraham sent his servant back to his relatives in the Haran region to select Isaac's bride (Genesis 24). The succession settled, Abraham gave gifts to other sons, and when he died aged 175, Isaac and Ishmael buried him beside Sarah (Gen 25:1–11).

2. Abraham's Faith. Although it was Abraham's grandson Jacob who gave his name to Israel and fathered the Twelve Tribes, Abraham was regarded as the nation's progenitor (e.g., Exod 2:24; 4:5; 32:13; Isa 29:22; Ezek 33:24; Mic 7:20). Israel's claim to Canaan rested on the promises made to him, and the God worshipped by Israel was preeminently the God of Abraham (e.g., Exod 3:6, 15; 4:1; 1 Kgs 18:36; Ps 47:9). God's choice of Abraham was an act of divine sovereignty whose reason was never disclosed. The reason for Abraham's favor with God (cf. "my friend," Isa 41:8) is made clear in the famous verse, "Abraham believed God and he credited it to him as righteousness" (Gen 15:6; cf. Rom 4:1–3), and in other demonstrations of Abraham's trust (e.g., Gen 22:8). Convinced of God's call to live a seminomadic life (note Heb 11:9), Abraham never attempted to return to Haran or to Ur, and took care that his son should not marry a local girl and so gain the land by inheritance, presumably because the indigenous people were unacceptable to God (Gen 24:3; 15:16). Throughout his career he built altars and offered sacrifices, thereby displaying his devotion (Gen 12:7, 8; 13:4, 18), an attitude seen also in the tithe he gave to Melchizedek after his victory (Genesis 14). The places sacred to him were often marked by trees, a token of his intention to stay in the land (Gen 12:6; 13:18; 21:33). Abraham believed his God to be just, hence his concern for any righteous in Sodom (Gen 18:16ff.). Even so, he attempted to preempt God's actions by taking Hagar when Sarah was barren (Gen 16:1–4), and by pretending Sarah was not his wife.

In the latter cases, God intervened to rescue him from the results of his own deliberate subterfuge because he had jeopardized the fulfilment of the promise (Gen 12:17f.; 20:3f.).

The God Abraham worshipped is usually referred to by the name *yhwh* (RSV LORD); twice Abraham "called on the name of the LORD" (Gen 12:8; 13:4), and his servant Eliezer spoke of the Lord, the God of Abraham (Gen 24:12, 27, 42, 48). The simple term "God" (*ʾĕlōhîm*) occurs in several passages, notably Gen 17:3ff; 19:29; 20 often; 21:2ff; 22. Additional divine names found in the Abraham narrative are: God Almighty (*ʾel šadday,* Gen 17:1), Eternal God (*yhwh ʾēl ʿôlām* Gen 21:33), God Most High (*ʾēl ʿelyôn* Gen 14:18–22), Sovereign Lord (*ʾădōnāy yhwh*, Gen 15:2, 8), and Lord God of heaven and earth (*yhwh ʾĕlōhê haššā-mayim wĕhāʾāreṣ* Gen 24:3,7).

Abraham approached God without the intermediacy of priests (clearly in Genesis 22; elsewhere it could be argued that priests were present, acting as Abraham's agents but not mentioned). God spoke to Abraham by theophanic visions (Gen 12:7; 17:1; 18:1). In one case, the appearance was in human form, when the deity was accompanied by two angels (Gen 18; cf. v19). Perhaps God employed direct speech when no other means is specified (Gen 12:1f; 13:14; 15:1; 21:12; 22:1). Angels could intervene and give protection as extensions of God's person (Gen 22; 24:7, 40). Prayer was a natural activity (e.g., 20:17) in which Eliezer followed his master's example (Gen 24). Eliezer did not hesitate to speak of Abraham's faith and God's care for him which he had observed (Gen 24:27, 35). God commended Abraham to Abimelech as a prophet (Gen 20:7, *nābîʾ*). Abraham is portrayed as worshipping one God, albeit with different titles. Abraham's is a God who can be known and who explains his purposes, even if over a time span that stretches his devotee's patience.

3. Abraham's Life-style. Leaving Ur and Haran, Abraham exchanged an urban-based life for the seminomadic style of the pastoralist with no permanent home, living in tents (Gen 12:8, 9; 13:18; 18:1; cf. Heb 11:9), unlike his relations near Haran (Gen 24:10, 11). However, he stayed at some places for long periods (Mamre, Gen 13:18; 18:1; Beersheba, Gen 22:19; Philistia, Gen 21:3, 4), enjoyed good relations with settled communities (Gen 23:10, 18 mentions the city gate), had treaty alliances with some, and spoke on equal terms with kings and the Pharaoh (Gen 14:13; 20:2, 11–14; 21:22–24). He is represented as having owned only one piece of land, the cave of Machpelah (Genesis 23). Wealth flowed to him through his herds, and in gifts from others (Gen 12:16; 20:14, 16), so that he became rich, owning cattle, sheep, silver, gold, male and female slaves, camels and donkeys (Gen 24:35). He may have traded in other goods, for he knew the language of the marketplace (Genesis 23). His household was large enough to furnish 318 men to fight foreign kings (Genesis 14). He was concerned about having an heir, and so looked on Eliezer his servant before sons were born (Gen 15:2), and took care to provide for Isaac's half-brothers so that his patrimony should not diminish (Gen 24:36; 25:5, 6; cf. 17:18). While Sarah was his first wife, Abraham also married Keturah, and had children by her, by Hagar, and by concubines (Gen 25:1–6). His burial was in the cave with Sarah (Gen 25:9–10).

4. Abraham, Ancestor of the Chosen People. Belief in their ancestry reaching back to one man, Abraham, to whom God promised a land, was firmly fixed among Jews in the 1st century (e.g., John 8:33–58; cf. Philo), and is attested long before by the prophets of the latter days of the Judean Monarchy (Isa 41:8; 51:2; 63:16; Jer 33:26; Ezek 33:24; Mic 7:20). The historical books of the OT also contain references to Abraham (Josh 24:2, 3; 2 Kgs 13:23; 1 Chr 16:16–18; 2 Chr 20:7; 30:6; Neh 9:7, 8) as does Psalm 105. In the Pentateuch the promise is mentioned in each book after Genesis (Exod 2:24; 33:1, etc.; Lev 26:42; Num 32:11; Deut 1:8; etc.).

B. Abraham in Old Testament Study

1. Abraham as a Figure of Tradition. Building on meticulous literary analysis of the Pentateuch, Julius Wellhausen concluded "… we attain to no historical knowledge of the patriarchs, but only of the time when the stories about them arose in the Israelite people; this latter age is here unconsciously projected, in its inner and its outward features, into hoar antiquity, and is reflected there like a glorified mirage." And of Abraham he wrote, "Abraham alone is certainly not the name of a people like Isaac and Lot: he is somewhat difficult to interpret. That is not to say that in such a connection as this we may regard him as a historical person; he might with more likelihood be regarded as a free invention of

unconscious art" (*WPHI*, 319f.). The literary sources of the early Monarchy, J and E, drawing on older traditions, preserved the Abraham stories. At the same time, Wellhausen treated the religious practices of Abraham as the most primitive in the evolution of Israelite religion. Hermann Gunkel, unlike Wellhausen, argued that investigating the documentary sources could allow penetration beyond their final form into the underlying traditions. Gunkel separated the narratives into story-units, often very short, which he alleged were the primary oral forms, duly collected into groups as sagas. These poems told the legends attached to different shrines in Canaan, or to individual heroes. Gradually combined around particular names, these stories were ultimately reduced to the prose sources which Wellhausen characterized. Gunkel believed the legends arose out of observations of life associated with surrounding traditions, obscuring any historical kernel: "Legend here has woven a poetic veil about the historical memories and hidden their outlines" (Gunkel 1901: 22). The question of Abraham's existence was unimportant, he asserted, for legends about him could not preserve a true picture of the vital element, his faith: "The religion of Abraham is in reality the religion of the narrators of the legends, ascribed by them to Abraham" (122).

The quest for the origins of these elements has continued ever since. Martin Noth tried to delineate the oral sources and their original settings, building on Gunkel's premises (Noth 1948), and Albrecht Alt investigated religious concepts of the expression "the gods of the fathers" in the light of Nabatean and other beliefs. He deduced that Genesis reflects an older stage of similar seminomadic life, the patriarchal figures being pegs on which the cult traditions hung (Alt 1966). The positions of Alt and Noth have influenced commentaries and studies on Abraham heavily during the past fifty years. At the same time, others have followed the literary sources in order to refine them and especially to discern their purposes and main motifs (e.g., von Rad *Genesis* OTL). For Abraham the consequence of these studies is the same, whether they view him as a dim shadow in Israel's prehistory, or as a purely literary creation: he is an example whose faith is to be emulated. The question of his actual existence is irrelevant; the stories about him illustrate how generations of Jews believed God had worked in a man's life, setting a pattern, and it is that belief, hallowed by the experience of many others, which is enshrined in them (see Ramsey 1981).

2. Abraham as a Figure of History. Several scholars have searched for positions which allow a measure of historical reality to Abraham. While accepting the literary sources as the channels of tradition, they have seen them as reflecting a common heritage which was handed down through different circles and so developed different emphases. This explains the nature of such apparently duplicate stories as Abraham's twice concealing Sarah's status (Gen 12:11–20; 20:2–18). W. F. Albright and E. A. Speiser were notable exponents of this position, constantly drawing on ancient Near Eastern sources, textual and material, to clarify the patriarch's ancient context. Albright claimed the Abraham stories fitted so well into the caravan society that he reconstructed for the 20th century B.C. "that there can be little doubt about their substantial historicity" (1973: 10). Textual and material sources included the cuneiform tablets from Mari and Nuzi and occupational evidence from Palestine. The Nuzi archives were thought to have yielded particularly striking analogies to family practices in the stories (see Speiser *Genesis* AB). These comparisons were widely accepted as signs of the antiquity of the narratives, and therefore as support for the contention that they reflected historical events. Even scholars who held firmly to the literary analyses took these parallels as illlumination of the original settings of the traditions (e.g., *EHI*). In 1974 and 1975 T. L. Thompson and J. Van Seters published sharp and extensive attacks on the views Albright had fostered, Thompson urging a return to the position of Wellhausen, and van Seters arguing that the stories belonged to exilic times (Thompson 1974; Van Seters 1975). The impact of these studies was great. They showed clearly that there were faults of logic and interpretation in the use made of the Nuzi and other texts, and put serious doubt on the hypothesis of an Amorite "invasion" of Palestine about 2000 B.C. In several cases, they pointed to other parallels from the 1st millennium B.C. which seemed equally good, thus showing that comparisons could not establish an earlier date for the patriarchal stories. For many OT scholars the arguments of Thompson and Van Seters reinforced the primacy of the literary analysis of Genesis and its subsequent developments, allowing attention to be paid to the narratives as "stories" rather than to questions of historicity.

Inevitably, there have been reactions from a variety of scholars who wish to sustain the value of comparisons with texts from the 2d millennium B.C. These include an important study of the Nuzi material by M. J. Selman (1976) and investigations of the Mari texts in relation to nomadism by J. T. Luke (1965) and V. H. Matthews (1978). Equally important, however, are considerations of the methods appropriate for studying the Abraham narratives, and these will be discussed in the remainder of this article, with examples as appropriate.

C. Abraham—A Contextual Approach

When the literary criticism of the Old Testament was elaborated in the 19th century in conjunction with theories of the evolution of Israelite society and religion, the ancient Near East was hardly known. With increasing discoveries came the possibility of checking the strength of those hypotheses against the information ancient records and objects provide. Were Genesis a newly recovered ancient manuscript, it is doubtful that these hypotheses would be given priority in evaluating the text. A literary analysis is one approach to understanding the text, but it is an approach that should be followed beside others and deserves no preferential status.

The current analysis is unsatisfactory because it cannot be demonstrated to work for any other ancient composition. Changes can be traced between copies of ancient texts made at different periods only when both the earlier and the later manuscript are physically available (e.g., the Four Gospels and Tatian's *Diatessaron*). Moreover, the presuppositions of the usual literary analysis do not sustain themselves in the light of ancient scribal practices, for they require a very precise consistency on the part of redactors and copyists. Ancient scribes were not so hide-bound. Rather, the Abraham narratives should be judged in their contexts. They have two contexts. The first is the biblical one. Historically this sets Abraham long before Joseph and Moses, in current terms about 2000 B.C. (Bimson 1983: 86). Sociologically it places Abraham in the context of a seminomadic culture not controlled by the Mosaic laws, moving in a Canaan of city-states. Religiously it puts Abraham before the cultic laws of Moses, aware of God's uniqueness and righteousness, yet also of others who worshipped him, such as Melchizedek. To an ancient reader, there was no doubt that Abraham, who lived many years before the rise of the Israelite monarchy, was the ancestor of Israel, a position which carried with it the promise of the land of Canaan and of God's covenant blessing. That is the biblical context and it should not be disregarded (see Goldingay 1983). The detection of apparently duplicate or contradictory elements in the narratives, and of episodes hard to explain, is not sufficient reason for assuming the presence of variant or disparate traditions, nor are anachronisms necessarily a sign of composition long after the events described took place. These questions can only be considered when the narratives are set in their second context, the ancient Near Eastern world, at the period the biblical context indicates. Only if it proves impossible to fit them into that context should another be sought.

1. Abraham the Ancestor. Although Abraham's biography is unique among ancient texts, its role in recording his ancestral place is not. Other states emerging about 1000 B.C., like Israel, bore the names of eponymous ancestors (e.g., Aramean Bit Bahyan, Bit Agush). Some traced their royal lines back to the Late Bronze Age, and many of the states destroyed at the end of that period had dynasties reaching back over several centuries to founders early in the Middle Bronze Age (e.g., Ugarit). Assyria, which managed to survive the crisis at the start of the 1st millennium B.C., listed her kings back to that time, and even before, to the days when they lived in tents. In this context, the possibility of Israel preserving knowledge of her descent is real (cf. Wiseman 1983: 153–58). States or tribes named after ancestors are also attested in the 2d millennium B.C. (e.g., Kassite tribes, *RLA* 5: 464–73). Dynastic lineages are known because kings were involved. Other families preserved their lines, too, as lawsuits about properties reveal (in Egypt, Gaballa 1977; in Babylonia, King 1912: no. 3), but they had little cause to write comprehensive lists. Israel's descent from Abraham, the grandfather of her national eponym, is comparable inasmuch as he received the original promise of the land of Canaan. The ancient King Lists rarely incorporate anecdotal information (e.g., Sumerian King List, Assyrian King List; see *ANET,* 265, 564). However, ancient accounts of the deeds of heroes are not wholly dissimilar. Sargon of Akkad (ca. 2334–2279 B.C.), a king whose existence was denied when his story was first translated, is firmly placed in histories as the

first Semitic emperor, well attested by copies of his own inscriptions made five centuries after his death, and by the records of his sons. Stories about Sargon were popular about 1700 B.C., and are included among the sources of information for his reign from which modern historians reconstruct his career. Other kings have left their own contemporary autobiographies (e.g., Idrimi of Alalakh, *ANET,* 557). All of these ancient texts convey factual information in the style and form considered appropriate by their authors. The analyses of their forms is part of their proper study. Finding a biography in an ancient Near Eastern document that combined concepts drawn from the family-tree form and from narratives about leaders, such as Genesis contains, preserved over centuries, would not lead scholars to assume the long processes of collecting, shaping, revising and editing normally alleged for the stories of Abraham.

2. Abraham's Career and Life-style. Journeys between Babylonia and the Levant were certainly made in the period 2100–1600 B.C. Kings of Ur had links with north Syrian cities and Byblos ca. 2050 B.C., and in Babylonia goods were traded with Turkey and Cyprus ca. 1700 B.C. A detailed itinerary survives for a military expedition from Larsa in southern Babylonia to Emar on the middle Euphrates, and others trace the route from Assyria to central Turkey. If Abraham was linked with the Amorites, as W. F. Albright argued, evidence that the Amorites moved from Upper Mesopotamia southward during the centuries around 2000 B.C. cannot invalidate the report of Abraham's journey in the opposite direction, as some have jejunely asserted (e.g., van Seters 1975: 23). Where the identifications are fixed and adequate explorations have been made, the towns Abraham visited—Ur, Haran, Shechem, Bethel, Salem (if Jerusalem), Hebron—appear to have been occupied about 2000 B.C. (Middle Bronze I; for a summary of archaeological material, see *IJH,* 70–148). Gerar remains unidentified, nor is there positive evidence for identifying the site now called Tel Beer-sheba with the Beer-sheba of Genesis (Millard 1983: 50). Genesis presents Abraham as a tent dweller, not living in an urban environment after he left Haran (cf. Heb 11:9).

Extensive archives from Mari, ca. 1800 B.C., illustrate the life of seminomadic tribesmen in relationship with that and other towns (see MARI LETTERS). General similarities as well as specific parallels (e.g., treaties between city rulers and tribes) can be seen with respect to Genesis. Some tribes were wealthy and their chieftains powerful men. When they trekked from one pasturage to another, their passage was marked and reported to the king of Mari. Town dwellers and steppe dwellers lived in dependence on each other.

In Canaan, Abraham had sheep and donkeys like the Mari tribes, and cattle as well. This difference does not disqualify the comparison (*pace* van Seters 1975: 16), for the Egyptian Sinuhe owned herds of cattle during his stay in the Levant about 1930 B.C. Like Abraham, Sinuhe spent some of his life in tents, and acquired wealth and high standing among the local people (*ANET,* 18–22; note that copies of this story were being made as early as 1800 B.C.). To strike camp and migrate for food was the practice of "Asiatics" within reach of Egypt, so much so that a wall or line of forts had to be built to control their influx (ca. 1980 B.C., see *ANET,* 446). The story of Sinuhe relates that the hero met several Egyptians in the Levant at this time (*ANET,* 18–22); the painting from a tomb at Beni Hasan depicts a party of 37 "Asiatics" (*ANEP,* 3), and excavations have revealed a Middle Bronze Age settlement in the Delta with a strong Palestinian presence (Bietak 1979). Military contingents brought together in coalitions traveled over great distances to face rebellious or threatening tribes, as in the affair of Genesis 14 (see below C5). In an era of petty kings, interstate rivalry was common and raids by hostile powers a threat to any settlement. To meet the persistent military threat, many cities throughout the Near East were strongly fortified during the Middle Bronze Age; fortification provided well-built gateways in which citizens could congregate (Gen 23:10, 18).

Disputes arose over grazing rights and water supplies. Abraham's pact at Gerar is typical, the agreement duly solemnized with an oath and offering of lambs. Abraham was a resident alien (*gēr*), not a citizen (Gen 15:13; 23:4). Concern for the continuing family was normal. Marriage agreements of the time have clauses allowing for the provision of an heir by a slave girl should the wife prove barren (*ANET,* 543, no. 4; cf. Selman 1976:127–29). The line was also maintained through proper care of the dead, which involved regular ceremonies in Babylonia (see DEAD, CULT OF). Burial in the cave at Machpelah gave Abraham's family a focus which was valuable when they had no settled dwelling (cf., the expression in

Gen 47:30). Comparisons made between Abraham's purchase of the cave reported in Genesis 23 and Hittite laws (Lehmann 1953) are now seen to be misleading (Hoffner 1969: 33–37). However, the report is not a transcript of a contract, and so cannot be tied in time to the "dialogue document" style fashionable in Babylonia from the 7th to 5th centuries B.C., as Van Seters and others have argued (Van Seters 1975: 98–100), and at least one Babylonian deed settling property rights survives in dialogue form from early in the 2 millennium B.C. (Kitchen 1977: 71 gives the reference).

3. Abraham's Names. Abram, "the father is exalted," is a name of common form, although no example of it is found in the West Semitic onomasticon of the early 2d millennium B.C. The replacement, Abraham, is given the meaning "father of a multitude" (Gen 17:5). That may be a popular etymology or a play on current forms of the name "Abram" in local dialects for the didactic purpose of the context, the inserted *h* having analogies in other West Semitic languages. The name "Aburahana" is found in the Egyptian Execration Texts of the 19th century B.C. (*m* and *n* readily interchange in Egyptian transcriptions of Semitic names [*EHI,* 197–98]). Genesis introduces the longer name as part of the covenant God made with Abram, so the new name confirmed God's control and marked a stage in the Patriarch's career (see Wiseman 1983: 158–60). No other person in the OT bears the names "Abram" or "Abraham" (or "Isaac" or "Jacob"); apparently they were names which held a special place in Hebrew tradition (like the names "David" and "Solomon").

4. Abraham's Faith. A monotheistic faith followed about 2000 B.C. is, so far as current sources reveal, unique, and therefore uncomfortable for the historian and accordingly reckoned unlikely and treated as a retrojection from much later times. The history of religions undermines that stance; the astonishing impact of Akhenaten's "heresy" and the explosion of Islam demonstrate the role a single man's vision may play, both imposing a monotheism upon a polytheistic society. Abraham's faith, quietly held and handed down in his family until its formulation under Moses, is equally credible.

Contextual research helps a little. Further study has traced the "gods of the fathers" concept far beyond Alt's Nabatean inscriptions to the early 2d millennium B.C., when the term referred to named deities, and the god El could be known as *Il-aba* "El is father" (Lambert 1981). Discussion of the various names and epithets for God in the Abraham narratives continues, revolving around the question whether they all refer to one deity or not (see Cross 1973; Wenham 1983). Some ancient texts which apply one or two of these epithets to separate gods (e.g., the pair *ʾl* "God" and *ʿlywn* "Most High," in an 8th-century Aramaic treaty, *ANET,* 659), may reflect later or different traditions; the religious patterns of the ancient Levant are so varied that it is dangerous to harmonize details from one time and place with those from another. The OT seems to equivocate over the antiquity of the divine name *yhwh.* Despite Exod 6:3, the Abraham narratives include the name often. Apart from the (unacceptable) documentary analysis, explanations range from retrojection of a (post-) Mosaic editor to explanations of Exod 6:3 allowing the name to be known to Abraham, but not its significance (see Wenham 1983:189–93). The latter opinion may find a partial analogy in the development of the Egyptian word *aten* from "sun disk" to the name of the supreme deity (Gardiner 1961: 216–18). However, the absence of the divine name as an indubitable element in any pre-Mosaic personal name should not be overlooked. Abraham naturally had a similar religious language to those around him, with animal sacrifices, altars, and gifts to his God after a victory. He found in Melchizedek another whose worship he could share, just as Moses found Jethro (Gen 14; Exod 2:15–22; 8), yet he never otherwise joined the cults of Canaan.

5. Objections to a 2d Millennium Context. a. Anachronisms. The texts about Sargon of Akkad are pertinent to the question of anachronisms in the Abraham stories. In those texts, Sargon is said to have campaigned to Turkey in aid of Mesopotamian merchants oppressed there. Documents from Kanesh in central Turkey attest to the activities of Assyrian merchants in the 19th century B.C., but not much earlier. Therefore the mention of Kanesh in texts about Sargon and his dynasty is considered anachronistic. At the same time, the incidents those texts report are treated as basically authentic and historically valuable (Grayson and Sollberger 1976: 108). The anachronism does not affect the sense of the narrative. In this light, the problem of the Philistines in Gen 21:32, 34 may be viewed as minimal. Naming a place after a people whose presence is only attested there six or seven centuries later than the setting of the story need

not falsify it. A scribe may have replaced an outdated name, or people of the Philistine group may have resided in the area long before their name is found in other written sources. Certainly some pottery entered Palestine in the Middle Bronze Age from Cyprus, the region whence the Philistines came (Amiran 1969: 121–23). A similar position can be adopted with regard to the commonly cited objection of Abraham's camels. Although the camel did not come into general use in the Near East until after 1200 B.C., a few signs of its use earlier in the 2d millennium B.C. have been found (see CAMEL). It is as logical to treat the passages in Gen 12:16; 24 as valuable evidence for the presence of camels at that time as to view them as anachronistic. Contrariwise, the absence of horses from the Abraham narratives is to be noted, for horses could be a sign of wealth in the places where he lived (cf. 1 Kgs 4:26); horses are unmentioned in the list of Job's wealth (Job 1:3). Ancient Near Eastern sources show clearly that horses were known in the 3d millennium B.C., but only began to be widely used in the mid-2d millennium B.C., that is, after the period of Abraham's lifetime as envisaged here (Millard 1983: 43). Comparisons may be made also with information concerning iron working. A Hittite text tells how King Anitta (ca. 1725 B.C.) received an iron chair from his defeated foe. Recent research dates the tablet about 1600 B.C., yet iron only came into general use in the Near East when the Bronze Age ended and the Iron Age began, ca. 1200 B.C. Were the Anitta text preserved in a copy made a millennium after his time, its iron chair would be dismissed as a later writer's anachronism. It cannot be so treated; it is one important witness to iron working in the Middle Bronze Age (Millard 1988). Alleged anachronisms in the Abraham narratives are not compelling obstacles to setting them early in the 2d millennium B.C.

b. Absence of Evidence. Occasionally the absence of any trace of Abraham from extrabiblical sources is raised against belief in his existence soon after 2000 B.C. This is groundless. The proportion of surviving Babylonian and Egyptian documents to those once written is minute. If, for example, Abraham's treaty with Abimelech of Gerar (Genesis 21) was written, a papyrus manuscript would decay quickly in the ruined palace, or a clay tablet might remain, lie buried undamaged, awaiting the spade of an excavator who located Gerar (a problem!), happened upon the palace, and cleared the right room. If Abimelech's dynasty lasted several generations, old documents might have been discarded, the treaty with them. Egyptian state records are almost nonexistent owing to the perishability of papyrus, so no evidence for Abraham can be expected there.

Abraham's encounter with the kings of the east (Genesis 14) links the patriarch with international history, but regrettably, the kings of Elam, Shinar, Ellasar, and the nations have not been convincingly identified. R. de Vaux stated that "it is historically impossible for these five sites south of the Dead Sea to have at one time during the second millennium been the vassals of Elam, and that Elam never was at the head of a coalition uniting the four great near eastern powers of that period" (*EHI*, 219). Consequently, the account is explained as a literary invention of the exilic period (Astour 1966; Emerton 1971). At that date, its author would either be imagining a situation unlike any within his experience, or weaving a story around old traditions. If the former is true, he was surprisingly successful in constructing a scenario appropriate for the early 2d millennium B.C.; if the latter, then it is a matter of preference which components of the chapter are assumed to stem from earlier times. Yet the chapter may still be viewed as an account of events about 2000 B.C., as K. A. Kitchen has demonstrated (Kitchen 1977: 72 with references). A coalition of kings from Elam, Mesopotamia, and Turkey fits well into that time. To rule it "unhistorical" is to claim a far more detailed knowledge of the history of the age than anyone possesses. The span of the events is only fifteen years, and what is known shows how rapidly the political picture could change. Current inability to identify the royal names with recorded kings is frustrating; scribal error is an explanation of last resort; ignorance is the likelier reason, and as continuing discoveries make known more city-states and their rulers, clarification may emerge. (One may compare the amount of information derivable from the Ebla archives for the period about 2300 B.C. with the little available for the city's history over the next five hundred years.) Gen 14:13 terms Abram "the Hebrew." This epithet is appropriate in this context, where kings are defined by the states they ruled, for Abram had no state or fatherland. "Hebrew" denoted exactly that circumstance in the Middle Bronze Age (Buccellati 1977).

D. Duplicate Narratives

A major argument for the common literary analysis of the Abraham narratives, and for the merging of separate lines of tradition, is the presence of "duplicate" accounts of some events. Abraham and Isaac clashed with Abimelech of Gerar, and each represented his wife as his sister, an action Abraham had previously taken in Egypt (Gen 12:10–20; 20; 26). These three stories are interpreted as variations of one original in separate circles. That so strange a tale should have so secure a place in national memory demands a persuasive explanation, whatever weight is attached to it. In the ancient Near East, kings frequently gave their sisters or daughters in marriage to other rulers to cement alliances and demonstrate goodwill (examples abound throughout the 2d millennium B.C.). The actions of Abraham and Isaac may be better understood in this context, neither man having unmarried female relatives to hand. That they were afraid may reflect immediate pressures. For Isaac to repeat his father's procedure at Gerar is more intelligible as part of a well-established practice of renewing treaties with each generation than as a literary repetition (Hoffmeier fc.).

Abraham and Isaac both had trouble with the men of Gerar over water rights at Beer-sheba. Again, the narratives are counted as duplicates of a single tradition (Speiser *Genesis* 202), and again two different episodes in the lives of a father and son living in the same area is as reasonable an explanation in the ancient context. One king might confront and defeat an enemy, the same king or his son having to repeat the action (e.g., Ramesses II and the Hittites, Kitchen 1982 *passim*). The naming of the wells at Beersheba, usually labeled contradictory, is also open to a straightforward interpretation in the light of Hebrew syntax which removes the conflict (*NBD,* 128).

E. Conclusion

To place Abraham at the beginning of the 2d millennium B.C. is, therefore, sustainable. While the extrabiblical information is not all limited to that era, for much of ancient life followed similar lines for centuries, and does not demand such a date, it certainly allows it, in accord with the biblical data. The advantage this brings is the possibility that Abraham was a real person whose life story, however handed down, has been preserved reliably. This is important for all who take biblical teaching about faith seriously. Faith is informed, not blind. God called Abraham with a promise and showed his faithfulness to him and his descendants. Abraham obeyed that call and experienced that faithfulness. Without Abraham, a major block in the foundations of both Judaism and Christianity is lost; a fictional Abraham might incorporate and illustrate communal beliefs, but could supply no rational evidence for faith because any other community could invent a totally different figure (and communal belief can be very wrong, as the fates of many "witches" recall). Inasmuch as the Bible claims uniqueness, and the absolute of divine revelation, the Abraham narratives deserve a positive, respectful approach; any other risks destroying any evidence they afford.

A. R. MILLARD

ABRAHAM, APOCALYPSE OF. A midrash based on the text of Genesis 15 presented in the form of revelation. The title of the book is preserved only in manuscript S (Codex Silvester), where it runs as follows: "The Book of the Revelation of Abraham, son of Terah, son of Nahor, son of Serug, son of Arphaxad, son of Shem, son of Noah, son of Lamech, son of Methusaleh, son of Enoch, son of Jared."

A. Contents

The main subject of the book is the election of Abraham and the covenant between God and Abraham and his descendants. Chapters 1–8 tell about the call of Abraham out of the midst of idolaters. After a deep reflection on the various forms of their idolatry, Abraham wants to know the true God who created the universe. God then appears to him in the form of fire and commands him to leave the home of his father Terah and to sacrifice a heifer, a she-goat, a ram, a turtledove, and a pigeon (Genesis 15) on the high mountain. Chapters 9–32 describe Abraham's journey to the mount of Horeb, the offering of the sacrifice, and the visions imparted to him. Abraham sees, among other things, the seven sins of the world (24:3–25:2) and the destruction of the Temple in Jerusalem (27:1–12). God announces to him the punishment of the Gentiles and of the sinners belonging to the people of Israel (chap. 29). The vision of the "man going out from the left, the heathen side" (29:4) foretells the test of the people of God in the last days of this age. Before the age of justice, God will afflict "all earthly creation" with ten plagues (29:15, 30:2–8) and afterward send his Elect One, who will summon the people of God (31:1). Sinners will be punished and the righteous will triumph forever (chap. 32).

B. The Text

The *Apocalypse of Abraham (Apoc. Ab.)* is preserved only in Old Church Slavonic translation. According to common opinion, it was translated from Greek around A.D. 900 in Bulgaria, although translation from a Semitic original cannot be excluded (see below). The Old Church Slavonic copies of the text were very soon transferred, probably by monks, from Bulgaria to Russia and there diffused within some centuries in different transcripts. This fact explains why the present text of the book is influenced by the old Russian language. All nine extant manuscripts containing this pseudepigraphon are preserved in the museums and the libraries of the U.S.S.R. The oldest manuscript is the Codex Silvester (14th century), which is characterized by many omissions owing mostly to inadvertance of the copyists; the text itself is incomplete. The best text is preserved in manuscript B, which belongs to the Synodal Paleja Tolkovaja

(Sin 211, Gosudarstvennyj Istoričeskij Muzej 869, fols. 76–90, Moscow) and dates to the 16th century (see Philonenko-Sayer and Philonenko 1981; Rubinkiewicz 1977; 1987).

C. The Integrity of the Text

Most critics distinguish two parts in the *Apocalypse of Abraham:* the haggadic section (chaps. 1–8) and the apocalyptic section (chaps. 9–32). The two sections were probably written by different authors. Later, the two documents were most likely joined together into a single work. It seems, however, that only chapter 7 did not belong to the original text of the pseudepigraphon, and maybe also chapter 23 (the description of the sin of Adam and Eve, which undoubtedly reflects Jewish sources; the chapter could have been introduced into the *Apocalypse of Abraham* from another pseudepigraphon). A special problem is presented by *Apoc. Ab.* 29:4–13. Generally one assumes that the Man "going out from the left, the heathen side" (29:4), worshipped by the great crowd of the heathen, and insulted by some of the people of Israel, represents the figure of Jesus. Therefore, some critics claim that this passage is a Christian interpolation (*ANRW* 2/19/1: 137–51) or that it could be a "Jewish view of Jesus as an apostle to the heathen" (*EncJud* 1: 125–27). However, an exact analysis of the vision in *Apoc. Ab.* 29:4–13 proves that it must be original, and that it "has little in common with a Christian view of Jesus but recalls the beast in Rev 13:1–4" (Hall 1988). The heathen man may be identified as the Roman emperor. Only "the phrase identifying the man who is worshiped as a child of Abraham (29:9b) must be understood as a gloss, probably by a Christian interpolator who found Christ in the author's 'antichrist' " (Hall 1988).

In addition to these three passages, we may note some glosses, perhaps because of the Bogomil editor (*ANRW* 2/19/1: 137–51; Rubinkiewicz 1987; contrary Philonenko-Sayar and Philonenko 1981). The very strange statement that Abraham's issue are "the people (associated) with Azazel" must be understood in the light of the gloss "*ljudii s Azazilomû sii sout*" (22:5), "this is the people with Azazel," found in one of the manuscripts in the correct form. In the other manuscripts it is slightly different and incorporated into the main phrase. This fact explains the strange association of Azazel with the people of God and is in the spirit of the medieval slavonic sect of the Bogomils.

D. Original Language

The original language of the *Apocalypse of Abraham* was undoubtedly Semitic, either Aramaic or Hebrew. Many Semitisms are found in the text which cannot be explained simply by the influence of Septuagintal style. For example, *Apoc. Ab.* uses the positive instead of the comparative, indicating a Semitic original. The awkward Slavonic construction "heavy of (a big stone)" (1:5) renders Semitic *kbd mn,* which should be interpreted "heavier than (a big stone)." Also, prepositions are sometimes used according to Hebrew rather than Slavonic syntax (e.g., 8:4; 12:10; see Rubinkiewicz 1980).

E. Date and Origin

The *Apocalypse of Abraham* was written after A.D. 70, as is evident from its reference to the destruction of the Temple. If one assumes that plagues 1, 3, 5, 7, 9, (*Apoc. Ab.* 30:4–8) refer to the events from A.D. 69 and 70, and that plagues 2, 4, 6, 8, 10 (*Apoc. Ab.* 30:4–8) refer to the eruption of Vesuvius in A.D. 79, then it may be surmised that the text was composed between A.D. 79–81. This opinion is reinforced by the symbolic interpretation of the haggadic material found in *Apoc. Ab.* 1–6 (the idols symbolize the hostile kingdoms and kings: Marumat = Rome, Barisat = Babylon, [Su]zuch = Persia, "five other gods" = Galba, Otho, Vitellius, Vespasian, and Titus), but this explanation must remain hypothetical (see Rubinkiewicz 1982).

The author of *Apoc. Ab.* belonged to the priestly environment. Some doctrinal affinities of the text with the Qumran writings—e.g., the opinion regarding the High Priest in the Temple, the liturgical milieu of the pseudepigraphon concentrated around the Feast of Tabernacles as the Feast of the renewal of the Covenant, and predeterminism contained in the text of this work—show at least some dependency on Essene doctrine. Despite these similarities, there is no convincing argument that the author of *Apoc. Ab.* was an Essene. The views expressed in the pseudepigraphon correspond equally well to the concepts represented by the priestly environment of Palestine in general, not just the Essene environment.

F. Theology

God is eternal (9:3) and He is the God who protects Abraham and his issue (9:4). He has created the universe, has elected Israel, has called her "my people" (22:5; 31:1), and will give her the victory over her enemies (31:1–2).

Angelology plays an important part in the pseudepigraphon. The most eminent person is the angel of God, Iaoel. His features resemble certain features of the Angel of God in Exod 23:20–23. His fundamental role is to protect and fortify Abraham (10:3). The chief of the fallen angels is Azazel (13:7). His power is on the earth (13:7–8; 14:6), but it is not unlimited; for example, Azazel has no power over the just (13:10).

The world is divided into two parts: (1) the land and the garden of Eden, and (2) the upper and lower waters. In the same way, mankind is divided into the people of God (Israel) and the Gentiles (21:3–7). However, there is no ontological dualism in *Apoc. Ab.* The world created by God is good (22:2). There is no other God except that one for whom Abraham searched and who is beloved (19:3). There is evil in the world, but it is not unavoidable. God has full control over the development of events and does not allow the body of the just man to fall under the control of Azazel (13:10). Azazel is wrong if he thinks that he may scoff at justice and disclose the secrets of heaven (14:4). He will be punished and banished to the desert, where he will remain forever (14:5).

The age of wickedness will consist of "twelve periods" (29:2). After this age comes the last judgment, preceded by the redemption of the righteous. First, however, ten plagues will affect all the world (29:15; 30:2–8). Then God will send his "Elect One" (31:1) and will gather the dispersed people of God. At this time, the Gentiles who oppressed Israel will be punished (31:2) and the apostates will be burned by the fire of Azazel's tongue (31:6). The Temple will be rebuilt and the cult restored (29:17–18). There is no explicit doctrine of the resurrection in the pseudepigraphon. However, this idea may be suggested by the symbol of the dew (19:4) and by the conviction expressed in 13:10 that the body of the just will not belong to Azazel. This may be connected with the exegesis of Ps 16:10, a Psalm utilized by Christians to prove the resurrection of Jesus (Acts 2:27).

G. The *Apocalypse of Abraham* and the Bible

The books of Genesis and Ezekiel play fundamental roles in *Apoc. Ab.* The author begins his work with an allusion to Gen 20:13, adduced in light of targumic exegesis, and closes with reference to Gen 15:13–16 (*Apoc. Ab.* 32:1–3). *Apoc. Ab.* 8:4 and 9:1–4 reflect the expression contained in Gen 12:1 and 15:1 seen in the light of Ps 22:2–3 and Deut 33:29. The author quotes Gen 15:9 (*Apoc. Ab.* 9:5) and employs the image of Gen 15:17a (*Apoc. Ab.* 15:1). The text of *Apoc. Ab.* 20:4 reminds one of Gen 18:27 and that of *Apoc. Ab.* 20:6 alludes to Gen 18:30. *Apoc. Ab.* 18–19 is based on Ezekiel 1, 10. Abraham sees four living creatures (*Apoc. Ab.* 18:3–12; cf. Ezek 3:12–13), the throne (*Apoc. Ab.* 18:3; cf. Ezek 1:26), and the Divine Chariot (*Apoc. Ab.* 18:12; cf. Ezekiel 1, 10).

There is no direct relation between the *Apocalypse of Abraham* and the NT. There are nonetheless many parallel expressions which show that the authors drew from the same tradition (for example, *Apoc. Ab.* 13:3–14 and Matt 4:1–11 par; *Apoc. Ab.* 9:5–8; 12:1–10 and Gal 4:21–31; *Apoc. Ab.* 18:11 and Rev 5:9; see Rubinkiewicz 1987).

H. The *Apocalypse of Abraham* and the Pseudepigrapha

The author of *Apoc. Ab.* follows the tradition of *1 Enoch* 1–36. The chief of the fallen angels is Azazel who rules over the stars and the main part of humanity. It is easy to find here the tradition of Gen 6:1–4 developed in *1 Enoch.* Azazel rebelled against God and, together with the other angels, united sexually with the daughters of men. He disclosed the secrets of heaven and caused great misfortune on earth. Therefore, he was expelled to the desert. Abraham, like Enoch, receives the power to tame Satan (*Apoc. Ab.* 14:3; *1 En.* 14:3). The tradition of 1 *Enoch* 10 about Azazel underlying *Apoc. Ab.* 13–14 permits us to understand better the difficult text of Matt 22:11–14 (see Rubinkiewicz 1984).

The *Apocalypse of Abraham,* with its Palestinian origin, early date of composition, common tradition with *1 Enoch,* and connections with NT writings, finds a place for itself among the most significant works of the Jewish world in the 1st century A.D.

RYSZARD RUBINKIEWICZ

ABRAHAM, TESTAMENT OF. Although titled a "testament" in many of the extant manuscripts, the Testament of Abraham exhibits few of the traits of that genre. Abraham is instructed to make a testament in preparation for his death, but he neither relates his own personal history in order to instruct his descendants, nor imparts ethical advice to those who have gathered at his bedside. The "Testament" of Abraham is more closely related to the apocalyptic dramas, the descriptions of otherworldly journeys, and the legends about the death of Moses, which circulated widely in the Hellenistic and Roman periods, than it is to the other testamentary literature. The "Testament" focuses on the inevitability of death, God's just and merciful judgment (in contrast to Abraham's quick condemnation of sinners), and the fate of souls after death. The figure of Abraham bears some resemblance to the biblical character in that he is presented as hospitable and righteous, but he is also seen in the story as disobedient (refusing to go with God's appointed messengers) and self-righteous (condemning nearly everyone that he sees during his heavenly journey).

The work survives in two distinct Greek recensions, a longer version (A) and a shorter version (B). The two recensions probably derive from a common source, but neither is directly dependent on the other. Whereas the long version is thought to preserve the more original contents and order, the short version often preserves earlier wording and simpler vocabulary (James 1892: 49; Nickelsburg 1976: 85–93).

The story contains two parallel and symmetrical divisions: In the first part, Michael is sent by God to retrieve Abraham's soul (chaps. 1–15); in the second part, Death is sent to complete the task (chaps. 16–20; Nickelsburg 1984: 61). In part one, Abraham receives the visitor Michael with great hospitality, but after he discovers why Michael has come, he refuses to die (A2–7; B = Abraham tries to postpone death). Michael continues to try to persuade Abraham to obey God's will, but Abraham instead strikes a bargain with Michael that would allow him to see all the inhabited world before he dies (A8–9; B = "all God's creation"). During the journey, Abraham is repulsed by the wickedness that he sees, and he immediately calls for the death of the sinners (A10). God orders the tour to stop before Abraham condemns everyone; he then instructs Michael to take Abraham to the place where Abel is carefully weighing the deeds of the dead so that Abraham can see God's compassionate judgment (A11–13). God's merciful treatment of the souls persuades Abraham to pray on behalf of those he had condemned during his journey (A14).

Although Michael has fulfilled his part of the bargain, Abraham still refuses to die. Michael then returns to heaven and God sends Death to reclaim Abraham's soul (A15–16). Death attempts to frighten Abraham by showing him all manner of gruesome deaths (A17), and then tries to persuade him that a swift death is something to be sought because such a death precludes any further punishment (A17–19). Abraham still is reluctant to die; finally he is tricked by Death, and dies. The story concludes with the angels taking Abraham's soul to heaven (A20).

Aside from the minor differences mentioned in the summary, the longer and shorter recensions differ in two major ways: (1) the shorter recension places the judgment scene before the tour of the world; and (2) the judgment scene in the shorter recension is much less fully developed.

The two recensions are preserved in approximately thirty Greek MSS ranging from the 13th to the 17th century (for a full list, cf. Schmidt 1986: 1–3; Denis 1970: 32–33). The noteworthy other languages are Coptic (which generally follows B, but some elements resemble A; cf. Sparks' introduction to Turner 1984: 393), Ethiopic (based on the Coptic; cf. *HJP²* 3/2: 765), Arabic (also based on the Coptic), Roumanian (cf. Turdeanu 1981: 201–18, 440), and Slavonic (follows B; cf. Turdeanu 1981: 201–18, 440).

Scholars such as Ginzberg and Kohler argued for a Hebrew original for the work, but the consensus today is that the longer version of the Testament was composed in Septuagintal, or Semitic, Greek (cf. *OTP* 1: 873; Delcor 1973: 32–34). This position is strengthened by the close vocabulary parallels between the long recension and other books such as the Wisdom of Solomon and 2,3,4 Maccabees, which were clearly composed in Greek. The shorter version can easily be retroverted to Hebrew, but as Sanders notes, the Hebrew that results is a classical biblical prose style, not the Hebrew of the Greco-Roman period as evidenced by the Dead Sea Scrolls and early rabbinic literature (*OTP* 1: 873). It is therefore likely, though still not settled, that the shorter recension was also composed in Greek (cf. Schmidt 1986).

There are no historical allusions in the Testament. Thus estimates of the date of composition have ranged from the 2d century B.C.E. up to the 6th century C.E. (for the final form of the long recension), although most scholars regard the 1st century B.C.E. or 1st century C.E. as the most likely (*OTP* 1: 874; Schmidt; Delcor: 73–77; Collins: 226; Denis 1970: 36).

An Egyptian provenience for the Testament has been widely accepted (*OTP* 1: 875; Collins: 226; Denis 1970: 36; Nickelsburg 1984: 63). Cited in its favor are the similarities in vocabulary between the Testament and other works thought to derive from Egyptian Jewry (3 Maccabees, Testament of Job, 3 Baruch), the balancing of deeds (weighing of souls; chaps. A11–13), the three levels of judgment (which may reflect the three levels of jurisdiction in Roman Egypt; cf. Sanders: 875; Delcor: 18), and the portrayal of the figure of death as a heavenly courtier and servant of God (Nickelsburg 1984: 63). Schmidt has argued for a Palestinian provenience (see also Janssen), but he bases his claim on the doubtful position that the shorter recension was composed in Hebrew.

Undoubtedly a Jewish work, the Testament (especially the longer recension) does contain a few Christian additions (most notably in the judgment scene; cf. *HJP²* 3/2: 763; Nickelsburg 1984: 63). Whether any identifiable group within Judaism is responsible for its composition is still debated. Kohler and Ginzberg suggested that the work derived from the Essenes, and that idea, in a slightly diluted form, has been picked up by Schmidt, who argues that the work originated from "a popular Essenism." Delcor (70–73) has suggested that the work may have been written by the Therapeutae, an Essenelike group, but Sanders has refuted this position convincingly, noting especially that Abraham is presented in the Testament as a city dweller whereas the Therapeutae were strictly nonurban dwellers (according to Philo), and that the Judaism presented in the Testament is a "lowest-common-denominator Judaism" which lacks any sectarian attributes (*OTP* 1: 876; but cf. *HJP²* 3/2: 762).

JAMES R. MUELLER

ABRAM (PERSON) [Heb *ʾabrām* (אַבְרָם)]. See ABRAHAM (PERSON).

ABRON (PLACE) [Gk *abrōna* (ἀβρωνα)]. A wadi along which the Assyrian general Holofernes razed all the cities in his western campaign during the Persian period (Jdt 2:24). However, the location of Abron is uncertain, and given the genre of the book of Judith, the historicity of this campaign and the "Assyrian" general is doubtful. The campaign is set in the territory of Cilicia (Jdt 2:21–25), suggesting that Abron is located somewhere between the NW bend of the Euphrates and the Mediterranean Sea. The confusion is compounded by the textual variants (Codex Sinaiticus *chebrōn;* Vg *mambre* [2:14]), which suggest that some ancient translators may have located Abron in the Hebron/Mamre region of Palestine. Some scholars, following Movers (1835), explain Gk *abrōna* as a translator's misunderstanding of the Heb phrase *b ʿbr hnhr* ("beyond the river"), designating "east of the Euphrates River," or "Mesopotamia" (cf. Josh 24:2, 14–15). However, from the Mesopotamian point of view, this phrase designated the region, or an administrative district, west of the northern bend of the Euphrates River (namely, Syria-Palestine; see Rainey 1969). In this phrase the Heb *ʿbr* was mistaken by the translator to be the actual name of the river. Others identify Abron with the Habur River (see HABOR), which joins the Euphrates 31 km NW of Dura (Soubigiou *Judith* Sainte Bible, 516).

ABRONAH (PLACE) [Heb *ʿabrônâ* (עַבְרֹנָה)]. An Israelite camp-site on the exodus itinerary, located between the stations of Jotbathah and Ezion-geber, N of the Gulf of ʿAqaba (Num 33:34–35; see Deut 2:8; 10:6–7). The historical location of the site of Abronah remains uncertain, as do most of the sites on the wilderness itinerary (Num 33:1–49), and any proposed location of these sites presumes a theoretical travel route (Aharoni *LBHG,* 198). A modern site named both Ar *ʿAin ed-Defîyeh* or *Dāfiya,* and also *ʿEin Avrona* (Hebrew), located 15 km N of the Gulf of ʿAqaba, is one identification (Rothenberg, et al., 1961: 89; Baly 1963: 166; see also *RNAB,* 114), while Aharoni and Avi-Yonah (*MBA,* 174) allow for the tenuous possibility of Elat (modern *Umm Rashrash;* M.R. 145884), situated on the northern shore of the Gulf of ʿAqaba.

MARK J. FRETZ

ABSALOM (PERSON) [Heb *ʾabšālōm* (אַבְשָׁלֹם)]. Var. ABISHALOM.

1. Third son of David. His mother was a foreigner, MAACAH, daughter of Talmai, king of Geshur (2 Sam 3:3; 1 Chr 3:2). He was one of six sons born to David at Hebron by six different wives. He was at the center of a long-running series of troubles that David had with his sons: he killed his older brother AMNON and later rebelled against David himself.

Absalom first appears in the story of Amnon's rape of their sister Tamar (2 Samuel 13). After the rape was committed, Absalom hated Amnon (13:22) with the same hatred that the latter had shown for Tamar (13:15–19), and he bided his time for revenge.

After two years, Absalom was able to lure Amnon—who himself had lured his sister into a trap—as well as "all the king's sons" to festivities at Baal-hazor, near Ephraim, during the time of sheepshearing (13:23–29). There, Absalom had Amnon killed and the brothers fled. David first mourned the death of Amnon, and then he mourned the absence of Absalom, who had fled to his mother's household in Geshur, where he remained for three years (13:30–39). David appears here and throughout as a noble, yet somewhat passive and detached hero.

Absalom was finally brought back through the efforts of Joab, David's general and nephew (2 Samuel 14). In an episode reminiscent of Nathan's parable that entrapped David into acknowledging his sin, Joab recruited a wise woman from Tekoa to masquerade as a bereaved mother whose remaining son's life was

threatened. When David's compassion led him to intercede, she pointed out to him that Absalom's lot was the same as her son's. Acknowledging her point, David restored Absalom from exile, but perhaps showed considerable insensitivity in not allowing him to come into his presence for 2 years (14:28). At this point we are told of Absalom's great beauty (just as his sister had been beautiful) and his full head of hair (14: 25–27). A reconciliation with his father finally was brought about after some persistence on Absalom's part (14:29–33).

Immediately thereafter, Absalom began an active campaign of subversion against his father (15:1–12). Just as people had admired his great beauty (14:25), so they now admired what they saw as his great wisdom (15:3–6). He conspired to be made king at Hebron, his birthplace and—ironically—the place of his father's acclamation as king and early reign over Judah and all Israel. (The duration of this campaign is uncertain; it was likely 40 days or 4 years, and not the 40 years of the MT at 15:7; *see* Conroy 1978: 106–7, n. 40.)

In the narrative, Absalom temporarily fades into the background after 15:12; the story now focuses on David's flight to the Jordan River and his encounters with various opponents and supporters along the way (15:13–16:14). As the conspiracy gained supporters (15:12), David was persuaded to flee from Jerusalem, along with his household and warriors loyal to him (15:13–23). Among these loyal ones was Ittai, leader of six hundred men from Gath and one of three generals who led the climactic battle against Absalom (18:2). David directed the priests Abiathar and Zadok that the ark should not accompany him in his flight (15:24–29), a contrast with earlier attitudes toward the ark (1 Samuel 4). David also met Ziba and Shimei (16:1–14), foreshadowing later events unrelated to Absalom (19:17–31—Eng19:16–30).

After David's departure, Absalom was able to enter Jerusalem without resistance (16:15). Ahithophel, David's respected counselor, had joined Absalom (15:12, 30–31), and he advised him to consolidate his position as king by taking his father's concubines, which Absalom did (16:20–23). He also counseled a selective strike that would kill only David (17:1–4). To counter Ahithophel's defection, David had enlisted one Hushai, the Archite, who then entered Absalom's court as a spy (15:32–37; 16:15–19). Hushai, acting in David's interests, advised a large-scale mobilization instead, and Absalom took his advice, prompting the rejected Ahithophel to commit suicide (17:5–14, 23). YHWH's hand was evident in this, since Ahithophel's advice had been good counsel (17:14)—the delay in mobilization allowed Hushai to send word to David about Absalom's plans via the two priests' sons Ahimaaz and Jonathan, setting the stage for the military confrontation (17:15–22).

The confrontation took place across the Jordan, in the dense Forest of Ephraim in Gilead. Absalom's forces were no match for David's seasoned followers, and many were lost to the sword or to the forest (18:1–8). The narrative slows to describe the death of Absalom and its announcement to David (18:9–32). Absalom's hair had gotten caught in a tree in the dense woods, and Joab killed him, aided by ten of his armor-bearers. The suspense builds as David awaits word of the battle, brought by two messengers. The moving climax is reached abruptly, in David's reaction to his son's death and his poignant lament (18:33).

Absalom had three sons, and a comely daughter whom he named after his sister (14:27). In light of 18:18, it appears that his sons died early in life. If he is the Abishalom of 2 Kgs 15:2, 10, then he had another daughter (or granddaughter), named for his mother, Maacah (contra the OG reading of 2 Sam 14:27b). She was the wife of Rehoboam, mother of Abijam, and (grand)mother of Asa (2 Kgs 15:2, 10, 13; cf. 2 Chr 11:20–22). The "Absalom's Monument" that he built to commemorate his own name due to his lack of heirs (2 Sam 18:18) is not the "Absalom's Tomb" that can be seen today on the eastern slope of the Kidron Valley. The latter dates to a much later period.

The story of Absalom has been seen as part of a large document known as the "Succession Narrative" (2 Samuel 9–20, 1 Kings 1–2; *see* Rost 1982, Whybray 1968), in which the primary concern is the struggle for succession to David's throne. However, this hypothesis fails to do justice to the appendix to 2 Samuel (chs. 21–24), and the evidence for the succession theme within the Absalom narrative itself (2 Samuel 13–18 [or 20]) is meager. Thus caution should be exercised here, to avoid subordinating too much to this one theme (Conroy 1978: 101–5; IOTS: 266–80).

2. The father of Mattathias, who was one of two who remained loyal to Jonathan Maccabeus when his army had been routed by the Syrians in 145 B.C.E. (1 Macc 11:70). This Absalom (GK *Apsalōmos*) also may have been the father of the Jonathan whom Simon Maccabeus sent on a mission to Joppe in 143 B.C.E. (1 Macc 13:11).

3. One of two envoys sent by the Jews to Lysias, Antiochus' deputy, to negotiate a peace after his defeat at Beth-Zur in 164 B.C.E. (GK *Abessalōm;* 2 Macc 11:17). The "House of Absalom" is mentioned in the Qumran commentary on Habakkuk, and it may have been an influential, pious family in the Maccabean period (Goldstein *2 Maccabees* AB, 410).

DAVID M. HOWARD, JR.

ABU ET-TWEIN, KHIRBET (M.R. 158119). An Iron Age fortress located on the summit of a remote ridge in the W slopes of the Hebron Hills, E of the Valley of Elah. The site was surveyed and excavated in 1974–75 by A. Mazar. The fortress is a square structure, ca. 30 × 30 m, with thin outer walls, yet the corners are built of large boulders. A gate chamber led from the E into a square inner courtyard, surrounded by a double row of rooms on all four sides. The rooms were constructed by placing a row of monolithic pillars between the outer wall of the fortress and the inner wall which surrounds the courtyard. Division walls created rooms of different sizes, some of which were perhaps for storage and stables (see Fig. ABU.01). The pottery found in the fortress is mainly of the Iron Age II, but there are also forms dated to the 6th and even the 5th centuries B.C., pointing to a continuous use of the fortress even after the destruction of Judah in 587 B.C.

A small village existed during the Iron Age II on a saddle at the foot of the hill on which the fortress was located. The village consisted of a number of houses scattered over a large area, with open spaces between them.

It appears that the fortress was constructed during the period of the Monarchy (perhaps during the 8th century B.C.) as a guard position and observation point in the remote region, which separated the extensive urban settlements in the Shephelah from those on the summit of the Judean Hills. Similar fortresses were discovered in surveys farther to the N and S in the same relative geographical proximity. It appears that these fortresses were used also as stations in a system of communication, serving as points to transmit fire signals from the Shephelah to Jerusalem in time of war (see Jer 6:1; Zeph 1:16; 3:18; Ps 74:3; and Lachish letter No. 4), while in times of peace they probably housed garrisons and perhaps officials of the Judean Monarchy.

AMIHAY MAZAR

ABU GHOSH (M.R. 160134). A prepottery Neolithic B (PPNB) site located within the limits of the present-day village of the same name. It is in the Judean hills ca. 12 km W of Jerusalem, 700 m above sea level. R. Neuville first explored the site in 1928 after flint artifacts and stone vessel fragments were found on the surface (Neuville 1929). In 1950, J. Perrott opened a trench (70 m^2) and recognized a 1 m thick archaeological layer (Perrott 1952). He recognized the similarities of the materials to the prepottery levels at Jericho, the only known stratified Neolithic site in Palestine at that time. New excavations were conducted at Abu Ghosh between 1967 and 1971, which opened an 800 m^2 area (Dollfus and Lechevallier 1969; Lechevallier 1978; Hesse 1978). As a result of the excavations, the following stratigraphic configuration was recognized: (a) a surface layer with terra rossa and coarse gravel, mixed with recent material (ca. 30 cm thick); (b) gray organic soil with angular stones and archaeological material *in situ* (ca. 0.50–1.10 m thick); and (c) sterile red clay (ca. 0.0–0.20 m thick) and bedrock.

Layer b yielded the remains of three levels of construction badly damaged by erosion and intrusive pits of later periods. In the relatively well-preserved intermediate level, the plans of large rectangular buildings were obtained. The walls, 0.60 to 1.10 m wide, were built with two rows of rough stones and rubble. The best preserved house measured 6.50 × 6 m. It had a white polished plaster floor with a band of red paint all along the walls. This house had been rebuilt once and the plaster floor showed evidence of two phases. Another house, also with remains of a plaster floor, had a row of three small compartments (0.80 × 1.00 m) along the S wall, which must have been used for storage. North of the buildings was an enclosure wall (18 m long), which seems to have marked the border of the settlement. Associated stone pavements, stone-lined pits, and hearths were located outside the buildings.

The remains of some thirty individuals, mostly represented by isolated bones, were recovered. In the undisturbed burials, the skeletons were in a flexed position (Arensburg, Smith, and Yakar 1978). Two adults, buried under the plastered floor of one house, were missing their skulls, but their mandibles were present. Five individuals had been buried in one location—the lower one, an adult, was undisturbed, while the remains of two adolescents and a child had been pushed aside to give place to the last burial of an adult.

The fauna included wild pig, cattle, gazelle, and deer, but the dominant species was goat (ca. 55 percent). From a study of the ages of the animals at death and the ratios of their sex, it appears that animal domestication was not fully developed (Ducos 1978).

The material culture is represented by the flint assemblage, polished stone artifacts, and bone tools. Fine brown, cream white, or reddish (most probably heat-treated) flint was used. The tools include small denticulated sickle blades (about 40 percent) and arrowheads of various types: tanged, winged and notched (Helwan and Jericho points), shouldered (Byblos) and foliated (Amuq) points, retouched by abrupt of flat pressure flaking. A few large amygdaloid axes with a polished edge, smaller axes with rectilinear sides, and small picks are present. Obsidian is represented by one arrowhead and a few bladelets. A good number of polished limestone bowls, basins, and flat dishes were present, as well as cupholes, grinding stones, and pestles (some in imported basalt). The bone tools were mainly awls, with some spatulas, and one needle. Other finds are scarce: a few animal figurines in unbaked clay, some beads in turquoise and green stone, a limestone pendant, and some worked cowrie shells.

From the data obtained through the geophysical survey and the excavations, the site seems to have covered an area of 2000–2500 m^2. The well-built stone houses and storage facilities suggest that this was a sedentary village. This is in agreement with the developing goat domestication and the reliance on harvesting and storing plants (cereals?) as inferred from the large number of sickle blades and grinding stones (no seeds were preserved). However, hunting was still an important source of food if one considers the wild species represented among the animal bones and the large number of arrowheads.

While no suitable samples were avilable for radiocarbon dating, the cultural features are consistent with the PPNB (7th millennium B.C.), most probably in its later phase. A later reoccupation of the site is indicated by the presence of small pressure-flaked arrowheads and a few large denticulated sickle elements.

MONIQUE LECHEVALLIER

ABU HAMID, TELL (M.R. 192204). A Neolithic/Chalcolithic site in the Jordan Valley, on the terrace left by the marls of the Pleistocene lake Lisan, at an altitude of 250 m below sea level. The site

covers about 4.5 hectares, and is limited on its N and S by two deep wadis in which are perennial springs. Current annual precipitation is about 200 mm, allowing for some dry farming.

The site was discovered during the first season of the East Jordan Valley Survey in 1975 and has been dated to the Neolithic/Chalcolithic Period by Ibrahim, Sauer, and Yassin (1976: 51). The material collected during this survey was later discussed by Kafafi (1982). In the summer of 1985, G. Dollfus and Z. Kafafi revisited the site and initiated a joint Jordano-French expedition which conducted its first season of excavation in 1986.

In addition to a general survey of the site and a systematic collection of all the artifacts, various soundings at the site indicate that a maximum of 2.5 hectares were built up during one major phase of occupation, and the depth of deposits vary between 0.30 m to 1.20 m. The remainder of the site was apparently the scene of outdoor activities or enclosures for the herds.

Approximately 400 m^2 have been excavated, revealing two phases of construction. The basal level is characterized by planoconvex mudbrick walls defining rectangular rooms. No complete house has been excavated so far. The upper level is badly eroded, and consists of remains of walls and large numbers of pits (fire pits, storage pits, etc.) which disturb the earlier level. On the edge of the developed area, in what appears to be a storage area, one pit has produced a huge pithos—1.50 m high and 1 m in diameter.

The ceramic assemblage is homogeneous. Most of the vessels are handmade, while small conical bowls show traces of the use of a slow wheel. The surfaces are either rough or wet-smoothed, especially near the rim; slips and self-slips are frequent. The decoration consists of impressed designed, applied clay coils with nail impressions or lunates in relief; occasionally painted bands will also appear. Among the painted pottery, the designs are usually linear. Very few shards are covered with a dark red paint and burnished. Rare also are fragments with chevron designs. These categories of pottery show great similarities with those excavated at Tuleilat Ghassul, Tabaqat Fahil, Shuneh North, Neve Ur, and sites in the Golan and Hauran Heights ("Chalcolithic").

The flint industry consists of scrapers on tabular flints, end scrapers, micro end scrapers, sickle blades, adzes, axes, chisels, perforated disks of unknown function, borers, piercers, denticulated pieces, and notched pieces. The burins are rare and only three transverse-edge arrowheads have been collected so far. Ground stone tools, utensils, and vessels made out of basalt and limestone are abundant, as are also mace heads, some of which are made from hematite.

Preliminary analyses of faunal and botanical remains indicate that the subsistence strategy was mostly agropastoralism. Hunting does not seem to have played an important role: wild species represent a very low percentage of the faunal remains, and arrowheads are nearly absent.

While radiocarbon samples have not yet been analyzed, the architectural remains, the assemblage of the artifacts, and the subsistence activities suggest a date for the settlement in the first part of the 4th millennium B.C.

ZEIDAN A. KAFAFI

ABU THAWWAB, JEBEL (M.R. 230174). A late Neolithic-EB I site south of Wadi Zerka (Jabbok).

A. History of the Excavations/Explorations

During his intensive surveys and explorations of the East Bank of the Jordan, Glueck visited the area of Jebel Abu Thawwab and identified it as Abu Trab (Glueck 1939: 225). Near the top of the mountain, he recognized three caves and considered them the results of earlier mining. In 1975, Coughenour investigated the caves and suggested, "A furnace or smithing operation might well be located by test excavations" (1976: 74). The caves were revisited during the er-Rumman Survey in 1985.

Z. Kafafi and R. Gordon of the Institute of Archaeology and Anthropology at Yarmouk University visited the site in 1983 as a result of a note published by E. Gillet and C. Gillet (1983) in which they mentioned having collected Neolithic and EB pot sherds and flint tools. Several visits followed to gather surface sherds and flint tools, which were dated to the Late Neolithic (Yarmukian), EB I, Roman, and Byzantine periods. As a result of these preliminary investigations, the Institute of Archaeology and Anthropology of Yarmouk University sponsored two seasons of excavations in 1984 and 1985 (Kafafi 1985a; 1985b; 1986a; 1986b), and conducted a survey in the area around the site in 1985 (Gordon and Knauf 1986).

B. The Results of the Excavations

Two main occupational phases were identified—the earliest dates to the Late Neolithic 1, the second phase is assigned to the EB I. These two phases are separated by a mixed fill, consisting mostly of small-sized stones. Both phases yielded architectural remains. Those of the Late Neolithic consisted of rounded and rectangular houses in addition to storage pits (Kafafi 1985b). The EB I buildings were rectangular with benches. All were built of medium-sized boulders and the Neolithic floors were made of either mud or pebbles, while those of the EB were of plaster.

The Yarmukian pottery assemblage consisted of both fine and coarse wares, red painted slip, and decorations consisting of incised herringbone chevrons, and red paint with parallel incisions. The forms represented were cups, simple bowls, deep bowls, and simple hole-mouth and globular jars. The flint tools consisted primarily of arrow-heads and sickle blades. In addition, points, knives, scrapers, burins, and spearheads were represented along with grinding and ground stones. The excavations also produced some bone tools, shells, and human and animal figurines.

The preliminary analysis of the botanical remains indicates that the following plants were predominant in the subsistence strategy: lentils, field pea, row barley, wheat, pistachio, and almond.

Although the samples for radiocarbon dating have not yet been analyzed, based on parallel, and stratigraphic, studies, the early phase of Abu Thawwab is consistent with the 6th millennium B.C. (Late Neolithic, "Yarmukian") and the late phase is consistent with the EB I.

ABUBUS (PERSON) [Gk *Aboubos* (Ἀβουβος)]. The father of Ptolemy, son-in-law and murderer of the high priest Simon Maccabeus and governor over the plain of Jericho (1 Macc 16:11–12, 15). No other information concerning Abubus is available since his name occurs only in this narrative concerning the murder of Simon Maccabeus.

MARK J. FRETZ

ABYSS, THE [Gk *abyssos* (ἀβυσσος)]. "Bottomless," "unfathomed," or "unfathomable deep"; with the feminine article, it signifies "the deep" or "the underworld." The term occurs at least 34 times in the LXX, where in 30 instances it renders Heb. *tĕhôm* (or its plural); once for *mĕṣûlâ,* depths (Job 41:23—LXX 41:22—Eng 41:31); once for *ṣûlâ,* "depths" (Isa 44:27); and twice where the text is uncertain (Job 36:16; 41:24a—LXX 41:23a—Eng 41:32a).

In the OT, "the abyss" is not widely used in the English versions, although it is found in some of the more recent translations, rendering *tĕhôm* (NAB, 11 times; NEB, 7 times; NJB, 6 times; and AB, once).

NAB uses the word 3 times for *ʾăbaddôn,* "destruction" (Job 31:12; Prov 15:11, 27:20). *JPS* uses it once for *maʿămaqqîm,* "depths" (Isa 51:10, where it is parallel with *těhôm*).

The more usual English renderings of the words behind the LXX *abyssos* in the OT are "the deep," "the depths," and "deep." These terms, along with "the abyss," are used in the following senses which reflect meanings of Heb *těhôm* and its synonyms: (1) the primordial ocean (e.g., Gen 1:2); (2) the (deep) sea (e.g., Jonah 2:6—Eng2:5; Job 28:14, 38:16, 41:23—LXX 41:22—Eng 41:31); (3) the Red Sea (e.g., Ps 106:9—LXX 105:9; Isa 51:10, 63:13—with mythological overtones); (4) subterranean waters (e.g., Gen 7:11, 8:2; Prov 3:20; Ps 78:15—LXX 77:15); and (5) the depths of the earth, i.e., Sheol (Ps 71:20—LXX 70:20).

In intertestamental literature, "the abyss" carries a number of meanings: (1) the great deep under the earth, namely, that part of the universe set in opposition to the height of the heavens (Sir 1:3, 16:18, 24:5, 29, 42:18); (2) a poetic reference to the Red Sea where a personified wisdom delivered Israel (Wis 10:19); (3) the depths of the earth (*Jub.* 5:10); and (4) the abyss of fire, i.e., the place of torment for sinners and fallen angels (*1 En.* 10:13; 18:11).

In the NT, there are 9 occurrences of Gk *abyssos,* which, in the older English versions, are usually rendered by "the deep" (Luke 8:31, Rom 10:7) and "bottomless" or "the bottomless pit" (seven times in Revelation). Other English versions use "the abyss" or "the Abyss" with more or less frequency (RSV, twice; NASB, 7 times; JB, GNB, NIV, NJB, 8 times; NEB all 9 times). In 2 Pet. 2:4, NJB renders Gk *zophos,* "dark, gloomy (place)," as "the dark abyss" (i.e., hell).

There are two meanings for "the abyss" in the NT. First, it refers to (1) the place to which the forces of evil are consigned (e.g., the demons in Luke 8:31), and from which they come by way of a shaft (the demonic "locusts" of Rev 9:1–11; cf. ABADDON; Apollyon). From the abyss comes the beast (Rev 11:7), and into it is cast the dragon, i.e. Satan (Rev 20:1, 3). Second, in one passage "the abyss" is a synonym for Hades (Rom 10:7). See also DEAD, ABODE OF THE.

HERBERT G. GRETHER

ACACIA. See FLORA.

ACCAD (PLACE) [Heb *ʾakkad* (אַכַּד)]. One of the cities of Nimrod listed in the Table of Nations of the Yahwist (Gen 10:10). It is listed along with Babel and Erech (and possibly Calneh) in the land of Shinar. These cities are called the "*rēʾšît* of his kingdom." This Hebrew word can mean either "beginning" (cf. Isa 46:10) or "chief," "mainstay" (cf. Amos 6:1 and Jer 49:35). If the connotation "beginning" is correct, then it means that the cities formed the original nucleus of Nimrod's empire. But if the meaning is "main-stay," then Accad and the other cities are described as the most important ones of his kingdom (on the latter, see Speiser *Genesis* AB). Either interpretation is possible within the context.

Accad was known by the Sumerian name "Agade" (A-GA-DÈ^{ki}). This city was founded in the 24th century B.C.E. by Sargon I of Agade, and was the capital of his dynasty until it was destroyed during the fall of that dynasty in the 22d century B.C.E. It was never rebuilt. A Sumerian composition from the late 3d millennium B.C.E., known as *The Curse of Agade,* relates a legendary version of the demise of the city (for a translation and commentary, see Cooper 1983). Agade is mentioned occasionally in subsequent Mesopotamian literature, but its location has not yet been determined with any certainty. The name "Agade" continued to survive in the title "the land of Sumer and Akkad," referring to Babylonia, and in Akkadian (*akkadû*), the word for the Semitic language spoken by the people of Sargon. It is clear that Gen 10:10 refers to the city Agade, not the region of Babylonia, since it is listed along with other cities in Mesopotamia. It is interesting to note that the Yahwist must have had a source mentioning a city that had ceased to exist before the end of the 3d millennium B.C.E.

The reading of the LXX is *Archad.* There is no obvious reason for the change. It is possible that the *reš* was accidentally added in a Hebrew manuscript in reminiscence of the *reš* in the preceding word "Erech." In any case, this form of the name is clearly secondary and incorrect.

ACCENTS, MASORETIC. See MASORETIC ACCENTS.

ACCO (PLACE) [Heb *ʿakkô* (עַכּוֹ)]. Var. PTOLEMAIS. One of the most prominent coastal cities in Canaan, mentioned only once in the OT in connection with the tribe of Asher's inability to drive out its inhabitants (Judg 1:31). On the basis of various Gk mss, it has been suggested that in Josh 19:30 Ummah (MT *ʿmh*) should be read Acco (*ʿkw*). The city was renamed Ptolemais during the Hellenistic-Roman periods, and it was there that the apostle Paul stayed for one day while en route from Tyre to Caesarea at the end of his third missionary journey (Acts 21:7).

Acco's importance may be attributed to its location at the juncture between the coastal road and the inland road leading through Galilee and Transjordan to Syria. OT Acco is identified with el-Fukhkhar (M.R. 158258) at modern Acre/Akko NE of the Naaman River and 700 m inland. The original size of the tell was ca. 200 dunams; however, its S side, apparently affected by its proximity to the river and by late destructions, has been almost totally destroyed. Here there are still remains of the swamps created near the outlet of the river. From the Persian period on, the settlement of Acco gradually moved off the tell and to the NW, along the Mediterranean.

A. History of the City

Acco is first mentioned in the Egyptian Middle Kingdom Execration Texts, where a Canaanite ruler of Acco named Tr'mw appears. Later, Acco is frequently mentioned in the Egyptian sources, which indicates that the population of the city was mainly Canaanite while the rulers were of Hurrian and Indoeuropean origins. These sources include the Karnak list of Thutmose III (*ANET,* 242), Amarna letters (13 times), and in a relief from the Karnak temple from the period of Rameses II, all of which testify to the city's importance. In the Ugaritic and Akkadian texts from Ugarit, Acco is among the few Canaanite cities mentioned. From the same period is a letter recently found in Aphek with the name of a high-ranked official, Adlaha of Acco.

In the 8th and the 7th centuries B.C., Acco appears to have been an important Phoenician city. According to Assyrian sources, the city (*Akku*) rebelled against Assyrian rule and was captured first by Sennacherib and finally by Ashurbanipal, who destroyed it and exiled its people. From the time of Cambyses on, Acco (Gk *akē*) was an important military and administrative center of the Persian empire.

In 332 B.C., Acco surrendered peacefully to Alexander the Great and remained autonomous. Throughout the wars of the Diadochi, it changed hands, but eventually, the city remained under Ptolemy II Philadelphus, who there established a *polis.* Acco-Ptolemais (as it was known) became a prominent trade center at that time, as indicated by the correspondence of Zenon. Following the Syrian wars, the city became a permanent part of the Seleucid empire and was renamed Antiochia-at-Ptolemais by Antiochus IV Epiphanes. Alexander Balas made Acco his second capital and royal fortress. During the Maccabean revolt, Acco was hostile to the Jewish cause; in fact, the city defeated Simon in 163 B.C., and it was there also that Jonathan was captured by Tryphon in 142 B.C. In 104 B.C., Alexander Jannaeus seized the city from him (later he had to surrender it to his mother, Cleopatra III). Acco was then captured by Tigranes of Armenia in 83 B.C.

The Roman phase in the history of Acco began with the arrival of Pompey and annexation of Judea to Rome in 63 B.C. Under Roman rule, Acco-Ptolemais became autonomous under the supervision of the Roman proconsul in Syria.

B. Excavations on the Tell

Prior to the systematic excavations in the 1970s, archaeological research of the city concentrated in uncovering tombs and in emergency digs occasioned by rubble-clearing work of new building projects in modern Acre. The tell itself, which had for hundreds of years been exposed to robbery and destruction and then to steady agricultural cultivation, had been subjected to several archaeological surveys, including that of Saarisalo (1929).

The systematic excavations of Tell el-Fukhkhar began in 1973 and thus far 10 seasons of excavations have been conducted in 8 areas on the tell. Also, 2 seasons were conducted in the lower (modern) city (Areas E and D), and short trial digs were also conducted there in Areas L, M, and N. Consequently, it is possible to obtain some sense of the history of Acco's settlement.

1. Late Chalcolithic—EB IA. Remains of the first stages of settlement were found in Area S on the S slope of the tell, opposite the fertile valley which extends along the N bank of the river and which may have served as an early anchorage. Foundations of stone-built walls, as well as several granary pits, were uncovered on the virgin soil. Sections of a few superimposed floors were cleared, and on the evidence of the pottery, the first settlement may date to the transitional period between the Late Chalcolithic and EB I. It appears to have ended abruptly after 2–3 generations; after its abandonment, there was most probably a gap in the settlement of Acco until the fortified MB I city was erected.

2. MB I. The earliest fortifications on the site were uncovered chiefly on the tell's N slope (Areas AB and B), and on the NW slope (Area F). It is still uncertain whether this fortification system encompassed the entire city or mainly its acropolis. Erected on the bedrock of the highest point of the hill, this fortification consisted in its base of a layer of hardened clay at least 2 m thick. Later a cyclopean wall of boulders ca. 3.5 m thick was erected on this rampart and a new layer of sloping rampart was attached to it. Over this, a brick wall with two bulging towers preserved up to 4 m high was constructed as a part of the fortification system. Attached to the N face of this enormous wall and traced for ca. 25 m was a stairway, consisting of 19 steps, which started from the top of the rampart. It seems that at least these first two stages of the fortification system belong to the MB I period. In the late stage, this rampart, including the stairway, was covered from the outside, and to its N the citadel ("Building A") was erected in the late MB I or early MB II period. The lowest level reached within the city to the S of the rampart (Area AB) and consisted of remains of stone walls, which supported and strengthened the inner slope of the rampart. On this slope, two burials in jars (one of a child and the other of an infant) accompanied by artifacts help to date it to the MB I period.

In Area F on the NW corner of the tell, a city gate ("Sea Gate") built into the rampart as part of the fortification system provided the best evidence for dating the earliest foundations of the city. The gate, preserved up to 3 m high, was approached by four steps and a rather narrow passage. It was composed of two interconnected units: a stone-built rectangular outer room and a square inner room built of bricks, with three pairs of gateway pilasters. The inner room, most probably a guardroom, had a second story, apparently leading to the towers on either side of the gate. The gate shows at least two phases of development within the MB I period, before it was filled in and went out of use. The quarter of the city ajoining the gate was partly excavated, and its architecture and the finds on all the floors, both in the gate itself and the gate quarter of the city, indicate its existence in at least three stages of the MB I period (ca. 2000–1800 B.C.).

3. MB II–III. The later stages of the fortification are characterized mainly by the citadel (Building A), a large brick building erected to the N of the rampart (Area AB). It probably served as a fortress from the end of the MB I until the end of the MB II period. In this two-story building was found an important stone-lined grave of a wealthy woman of high status. Skeletons of a woman and two children and a large number of burial gifts, including pottery vessels, jewelry, and scarabs, were discovered in the grave. On the inner face of the wall (constructed in the second stage of the fortification to support the rampart) were found scattered burials. Burials, either dug or built, continued in the MB III period, as for example, the burial found in a large square vaulted stone-built tomb in Area H. Beside local pottery, the artifacts also included fine pottery imported from N Syria or Anatolia, as well as scarabs, weapons, and jewelry. On the inner slope of the rampart, which was partly filled by now, a few structures, connecting walls, stone-built drainage installation, and granary pits were found. In the debris, many animal bones and a whole skeleton of a large donkey were found. This stratum was also found in the lowest level of Area C, where a handle of a large pithos bearing the impression of a Hyksos scarab was discovered.

Near the W end of the rampart (Area P), a section of a stone-built postern was excavated. It was about 2 m high outside and inside ca. 1.6 m. The floors consisted of flat stone slabs. It might have been used for both collecting water and communication from the city during seige or attack.

4. LB I–II. The citadel in Area AB continued during most of this period, though it was partly damaged possibly during Thutmose III's conquest. Into the additional layer of the rampart, LBI graves were installed. One of these was a very well-built stone grave; beside the skeleton were some rare types of bichrome ware and a large krater of the "chocolate-on-white" type. Some buildings were uncovered in Area A, among which was a public building made of mud bricks. The building was erected, according to the finds, at the end of the 15th or beginning of 14th century B.C. when Acco and its rulers are frequently mentioned in the El-Amarna tablets. A few burials with finds of the early LB period were found outside this building. Also uncovered was a well-preserved rectangular stone tomb with a low vault, a rare example in Canaan for this period. It was built into the NW slope of the rampart (Area H). Beside the pottery, the finds included scarabs, some of which were set in gold rings. In Area S, an outstanding find was an ivory cosmetic box in the form of a duck. Some damage inflicted on several buildings may be related to Seti I's campaign in the area.

Toward the end of this period, probably after Acco's destruction by Rameses II, the citadel fell into disuse and the place was partly converted into a workshop area. By then, there were almost no regular buildings, and instead, many silos and granaries were found in Area AB. Beside the local pottery, Cypriot and Mycenean sherds from the end of the LB II period were still found on the floors and in stone-lined pits and silos, testifying to a maritime trade relations between Acco, Cyprus, and the Aegean.

5. The LB–Early Iron Transition. The citadel disappeared at the end of the Bronze Age and the whole area was converted into an industrial quarter, associated with the making of pottery, the reworking of metals, and probably also the extraction of purple dye from murex shells. Layers of ash and workshop waste accumulated one on top of the other in the open spaces between craftsmen's installations and working floors. Among the finds in Area AB were crucibles, pieces of a clay tuyere, a stone jewelry mold, as well as remains of a furnace that was probably used for smelting copper and bronze for recasting. A large pottery oven with remains of a locally produced ware of Mycenean IIIc1 type was found. Such a pottery type was also found in a parallel stratum in Area F. Some whole local pottery vessels found in a pit, on top of the rampart (Area H) also belong to the transitional LB–Early Iron period. Typical to the local Canaanite culture are two small finds in Area K: one is a mold of a Canaanite goddess, probably an Asherah, and the other is a bronze male figurine with one hand raised, which probably represents the Canaanite god Reshef.

There are remains of poorly constructed houses mainly at the SW areas of the tell, as well as many granary pits. From Area H came a stone, mortar-shaped portable altar, bearing incised drawings of boats and boatmen; it was probably brought by newcomers to Acco. The presence of a large number of crushed murex shells (used also for the foundations of several floors) and a large piece of a jar covered with purple dye indicate the activity of the purple dye extracting. A scarab of Tausert found in Area AB, just below the workshop's floors, may help to date this stratum to the end of the 13th and beginning of the 12th century B.C.

This new material culture on the remains of the LB Canaanite city testify to a settlement of a non-Canaanite ethnic group, probably one of the "Sea Peoples" known to have invaded the country around that period. The evidence of the new material culture and specifically the pottery mentioned above provides grounds for assigning the finds to one of the "Sea Peoples," probably the Sherden, who are known mainly from Egyptian sources as having settled on the N coast of Canaan.

6. Iron Age I–II. The scarce architecture from the 11th and 10th centuries B.C. seems to indicate the decline of Acco, at the same time that to the N, Tyre was becoming a prominent city port in the region. The pottery includes vessels of the Phoenician "Achzib" type, as well as Cypriot "black-on-red" and "white painted" pottery, which seem to belong to the early stage of the Iron Age. A circular crucible found above the industrial area ascribed to the Sherden seems to indicate that the production of pottery continued in this place.

From the 9th century on, the city began to develop again, as inferred from the renewal of building activity, mainly for living quarters. The "bowl" of the city was by then filled in completely. The wall built in Area A to fill in and straighten the rampart formed a basis on which the city was leveled. In addition to the regular constructions on stone and brick, ashlar-built structures, probably public, appeared for the first time. A solid brick wall preserved to a height of 7 courses was found in one of the buildings which apparently continued to function in the early Assyrian period and was finally destroyed during the conquest of Sennacherib. Among the interesting finds was a hoard of little cubes of silver. In a later stratum a large building with a series of rooms still preserved to a height of 4 courses was destroyed by fire, indicating the destruction of the city probably during the period of Assurbanipal. The layers of ash contained fragments of various metals, testifying to the existence of a metal industry during this period. A stone construction, which might have been a part of a casemate wall, was traced in Area H. In Areas A and K, living quarters with a few industrial installations were uncovered. In Area A, there was evidence of a double destruction; the first may be assigned to the capture of the city by Sennacherib and the second should be related to Assurbanipal's conquest. In Area K, remains were found of what might be a fortification, but this is still unclear. In addition to local pottery, Phoenician and Cypriot types of wares were traced, as well as figurines dating from the 8th to the 6th centuries B.C. A tiny stone (perhaps used as an amulet) was found with a Phoenician inscription which reads ʾšʾ (Asha); also found was a stamped handle with an engraved horse and the inscription *ršp.*

7. The Persian Period. With the Persian conquest of Acco in the 6th century B.C., the city again became an important administrative, military, and economic center. In fact, the two well-defined Persian strata (5 and 4), starting with the last quarter of the 6th century (when Cambyses' expedition to Egypt took place) and ending with the city's conquest by Alexander the Great, provide evidence for an enormous expansion toward the bay. With the construction of a harbor, it became the major anchorage for military and mercantile traffic to and from Egypt. The results of the excavations show that although the city expanded beyond the tell itself, most of the population probably still lived on the tell during the period.

In Area K, where, as yet, only one stratum has been assigned to the Persian period, residential buildings with courts and ovens were excavated. The Persian level there is also represented by a series of deep pits, where a large amount of iron slag was found, testifying to the industrial character of this part of the city. A large cistern with a well-preserved plastered interior, which was probably built during this period, was linked with this industry. In Area A, remains of a three-room structure, built partly in the Phoenician style of stretchers and headers, was uncovered. It had probably been used for administrative and storage purposes. In a pit in its floor were found two Phoenician ostraca. One of them contained an order from the governor of Acco to the guild of metal craftsmen, to give a large number of metal vessels to the person "in charge of the temples." This provides evidence for the existence of Phoenician temples at Acco. Nearby, a well-constructed stone wall and some cultic artifacts were found, and these may have belonged to this temple. The finds, which include several zoomorphic and anthropomorphic male and female figurines, testify to the Phoenician character to this quarter.

A large quantity of imported Greek "black-on-red" figure pottery also turned up in the Persian strata, mainly on the W part of the tell. In Area F, among buildings constructed in the Phoenician style of headers and stretchers, a stone-lined pit, with a basalt base (*bothros*) was found, containing a large quantity of local, Cypriot, and Greek pottery. Among these was a rare Attic red-figured bell krater, portraying Heracles accompanied by satyrs and maenades, from the early 4th century B.C. The architecture and the finds indicate a prosperous city quarter, perhaps settled by Greek merchants.

8. The Hellenistic Period. The Hellenistic city on the tell was very well planned, and though the two strata from this period were subjected to robbery, destruction, and finally agricultural cultivation (at least from the Middle Ages on), one can still recognize the urban planning in most of the excavated areas of the tell. The town planning continued on the tell even after the main urban center of Acco had moved down to the maritime plain, to Ptolemais (see C below). A few structures, built in the Phoenician style of headers and stretchers, belong to the earliest stage of the era. The remains in Area K show well-planned buildings

with open courtyards, where the artifacts, especially the pottery, were mainly Hellenistic. The pottery, including amphorae with stamped handles, mainly of the 2d century B.C., provide evidence for well-developed trade relations, mainly with the islands of the Mediterranean and the Aegean. Metal and stone ware, jewelry, as well as figurines of different types (e.g., of a woman with her hands over her head), were found.

Above the Hellenistic strata were several badly preserved remains of a settlement from the Roman and Byzantine periods. There was little evidence from the Crusader period (mainly from the S part of the tell), even though the Crusaders occupied the tell. A stone structure uncovered in Area B1, guarding the route to the Galilee, may be dated to the time of Saladin. In the Ottoman period the earlier building remains had already been covered with soil and blown sand, and the tell was used as a pasture.

C. Excavations in the "New City"

Several of the rescue excavations undertaken in the area between the tell and the Crusader Ottoman city of Acre confirmed the assumption that the new city of Acco developed to the W of the tell as early as the Persian period. In the lowest stratum (9), reached in Area D (ca. 600 m W of the tell), local and Greek ware was found from the 5th century B.C. To the next stratum (8) belonged a wall constructed of ashlar stones and rubble fill from the late 5th and early 4th centuries. The next two strata (7 and 6) provide evidence for a flourishing Hellenistic city with a specific architecture, an important tombstone of a Greek from Crete, and coins which provide a date for the strata. The following stratum (5) belongs to the Roman period. In the next stratum (4) remains of a well-paved street and a drainage system serve as evidence of the prosperity of this part of the city during the Byzantine period. The discovery of remains of a Crusader building (in stratum 2) raises the question whether the walls of the Crusader city should not have existed more to the E than is generally accepted. A remarkable find from this stratum is a very rare chalice bearing a fragmentary Latin inscription and a cross which might indicate a Crusader church on the site. The last occupation of this part of the city is represented by stone installations from the Ottoman period (stratum 1).

Other rescue operations were conducted to the SW of Area D, where remains of nine settlement strata were excavated (Area E). The lowest stratum yielded local and Greek pottery and some remains from the late 5th and early 4th centuries B.C. In the next stratum was found a segment of the foundations of a large round tower (ca. 20 m in diameter) built of ashlar stones. Attached to the tower were remains of walls which belonged to a fortification system of the early Hellenistic period. In one area, a large number of lead arrows and slingstones suggest that some of the structures served as an armory. The destroyed walls testify to the many battles for Acco during the "Syrian Wars" in the Hellenistic period. Along one of the walls, unused pots with lids dating to the 3d century B.C. were found still standing on a floor. This enigmatic find and a Tanit sign on a jar may point to a local cult. In the next stratum, some changes in the structures could be observed until the fortification fell into disuse, apparently during the time of Vespasian. In the later Roman and Byzantine periods, a podiumlike structure was erected on the site. During the Arab period, a large installation for lime production existed in the area.

The last among the significant excavations in the new city took place N of the areas described above (Area L). Part of a building was discovered, most likely a temenos, erected in a Hellenistic style. This building, which existed in only one stratum, yielded many pottery figurines and lamps from the 3d century B.C., and certainly was used for cultic purposes.

ACHAIA (PLACE) [Gk *Achaia* (Ἀχαια)]. Var. ACHAEA. A Greek region which twice gave its name to all of Greece before its Achaean League (280–146 B.C.) fell to the Romans (Polyb. 2.41; Thuc. 1.111, 115). All relevant NT references involve Corinth, Achaia's capital (Acts 18:12, 27; I Cor 16:15; 2 Cor 1:1).

The Achaean people came from the east and pushed out the region's original inhabitants, the Ionians. The latter are credited with founding the twelve coastal cities which became the fulcrum of the Achaean League. Following the Dorian invasions (ca. 1250 B.C.) Achaia, thus named by Homer after Achilles' men and Agamemnon's followers, realized an alliance of powerful cities between Elis and Sicyon. It was a commander-in-chief of the Achaean League, Aratus of Sicyon, who spearheaded their constitution (251 B.C.). Achaia managed several successful colonies, e.g., Sybaris and Croton, and is perhaps part of Philistine ancestory (*AHL,* 214). Although Achaia aligned with Rome in 198 B.C., it lost its autonomy in 146 B.C., when, after years of disputes, the Romans razed Corinth. Julius Caesar turned Rome's attention again to Achaia in 46 B.C. and rebuilt its former isthmian city, which became the Roman capital of Achaia in 27 B.C. (Apul *Met.* 10.18). Achaia now included all of the southern half of the Greek peninsula (Paus. 8). In this same year the Romans made the northern part of (former) Achaia into Macedonia, with a southern border stretching from the Eubian gulf west-northwest to around Actium. This division prefaces the reference "Macedonia and Achaia" which generally implied all of Greece (Acts 19:21; Rom 15:26; I Thess 1:8). The Romans often just used "Achaia" to define the parameters of Greece, excluding Thessaly. The early Christians recognized Macedonia and Achaia as one of the thirteen major Roman provinces (*MCBW,* 218). By A.D. 65 the provinces of Thessaly and Epirus were clearly defined and constituted Achaia's northern border; Actium, and the coastal territory to its immediate south, became part of Epirus.

Paul's eighteen-month stay in Corinth is dated by an Achaean inscription at Delphi which chronicles the tenure of proconsul Gallio (*SIG* 3.108). By the time of Nero's accession, Christianity had a permanent hold in Achaia, already boasting at least twenty churches.
JERRY A. PATTENGALE

ACHAICUS (PERSON) [Gk *Achaikos* (Ἀχαικος)]. A Corinthian Christian who, along with Stephanas and Fortunatus, traveled from Corinth to be with Paul in Ephesus (1 Cor 16:17). The name "Achaicus," which means "one who is from Achaia," suggests that he was a slave or former slave from that region since slaves were often named after the province from which they came. Paul rejoiced at the arrival of these three messengers because, as Paul expressed it, they made up for the absence of the other Corinthians which Paul keenly felt (16:17). He remarks that their presence refreshed his spirit (16:18), apparently because they relieved some of his worries about the Corinthian community. In turn, Paul observed that their coming would also lift the Corinthians' spirits, probably because they would know their envoys had brought him much comfort. Finally, Paul urges the Corinthians to "recognize these people" (16:18). That Paul concludes with this appeal suggests that they were among "Paul's people" in the community (cf. 1:12).

It is possible that the three men had brought a letter to Paul, although one should not deduce that they were therefore among those Corinthians who delivered the communication referred to in 7:1, nor among "Chloe's people" (1:11), since those groups brought disturbing reports to Paul. After their visit with Paul, Achaicus and the others probably carried 1 Corinthians back with them to Corinth (see Fee *1 Corinthians* NICNT, 46–66).

The reference to the household of Stephanas immediately preceding the reference to Achaicus and Fortunatus in 16:17 could imply that the latter two were members of that household, either slaves or attached freedmen, and thus that they were numbered among Paul's first converts in Achaia and were themselves ministers to the community in Corinth (16:15). (Indeed a few mss in the Western tradition read "and Fortunatus and Achaicus" in 16:15, but their inclusion here is most likely an assimilation to v 17.)

JOHN GILLMAN

ACHAN (PERSON) [Heb *ʿakan* (עָכַן)]. Var. ACHAR. Achan, the son of Carmi, son of Zabdi, son of Zerah, of the tribe of Judah, appears in the MT of Joshua 7 (the full form of his name is found in vv 1 and 18; shortened form in vv 19, 20, 24). In the Old Greek of Joshua and in the MT and Old Greek of 1 Chron 2:7, the name appears as Achar (in the preceding verse his grandfather's name is recorded as Zimri). This variation may be explained by graphic confusion between *resh* (*r*) and *nun* (*n*) at the end of the name in Hebrew. Or the two forms may represent a change from original "Achan" to "Achar" under the influence of the verbal root *ʿkr*, meaning to "trouble," which appears in Joshua 7:25 (so also in 6:18).

In defiance of a command from Joshua (6:17–19), Achan took of the booty from Jericho (specifically: "a beautiful mantle from Shinar, two hundred shekels of silver, and a bar of gold weighing fifty shekels") and hid the loot in his tent. He did not come forth on his own to confess. Rather, Joshua cast lots, beginning by tribes and working his way down to Achan himself. Confronted by this divine sleuthing, Achan finally confessed. His admission of guilt did not, however, save him from a drawn-out punishment of burning and stoning. Although the specific sin was Achan's, blame was shared widely. First by all Israel (see v 1), which suffered a defeat at Ai directly after Achan's theft. In some sense, Israel was to blame, if only indirectly. Achan's family was implicated more directly and suffered the same punishment as their leader.

Many scholars view Joshua 7:1–8:24 as a composite of two originally separate traditions—one dealing with Achan and the other with the battles for Ai. Some posit a primarily etiological basis for the Achan tale. They point to the statement, found in Joshua 7:26, that a mound of stones heaped upon Achan remained "to this day" in the Valley of Achor (a site usually identified by contemporary scholars with the modern *el-Buqeʿah,* a large plain SW of Jericho). Outside of Joshua 7, the Valley of Achor is found in Josh 15:7, Hos 2:15 ("I will make the Valley of Achor a door of hope"), and Isa 65:10 ("the Valley of Achor shall become a place for herds to lie down").

In the judgment of others, the story of Achan originated as intertribal polemic, with the tribe of Judah coming up on the losing side. Read in its present form, the story yields significant theological insight: all Israel must be totally obedient to Yahweh and his regulations for Divine Warfare if Israel is to be victorious. The sin of even a few is imputed to the entire community.

Although Achan/Achar is not mentioned in the Bible outside of the passages listed above, allusions to him have been detected at two points in the New Testament (see further Derrett 1986): in the story of Ananias and Sapphira (Acts 5:1–10) and in the Parable of the Pounds (Luke 19:11–27) or Talents (Matthew 24:14–30). Later Jewish traditions emphasize Achan's confession and the further trouble he averted thereby (so *Sanh.* 43b; also *ʾAbot R. Nat.* and *Num. Rab.*). Although his sin cost him his life in this world, his confession gained him a place in the world to come. See also *EncJud* 2:211; Boling and Wright *Joshua* AB; and Butler *Joshua* WBC.

LEONARD J. GREENSPOON

ACHBOR (PERSON) [Heb *ʿakbôr* (עַכְבּוֹר)]. **1.** Father of Baal-hanan, a king of the Edomites prior to Israel's monarchy (Gen 36:38–39; 1 Chr 1:49). Achbor's name occurs in parallel lists of Edomite kings, the dates and duration of whose reigns are uncertain (Gen 36:31–39 = 1 Chr 1:43–51).

2. The son of Micaiah, father of ELNATHAN, and a courtier of King Josiah (ca. 640–609 B.C.E.; 2 Kgs 22:12, 14; Jer 26:22; 36:12). After the book of the law was found and read to Josiah, Achbor was sent as part of a royal delegation to inquire of Huldah the prophetess concerning the words of this book (2 Kgs 22:11–20; see 2 Chr 34:19–28, where "Achbor son of Micaiah" is replaced by "Abdon the son of Micah" [v 20]). Elnathan the son of Achbor played an important role in the administration of King Jehoiakim (ca. 609–598 B.C.E.).

MARK J. FRETZ

ACHIM (PERSON) [Gk *Achim* (Ἀχιμ)]. The son of Zadok and father of Eliud in Matthew's genealogy of Joseph, the husband of Mary (Matt 1:14). Although Achim is absent in Luke's parallel genealogy (3:23–38), his mention in Matt 1:14 may associate him with the lineage of the high priest Zadok (1 Chr 5:34–35—Eng6:8–9; Gundry 1982: 18). Also, the name "Achim" may be a shortened form of the name of Zadok's son Ahimaaz (1 Chr 5:34–35—Eng6:8–9; MT *ʾăḥîmāʿaṣ* = LXX *acheimaas*; for Gk *acheim*, cf. LXX 1 Chr 11:35; 24:16—Eng24:17).

MARK J. FRETZ

ACHIOR (PERSON) [Gk *Achiōr* (Ἀχιωρ)]. Achior the Ammonite appears only in Judith, in which he plays a prominent role as a gentile who embraces Judaism. He was among the leaders of Israel's neighbors whom Holofernes, general of Nebuchadnezzar, had summoned to inform him about the Israelite nation, who alone among the Western peoples dared to resist his army. In Jdt 5:5–21 Achior surveys Israel's biblical history from Chaldean origins to the post-exilic period. His rather deuteronomic claim that God would permit Holofernes to defeat them only if they had sinned nearly cost Achior his life (5:22). The general decided to postpone his execution and remarks ironically that the Ammonite would not see his face "until I take revenge on this race that came out of Egypt" (6:5). Achior was delivered to the Israelites of Bethulia, to whom he reported the conversation with Holofernes (6:10–21). Later Judith herself confirmed that what Achior had told the general was correct (11:9–10). Moreover, after Judith had beheaded Holofernes, Achior once more saw his face and was able to verify that the head she had brought to Bethulia was indeed the general's (14:5–10; Vg places these vv before 14:1). Achior then firmly believed in God and was circumcised, thus converting despite the command of Deut 23:3.

The name "Achior," which does not occur in the Hebrew Bible, has been explained in various ways (Steinmann 1953: 55–62; Moore *Judith* AB, 158, 162–63). One possibility is that it reproduces the Semitic name *ʾḥyʾwr* ("my brother is light"), which could be taken as a reference to the true insight which he brings in the book (Enslin 1972: 86). A second option, defended by H. Cazelles (1951: 125–37, 324–27), is to view it as a mistake for *ʾḥyqr*, the name of another gentile—the sage in the book of *Ahiqar* (in Tob 11:20 the Vg reads *Achior* where the LXX [v 19] has *Achikar*). Apart from the shared consonants at the beginning of the two names, there is little reason to think they have been confused. A third hypothesis is that the name is a corrupt form of *ʾḥyhwd* ("[my] brother is Judah"). In support of this option one should note that in Num 34:27 the name *ʾḥyhwd* appears in the LXX as *achiōr* (Cowley *APOT* 1: 252); and in the Syriac version of Judith *Achior* is spelled *ʾḥyhwd* (Steinmann 1953: 55). If this appealing suggestion is correct, then Achior's name, like that of Judith ("a Jewess"), would symbolize the role that he, a convert from a nation that was related to Israel (Gen 19:30–38), plays in the book.

JAMES C. VANDERKAM

ACHISH (PERSON) [Heb *ʾākîš* (אָכִישׁ)]. Philistine ruler of Gath, from whom David sought asylum when he fled from Saul. In 1 Sam 27:2 his father's name is given as Maoch (*māʿôk*), which closely resembles Maacah (*maʿăkâ*), father of King Achish of Gath according to 1 Kgs 2:39. There were probably two kings by this name: Achish I, son of Maoch, who was succeeded by Maacah, father of Achish II. In the title of Psalm 34, he is called Abimelech, a Semitic title perhaps adopted by Philistine rulers, rather than a personal name (cf. Gen 20:1–2; 21:34).

The name is not Semitic in form and has been related to Agchioses, a king in the neighborhood of Troy at the time of the Trojan War (Hom. *Il.* 2: 819). The name probably corresponds to that of *Ikausu* (ANET, 291), a Philistine king of Ekron in the days of Esarhaddon (681–669 B.C.) and Ashurbanipal (668–629

B.C.). Two names in a list of Keftui names from Egypt have been identified with Achish, particularly since the Philistines were reputed to have come from Caphtor (*Keftui*) in Amos 9:7 (Strange 1980). Corney (*IDB* 1: 27) has explained the name from Hurrian *akk sha (rur)*, "the king gives."

From a literary perspective, the figure of Achish is related to that of Goliath, another Philistine champion from Gath (1 Sam 17), in the narrative of David's rise to power (cf. Miscall 1986: 173–77). The story of David and Goliath concludes with the curious statement that "David took the head of the Philistine and brought it to Jerusalem" (1 Sam 17:54), foreshadowing David's rise to power in that city. When David slew Goliath, the women sang, "Saul has slain his thousands, and David his ten thousands" (1 Sam 18:7), a refrain which appears again on the lips of both the servants of Achish (1 Sam 21:11—Eng 21:10) and the Philistine commanders addressing Achish (1 Sam 29:5), forming a kind of frame around the story of David and Achish and connecting it to the earlier story of Goliath.

In his first encounter with Achish, David carried Goliath's sword with him, which he had received from the priest Ahimelech (1 Sam 21:9—Eng 21:8). Perhaps this explains his fear and feigned madness before Achish, king of Goliath's hometown (1 Sam 21:13–14—Eng 21:12–13). David's conduct on this occasion has been compared to that of other great men who feigned madness in difficult circumstances, such as Ulysses (Cic. *Off.* 3, 26), L. Junius Brutus (Dion Hal. 4, 68), the astronomer Meton (Ael. *VH* 13, 12), and the Arabian king Bacha (Schultens, *Anth. Vet. Hamasa*, p. 535). Subsequently, Achish accepted David and his men as mercenaries and gave David the city of Ziklag in exchange for his raids on southern tribes hostile to the Philistines (1 Sam 27:1–12). Because of the suspicion of some of his commanders, however, Achish excused David from participation in the fateful battle of Mount Gilboa in which Saul and his sons died.

There is an interesting play on the word "head" in the concluding episodes of the story of David and Achish. The Philistine commanders suggested that David would be reconciled to his lord (Saul) "with the heads of the (Philistine) men here" (1 Sam 29:4). Earlier, Achish had appointed David to be "the keeper of my head forever" (i.e., his permanent body guard; 1 Sam 28:2). After the battle of Mount Gilboa, the Philistines "cut off (Saul's) head … and fastened his body to the wall of Beth-shan" (1 Sam 31:9–10). In the tradition of Jephthah of old, David became both "head and leader over them" (Jdg 11:11), as foreshadowed in the words of Achish and his Philistine cohorts.

DUANE L. CHRISTENSEN

ACHOR (PLACE) [Heb *ʿākōr* (עָכֹר)]. A valley (*ʿēmeq*) on Judah's northern border (Josh 15:7) identified with modern day *El Buqêʿah.* According to biblical tradition, Achan and his family were stoned and buried at the Valley of Achor after he violated the ban following the battle of Jericho. Achan's crime (Joshua 7) was the first Israelite act of disobedience after Israel crossed the Jordan; his death was the first divinely commanded punishment in the new land. Josh 7:25–27 (probably secondary) offers an etiological explanation of Achor's name. Joshua declares that Achan has troubled (Heb *ʿkr*) Israel and that God will trouble (*ʿkr*) him; the site of his execution is therefore called "trouble" (*ʿākôr*). The word play is further developed by LXX^{B}, Syriac, and 1 Chron 2:7, where Achan's name is rendered "Achar."

The Valley of Achor is included among the sites marking Judah's northern border (Josh 15:7), a list which moves uphill from the Jordan to Jerusalem. The reference to the Valley of Achor is omitted from the description of Benjamin's southern boundary (Josh 18:15–19), which otherwise parallels the list delineating Judah's northern border.

The negative character of both Achor's name and the Achan tradition allows Achor to function as a figure of eschatological change. According to Hos 2:17—Eng2:15, the Valley of Trouble will be made a

door of hope. Hosea's mention of Achor as a "doorway" may be a reference to an old road which F. M. Cross (*CMHE,* 110) has identified as an ancient route from the *Ḥajle* Ford through *El Buqêʿah* to Jerusalem. Isa 65:10 promises that the Valley of Sharon to the east and the Valley of Achor to the west will be given as rich pasture land to those who seek God.

Noth (1955: 42–55) has identified the Valley (*ʿēmeq*) of Achor with present day *El Buqêʿah* ("little valley"), a small plain (approximately five miles long and up to two miles wide) in the northern Judean wilderness, between Hyrcania and Qumran. *El Buqêʿah* is bounded on the north by the *Wâdī Dabr* system, and on the south by *Wâdī en-Nár* (the Kidron Valley). According to Noth, *El Buqêʿah* is the only site in the area around Jericho which could properly be called an *ʿēmeq* (that is, an arable, defensible depression, bordered by hills or mountains).

Noth's identification has achieved near consensus among biblical scholars. Wolff (1954: 76–81) has presented the strongest alternative proposal. He locates the Valley of Achor in *Wâdī en-Nuwēʿime,* a valley one-half mile wide by one mile long situated north of Jericho, a location which fits both the Benjaminite context of Joshua 7 and the northern prophet Hosea's reference to Achor. However, *Wâdī en-Nuwēʿime* is too far into Benjaminite territory (perhaps near the Ephramite border) to be cited as a marker for the Judean-Benjaminite boundary. That the Valley of Achor is included in the Judean but not the Benjaminite description of their joint border suggests that it belonged to Judah. Joshua 7 (long recognized as independent from the account of the conquest of Ai in Joshua 8) would then be a Judean story which had been carried to Gilgal and incorporated into its Benjaminite legends.

F. M. Cross and J. T. Milik's exploration of *El Buqêʿah* (1956: 5–17) uncovered three Iron Age II settlements (*Khirbet Abu Ṭabaq* [M.R. 188127], *Khirbet es Samrah* [M.R. 187125], and *Khirbet el Maqari* [M.R. 186123]) which they have identified with the desert cities Middin, Secacah, and Nibshan (Josh 15:61–62). The proposal has been well received; however, in the absence of evidence directly linking the desert cities to the Valley of Achor, or the Iron Age ruins to the desert cities, the identification must be considered tentative.

ACHSAH (PERSON)

[Heb *ʿaksâ* (עַכְסָה)]. The daughter of Caleb (1 Chr 2:49) and the wife of the Israelite judge Othniel (Josh 15:16–17 = Judg 1:12–13). For sacking the city Kiriath-sepher (Debir, see Josh 15:15 = Judg 1:11), Othniel received Achsah as a prize from Caleb. Subsequently, in addition to receiving territory in the Negeb, Achsah charmed Caleb into giving her the arable land known as the Upper and Lower Springs (Josh 15:13–19 = Judg 1:11–15; see Mosca 1984). Although the derivation of her name is uncertain, relating Achsah to those charming, seductive anklets that attracted attention in Isa 3:16–18 (Heb *hāʿakāsîm*) would certainly deepen our appreciation of the wordplays in these verses.

While in this story Achsah is Caleb's daughter and Othniel is "the son of Kenaz, the brother of Caleb" (Josh 15:17; cf. Judg 1:13; 3:9–11; 1 Chr 4:13), the genealogical relationship between Achsah and her spouse is not self-evident (see Webb 1987: 233, n. 25). Since the name "Caleb" occurs as the son of both Jephunneh (see e.g., Numbers 13–14; Joshua 14–15; Judges 1; 1 Chr 4:15) and Hezron (1 Chronicles 2), but never occurs as the son of Kenaz (cf. 1 Chr. 4:15 where Caleb is the grandfather of Kenaz), therefore, contrary to the implication of Josh 15:17 = Judg 1:13, Achsah is not literally Othniel's niece. The relationship must be understood, rather, within the framework of how genealogies function in the Bible.

According to Wilson (1977: 183), genealogies can be used to delineate social and political ties between two groups and, in particular, to incorporate marginally affiliated clans in a central tribe. Since the genealogies of Caleb and Othniel are related in this way to the tribe of Judah (Yeivin 1971: 13–14), it can

be inferred that Joshua uses the term "brother" to express that Caleb and Othniel belonged to a common group, which was assimilated into the tribe of Judah (Meyer 1906: 348–49; Johnson 1969: 6). Thus, the marriage of Achsah to Othniel would have functioned to strengthen the ties between the clans of Othniel and Caleb.

MARK J. FRETZ

ACHSHAPH (PLACE) [Heb *ʾakšāp* (אַכְשָׁף)]. An ancient Canaanite city-state. Its antiquity and importance are known from a few early records. The Egyptian Execration Texts (*ca.* 20th–18th century B.C.), lists Achshaph among 64 other place names. These were well-known city-states ruled by a king, so the fact that Achshaph was included in the list is indicative of its prominence. The Karnak List of Towns conquered by Thutmose III (15th century B.C.) refers to Achshaph as a city in the Plain of Jezreel and Acco, in the district of Gaza. The Tell el-Amarna Letters (*ca.* 14th century B.C.) state that the kings of Acco and Achshaph (spelled *ʾakšapa*) provided military assistance to the King of Jerusalem and Shuwardata (Gath). The Papyrus Anastasi 1 (13th century B.C.) indicates that a road from Megiddo reached the Plain of Acco close to Achshaph, although it spelled Achshaph with an *ʿayin* instead of an *ʾalep.*

Achshaph is mentioned in the Bible solely in the book of Joshua. It is one of the city-states that joined the coalition of the northern kings (Josh 11:1) to fight Joshua and the Israelites. Obviously, on being defeated, it became a part of Asher's territory (Josh 19:25).

The reference to Achshaph in the book of Joshua is significant for two reasons. First, the tradition behind the book preserved a memory that Achshaph was a royal city in the N plain during the ancient times. Second, by mentioning a renowned ancient city the Deuteronomistic theologian illustrated that when the Israelites were obedient to the Lord, the cities of the northern coalition, the powerful Achshaph included, were defeated and their land given to Israel.

The location of Achshaph remains uncertain. Some identify it with Tel Keisan, which is located 6 miles SE of Acco. Remains from the Bronze Age and early Iron Age were found there. See KEISAN, TELL. Another likely site is Khirbet el-Harbaj (M.R. 158240), which is situated at the S end of the plain of Acco.

PAUL BENJAMIN

ACHZIB (PLACE) [Heb *ʾakzîb* (אַכְזִיב)]. Var. CHEZIB. **1.** A town allocated to the tribe of Judah (Josh 15:44). From the context of its placement among the other cities, it appears to have been in the Shephelah, probably at its juncture with the Judean hills. In Mic 1:14, it is mentioned among several towns on which the prophet presents various puns, playing upon the similarity of the sounds of the name of the town Achzib (Heb *ʾakzîb*) with "deceit" (Heb *ʾakzāb*). The town may be connected with the birth of Judah's son, Shelah, who was born to him by a Canaanite woman—the name of the city, CHEZIB (PLACE) (Heb *kēzîb*), is an apparent variation of Achzib.

While certain identification is not possible, Eusebius (*Onomast.* 172) identified the site with Chasbi, which is modern Tell el-Beida (M.R. 145116) near Adullam.

2. A tell on the Mediterranean coast (M.R. 159272) N of Acco. According to Josh 19:29, it was part of the territory of Asher, but they proved unsuccessful in expelling the Canaanites from the site (Judg 1:31).

Excavations directed by M. W. Prausnitz in 1963–64 revealed that at the end of the MB I, a trench had been dug in the *kurkar* E of the tell which had transformed the Achzib peninsula into a Mediterranean port

and island city. The circumference was defended by earth walls, a glacis, and a fosse. Apparently sacked in the beginning of the LB (mid-16th century B.C.E.), Achzib was rebuilt, but was again laid waste at the end of the LB. From the Iron Age IB (11th century B.C.E.), the town expanded to its largest size during the 8th century (Iron Age II), when it was conquered by Sennacherib in 701 B.C.E. The rebuilt city, which is called Accipu in the Assyrian texts, flourished throughout the succeeding Persian period. The evidence from the storehouse excavations shows that it prospered until the beginning of the Roman period. Three squares excavated in the middle of the site attest to occupation by Byzantines, Crusaders, and Arabs.

Numerous excavations have been conducted in the various cemeteries (Central, Eastern, Southern, and Northern) beginning in 1941 and spanning over forty years. The first excavations were directed by I. Ben-Dor and the remaining operations since 1944 have been directed by M. Prausnitz. While all the cemeteries have produced Iron Age materials, only the Southern and Central cemeteries have produced burials from the MB I–II.

a. The Central Cemetery. Early Iron Age IB cist graves of the 12th–11th centuries B.C.E. have been excavated which contained one or two skeletons each. Characteristic grave goods were cylinder seals, bronze bowls, a bronze double axe, long-hafted lance heads, an ivory bowl with lion couchant, as well as numerous burnished bichrome pilgrim flasks and white-painted Cypriot bottles, all of which indicate a continuation of the LB Canaanite customs into the beginning of the Iron Age.

b. The Eastern Cemetery. At the end of the Iron Age IB, underground burial chambers with shafts were hewn into the rock. Inside each of the burial chambers were found the skeletons of 300 to 400 individuals. These were family tombs identical with contemporary Israelite funereal practices and architecture. The family vaults were apparently in continuous use for 250–300 years. The pottery inside the tombs consisted of a great number of red-burnished, and red-polished jugs with trefoil rims, as well as red-polished jugs with mushroom rims—all typical "Achzib" wares. Statistically the amount of early bichrome wares was minimal and pilgrim flasks were few and late. There was a range of proto Black-on-Red to Black-on-Red II/III wares dating from the end of the 11th to the 8th/7th centuries B.C.E. More than three fourths of all the pottery finds were jugs.

c. The Southern Cemetery. A different range of contemporary ceramics of the Iron Age II was predominate in this cemetery. Bichrome, Black-on-White, and Black-on-Pink pilgrim flasks represented the overwhelming majority of pottery in the early phase of the burials. Some chambers were built, some hewn into the rock. A shaft or dromos led to the entrance. Paradoxically the ceilings of the rock-cut chambers had been quarried to be covered again by a built upper structure—a *bamah* with altar, *maṣṣebah*, and a special ceramic repertoire of votives. These family vaults contained 250–300 bodies buried over a period of about 300 years. The early, middle, and final phases of these chambers are dated by the ceramics, scarabs, and cylinder and stamp seals.

The middle phase continued to use red-slipped flat pilgrim flasks reflecting the LB traditions. At this time (mid-9th century), however, white painted Cypriot wares disappear and were replaced by red-polished Achzib jugs with trefoil rims. There also appeared red-polished bowls and jugs with mushroom rims. This phase continued until the first third of the 7th century B.C.E. The final phase was highlighted by large storage jars used as ossuaries and receptacles for funeral gifts, which accompanied the deceased inside the family vault. To judge by seals and scarabs, the final phase ended in the beginning of the 6th century.

The Southern cemetery was also a burial ground for shaft burials of the 6th century. The absence of Attic wares strongly suggests that by midcentury, this sacred ground with its Canaanite and Sidonian traditions was no longer in use.

d. The Northern Cemetery. The areas excavated contained cremation urns and burials mainly of the Iron Age, Persian, and Hellenistic periods. Iron Age cremation urns had also been deposited in the sands of the peripheral regions of the Southern cemetery. Early cremation urns were large Sub-Mycenean kraters, White-Painted II–III geometric kraters, or Black-on-Red I–II wares belonging to the 10th–8th centuries B.C.E. Later cremation burials were made inside storage jars. Also significant was the custom of erecting a *maṣṣebah* immediately above the cremation urns or jars.

Cremation urns were also found clustered around the foundations of a large pavement covered by lime and chalk plaster which had been frequently resurfaced. There was an area surrounded by a wall in which was an altar—this is believed to have been a *bamah.* The absence of scarabs or other funerary gifts with the urns near the *bamah* leaves only typological and stratigraphic criteria for determining its date, apparently 8th century B.C.E. The types of kraters and storage jars used in this cemetery and the stelae have close parallels with those found in the lower levels of the Precinct of Tanit at Carthage. The preference for kraters as cremation urns in association with the contemporary Achzib red-slipped jugs clearly points to the continuation of Syro-Hittite traditions at Achzib.

Each of the cemeteries represents a separate cultural tradition—Late Canaanite-Sidonian, Israelite, and Syro-Hittite. Only after the 6th century B.C.E. did they become known as Phoenician.

M. W. PRAUSNITZ

ACRABA (PLACE) [Gk *Egrebēl* (Ἐγρεβηλ)]. A town situated southeast of Dothan in the eastern hills of Samaria (Jdt 7:18). The Assyrian general Holofernes had the Edomites and Ammonites stationed in this area while his troops cut off the water supply to the Israelite town of Bethulia. However, the location of Acraba is uncertain, and given the genre of the book of Judith, the historicity of this campaign and the "Assyrian" general is doubtful. Most scholars (see Moore *Judith* AB, 173) identify Acraba with Acrabeta (modern *ʿAqraba*), located 40 km north-northeast of Jerusalem. Acraba may also be associated with the site AKRABATTENE (1 Macc 5:3), where Judas Maccabaeus defeated the Idumeans who were killing Jews in 164 B.C.E. (Goldstein *1 Maccabees* 294).

MARK J. FRETZ

ACRE (PLACE). See ACCO (PLACE).

ACROSTIC. A device employed in poetry whereby the initial letters or signs of each line, read downward, constitute a name, a sentence, or an alphabetic pattern.

The earliest examples of *name/sentence acrostics* are Babylonian. Two can be dated to the reigns of Ashurbanipal and Nebuchadnezzar II respectively, since they mention those kings by name. The best-known Babylonian acrostic, the so-called *Babylonian Theodicy,* has been provisionally dated ca. 1000 B.C.E. (Lambert 1960: 67). The acrostic may spell out a name (e.g., "God Nabu") or a sentence (e.g., in the *Theodicy,* "I, Sag-gil-kinam-ubib, the incantation priest, am adorant of the god and the king"). Six of the seven extant Babylonian acrostic poems (surveyed in Soll 1988: 305–11) are stanzaic. In all but one of the stanzaic acrostics, each line within the strophe begins with the same sign that began the strophe. This repeating stanzaic pattern is the typical pattern for the Babylonian acrostics. In the Babylonian writing system, one sign could represent more than one sound. Most of the acrostics make use of this polyphony of sign values. Thus, the most important consideration was a conceptual or visual one: the use of the same sign. Two of the prayers incorporate not only an acrostic, but also a *telestic:* the terminal letters of each line, read downward, also form a phrase.

Name/sentence acrostics also occur in Greek literature. The Christian acrostic in the Sibylline Oracles 8.217–50 reads *iēsous chreistos theou huios sōtēr stauros,* which in turn utilizes the well-known Christian acrostic *ichthys.*

The Hebrew Bible contains a number of *alphabetic acrostics.* The earliest biblical acrostics are probably the damaged acrostic in Psalms 9–10 and the partial acrostic (through *kap*) in Nahum 1; both are usually dated to the period of the Judaean monarchy. Many of the remaining biblical acrostics are probably either exilic or postexilic. Psalm 37 and Lamentations 1, 2, and 4 are stanzaic acrostics (see LAMENTATIONS); repeating stanzaic acrostics may be found in Lamentations 3 (3-line strophes) and Psalm 119 (8-line strophes). In Psalms 111 and 112, each individual colon (half of a normal line) begins with a consecutive alphabetic character. Psalms 25 and 34 both omit a *waw* line and add a *pe* line after

taw. This *pe* line thus becomes the last letter of the acrostic and combines with *ʾalep* and *lamed* (the first and middle letters of the acrostic) to form the consonants of the first letter of the alphabet, *ʾlp* (Skehan 1971: 74). The remaining biblical acrostics are Psalm 145 and Proverbs 31: 10–31. There are also three psalms from Qumran (see Sanders 1965) which are alphabetic acrostics: the Hebrew text of Sirach 51: 13–30 (11QPs^{a}Sirach, which also adds a *pe* line), the so-called Apostrophe to Zion (11QPs^{a}Zion) and the partial acrostic (through *pe*) 11QPs^{a}155 (also known [Syriac] Psalm III). For a more detailed discussion of alphabetic acrostics in the biblical period, see Marcus (1947), Holm-Nielsen (1960), and Soll (1990, chap. 1).

While acrostic poetry depends on knowledge of the art of writing and is therefore "scribal" in the sense that all ancient written literature is scribal, the acrostic should not be seen as exclusively, or even primarily, wisdom literature. Included among the biblical alphabetic acrostics are hymns (e.g., Psalm 145), prayers (e.g., Psalm 25), and wisdom poems (e.g., Prov 31:10–31). This same distribution of genres is found in Babylonian name/sentence acrostics as well.

While the biblical alphabetic acrostic is often considered to be a mnemonic device (e.g., Paul *IDBSup,* 600–1), this position is difficult to maintain in the light of parallel Babylonian acrostics, which no one supposes were written with a mnemonic end in view (for further discussion, see Soll 1988: 320–22). The use of the acrostic form is best understood by analogy with metrical or rhyme schemes as an aesthetic constraint. It provided ancient poets with stimulus, direction, and limit as they drew on their stock of divine epithets, lament motives, petitions, and other conventional features of religious poetry which could otherwise be piled on indefinitely.

In the case of a name/sentence acrostic, the acrostic identifies the poem's author, the purpose of the composition, the one to whom it is addressed, or some combination of these. Although the poet began with the acrostic text as a matrix for the work, habit causes the reader to begin reading horizontally rather than vertically. Thus the impression of the finished product is the reverse of the process of composition: the poem gives the appearance of generating the acrostic, as if revealing a secret about itself. All Babylonian name/sentence acrostics had some way of alerting the reader to the presence of the acrostic pattern.

The alphabetic framework is, by contrast, abstract; it does not say anything. Rather, it says everything, for the 22 letters of the alphabet can be used to make any combination of words. The alphabet is a ready metaphor for totality and completeness (Gottwald 1954: 23–32) and thus serves as an excellent frame for praising the qualities of God (Psalms 111 and Psalms 145), the just man (Psalm 112), or the capable woman (Prov 30:10–31). Even in poems not concerned with the enumeration of qualities, use of the alphabet evokes a sense of completeness without having to be comprehensive. The fact that the Semitic alphabet gave a much greater impression of organization than any of its adaptations to other languages and scripts (Driver 1976: 179–85) may also have led to its use as an ordering device for poetry.

The alphabetic framework was a fixed sequence that did not have to be justified, but was simply there, ready to be built on. The only variation in this order is the inversion of the *ʿayin-pe* sequence: *pe* precedes *ʿayin* in Lamentations 2, 3, and 4; Psalm 10; and the LXX of Proverbs 31:10–31. The *pe-ʿayin* inversion occurs in some epigraphic abecedaries as well (Cross 1980: 9–13), so variation on this point in the acrostics was not a question of poetic license, but of adherence to different ordering conventions.

The alphabetic sequence may have been understood as being complete numerically as well as linguistically, which would account for the 22-line poems in the Bible. This number of lines is clearly a deliberate choice in Lamentations 5, since the rest of the book consists of alphabetic acrostics. Psalms 33, Psalms 38, and Psalms 103 are also 22-line poems.

ADADAH (PLACE) [Heb *ʿadʿādâ* (עַדְעָדָה)]. A city situated in the Negeb region of Judah toward Edom (Josh 15:22). In the Bible this name occurs only as part of a list of Judah's territorial inheritance (Josh 15:20–63). According to most scholars (e.g., Boling and Wright *Joshua* AB, 379), the MT *wĕʿadʿādâ,* "and Adadah," should be emended to read Heb *wʿrʿrh,* "and Ararah" (cf. LXX variants *arouēl, arouēr,* as well as *adada*). Some scholars, therefore, identify Adadah with *ʿArʿarah* (modern *Khirbet Aroer*; see Alt 1934: 19; Keel and Küchler 1982: 337), a site located some 20 km southeast of Beer-sheba, to which David redistributed some of the spoils of the Amalekites (1 Sam 30:28; see McCarter *1 Samuel* AB, 436). Alternatively, Kallai (*KHG* 351) suggests that if no evidence of an Iron Age settlement is yielded from *ʿArʿarah,* then Tell ʾEsdar, located 2 km farther north-northeast should be considered. Aharoni (*LBHG,* 117) suggests that the name was originally Heb **Aroer-ʿArʿarah,* "ʿArʿarah the ruin" (Heb *ʿărôʿēr* indicates "a ruin" as does Arabic *khirbet*). Epigraphically, therefore, the name "Adadah" may have resulted from a transmutation in the name "ʿArʿarah "of the Heb letter *resh* to *daleth,* since these letters are difficult to distinguish in script.

MARK J. FRETZ

ADAH (PERSON) [Heb *ʿādâ* (עָדָה)]. The name "Adah" seems to have been common in the ancient Semitic world (compare Minaean *ʿdt* [?]; Thamudic *ʿdh*/*ʿdy*; Safaitic *ʿdʾ*/*ʿdy*; Aramaic *ʿdyh;* Neo-Punic *ʿdyt* [?]; Syrian *ʿaddā*/*ʿiddô*; Samaritan *ʿāda;* Nabataean *ʿdyw;* and Arabic *ʿaddijj*). It appears to be the shortened form of a personal name containing the element **ʿdw/y,* "to decorate, embellish" (Weippert 1971: 250; Stamm 1980: 130) (e.g., Heb *ʿadîʾēl, ʿadāyāh (û), ʾelʿādâ, ʿādîn (āʾ)* [?], and *ʿiddô (ʿ)* [?]; Sabaean/Safaitic/Ammonite [?] *ʿdʾl;* Libyanite *ʿdwn* [?]; Minaean/Safaitic *ʿdyn* [?]; and Gr *Kosadou* [gen. from *qsʿdʔ*]). Two women in the Hebrew Bible bear this name.

1. The first of Lamech's two wives, according to the genealogy in Gen 4:17–19. To her two sons, Jabal and Jubal, are attributed the life-style of the tentdweller and the herdsman, as well as the cultural achievement of musical performance.

2. The daughter of Elon the Hittite, and one of Esau's Canaanite wives (Gen 36:2). She was considered to be one of the Edomite tribal ancestresses alongside of Oholibamah and Basemath. Eliphaz, her only son and Esau's eldest, was born in Canaan (Gen 35:4, 10) and became the father of Teman, Omar, Zepho, Gatam, Kenaz, Amalek (and Korah?) (Gen 36:11–12), who are listed a few verses later as the "tribal chiefs" (*ʾallûpîm*) of Edom (vv 15–16). The three contradictory texts Gen 36:2–3, 26:34, and 28:9 are based on different traditions of P, hence the lack of harmony (Speiser *Genesis* AB, 279; Westermann *Genesis 1–11* BK, 684).

ULRICH HÜBNER

ADAIAH (PERSON) [Heb *ʿădāyâ* (עֲדָיָה)*; ʿădāyāhû* (עֲדָיָהוּ)]. **1.** A Levite of the clan of Gershom, son of Ethan, father of Zerah, and grandfather of Ethni (1 Chr 6:26–27—Eng6:41–42). His name occurs in the middle of a genealogical list whose purpose was to substantiate the Levitical pedigree of Asaph, one of the temple singers appointed by King David (1 Chr 6:16–17, 33—Eng6:31–32, 48). With some justification this Adaiah [*ʿădāyâ*] has been equated with Iddo [*ʿiddô*] in 1 Chr 6:6—Eng6:21 (Schumacher *IDB* 1:42) but this identification is not absolutely certain. Although there are four names (Gershom, Jahath, Zimmah, Zerah) common to the two Gershomite Levitical lists involved (1 Chr 6:5–6—Eng6:20–21; 1 Chr 6:24–28—Eng6:39–43), the pertinent inner patterns Zimmah-Joah-*Iddo*-Jeatherai and then Zimmah-Ethan-*Adaiah*-Zerah-Ethni illustrate equally the configuration of differences. It is also worth noting that Chronicles traces Asaph's lineage through Adaiah to Levi's son "Gershom," not the more traditional "Gershon."

2. A Benjaminite, one of the sons of Shimei (1 Chr 8:21). His name is found in a list of Benjamin's descendants who are distinguished as heads of families living in Jerusalem (1 Chr 8:28). This Shimei [Heb *šimʿî*] is probably a textual corruption of the name SHEMA [Heb *šemaʿ*] mentioned ealier in 1 Chr 8:13. The complex 1 Chronicles 2–8 contains three epicenters: the lists of the tribe of Judah at the beginning, those of Levi in the middle, and those pertaining to the tribe of Benjamin at the end. This threefold arrangement reflected something of the territorial, social, and political realities of the postexilic period (see Weinberg 1981: 111–12).

3. The father of Maaseiah, who is seemingly listed as one of the "commanders of hundreds" [*śārê hammēʾôt*] that conspired with Jehoiada the priest to overthrow Queen Athaliah and install young Joash upon the Judean throne (2 Chr 23:1). According to 2 Kgs 11:4 these individuals were "the captains of the Carites and of the guards." By contrast, the Chronicler, true to his own ideology, apparently reports the plot as carried out exclusively by priestly and Levitical guards in order to avoid any hint of the desecration of the temple area by "foreign mercenaries" (Myers *2 Chronicles* AB, 131; Williamson *Chronicles* NCB, 315). On the connection of Levites with martial activities, see Spencer 1984: 270–71. Dillard, moreover, makes the intriguing observation that, whereas the first three occurrences of names (Azariah, Ishmael, Azariah) in 2 Chr 23:1 are introduced with the preposition *le*, the last two names (Maaseiah ben Adaiah, Elishaphat) are proceeded by the object marker *ʾet* before "the commanders of hundreds." While representative possibly of no more than a stylistic variation, this change in pattern may just as well indicate that for the Chronicler Maaseiah ben Adaiah was not intended to be included among the "commanders of hundreds." However, that the writer regarded the commanders as Levites seems to be implied in the activities envisioned in 1 Chr 23:6–7, 9 (see Dillard *2 Chronicles* WBC, 177 n.1c, 180–81).

4. The maternal grandfather of King Josiah (2 Kgs 22:1). It is characteristic of the Deuteronomistic history to introduce Judean kings through a fixed scribal formula. Included in this formula is the name of each king's mother. Jedidah, Josiah's mother, is cited as the daughter of Adaiah of Bozkath. BOZKATH (Josh 15:39) appears to be a SW Judean village in the vicinity of Lachish (Tell ed-Duweir) and Eglon (Tell el-Ḥesi).

5. A Judahite, the son of Joiarib, and father of Hazaiah (Neh 11:5). He is mentioned as an ancestor of Maaseiah, one of the Judean family heads resident in Jerusalem after the return from exile. The parallel text in 1 Chr 9:5 (RSV) makes no reference to Adaiah ben Joiarib but speaks rather of "the Shilonites: Asaiah [= Maaseiah?] the first-born, and his sons." However, the presence of Judah's two sons Perez (Neh 11:4; 1 Chr 9:4) and Zerah (1 Chr 9:6) in these two otherwise synoptic lists suggests that the MT behind the RSV's "the Shilonite/the Shilonites" [*haššilōnî*/*haššîlônî*] in Neh 9:5 and 1 Chr 9:5 might well be revocalized to read "the Shelanite/the Shelanites" [*haššēlānî*/*haššēlānî*] (see NEB), thus making this Adaiah actually a descendant of Judah through his third son Shelah (Gen 38:5; Num 26:20).

6. The son of Jeroham (1 Chr 9:12 = Neh 11:12) and one of the priests listed who returned from exile to live and work in Jerusalem. Adaiah and his brethren, heads of fathers' houses, are reported to have numbered 242 persons. A comparison of the two parallel verses cited reveals that Nehemiah 11 carries his ancestry back to the seventh generation, adding three additional names (Pelaliah, Amzi, Zechariah) to Adaiah's ancestry as given in 1 Chr 9:12.

7. A son of BANI (Ezra 10:29 = 1 Esdr 9:30) and **8.** a son of BINNUI (Ezra 10:39), two individuals who had married foreign women and who were induced to put them away along with their children, in the time of Ezra (Ezra 10:44 = 1 Esdr 9:36). The double occurrence of the name "Bani" in both Ezra 10:29 and 10:34 and the similar name "Binnui" in Ezra 10:39 have given rise to a number of textual emendations. Not all is settled even with respect to the name "Adaiah": thus 1 Esdr 9:30 reads *iedaios* for Adaiah in Ezra 10:29; accordingly, the text-critical apparatus of BHS suggests that the name "Adaiah" here be amended to read either *ye‹adya* or *yeda‹ya.* For the second Adaiah named in Ezra 10:39, there is no corresponding name parallel whatsoever in 1 Esdr 9:34. There, in fact, Binnui has become a one of Bani's sons!

ROGER W. UITTI

ADALIA (PERSON) [Heb *›ădalyā* (אֲדַלְיָ)›]. One of the ten sons of Haman (Esth 9:8). The names of Haman's sons appear within Esth 9:1–19, a passage long thought to be the denouement of the Esther story, although recent research has shown it to be independent of both the main story (Esth 1–8) and the two appendices; one on the origin of Purim (Esth 9:20–32), the other the praise of Mordecai (Esth 10:1–3) (Clines 1984: 39–49, 158–62). This passage resolves the question of what happened after king Ahasuerus granted the Jews permission to defend themselves against the attacks of hostile neighbors incited by Haman (Esth 8:11–12). In this narrative context the killing of Haman's male progeny is the reversal of his attempt to annihilate the Jews (Esth 3:9–15) (Berg 1979: 105ff.).

The authenticity of the names of Haman's sons is a matter of dispute. There are variant lists of the names in the LXX, the A-Text (= LXX L?) and other ancient versions (see the lists in Moore *Esther* AB, xlii–xliii; Haupt 1907–8: 175). It has been suggested from this that the spelling of certain names in MT may be corrupt, the Greek versions perhaps preserving a more accurate spelling (Moore *Esther* AB, xliv). Against this, the attestation in Iranian onomastica of a few of the names in MT Esther and the likelihood that many of them can be given sensible Iranian etymologies has renewed confidence in the superiority of the MT orthography (Millard 1977; Zadok 1986). While this also counters the claim that the names are the product of the writer's imagination, the use of probable real names proves nothing about the veracity

of the story. Many of the names of Haman's sons are, however, otherwise unattested, perhaps reflecting our limited knowledge of Iranian onomastica. The current state of knowledge of Iranian dialects leaves the analysis of many of the names uncertain and the etymologies given are often conjectural. For the analysis of many of the names there is often no advancement on the classic studies of Oppert (1894: 35–41), Justi (1895), Scheftelowitz (1901), and Bartholomae (1904). Their work on Iranian names in Esther is summarized by Paton (1908: 66–71). The most recent comprehensive survey of Iranian names is Hinz (1975), supplemented by Zadok (1986) on names in Esther.

ʾădalyā (LXX *barsa*) has a number of proposed Old Iranian etymologies for which see Paton (*Esther* ICC, 70f.) and Gehman (1924: 327), but none are convincing. *ʾădalyā* may be related to the name *dlyn* attested in a 6th century B.C.E. Aramaic text from Egypt (Bauer and Meissner 1936 line 16; *TAD*, 11–13), although this name also proves to be difficult to analyze (Grelot 1972: 500f.; Kornfeld 1978: 113 for Hurrian derivation). For an explanation of the LXX spelling, see Haupt (1907–8: 176).

PETER BEDFORD

ADAM (PERSON) [Heb *ʾādām* (אָדָם)]. The Hebrew noun *ʾādām* generally denotes "human being," "humankind." The term is also used of the male individual in the Gen 2:4b–3:24 creation narrative.

A. Etymology and Use in the OT.

The etymology of the word is uncertain. *ʾādām* has often been associated with the root *ʾdm* "red." Evidence cited in support of this association is widespread. In Akkadian, *adamu* means "blood, red garment," and *adamatu* "black blood." In Aramaic, *ʾădām* and other cognate terms refer to "blood," while in biblical Hebrew *ʾādōm* means "red" (adj.), and the verb *ʾādōm* "to be red." The Ugaritic verb *ʾadm* appears in several places in connection with bodily cleansing and anointing, and is usually translated "to rouge or redden." It has been suggested that the use of *ʾādām* for "human" arises because of the reddish color of human skin.

The play on words in Gen 2:7 and 3:19 between *ʾādām* and *ʾădāmâ* "ground, earth," has not been overlooked in the search for an etymology of the former. The name *ʾādām* is given to the human creature believed to have come from the *ʾădāmâ.* Of course, word plays in themselves do not necessarily indicate the etymology of a word. They could simply be used by writers or editors for literary effect. However, in this case the suggested etymological connection ought not to be ruled out. The Akkadian *adamātu,* "dark red earth" (used as a dye), suggests that the Hebrew *ʾădāmâ* could also be derived from the root *ʾdm,* "to be red." *ʾādām* and *ʾădāmâ* could have been derived from the same root separately or the latter could have given rise to the former because of the similarity of skin tone to the color of the soil itself.

While we cannot draw any firm conclusions about the origins of biblical *ʾādām,* we should note that the word has cognates in other Northwest Semitic languages. *ʾdm* appears in both Ugaritic and Phoenician as "human being." In the former, the high god El is called *ʾab ʾadm,* "the father of humankind." The development of *ʾdm* for "humankind" would seem to have been confined to the Northwest Semitic

domain since the Akkadian word for "human being" is *awīlum/amī (ē)lu.* Thus, any etymological connection between *ʾādām* and either *ʾdm* "to be red," or the root for "ground, earth," would appear to be a localized Northwest Semitic phenomenon. The cognates for the latter two words range across the whole Semitic family.

B. *ʾādām* in Genesis 1–11.

ʾādām is used widely throughout the OT for "human-kind" or "human being." It also occurs as the proper name of the first of the forefathers of the human family in 1 Chr 1:1. This may also be the case in Job 31:33, Hos 6:7, and Deut 4:32. In Genesis 1–5 the situation is more complex.

The use of *ʾādām* in J is concentrated in the primeval history of Genesis 2–11. In Gen 2:4b–4:25, the term refers to a specific male being. Elsewhere in the primeval narrative, it refers to humankind in general, even in Gen 8:21, which recalls the curse of Gen 3:17–19. In the context of Genesis 2–11, the individuality of the figure *ʾādām* in Gen 2:4b–3:24 must be seen as representative. No doubt the sources of the stories dictated in part the shape of the J narrative. *ʾādām* usually appears with the definite article *hāʾādām* (exceptions being 2:5, 2:20, and 3:17, the last two of which many scholars have amended).

While the individuality of the *ʾādām* figure in Gen 2:4b–3:24 is evident throughout the story, the restriction of *ʾādām* to a male individual begins clearly only from 2:18. Thus the beginning of the story addresses the issue of human beings in general in the presence of Yahweh. The disobedience that follows is not to be blamed primarily on the woman in the garden, but is the responsibility of the whole human community, as the curses (3:14–19) reveal. In 4:1, 25, *ʾādām* is clearly used as the proper name of the father of Cain, Abel, and Seth. After these verses, J again employs the term in its broader context. We should note that the Septuagint and Vulgate begin to translate *hāʾādām* as a proper name in Genesis 2:19.

In Gen 1:26–28, P uses *ʾādām* collectively as male (*zākār*) and female (*nĕqēbâ*). A single couple is not indicated here. *ʾādām* in its composite whole as male and female is the image of God. In Gen 5:3–5, however, P clearly understands *ʾādām* as an individual, i.e., the father of Seth and other children. The writer even records Adam's age at death as 930 years. This transition in the P material cannot be properly understood apart from the intervening J narrative. Recent studies in the canonical shape of Genesis 1–11 (Childs *IOTS,* 148–50) have drawn attention to the interdependence of the J and P material and the theological import of their connection. Although Childs suggests that the J creation account plays a subsidiary role to that of P, he does point to the interconnection between creation (Genesis 1) and the history of humankind (Genesis 2). One should also note that, as the two chapters stand, they present a balanced picture of humanity. The creature made in the image of God, indeed invited into God's presence, is also the creature primarily responsible for the subsequent alienation and enmity within creation. The two sides of humanity presented in Ps 8:4–7 are seen in reverse order in Genesis 1–3.

The closeness and yet enmity between humans and creation is highlighted by the play on words between *ʾādām* either as "human being" or the first male individual, and *ʾădāmâ* "ground, earth." It is from *ʾădāmâ* that *ʾādām* is fashioned (Gen 2:7). The latter's task is to till the ground (2:6). When *ʾādām* disobeys Yahweh, the *ʾădāmâ* is cursed (3:17–19). This in turn causes hardship for *ʾādām.* The end of *ʾādām* is again to return to the *ʾădāmâ* (parallel to *ʿāpār* "dust"). This wordplay continues through the flood story and is highlighted in 4:11–12 and 5:29. The link between *ʾādām* and *ʾădāmâ* in terms of sin and curse is only alleviated in 8:21–22. The dependence of fertility on human behavior, which remains wicked (8:21; 9:18–27; 11:1–9), is broken.

While the wordplay between *ʾādām* and *ʾădāmâ* is unique to the biblical material, the notion that humans are in part formed from earth or clay was widespread in the ancient Near East. We find it in the Sumerian account of the creation of humans where Enki, in order to fashion servants for the gods, calls on Mammu to "mix the heart of the clay that is over the abyss" (see Kramer 1961: 72–73). Likewise in the story of Atrahasis, Ea assists Mami, "the mistress of all the gods," in fashioning humans by pinching off pieces of clay (Tablet I. 189–260; see Lambert and Millard 1969: 56–61; cf. *ANET,* 99–100).

C. *ʾādām* in Intertestamental Literature.

Little attention has been given to the *ʾādām* figure of Genesis 1–5 elsewhere in the OT. There are, however, possible allusions to *ʾādām* and the creation narrative in apocryphal literature (Sir 17:1; 49:16;

Tob 8:6; Wis 2:23; 9:2; 10:1). Renewed interest in and speculation concerning *ʾādām* is found in pseudepigraphal, rabbinic, and gnostic texts. The Greek text *Apocalypse of Moses* is the most familiar of these. It tells of the life of Adam and Eve outside paradise, the death of Abel, the birth of Seth, Adam's illness, and the journey of Eve and Seth to paradise in search of the oil of the Tree of Life which would cure Adam. Adam dies and his soul is taken into the presence of God by the Cherubim. Through the prayers of the angels, Adam is pardoned and taken back into the third heaven. While a good portion of this material overlaps with its Latin counterpart, *The Life of Adam and Eve*, the exact nature of the relationship between these two texts is difficult to determine (see *OTP*, 249–95 for a translation and discussion of both texts). See ADAM AND EVE, LIFE OF.

Emphasis in the *Apocalypse of Moses* focuses on two matters: (1) the nature of sin and the present human condition and (2) the hope of resurrection. The sin of Adam and Eve is their deliberate disobedience of God's command (*Apoc. Mos.* 8:2; 10:2; 23:4, etc.). Eve is the one who initially succumbs to temptation and then dupes Adam into following her example (7:2–3; 9:2; 14:2; 21:1–6). Both lose the visible righteousness and glory of God which they had in the beginning (11:2; 20:1–2; 21:2). This sin brings hardship upon humanity. However, the image of God in which they were created is retained in their son Seth (10:13; 12:1), who is born according to the appointment of God (38:4).

While Adam's death is a result of sin, it eventually provides an avenue to hope in resurrection. In his mercy God promises to pardon Adam and to raise him up to enjoy the benefits of paradise once again (28:4; 37:1–6; 41:3). This comes to fruition after his death. His former glory is restored (39:1–3) and the power of Satan is overcome, turning grief to joy. Just as others participate in the consequences of Adam's sin, so there is hope that the "holy people," those who adhere to the covenant, will share in his resurrection (13:3–5; 41:3).

Speculation in various noncanonical works also focuses on the figure of Adam. Philo stresses Adam's perfection (*Op* 47:136–141), while various other works describe his honor and beauty above other living beings (e.g., Sir 49:16; *Pesiq. Rab Kah* 101). This beauty was lost with Adam's sin (*Gen. Rab.* 11:2; 12:6). A motif of rabbinic thought is the enormous size of Adam, whose body stretches across the cosmos (e.g., *Gen. Rab.* 8:1; 21:3; 24:2; *Pirqe R. El.* 11; *ʾAbot R. Nat.* B8, etc.). Other passages note Adam's great wisdom (*Gen. Rab.* 24:2; *Pesiq. R.* 115a).

D. Adam in the New Testament.

The most significant references to Adam in the NT are found in Rom 5:12–21 and 1 Cor 15:21–22, 45–49. Here Paul develops his Adam-Christ typology (on the debated origin of this typology, see discussion in Cranfield *Romans* ICC, 269–95; Kasemann *Romans* HNT, 139–58; and Beker 1980). In Rom 5:12–21 Paul emphasizes the analogy between Adam, the one through whom sin and condemnation to death come into the world, and Christ, the one through whom life is offered to all. While this analogy presents Adam and Christ as those who shape the destiny of the world, the contrast is not to be ignored. The reign of grace and righteousness which comes through the second Adam confronts the reign of sin and death introduced through the first Adam and overcomes it.

In 1 Cor 15:21–22, the emphasis of the typology focuses on Christ as the one through whom resurrection to life comes. This theme is carried through in vv 45–49. In resurrection, one has a spiritual body, like that of the heavenly Christ, in contrast to the physical body which all humanity has in common with the earthly Adam. Paul draws on Gen 2:7 (LXX) as support. Here Paul could well be using the type of exegesis Philo exhibits in his discussion of Genesis 1:27 and 2:7, wherein he contrasts the heavenly, archetypal person with the historic Adam, made from dust (*Legum Allegoriae*, i.31). However, Paul understands these figures not as types but as eschatological and historical figures respectively (1 Cor 15:47).

Elsewhere in the NT, reference is made to Adam as the first generation of humanity (Jude 14 and Luke 3:38). In the latter text, he is foremost in the genealogy that leads to Jesus. In 1 Tim 2:13–14, the Eden story is used to justify the denial of teaching roles and positions of authority to women at that time. The writer stresses the prior creation of Adam, as well as the fact that Eve was the one deceived by the serpent. Adam is seen as completely innocent, while the woman in the story is labeled the transgressor.

Such a line of argument is in keeping with early Jewish exegetical interpretations of Genesis 3 (e.g. *Apoc. Mos.* 15–21; *Pirqe R. El.* 1, 13).

HOWARD N. WALLACE

ADAM (PLACE) [Heb *ʾādām* (אָדָם)]. A city located in the Transjordan N of the place where the Israelites crossed the Jordan into Palestine (Josh 3:14–17). According to the biblical account of the crossing, the waters of the Jordan "rose up in a heap" at Adam (Josh 3:16). A strategic city, Adam was situated near the fords of the Jordan (Judg 7:24), S of the mouth of the Jabbok River and N of the mouth of wadi *Farʿah.* At Adam, significant travel routes intersected (2 Sam 18:23; Hos 6:9), which made it easily accessible to Pharaoh Shishak individual (ca. 945–924 B.C.E.) of Egypt, who captured Adam while on a military campaign through Palestine (1 Kgs 14:25–28; 2 Chr 12:1–12; see Kitchen 1973: 438; Mazar 1986: 146). Most scholars have traditionally located this site at *Tell ed-Dāmiyeh* (modern *Damiya*; see Glueck 1951: 331; Boling and Wright *Joshua* AB, 169), where landslides have been known to dam up the Jordan (Aharoni *LBHG,* 34; Keel and Küchler 1982: 491; Noth *Josua* HAT, 37).

The translation of the MT of Josh 3:16 reads, "one heap arose a great distance from Adam, the city which is beside Zarethan," and the written text (Heb *bēʾādām*) differs from what is to be read (Heb *mēʾādām*). The LXX rendering differs quite radically from the MT: "forming a single heap over a very wide area, as far as the frontier of Kiryath-Jearim" (see Boling and Wright *Joshua* AB, 156). Whereas the MT identifies the location of the obstruction of the water in relation to Adam, the LXX expresses the expanse of the flooding in relation to Kiriath-Jearim. Thus, a single story about the extent of flooding is formulated from two different points of reference.

The city of Adam may also refer to a sacred location in biblical poetry (see Mazar 1985: 17–18). Several verses of poetry which contain the Heb word *ʾādām,* traditionally translated "man," could be clarified by translating it " (the city) Adam." Consequently, Ps 68:19–Eng 68:18 and Ps 78:60 could benefit from this proposal (Goitein 1947), as could Hos 6:7 (even though LXX *hōs anthrōpos,* "as man," supports the traditional rendering of "man"; see Andersen and Freedman *Hosea* AB, 439).

MARK J. FRETZ

ADAM AND EVE, LIFE OF. Among several related narrative elaborations of the biblical account of Adam and Eve, the most important are the Greek *Apocalypse of Moses* and the Latin *Vita Adae et Evae.* An Armenian recension was translated loosely from the *Apocalypse of Moses,* or possibly from the Syriac (Conybeare 1895: 216–35), at least by 1000 C.E., although more probably during the 5th or 6th centuries. A Slavonic recension, translated from the Greek between 950 and 1400 C.E., combines the *Apocalypse of Moses* and *Vita* 1–11. Other documents, while part of the Adam cycle of literature, have no direct literary relationship with the *Apocalypse of Moses* and *Vita Adae et Evae*: the *Cave of Treasures,* the *Combat of Adam and Eve* (Ethiopic), the *Testament of Adam,* and the *Apocalypse of Adam* from Nag Hammadi.

The *Apocalypse of Moses* and *Vita Adae et Evae,* though sharing much material, also contain unique traditions:

	Ap. Mos.	*Vita*
1. Adam and Eve search for food and repent by standing in the Jordan and Tigris rivers.	——	1–8
2. Satan, disguised as an angel, convinces Eve to curtail her penitence.	——	9–11
3. Satan explains his fall and consequent enmity toward Adam.	——	12–17
4. Eve escapes death and bears Cain by means of Adam's intercession.	——	18–22
5. Eve bears (Cain [*Ap. Mos.* 1:3]), Abel, Seth, *et al.*	1:1–5:1	23–24
6. Adam reveals to Seth his rapture to paradise to see God.	——	25–29
7. Adam, on his deathbed, sends Eve and Seth on an unsuccessful quest for the oil of mercy.	5:2–14:3	30–44
8. Eve exhorts her children to obey by recounting the temptation by Satan and expulsion from paradise.	15–30	——
9. Adam dies.	31–32	45
10. Adam is pardoned.	33–37	46
11. Adam is buried.	38:1–42:2	47–48
12. Eve commands her children to preserve her and Adam's life on tablets of stone and clay.	——	49:1–50:2
13. Eve dies and is buried.	42:3–43:4	50:3–51:3

The redactors of the *Apocalypse of Moses* and *Vita Adae et Evae* shape their mutual (e.g., *Apoc. Mos.* 5:2–14:3 and *Vita* 30–44) and unique (e.g., *Apoc. Mos.* 15–30) traditions in different ways, as a comparison of three major characteristics of both stories will demonstrate. First, Satan is prominent in *Apoc. Mos.* 15–30, where he is responsible for the deception of the serpent, Eve, and Adam, yet his role is even more prominent in *Vita Adae et Evae.* Satan deceives Eve a second time (chaps. 9–11), then explains thoroughly why he maliciously pursues Adam (chaps. 12–17). According to *Vita* 37–39, a "serpent" whom Seth recognizes as Satan, the "cursed enemy of truth, (and) chaotic destroyer," attacks him; in the parallel passage of *Apoc. Mos.* 10–12, only a rebellious "wild beast" attacks Seth.

Second, Eve is culpable for the first transgression in both accounts, but the redactor of *Vita Adae et Evae,* particularly in the unique material (chaps. 1–22), consciously denigrates Eve and exonerates Adam. Eve's unrealistic solution to hunger following explusion is to have Adam murder her, since she sinned, so that God may return him to paradise (chaps. 1–6); in contrast, Adam suggests sensibly that they repent. While the Jordan stops its flow and the entire animal world gathers around Adam when he repents, Eve succumbs again to Satan's deceit (chaps. 7–11). Subsequently, when she departs to die, Eve experiences birthpangs but receives no mercy, despite her desperate prayers, until Adam intercedes (chaps. 18–22).

Third, God's mercy, a significant theme in both stories, is interpreted differently. One message of *Vita Adae et Evae* is that penitence, properly performed, evokes God's mercy. The editor presents details of Adam's penitence in the Jordan (chaps. 6–8) and adds similar details to Seth's prayer at paradise (chap. 40; cf. *Apoc. Mos.* 13:1) to provide the readers with models of penitence. Because Adam repented properly, he was pardoned during his lifetime (chap. 46). In contrast, the main theme of the *Apocalypse of Moses* is that mercy is accessible only following death. Adam faces death, uncertain that God will be merciful (chaps. 31–32). He dies and, after a lengthy and suspenseful account of angelic intercession, is pardoned (chaps. 33–37). Finally, he receives the promise of resurrection twice (39:1–3; 41:2–3).

The preceding examples demonstrate that the *Apocalypse of Moses* and *Vita Adae et Evae* are similar, but significantly different from each other. The relationship between them is difficult to determine. Meyer (1895: 205–8) regarded the *Vita* as the older document. Fuchs (1900: 508–9) and Wells (*APOT* 2: 128–9) regarded the *Apocalypse of Moses* as earlier. It is equally possible that the two narratives were composed independently on the basis of traditions which they had in common (e.g., *Apoc. Mos.* 31–32 and *Vita* 45).

Many of the traditions underlying these texts were probably composed in Hebrew. However, the author of the *Apocalypse of Moses* was familiar with the LXX, and *Vita Adae et Evae* contains some Greek expressions (e.g., *plasma,* "creature," in 46:3), indicating that at least some of the original traditions may have been composed in Greek. There is little consensus, then, concerning the relationship of the Greek and Latin texts and the language of the traditions which preceded them other than that a diverse oral and literary history underlies these documents (Johnson *OTP* 2: 251).

Both sets of traditions are clearly Jewish, exhibiting parallels with many Jewish documents (notes in Johnson *OTP* 2: 258–95). Although *Apoc. Mos.* and *Vita* contain no historical allusions, several of these parallels indicate that the traditions embodied in both fit well into the 1st and early 2d centuries C.E. Josephus' *Ant* 1.2.3 contains a reference to tablets of stone and clay which is similar to *Vita* 49:1–50:2. The apostle Paul refers to Satan's being disguised as an angel of light (2 Cor 11:14 and *Vita* 9, *Ap. Mos.* 17) and to the location of paradise in the third heaven (2 Cor 12:2–3 and *Ap. Mos.* 37:5). The most important parallels which suggest a late 1st or early 2d century provenance are those between the *Apocalypse of Moses* and *4 Ezra* and *2 Baruch*: (1) the combination of allusions to Gen 1:26–27 and 2:7, the image of God and the work of God's hands, to appeal for divine mercy (*Apoc. Mos.* 33–37 and *4 Ezra* 8:44–45); (2) the loss of supramundane paradise (*Ap. Mos.* 27–29 and *2 Bar.* 4:3–7); and (3) emphasis upon the effects of the initial transgression on future generations, yet insistence upon individual responsibility as the prerequisite to eschatological glory (*Apoc. Mos.* 14, 28, 30 and *4 Ezra* 3:20–27; 4:26–32; 7:11–14; 7:116–31; *2 Bar.* 17:1–18:2; 23:4–5; 48:42–47; 54:13–19).

These parallels suggest that the traditions contained in these documents may belong to the 1st century C.E. The *terminus ad quem* for their composition is ca. 400 C.E., since several texts written shortly after that date, including the Armenian version, appear to depend upon them. No manuscripts date earlier than the 11th century for the *Apocalypse of Moses* and the 9th century for *Vita Adae et Evae.* See Johnson *OTP* 2: 249–95, and Wells *APOT* 2: 123–54 for text.

ADAM, APOCALYPSE OF (NHC V,*5*). A Jewish-gnostic document found in the Nag Hammadi Library, a collection of papyrus manuscripts discovered in Upper Egypt in 1946. The *Apocalypse of Adam (Apoc. Adam)* purports to be a revelatory discourse that Adam delivered to his son Seth which was preserved for Seth's posterity. It is not to be identified with any previously known Adam text. Epiphanius (*Pan.* 26.8.1) mentions that the "gnostics" used "apocalypses of Adam," but little is known of them.

A. Setting.

Apoc. Adam is the fifth and final tractate in NHC V. *Apoc. Adam* is immediately preceded in NHC V by three other tractates bearing the title "apocalypse": an apocalypse of Paul and two apocalypses of James. The first tractate in NHC V is not an apocalypse but a highly fragmentary copy of *Eugnostos*, of which another copy is preserved in Codex III. The inclusion of four apocalypses in one book is unusual in the Nag Hammadi Library and does seem to be the result of a deliberate scribal collection.

B. Text.

The manuscript is preserved in the Coptic Museum in Old Cairo (codex inventory number 10548). The tops and bottoms of its 21 inscribed papyrus pages are all lacking text in varying degrees. Pages 69–70 are completely lacking all vestiges of first and last lines, while pages 67 (the verso, p. 68, is uninscribed), 71–72, and 77 are each lacking one to four lines at the bottom of the page.

As to its date and provenance, one cannot be certain. It was written in Greek sometime after the appearance of the Septuagint (250–200 B.C.E.), and then translated into Coptic (Sahidic dialect) sometime before the middle of the 4th century C.E., when the books of the Nag Hammadi Library were manufactured. It has been dated in its present form as early as the end of the 1st century C.E. Since its present form is thought to be the result of editorial redaction, the various component parts could perhaps be even earlier.

C. Character and Contents.

The narrative is cast as a revelatory discourse delivered by Adam to his son Seth "in the 700th year"; that is, just prior to Adam's death (cf. Gen 5:3–5 LXX). This feature suggests that the text is to be understood as the "last testament" of Adam, and to be associated with other testamentary literature in antiquity, such as the *Testaments of the Twelve Patriarchs.* The selection of Seth as the son to receive the revelation, and the identification of Seth's namesake as "that man who is the seed of the great generation" (NHC 65,6–9; cf. Gen 5:3), also associates the text with other Sethian literature in antiquity. It has been described as an original writing of the gnostic sect of the Sethians (Turner 1986).

Unlike other gnostic writings, Adam describes his original androgynous "creation" in highly positive language (NHC 64,6–12). His "fall" is portrayed as a lapse into ignorance that is brought about by separation into male and female entities (NHC 64,20–28; cf. Gen 2:21–23), rather than by an act of disobedience to God's command not to eat of the tree "of the knowledge of good and evil," as it is reported in the Jewish biblical tradition (Gen 2:15–17; 3:1–19). Three unnamed heavenly figures then appear to Adam and their revelation to him becomes the subject of Adam's last testament to Seth (NHC 67,14–21).

Adam describes to Seth the origin of a special race of men, and their struggle against God, The Almighty (Gk *pantocrator*), or Sakla, who is portrayed as the creator god of the Jewish biblical tradition. Three attempts are made by the Almighty to destroy this race of men who possess the knowledge of the "eternal God" (NHC 68,10–16), which Adam also possessed in his primordial state (NHC 64,6–14).

Two of these attempts to destroy this special race of "Sethians" (cf. NHC 65,6–9), that of flood (NHC 69,1–16—the Noah story) and fire (NHC 75,9–16—the Sodom/Gomorrah story) are well known in Jewish biblical tradition, but are here given new interpretations. For example, the biblical flood narrative is explained as the attempt of a wicked creator to destroy the pure race of men who possess special knowledge of the eternal God, rather than as the judgment of a righteous God upon the wickedness of humankind (cf. Gen. 6:1–7). A third threat is lost in lacunas (NHC 71,8–72,1), but may be assumed because of a clear account of a third deliverance (NHC 72,1–15).

At the conclusion of these three attempts of the Almighty to destroy the great race, Adam describes the descent of a heavenly figure, the Illuminator of Knowledge. The sudden appearance of this heavenly figure shakes the cosmos of the Almighty, disturbing his heavenly court, i.e., his powers and angels. The Illuminator comes to "redeem" the souls of the seed of Noah "from the day of death" and to leave for himself "fruit-bearing trees" (NHC 76,8–17). He performs "signs and wonders" (NHC 77,1–3). And as the man on whom "the holy spirit has come," he "suffers in his flesh," (NHC 77,16–18), yet the god of the powers and his hosts do not see the Illuminator or his glory (NHC 77,7–15).

Perplexed by these events, the "angels and all the generations of the powers" in confusion ask about the source of the disturbance (NHC 77,18–27). The narrative continues with thirteen erroneous explanations for the Illuminator's origin made by "kingdoms," followed by the correct explanation of the "kingless generation" (NHC 82,19–83,7). The narrative then reports an apocalyptic scene, reminiscent of Matthew 25, in which those who oppose the Illuminator fall under the condemnation of death, while those who receive his knowledge "live forever" (NHC 83,8–29). The document concludes with a description of competing baptismal traditions, and a statement that the "words of revelation" are not to be inscribed in a book but rather "on a high mountain, upon a rock of truth" (NHC 85,1–18).

The struggle between the Almighty and the special race of men who possess knowledge of the "eternal God" is cast in the form of a gnostic midrash on the biblical story in which elements of the story (NHC 67,22–69,10; 70,3–71,4; 72,15–17; 73,25–27) are followed by a gnostic interpretation (NHC 69,18–70,2; 71,8–72,15; 72,18–73,24; 73,27–76,7) that sets out a Sethian explanation for the events in the story. The author never quotes the biblical passages directly, however, but draws on material that has already been influenced by Jewish exegetical traditions.

The thirteen erroneous kingdom explanations (NHC 77,27–82,19) for the Illuminator's origin are cast in highly structured prose with a recurring refrain. For example:

> The twelfth kingdom says about him:
> "He came from two illuminators.
> He was nourished there.
> He received glory and power.
> And in this way he came to the water."
> The third kingdom says about him:
> "He came from a virgin womb.
> He was cast out of his city
> —he and his mother—and was
> taken to a desolate place.
> He was nourished there
> and received glory and power.
> And in this way he came to the water."

Each of the thirteen kingdoms offers an explanation for the Illuminator's origin followed by statements of nourishing (except numbers 5, 7, 10, and 13), receiving power and glory (except number 11), and the concluding refrain: "And in this way he came to the water."

It is generally agreed that the explanations of the Illuminator's origin constitute traditional material that was later incorporated into the present document (Hedrick 1980: 130–54). It has also been argued (Hedrick 1980) that the document breaks down into two sections that appear to be two separate sources harmonized by an ancient editor with appropriate redactional comments at the point of the literary seams. One source (NHC 64,1–65,23; 66,12–67,12; 67,22–76,7; 83,7–84,3; 85,19–22) stands near the border separating Jewish apocalypticism and gnosticism. The general character of its gnosticism and its extensive use of Jewish traditions suggest that this source reflects a type of emerging Jewish gnosticism. The second source (NHC 65,24–66,12; 67,12–67,21; 76,8–83,7) contains few overt references to Jewish traditions, but reflects a developed gnostic mythology. The two sources were brought together in a group that argued for a spiritualized understanding of baptism and an ascetic life-style. The polemic against baptism (NHC 84,4–85,18; 85,22–31) at the end of the tractate is not directed against Christian baptism but reflects competing views of baptism within rival gnostic communities. The theory that the text breaks down neatly into two sources has been criticized, but it seems clear that the text as it now appears has been subjected to redaction (Pearson 1986).

D. Significance.

The text documents the existence of a type of heterodox Jewish gnosticism. It is "Jewish" in its knowledge and use of Jewish traditions, but in its intention the document is radically anti-Jewish since it constitutes a thoroughgoing Sethian-gnostic transversion of usual Jewish traditions. There are some

general parallels to the Christian tradition, but the document has no features that are necessarily Christian and it makes no use of New Testament texts. The redeemer-illuminator mythology in the document does not appear to have been derived from Christian groups or texts. Rather, the author draws instead (MacRae 1965) upon pre-Christian Jewish traditions of the persecution and subsequent exaltation of the righteous man as reflected, for example, in Wisdom 1–6 and Isaiah 52–53. *Apoc. Adam* reflects a type of non-Christian Jewish gnosticism prossessing a fully developed redeemer myth that did not pass through the Christian kerygma, but rather appears to be an independent parallel development.

CHARLES W. HEDRICK

ADAM, THE TESTAMENT OF. Because of erroneous identification by 19th-century scholars, the *Testament of Adam* has only recently been classified as one of the pseudepigrapha of the OT. A composite document, the Testament is made up of three originally independent sections referred to as the Horarium, which is a catalog of the hours of the day and night, the Prophecy in which Adam foretells the future of the world, and the Hierarchy, which explains the names and functions of the different ranks of angels. In the Horarium (chaps. 1 and 2), father Adam is represented as revealing to his son Seth what parts of the created order, both natural and supernatural, render their praises to God at each hour of the day or night: demons at the first hour of the night, doves at the second, fish and fire at the third, etc.

In the second section, the Prophecy (chap. 3), Seth relates to the reader in Adam's own words what his father had prophesied just before his death concerning the future of the world. This is primarily an *ex eventu* prophecy of the coming of Jesus Christ and of the events of his life, death, and resurrection (as recorded in the NT), but the Prophecy also describes the Flood and the end of the world and answers questions about the Fall and related events. For example, we are informed that the forbidden fruit was really the fig, and that Cain actually killed Abel out of passion for Lebuda, one of their sisters. Seth also describes Adam's funeral in some detail. The most striking doctrinal feature of the Testament, the promised deification of Adam, is found in this section. Here Adam explains that it had been his wish and God's intention to make Adam a god, but that because of the Fall, the promised apotheosis had to be postponed until after the saving mission of Jesus Christ, at which time its occurrence was certain.

The third section of the Testament, the Hierarchy (chap. 4), lists the nine different kinds of angels and explains the role and function of each in the administration of the cosmos. For example, according to the

Hierarchy the archons control the weather; the authorities take care of the sun, moon, and stars; and the powers keep the demons from destroying the whole of creation. The nine classes of angels are in ascending order: angels, archangels, archons, authorities, powers, dominions, thrones, seraphim, and cherubim.

Although versions of the Horarium and Prophecy sections of the Testament have been found in Greek, Arabic, Ethiopic, Old Georgian, and Armenian, Syriac has been demonstrated to be the original language of the document in all three of its sections. Evidence for this are the puns and wordplays in the text that work only in Syriac. Also, the manuscript evidence for the Syriac text is considerably older than that for any other version, the earliest being British Museum MS Add 14,624, which dates from the 9th century. Corruptions in the Greek version have proved to result from mistaking one Syriac word for another, therefore demonstrating that the Greek is dependent upon the Syriac. The Arabic, Old Georgian, and Armenian versions did not appear until after a Syriac version was well established and well attested, and must therefore be secondary to it. The Ethiopic version is dependent upon the Arabic.

It is likely that the first section of the Testament, the Horarium, is taken from Jewish traditions which circulated before the 3d century C.E., since it completely lacks the Christian elements which are so prominent in the Prophecy and Hierarchy and since it displays several affinities with the Wisdom literature of the OT. This Jewish material appears to have been joined together with the Prophecy by a Christian redactor in the 2d or 3d century to form the present *Testament of Adam.* The Prophecy itself, though heavily Christianized, preserves some Jewish traditions about Adam and Eve found in other Jewish literature but not in the OT, among them the idea that Adam left to his posterity an esoteric understanding of creation and a knowledge of the future history of the world. But in the present document, the substance of Adam's legacy has been turned by the redactor into a Christian proof text. Subsequently, perhaps between the 3d and 5th century, the Hierarchy was added to the Prophecy and Horarium, because its angelology complemented theirs, though the addition never really caught on, being found in only one Syriac MS.

STEPHEN E. ROBINSON

ADAMAH (PLACE) [Heb *ʾădāmâ* (אֲדָמָה)]. A fortified city within Naphtali's territorial boundaries, the exact location of which is unknown (Josh 19:36; LXX variants also reflect the uncertainty). Adamah is not to be identified with Adam in the Transjordon (Josh 3:16), nor with Adami-neqeb (Josh 19:33; see Boling and Wright *Joshua* AB, 459). Aharoni (*LBHG,* 429) suggests a location 7 km W of the Sea of Galilee associated with Shemesh-adam (modern *Qarn-ḥaṭ-ṭin*). Rogerson (*RNAB,* 129) associates this same site with Madon (Josh 11:1; 12:19), and suggests that an unidentified location 7 km N of Capernaum may also be the location of biblical Adamah.

MARK J. FRETZ

ADAMI-NEKEB (PLACE) [Heb *ʾadāmî neqeb* (אַדְמִי נֶקֶב)]. After the conquest described in Joshua 6–12, the Transjordan tribes of Reuben, Gad, and half of Manasseh returned to the E bank of the Jordan River. The W bank proper was then divided among the remaining tribes. Several major tribal units were settled and Joshua cast lots (18:10) for the remaining seven. The sixth portion went to the tribe of Naphtali (Josh 19:32–39). The S border of Naphtali (and part of the N border of Issachar) ran from Heleph to the Jordan River where it comes out of the Sea of Galilee. Simons (*GTTOT* 194) says this is not a border but just a list of cities. Aharoni (*LBHG* 259) suggests the border ran just S of the line of Wadi Fajjas/Fegas. Kallai (*HGB* 235) considers it a border. RSV refers to the boundary while the Jerusalem Bible refers to the territory of Naphtali. One of the border sites, v 33, is Adami-nekeb.

Wright (*WHAB* 42) shows Adami-nekeb within the SW corner of Naphtali's territory, near its W boundary with Zebulun (which is Zebulun's E boundary). Verses 35–38 list Naphtali's fortified cities but

these are not the boundary cities, except that v 36 includes Adamah. It is not impossible this is Adami-nekeb. However, Adamah is in sequence with Chinereth and Hazor, which suggests it is in the N (Na‹aman 1986: 134).

Adami-nekeb is described as a city or town between the Sea of Galilee and Mt. Tabor. Adam means "man" (BDB, 10) or "ground," and Nekeb means "pierce" (BDB, 666), and hence a "pass" that pierces the mountain. It has also been translated "red pass," since ›*dm* means "red," perhaps a reference to the *terra rossa*, the "red soil" common to the land. Yet a third translation is "fortified hollow." The KJV translates it as two names, following the LXX which has two names, with various spelling. The Jerusalem Bible translates one name but spells it Adami-negeb. The Vulgate has "Adami which is Neceb." Aharoni (*LBHG*, 126–27) quotes the Jerusalem Talmud (Meg. 1, 77a) where Rabbi Yosi refers to Adami—Damin, the Nekeb—Saydatha. "Damin" is an Aramaic intermediate form between biblical Adami and Arabic Damiyeh.

The Palestine Exploration Survey maps locate Adamah at Khirbet Damiyeh, 7 m NW of the exit of the Jordan from the Sea of Galilee and Adami at Khirbet Adamah, 5–6 m S of the exit. However, Boling (*Joshua* AB, 458; *GTTOT* 196) et al. place Adami at Damiyeh. Gehman (*NWDS* 16) suggests that Adami of the narrow pass is called this to distinguish it from Adam of the ford, Josh 3:16. Khirbet Damiyeh is a Bronze Age and Iron Age site 5 m SW of Tiberias, on the W side of Sea of Galilee. It is above the Wadi Mu'allaqah, which flows into the Wadi Fegas (*HGB,* 235). The site called Darb el-Hawarnah was probably a fortress controlling the pass on the caravan route from Damascus by way of Hauran or Bashan, around the S end of Galilee to the plain of Acco. It was a major alternate route to the Via Maris (*LBHG,* 61).

The conquest lists of Thutmose III (1504–1450 B.C.) include a site, no. 57 at Karnak, called *nkbu* which may be Nekeb or Negeb (*GTTOT* 196; *GP* 398; *ANET* 242). However, Aharoni (*LBHG* 161, 183) identifies no. 57 as Tell Abu Hureireh, possibly biblical Gerar, while identifying no. 36, Adumim with Adami-nekeb, Kh. et-Tell, *above* Kh. ed-Damiyeh (he seems to identify the two tells, *LBHG* 429). While noting several authors who share this identification, S. Ahituve, identifies Thutmose's no. 36 with Tel Qarnei Hittin, the Horns of Hattin (quoted by Na›aman 1986: 128 n.23). Aharoni identifies Adamim in Papyrus Anastasi I, an Egyptian letter of the scribe Hori, as Adami-nekeb (*ANET* 477). Kallai (*HGB* 235, n.287) explains the et-Tell and Damiyeh distinction by noting there are three ruins on Damiyeh. Kh. et-Tell is the highest of these at the top of the slope. Simons (*GTTOT* 196; *NWDB* 659) suggests that if Nekeb is a separate place, it may be Kh. el-Bassum (Bronze Age), SE of Kh. ed-Damiyeh, E of Kefr Sabt.

Some identify Nekeb by its Talmudic name with a ruin called Seiyadeh, but Kh. Sayadeh is a late ruin (Roman) with no ancient tell nearby. Aharoni thought it probable that "the Nekeb" is not an ancient name but an appellative to Adami. Kallai (*HGB* 235, n.287) acknowledges Roland de Vaux's discovery of a settlement *south* of the Wadi Mu›allaqah, opposite Damiyeh, with remains of the same Bronze and Iron Ages as Damiyeh. De Vaux assumed the double settlements reflect the double name but this has not been accepted by others. Van Beek (*IDB* 1: 45) cautions Adami-nekeb is not ›Udm of the Keret Epic from Ugarit (*GP* 238), nor Amarna Letter no. 256, Udumu, a city in the land of Garu which was hostile to the Pharoah (*ANET* 486). These may be identified with Edom (Albright 1943: 14). It is of interest that all these names may be interpreted as "red" stone, object, thing, etc. The plural "Adummim" means "red stones," as in the red-streaked limestone cited earlier.

HENRY O. THOMPSON

ADAR [Heb ʾ*ădār* (אֲדָר)]. The twelfth month of the Hebrew calendar, roughly corresponding to February and March. See CALENDARS (HEBREW).

ADASA (PLACE) [Gk *Adasa* (Ἀδασα)]. The town where Judas Maccabeus and his military band camped and subsequently defeated the Syrian general Nicanor and his troops (1 Macc 7:40–45). Josephus' account of this story locates Adasa 30 stades (ca. 4 km) from Beth-horon (*Ant* 12.10.5; see also his reference to the town Acedasa, in the province of Gophna, *JW* 1.1.6). Some scholars identify Adasa with modern *Khirbet ʿAdaseh,* a militarily strategic site located midway between Jerusalem and Beth-horon, ca. 8 km (60 stades) SE of Beth-horon, rather than the 30 stades recorded by Josephus (Abel *GP*, 238; Goldstein *1 Maccabees* AB, 341). Adasa has also been identified with the ʾ*Adasa* northeast of Beth-horon in the province of Gophna, which was known to Eusebius (*HJP²* 1: 170).

MARK J. FRETZ

ADBEEL (PERSON) [Heb ʾ*adbĕʾēl* (אַדְבְּאֵל)]. The third of Ishmael's twelve sons (Gen 25:13 = 1 Chr 1:29). The LXX, however, transposing the letters *beta* and *delta*, spells the name *nabdeēl* (Gen 25:13) or *nabdaiēl* (1 Chr 1:29) in these parallel lists, and adds *ragouēl kai nabdeēl* "Ragouel (or Reuel) and Nabdeel" to the list of Dedan's sons in Gen 25:3. But the Lucianic version of 1 Chr 1:29 reads Gk *abdiēl,* and Josephus spells the name *abdeēlos* in his list of Ishmael's descendants (Ant 1.12.4). This rather consistent metathesis of the letters *beta* and *delta* in the Gk texts suggests that the difference in spelling is not simply a scribal error. Based on the LXX use of an initial *N*, Albright (1956: 13–14) suggests that *Nadab* is a hypocoristic doublet of Heb ʾ*adbĕʾēl,* and identifies Nadab with the Arabic name *Idibaʾil.* Other scholars identify Adbeel with the Arabian tribal and personal name *Idibaʾilu,* which appears in the inscriptions of Tiglath-Pileser III (*ANET*, 283; Ephʿal 1982: 215–16; Montgomery 1934: 45; Musil 1926: 291). Tiglath-Pileser III (744–727 B.C.E.) first subjugated this northwest Arabian tribe, then appointed Idibiʾlu to the wardenship of the Egyptian border.

MARK J. FRETZ

ADDAN (PERSON) [Gk *Charaathalan* (Χαραααθαλαν), *Charaathalar* (Χαραααθαλαρ)]. A leader of the exiles, who returned to Palestine from Tel-melah and Telharsha in Babylon (1 Esdr 5:36). The RSV form "Addan" is derived from the difficult LXX phrase, rendered by codex Vaticanus *hēgoumenos autōn charaathalan kai allar* , "their leaders (were) Charaathalan and Allar" (codex Alexandrinus spells the names *charaathalar* and *alar*). Bewer (1922: 30) argues that Gk *charaathalan* should be two words (*charaath* and *alan*), and that Gk *alan* resulted from a confusion in the transmission of Gk *adan,* since the triangular form of uppercase Gk *lambda* closely resembles the "tee pee" form of uppercase Gk *delta.* He bases this suggestion on the place name "Addan," attested in Ezra 2:59 and Neh 7:61. See ADDAN (PLACE). The occurrence of Addan as a personal name is unique to the list of returnees in 1 Esdras 5.

MARK J. FRETZ

ADDAN (PLACE) [Heb ʾ*addān* (אַדָּן)]. Var. ADDON. A place in Babylon from which a group of Jews of undocumented ancestry returned to Palestine (Ezra 2:59 [LXX *ēdan*] = Neh 7:61 [Heb ʾ*addôn;* LXX *ērōn*]). The location of this site is unknown.

MARK J. FRETZ

ADDAR (PERSON) [Heb ʾ*addār* (אַדָּר)]. The first son of Bela and grandson of Benjamin (1 Chr 8:3).

The name "Addar" appears only in this portion of an extended genealogy (1 Chronicles 7–8) listing Benjamin's descendants. Parallel genealogies list "Ard" as either a son of Bela (Num 26:40), or a son of Benjamin (Gen 46:21); however, the list of Benjamin's descendants in 1 Chronicles 7 has neither name. See ARD. Albright (1939: 179–80), noting the similarity of the Hebrew letters *dalet*, *kap,* and *reš* (cf. Josh 16:2, 5; 18:13), argues that the names "Addar" and "Ard" are actually corrupted forms of the (unattested) Hebrew clan name **erek* "Erech" (cf. the gentilic ʾ*arkî* "Archite"). See ARCHITE.

Bibliography

Albright, W. F. 1939. Review of *GP*. Vol. 2. *JBL* 58: 177–87.

MARK J. FRETZ

ADDAR (PLACE) [Heb ʾ*addār* (אַדָּר)]. A border town in the southern Negeb region of Judah, near Hezron and Karka (Josh 15:3). The name "Addar" occurs as part of a lengthy list of Israelite tribal boundary sites (Joshua 15–17). The precise location of Addar is unknown. The name may be synonymous with Hazar-addar (cf. Num 34:4; see Noth 1935: 188), or possibly a parenthetical comment regarding the location of the border of Judah, e.g., "It went around Hezron (more specifically, it went up to Addar)" (see Boling and Wright *Joshua* AB, 365).

MARK J. FRETZ

ADDAX. See ZOOLOGY.

ADDI (PERSON) [Gk *Addi* (Ἀδδι)]. **1.** The patronym of a clan of Israelite laypersons who returned from Babylonian exile (1 Esdr 9:31). Members of the clan of Addi were listed (after the sons of Bani) with those who married foreign women from "the people of the land," and who, under Ezra, were subsequently forced by covenant to separate themselves from these foreign wives and their children (cf. Neh 13:23–31). The name "Addi" does not appear in Ezra's parallel list (Ezra 10:18–44), although there the name "ADNA" does appear right after the listing of the sons of Bani (Ezra 10:30).

2. The son of Cosam and father of Melchi in Luke's geneaology of Joseph, the husband of Mary (Luke 3:28). The name "Addi" is absent in Matthew's parallel genealogy (Matt 1:1–17). Kuhn (1923: 214) finds an analogue in the MT name *pĕdāyâ* (2 Kgs 23:36), which the LXX renders *edeil.* The LXX apparently presupposes Heb ʿ*dyl,* "ADIEL" (1 Chr 4:36; 9:12; 27:25), a variant of which combines Heb ʿ*dy* [Gk *addi*] and an alternate theophoric ending (Heb *yh*) resulting in "ADAIAH." Given the unpredictable occurrence of Gk *addi* as a variant in manuscripts of four unrelated passages (Num 26:25—Eng26:16, RSV "Iddo"; 1 Chr 6:21, RSV "Eri"; 2 Chr 28:12, RSV "Hadlai"; 1 Esdr 9:31, RSV "Addi"), and the tenuous nature of identifying a specific individual simply on the basis of a particular form of a name, the Addi in Luke 3:28 must remain anonymous.

ADDITIONS TO DANIEL. See DANIEL, ADDITIONS TO.

ADDITIONS TO ESTHER. See ESTHER, ADDITIONS TO.

ADDITIONS TO JEREMIAH. See JEREMIAH, ADDITIONS TO.

ADDON (PLACE) [Heb ʾ*āddôn* (אָדּוֹן)]. See ADDAN (PLACE).

ADDUS (PERSON) [Gk *Addous* (Ἀδδους)]. The name of one of the 17 families descended from Solomon's servants that returned to Jerusalem from Babylon (1 Esdr 5:34). The name "Addus" occurs only in that portion of the list providing names not attested in parallel lists (Myers *1 & 2 Esdras* AB, 68).

Those parallels instead list 10 families (Ezra 2:55–58 = Neh 7:57–60; LXX Neh 7:60 cites 11 families). Also, the summary in 1 Esdr 5:35 (and its LXX parallels in Ezra 2 and Nehemiah 7) numbers only 372 total "temple ministrants" and servants, while the MT parallels number 392 (Ezra 2:58; Neh 7:60).
MARK J. FRETZ

ADER, KHIRBET (M.R. 222068). A site in ancient Moab on the Transjordanian Plateau. It is located on the "King's Highway"—one of the major caravan routes in antiquity—some 7 km NE of the modern city of Kerak, Jordan. The ancient site comprises a large tell of about 10 acres and, separated by a small wadi, a much smaller mound. The modern village of Ader now occupies the site.

A. History of Exploration.

The site's best-known feature is its four *menhirs* (large upright monoliths), noted as early as 1806 by J. Seetzen and later by J. L. Burckhardt and A. Musil. W. F. Albright (1924; 1934) and N. Glueck (1933) investigated the architectural remains at the site and, by a study of the pottery, concluded that its main periods of occupation were the late EB, the Iron Age, and the Late Roman Period. In 1933, W. F. Albright and R. G. Head directed a two-week expedition, accounts of which were only published in preliminary fashion (Albright 1934; 1944). R. L. Cleveland (1960) later published the results of the original expedition.

B. The Early Iron Age Remains.

Khirbet Ader is most frequently referred to as one of a half-dozen or so excavated settlement sites found in the EB IV period, ca. 2400–2000 B.C. Given the growing evidence for a significant level of sedentism (small towns and villages) in Transjordan, it is now clear that this period was not the "nomadic interlude" as envisioned by K. Kenyon (Richard 1980). Both the 10-acre "city," as Albright describes it, and the small tell to the N were occupied in the EB IV; apparently only a portion of the main site was occupied during the Iron Age and Roman Period.

Almost 3 m of EB IV occupational debris attest to a permanently occupied agricultural settlement. Good arable land surrounds the site and nearby streams provide a permanent source of water. On the small tell, a trench measuring 10 m × 4 m revealed three occupational levels (A–C) with pottery that Albright compared with Tell Beit Mirsim strata I–J. Although the pottery appears mixed, clear stratification was present, consisting of the corner of a rectangular house in the latest level (A), a mudbrick wall, and much mudbrick debris and ash in level B, and an enigmatic level C that contained early pottery, particularly wavy ledge handles. A study of the pottery plates (Cleveland 1960) shows that the three phases exemplify the degenerate red-slipped and burnished pottery with rilled exterior that is characteristic of the end of the EB. On the basis of comparisons with other EB IV sites (Iktanu, Khirbet Iskander, ʿAroʿer, Bâb edh-Dhrâʿ), one can date Ader to the early part of the EB IV period (i.e., EB IVA–B). Ader's two clear architectural phases compare well with these sites, where two to four phases have been identified. A typical EB IV shaft tomb was also excavated on the small mound.

Originally four *menhirs* were noted at the site, one of which rested upon a step in the portico of a temple. Near the temple lay a massive stone slab with two round depressions, obviously an altar for offerings. Unfortunately this building, which was to be excavated fully in 1933, had been almost totally destroyed in the interim since Albright's first visit. From Albright's description and a published, though hypothetical, plan (Cleveland 1960: fig. 8), the temple appeared to be of tripartite design with the center room slightly offset. If Albright's observations are correct, this temple would be the earliest example of a type known during the MB and LB from Syria-Palestine at such sites as Shechem, Ebla, Alalakh, and Hazor.

Although Albright originally referred to the structure as the "Moabite Temple," he later placed it in the Canaanite Period. Given the apparent sole discovery of EB IV sherds and occupation on the small tell, as well as the associated *menhir*, it is highly likely that the building belongs in the EB IV period. Large *menhirs* (some 4 meters high) like those at Ader are also known from other EB sites (e.g., Bâb edh-Dhrâʿ, Khirbet Iskander, and Lejjun). In light of a recently excavated EB IV sanctuary at Bâb edh-Dhrâʿ and the monumental EB IV architecture (fortifications and gateway) at Khirbet Iskander, it would not be

impossible that such a temple could date to the EB IV. On the basis of excavations in Jordan over the past 15 years, it is becoming increasingly clear that the EB IV was a period of urban regression, and not a nomadic interlude. Moreover, the strong continuities now apparent between the EB III and the EB IV suggest that the collapse of the city-state system at the end of EB III and the subsequent adaptation to nonurban subsistence strategies (small towns, villages, and pastoralism) were a result of gradual internal processes, not nomadic invasions as earlier scholarship presupposed (Richard 1986).

C. Iron Age and Roman Remains.

On the main tell, excavation uncovered occupation of the Iron Age II and the Roman/Byzantine periods, although earlier EB IV occupation was noted. Only fragments of walls and associated Iron Age II pottery represent the Iron Age occupation on the mound. More substantial remains of the Roman/Byzantine period were found. The city wall was constructed in the Late Roman period (2d–3d centuries A.D.). Excavation showed that a tower on the N city wall, well built with a front wall of ashlars, dated to the Late Roman Period, but had been repaired in the Byzantine period. The domestic occupation uncovered within the city wall consisted of several walls comprising a fairly well-preserved room with a great deal of Roman (3d century) pottery. Below the floor of this room there was discovered a cist burial, in which some Nabatean sherds were also found. Interestingly, among the rubble within the room the excavators found a stone with a Hebrew inscription, thought to date from the Byzantine period.

SUZANNE RICHARD

ADIDA (PLACE) [Gk *Adida* (Ἀδιδα)]. Mentioned in 1 Macc 12:38 and 13:13 as a Judean town fortified and occupied by Simon, the second brother of Judah the Maccabee. Adida is probably the biblical Harim of Ezra 2:32 (Heb *ḥārim;* Gk *arōth*) and which occurs in Neh 7:37 as Hadid (Heb *ḥādid;* Gk *adid*). Ezra and Nehemiah list Harim/Hadid along with Lod and Ono in whose vicinity Adida lay. Josephus describes Adida as located on a hill overlooking the plains of Judea (*Ant* 13.6.5 §203). Abel (1926: 218, 511 and *GP* 2: 340) considers Josephus' description of a hill as an exaggeration but deems Adida to be the modern *ʾel-Ḥaditheh* located 6 km NE of Lod (M.R. 145152).

Bibliography

MICHAEL E. HARDWICK

ADIEL (PERSON) [Heb *ʿădîʾēl* (עֲדִיאֵל)]. **1.** A Simeonite prince who, during Hezekiah's reign, was involved in Simeonite expansion to Gedor in search of pasture lands (1 Chr 4:36). His name appears in a list of Simeon's descendants (1 Chr 4:24–43) preserved within an extended genealogy of Israel (1 Chronicles 2–8).

2. The father of the priest Maasai, an exile who returned from Babylon to live in Jerusalem (1 Chr 9:12). In a parallel list of priests who lived in Jerusalem under Nehemiah (Neh 11:10–14), the name "Adiel" is replaced with Azarel (LXX variants include *esdriēl, ezriēl*). A possible connection between the names "Adiel" and "ADDI" must be rejected as being too tenuous.

3. The father of Azmaveth, the administrator in charge of the "treasuries" of King David, presumably in Jerusalem (1 Chr 27:25; see Rudolf *Chronikbücher* HAT 180). This name occurs in a list of stewards of crown property (1 Chr 27:25–31).

MARK J. FRETZ

ADIN (PERSON) [Heb *ʿādîn* (עָדִין)]. The father of a clan of returnees who settled in the area of Jerusalem during the reign of the Persian ruler Artaxerexes (Ezra 2:15; 8:6; Neh 7:20; 1 Esdr 5:14 [where LXX renders the name variously as *adeiliou* and *adinou*]). While this leader's name occurs as a patronym in parallel lists of returnees (Ezra 2 = Nehemiah 7 = 1 Esdras 5), his descendants were variously numbered as 454 (Ezra 2:15 = 1 Esdr 5:14) or 655 (Neh 7:20; Codex Alexandrinus reads 654, as do variant readings of Ezra 2:15 and 1 Esdr 5:14; see Allrick 1954: 22). As a prince under Nehemiah, Adin set his seal to the covenant made with the Lord (Neh 10:17—Eng10:16).

Bibliography

Allrik, H. L. 1954. The Lists of Zerubbabel (Nehemiah 7 and Ezra 2) and the Hebrew Numeral Notation. *BASOR* 136: 21–27.

MARK J. FRETZ

ADINA (PERSON) [Heb *ʿădînāʾ* (עֲדִינָא)]. The son of Shiza and leader of a band of Reubenites associated with King David's chief military men (1 Chr 11:42). This group of Reubenite warriors reinforced David's armies, perhaps during his wars in the Transjordan (Mazar 1986: 102). The Chronicler's expansion (1 Chr 11:41b–47) of the parallel lists of David's military elite (1 Chr 11:10–41a = 2 Sam 23:8–39) includes Adina and 15 other men from the Transjordan. There is general agreement that these verses were not part of the original list, and Williamson (*1 & 2 Chronicles* NCBC, 104) and others (Mazar 1986: 101–2; Rudolf *Chronikbücher* HAT, 101) have argued convincingly that the Chronicler or a later redactor did not fabricate these names.

Bibliography

MARK J. FRETZ

ADITHAIM (PLACE) [Heb *ʿădîtayim* (עֲדִיתַיִם)]. One of 14 towns grouped together in the Shephelah (foothills) of Judah (Josh 15:36). The name "Adithaim" occurs only here and the location is unknown. Abel (*GP* 2: 238; see also *RAB*, 148) suggests modern *el-Ḥadîtheh*, a site 4 km NNW of Yâlō, based on a comparison with Egyptian *kdtm* (no. 25 of the Shishak list); however, others dispute this and prefer to leave the location unspecified (Albright 1939; Noth *ABLA* 2: 78).

Bibliography

Albright, W. F. 1939. Review of *GP*. *JBL* 58: 177–87.

MARK J. FRETZ

ADLAI (PERSON) [Heb *ʿadlay* (עַדְלַי)]. Father of Shaphat, the official in charge of King David's herds in the valleys (1 Chr 27:29). Adlai is unknown outside this list of stewards of crown property (1 Chr 27:25–31).

MARK J. FRETZ

ADMAH (PLACE) [Heb *ʾadmâ* (אַדְמָה)]. One of the "cities of the plain" associated by biblical tradition with Sodom and Gomorrah (Gen 14:2, 8). Admah is mentioned (along with Sodom, Gomorrah, and Zeboiim) among the points marking the Canaanite's southern border (Gen 10:19). Shinab, King of Admah, was one of the five allies (along with the kings of Sodom, Gomorrah, Zeboiim, and Zoar) who were defeated by Chedorlaomer and his three confederates in the Battle of the Valley of Siddim (Gen 14:2, 8) (see also CHEDORLAOMER). While Admah is not specifically mentioned in the account of the destruction of Sodom and Gomorrah (Gen 19:24–28), the tradition that it was also destroyed as judgment for its sin is attested twice. Like Sodom and Gomorrah, Admah and Zeboiim function as proverbial symbols of divine judgment. The fate of all four cities is held out as a warning to Israel not to disobey the

covenant (Deut 29:22—Eng29:23). Hosea 11:8 also recalls the divine overthrow of Admah and Zeboiim (cf. Wis 10:6).

The historicity of Admah's association with Sodom and Gomorrah is uncertain. Several scholars cite the greater number of references to Sodom and Gomorrah as evidence that Admah and Zeboiim are secondary additions to a core tradition. Admah and Zeboiim are, however, consistently associated with Sodom and Gomorrah within the written biblical tradition.

The site of Admah is uncertain. Simons (1959: 222–29) and others locate the cities of the plain in the SE corner of the Jordan Valley, to the N of the Dead Sea. Albright (1924: 8), tentatively identifying Admah with Adamah (Josh 3:16), also suggests that Admah and Zeboiim were located in the Jordan Valley, although he situates Sodom and Gomorrah under the shallow S bay of the Dead Sea. The Early Bronze Age ruins of Bab edh-Dra‹, Numeira, Feifeh, Khanazir, and Es-Safi, on the SE edge of the Dead Sea, have been hailed as the cities of the plain (van Hattem, 1981: 87–92). However, the archaeological evidence is inconclusive. See also SODOM, ZEBOIIM.

CAROLYN J. PRESSLER

ADMATHA (PERSON) [Heb ›*admātā*‹ (אַדְמָתָא)]. One of seven wise princes who counseled King Ahasuerus concerning matters of the law and judgment (Esth 1:14; cf. Ezra 7:14). Since the historicity of the book of Esther is uncertain, the identification of the characters cannot be verified. The name "Admatha" is absent in the LXX, which seems to have suffered corruption in this verse since it lists only three names (Gk *arkesaios, sarsathaios,* and *malēsear*).

MARK J. FRETZ

ADMIN (PERSON) [Gk *Admin* (Ἀδμιν)]. The son of Arni and father of Aminadab (Luke 3:33) in Luke's genealogy of Joseph, the husband of Mary (Luke 3:23–38). Matthew's parallel genealogy (Matt 1:1–17), replaces Luke's name sequence of Hezron—Arni—Admin—Aminadab with the sequence Hezron—Aram—Aminadab. According to the LXX, this Aram is Aminadab's father in Ruth 4:19 (MT reads *rām;* LXX variants include *aram* and *arran*), and in 1 Chr 2:9–10 (MT reads *rām;* LXX lists *ram* and *aram*). Luke's passage (3:33) contains a number of variant spellings of the name (e.g., *admin, aram,* and *admi*), attesting to the problems encountered by the copyists in attempting to establish the identity of Admin (Brown 1979: 60).

MARK J. FRETZ

ADNA (PERSON) [Heb ‹*adnā*› (עַדְנָא)]. **1.** A descendant of Pahathmoab and one of a number of returning exiles who married foreign women (Ezra 10:30). Under Ezra, Adna was subsequently forced by covenant to separate himself from his foreign wife and her children (Ezra 10:1–44 = 1 Esdr 8:88–9:36; see also Neh 13:23–31). LXX variants include *aidaine, idane,* and *edne,* and the apparent parallel in 1 Esdr 9:31 lists *addi* (see ADDI).

2. Head of the priestly family of Harim in the days of the high priest Joiakim (Neh 12:15). Adna may have been a contemporary of Adna no. 1 above, since the name of his father, "HARIM," also appears in connection with the issue of foreign wives (see especially Ezra 10:21; Neh 3:11); his priestly lineage, however (Neh 12:12–21), sets this Adna apart from the descendent of Pahathmoab.

MARK J. FRETZ

ADNAH (PERSON) [Heb ʿ*adnaḥ* (עַדְנַח)*;* ʿ*adnâ* (עַדְנָה)]. **1.** One of seven military leaders from the tribe of Manasseh who defected from King Saul's troops to serve David (1 Chr 12:21—Eng12:20) prior to the confrontation with the Philistines in which Saul died (1 Samuel 31). The wary Philistines did not permit David to enter into this battle (1 Samuel 29), and before David could return to Ziklag, Amalekites had raided the town; so Adnah (Heb ʿ*adnaḥ*), and the others were in a position to assist David against these raiders (1 Chr 12:21; see also 1 Samuel 30).

2. One of King Jehoshaphat's chief military officials who commanded an army of 300,000 soldiers in Judah (2 Chr 17:14). In the Bible his name (Heb ʿ*adnâ*) occurs in a large list of commanding officers who served Jehoshaphat (2 Chr 17:13b–19). This rare biblical name is inscribed on a stone bowl unearthed at Kuntillet-ʿAjrud. Based on archaeological and epigraphical evidence at ʿAjrud, and on Adnah's biblical connection with Jehoshaphat, Meshel (1978: 54) tentatively raises the possibility that the inscription and the Bible refer to the same person.

MARK J. FRETZ

ADONAI [Heb ʾ*ădōnāy* (אֲדֹנָי)]. One of the various names of God in the Hebrew Bible. The term is derived from Heb ʾ*ādôn* ("lord"), which in the biblical text refers both to the deity and to human rulers. Adonai is a modified form of the plural of ʾ*ādôn:* it bears the first-person suffix "my" and has been vocalized in a slightly different manner than "my lords," receiving a lengthened final *a*. Although based on a plural, it is usually translated into English as "my lord" or simply "Lord."

Adonai appears in the MT both as a title in its own right and as a substitute for the personal name of God, Yahweh. In order to preserve the sanctity of the Name, the Masoretes placed the vowel letters of Adonai underneath the consonants of Yahweh. This common substitution technique, called *qere/kethib* ("read/written"), clues readers to pronounce the Name as Adonai. In cases in which Adonai already appears, the hybrid form is read "Elohim." The RSV renders the substitution form as "LORD" (with all letters capitalized) while Adonai itself is translated "Lord" (with only the first letter capitalized).

The failure to recognize this substitution technique led later translators of the Hebrew Bible to render the form as it appears. Vocalizing the consonants YHWH with the vowels of Adonai (e, o, a) produced the new form "Yehowah," or in English "Jehovah." According to Kaufmann Kohler (*JEnc* 1: 201), this misreading can be traced to a Christian translator working in 1520 C.E. (See also YAHWEH.)

JULIA M. O'BRIEN

ADONI-BEZEK (PERSON) [Heb ʾ*ădōnî bezeq* (אֲדֹנִי בֶזֶק)]. The name of a Canaanite king reportedly defeated by the tribe of Judah in battle near Bezek (Judg 1:4–7). Wright (1946: 105–14) argued that this king was identical with Adoni-Zedek of Jerusalem (who was defeated and killed by Joshua, [Joshua 10]). Since nothing is said of this king's ruling over Jerusalem, and both names are distinctive, there is no substantive textual reason indicating that Adoni-Zedek was corrupted to Adoni-Bezek. The difficulty with Adoni-Bezek is that while the name is constructed as if Bezek were a divine name (cf. Adoni-Zedek—"My Lord is *ZDQ*," or Adonijah—"My Lord is Yahweh"), Bezek is unattested as a divine name. It is possible that there was a deity, Bezek, whose name was related to the Hebrew word *bāzāq,* found once with the meaning of "lightning" (Ezek 1:14). Until the discovery of such a deity, however, this suggestion is no more than guesswork.

A better possibility is to derive Bezek from the Hebrew word *bezeq*, meaning "fragment," or "sherd." This term is found as the name of a (rocky?) place in Judg 1:4–7 and 1 Sam 11:8. The site in Judg 1:4–7 would seem to lie near Jerusalem; but that in 1 Sam 11:8 may be identified with modern *Ibziq*, northeast of Shechem on the road to Beth-Shean. Since Bezek was a city, Adoni-Bezek is best read as "Lord of Bezek" (with ʾ*ădōnî-* forming the construct of ʾ*ādôn*, as is frequently the case with masculine nouns in the construct state (*BLe*, 525, §65j). That Adoni-Bezek was the ruler of Bezek is implied in that the men of

Judah "came upon Adoni-Bezek at Bezek" (Judg 1:4). Having captured this Canaanite king, the Israelites cut off his thumbs and big toes (Judg 1:6). Thereupon Adoni-Bezek said, "Seventy kings with their thumbs and big toes cut off used to pick the scraps from under my table; as I have done, so has God repaid me." That Adoni-Bezek was then carried back to Jerusalem, where he died, is probably a later gloss dating from the time when the Israelites controlled the city (See also ADONI-ZEDEK; BEZEK).

D. G. SCHLEY

ADONI-ZEDEK [Heb *ʾădōnî-ṣedeq* (אֲדֹנִי־צֶדֶק)]. A Canaanite king of Jerusalem (Josh 10:1–3) whose name means either "My Lord is righteousness" (i.e., Heb *ṣedeq* = "righteousness"), or "My Lord is Zedek." The latter is more likely, since Adoni-Zedek is constructed as a noun clause with a theophoric element (or divine name). The Yahwistic equivalent of Adoni-Zedek is Adonijah—"My Lord is Yahweh." A Canaanite king of Salem (= Jerusalem; cf. Ps 76:2) bears a name with the same theophoric element: Melchi-Zedek (Gen 14:18; Ps 110:4)—"My King is Zedek." The theophoric element *ṣdq* also occurs in the syllabic writings from Ugarit in the names *Ili-Ṣaduq*—"My God is *Ṣaduq*" —and *Ḥammi-Ṣaduq*—"My Warmth (?) is Ṣaduq." *Adnṣdq* is also attested, providing a parallel to the biblical name Adoni-Zedek (*PTU*, 187). Although the term *sedeq* by itself never occurs in the Hebrew Bible as the name of a deity, the above evidence probably indicates the existence of an old Canaanite god, *Ṣedeq* (Ug *Ṣaduq*), who was at one time the patron deity in Jerusalem.

Further evidence indicates that this tradition continued into the Davidic monarchy. David's choice of a priest of unknown origin, Zadok ((Heb *Ṣādôq,* Ug *Ṣaduq*), to serve alongside Abiathar, may have resulted from a desire (or need) to secure the loyalty of the Jebusite cult in Jerusalem. This was done by recognizing its priest-king (Zadok) as high priest in Israel. That the Davidic kings viewed themselves as heirs to the Jebusite royal tradition is suggested by the writer of Ecclesiastes, ostensibly Solomon, who boasts of acquiring wealth "more than all who had been before me in Jerusalem" (Qoh 2:7).

Adoni-Zedek is depicted in Joshua 10 as the leader of a coalition of five southern Canaanite cities—Jerusalem, Hebron, Jarmuth, Eglon, and Lachish—formed to punish the Gibeonites after they had made peace with Joshua. These kings came up against Gibeon and encamped by the city. Joshua, having made a forced march from Gilgal at night, surprised the Canaanite army and threw it into a panic. The Israelites smote them as they fled by way of the ascent of Beth-Horon (which runs west-southwest from Gibeon to the Shephelah). According to the biblical account, Yahweh also smote them with hailstones as they fled, and at Joshua's request, caused the sun to stand still while the Israelites finished the slaughter (Josh 10:11–13). The five kings escaped and hid themselves in the cave at Makkedah, whence Joshua took them and hanged them on five trees in the vicinity (Josh 10:16–27). It has been argued that this Adoni-Zedek is identical with Adoni-Bezek, the Canaanite king in Judges 1, but this proposition is doubtful. See also ADONI-BEZEK; ZADOK; MELCHIZEDEK (PERSON); GIBEON.

ADONIJAH (PERSON) [Heb *ʾădōnîyāh (û)* (אֲדֹנִיָּהוּ)]. A name given three OT characters which means "Yah (weh) is (my) Lord."

1. The fourth son of David by his wife Haggith in Hebron, while David was king of Judah (2 Sam 3:4; 1 Chr 3:1–2); and heir apparent to the throne at the time of Solomon's accession. Adonijah's personal ambition led to his own demise in a story that echoes that of the rebellion and death of his elder brother Absalom.

The story begins with a note on the feebleness of David in his old age. Since the elder half-brothers Amnon, Absalom, and presumably Chileab were dead (1 Kgs 2:22), it was assumed by Adonijah, and perhaps by the general populace, that he was next in line for the throne. Though David may have promised Bathsheba, his favorite queen, that her son Solomon would succeed him—a fact that finds some confirmation in the exclusion of Solomon from Adonijah's feast—that pledge does not appear to have been seriously considered. The subsequent nomination of Solomon came as a surprise to the followers of Adonijah, who himself later claimed in conversation with Bathsheba: "You know that the kingdom was mine, and that all Israel fully expected me to reign" (1 Kgs 2:15).

With the help of David's general Joab and the priest Abiathar, Adonijah prepared a sacrificial feast near the spring En-rogel, to which he invited "all his brothers, the king's sons (except for Solomon), and all the royal officials of Judah (except for Nathan, Zadok, and Benaiah)," hoping to become king before his aged father died (1 Kgs 1:9). His plans were thwarted by the prophet Nathan, the priest Zadok, and Benaiah, commander of the royal bodyguard, who allied themselves with Bathsheba to forestall his succession.

When Bathsheba informed David of the events at En-rogel and the threat to her own life if Adonijah became king (1 Kgs 1:21), Nathan opportunely appeared, confirming her words and making his own appeal on the basis of loyalty to old friends and counselors. Together Nathan and Bathsheba moved the aged David to decisive action; and he ordered that Solomon be conducted on the royal mule in a procession to the spring at Gihon to be anointed and proclaimed king by Zadok. The instructions were immediately carried out and the new king, Solomon, was joyfully acclaimed by the people.

When the resounding acclamations of Solomon's procession were interpreted by Jonathan, the son of Abiathar, to mean the ruin of Adonijah's hopes, his adherents fled and Adonijah himself took sanctuary in the Temple by laying hold of the horns of the altar. Adonijah was subsequently persuaded to leave his asylum only by Solomon's promise to spare his life (1 Kgs 1:40–53).

After David's death, Adonijah asked Bathsheba to intercede with Solomon to give him in marriage the beautiful Abishag, his father's concubine and nurse. Solomon interpreted this as a bid for the throne and ordered Adonijah's execution at the hands of Benaiah.

Close parallels between the stories of Absalom (2 Samuel 15–18) and Adonijah (1 Kings 1–2) have been noted (Fokkelman 1981: 345–410; Long 1984: 33–52; and Gunn 1987: 104–111). Both men are described as handsome and appealing figures, who were not adequately disciplined by their father. Adonijah enlisted the help of "chariots and horsemen and fifty men to run before him" (1 Kgs 1:5), as Absalom had done before him (2 Sam 15:1). Both sought the crown on their own without David's support; and both came to a violent end. Adonijah's request from Solomon that he be given Abishag as his wife is reminiscent of Absalom, who, after taking Jerusalem and in order to secure his political position, publicly took David's concubines as his own (2 Sam 16:20–23). Adonijah's desire to marry Abishag may have been motivated by his love for her; but that decision was his final undoing. Whatever his real motives or the political significance of his act may have been, in terms of the story, he was rebelling against the king.

The story of Adonijah's rebellion and fate in 1 Kings 1–2 may also be interpreted in relation to the law of the king in Deut 17:14–20, which forbade the monarch from relying solely on force of arms, alliances (through marriage), or wealth. Adonijah's violation of the prohibitions of the law of the king foreshadows the more flagrant violations of this same law on the part of Solomon. The king is to follow the law of Moses, which is in the hands of the Levites.

2. A Levite who, together with princes and priests, instructed the people in the law during a mission to the cities of Judah in the third year of Jehoshaphat (2 Chr 17:8).

3. A leading layman, one of the "chiefs of the people," who sealed the covenant of reform in the time of Ezra (Neh 10:17—Eng10:16).

ADONIKAM (PERSON) [Heb *ʾădōnîqām* (אֲדֹנִיקָם)]. The father of a clan who, along with other lay families, returned from Babylon to Palestine (Ezra 2:13 = Neh 7:18 = 1 Esdr 5:14; also Ezra 8:13 = 1 Esdr 8:39). The precise number of returnees in Adonikam's clan is uncertain, owing to the occurrence of this name in multiple lists where the Hebrew-Aramaic numeral notation may have been miscounted (Allrik 1954). Adonikam may be identical with the ADONIJAH mentioned in a list of lay family heads (Neh 10:17—Eng10:16), since both are listed in conjunction with otherwise similar persons (Myers *Ezra-Nehemiah* 239: Williamson *Ezra, Nehemiah* WBC, 329).

MARK J. FRETZ

ADONIRAM (PERSON) [Heb *ʾădōnîram* (אֲדֹנִירָם)]. The son of Abda and an official in Solomon's court who was in charge of the forced labor used in many of the major building projects (1 Kgs 4:6; 9:15). This office was first mentioned late in David's reign and continued into the rule of Rehoboam (2 Sam 20:24; 1 Kgs 12:18). In the reign of David and Rehoboam, this office was held by Adoram. Some scholars take this to be a shortened form of the name "Adoniram." If this is the case, then one person held this office from late in David's reign until the crisis under Rehoboam—a period of some 40 years. The LXX supports this identification and uses the name "Adoniram" consistently in the passages referring to this official. Other scholars believe that it is possible, but not likely, that one person would have held this office for such a length of time.

Two factors suggest the importance of Adoniram's office: (1) the position is included in the small number of offices listed at the royal court, and (2) control of a force of 30,000 men certainly would have been given only to a most trusted individual (1 Kgs 5:28—Eng5:14).

Forced labor was a part of many societies in the Ancient Near East. Israel's distaste for this practice is probably to be seen in the demand for lighter burdens under Rehoboam (1 Kgs 12:4). When Rehoboam refused to change his harsh policies, Adoniram, the overseer of the hated forced labor, was murdered by the angry Israelites (1 Kgs 12:18).
PHILLIP E. MCMILLION

ADOPTION. The creation of a kinship relationship between two individuals that is recognized as essentially equivalent to one stemming from natural descent. In the ancient Near East, such ties were typically between adoptive parent(s) and a son or daughter, but individuals were adopted into other roles as well. Frequently the parties were relatives before the adoption took place. Adoption differs from fosterage in that the latter is a temporary arrangement which is not legally binding. The foster child receives support but not the status of son or daughter.

———

A. Extrabiblical Sources
1. Cuneiform
2. Egyptian
3. Jewish
B. Adoption in the Bible
1. Possible Cases
2. Metaphorical Use
3. Issues

A. Extrabiblical Sources.

Because biblical references to adoption are both limited in number and seldom unambiguous, they have been interpreted with the aid of extrabiblical sources, particularly cuneiform texts.

1. Cuneiform. Relevant documents date at least from the beginning of the 2d millennium B.C.E. to the Achaemenid period, the majority coming from Old Babylonian (OB) and Middle Babylonian (MB) times. Since our sources span both a wide geographical range and the better part of two millennia, details of adoption practice from a given time and place were not necessarily universal.

Law collections (often called law codes) and adoption contracts are our primary types of documentation. The latter are more abundant and also more reliable, since the function of the collections is debated and their treatment of adoption incomplete. Contracts have their limitations as well; they do not as a rule present the circumstances leading to the adoption, or the age of the parties. Stipulations regarding adoption differed from contract to contract and "code" to "code" so that one cannot expect to discover general laws which governed Mesopotamian (or biblical) practice.

Schorr (1913) and Kohler, Koschaker, and Ungnad (1909–23) have collected a number of OB adoption texts; see also texts and bibliography in Ellis 1975. Speiser (1930) and Cassin (1938) present MB Nuzi texts with discussion (see also dissertations cited in Eichler 1989: 116–17 nn. 51, 56). References to adoption in the law collections (see *ANET*) are Codex Hammurabi (CH) §§170–71, 185–93; Laws of Eshnunna §35; and Middle Assyrian Laws (MAL) §A 28; cf. doubtfully MAL §A 41, Lipit-Ištar §27.

Other types of documents occasionally mention adoption. We read of the adoption of a foundling in "The Legend of Sargon" (*ANET*, p. 119) and, with details of the adoption procedure, in the lexical series *ana ittišu* (Landsberger 1937: 44–47). In addition, there are records of litigation over custody or inheritance rights of adoptees.

The most common Akkadian way to say "adopt" is *ana mārūtim leqŭ* "take for son/daughtership." Individuals could also be adopted into other roles, such as that of brother (*aḫḫūti,* "brotherhood"), sister (*aḫātūti/atḫūti*), or even father (*abbūti*). In cases known especially from Nuzi, women adopted in order to be given in marriage would receive the "status of (adopted) daughter" (*mārtūtu*), daughter-in-law (*kall[at]ūtu*), daughter or daughter-in-law (*mārtūtu u kall[at]ūtu*), or sister (*aḫātūtu*); for literature see Eichler 1989; nn. 36, 56, 61.

Adoptions were usually effected by an agreement between two parties, the adopter and the parent or guardian of the adoptee, but occasionally adoptees would act on their own behalf. A written contract recording the adoption typically included a statement of the adoptive relationship, clauses regarding its dissolution, a record of the oath of the parties, the names of witnesses, and the date. Some sources hint at an adoption ceremony.

Adoption in the cuneiform *Kulturkreis* took many forms. An individual might be adopted as heir, or into apprenticeship. Slaves were manumitted by adoption (Schorr 1913: nos. 23–35), and illegitimate children legitimated. Females were often adopted with a view to giving them away in marriage. An adoptive sister relationship between co-wives could promote family unity. A man without male offspring might adopt his son-in-law to keep property within the family. Money, land, or services often played a role in the adoption arrangement. At Nuzi, in particular, land sales took the form of an adoption (Cassin 1938: 51–274). The buyer was adopted and given land as an "inheritance" in exchange for a "gift" of equivalent value. These "sale adoptions" have often been seen as circumventing a prohibition against alienating ancestral property (cf. Lev 25:23–28); for this and other interpretations see Maidman 1976: 92–123.

2. Egyptian. Far fewer texts are preserved from Egypt (see Allam 1972). The "Story of Sinuhe" may contain an example of the adoption of a son-in-law in Syro-Palestine (*ANET* pp. 19–20). The "Extraordinary Adoption" text (ca. 1100 B.C.E.; Thompson 1974: 229 n. 141) refers to the adoption of a wife as the daughter and heir of her childless husband. Following the latter's death, the wife freed and adopted three slaves (her husband's children by a concubine?). One of them, a woman, married the wife's brother, whom the wife then adopted as son and heir. In a text from ca. 656 B.C.E., the Nitocris Adoption

Stela, Pharaoh Psammetichus had his daughter Nitocris adopted as successor to the celibate Divine Wife of Amon at Thebes.

3. Jewish. An Aramaic papyrus from the Jewish colony at Elephantine (*BMAP,* no. 8), dated to 416 B.C.E., refers to the manumission and adoption of a slave. Both adopter and adoptee bear Jewish names. Catacomb inscriptions attest to Jewish adoptions in the Roman period (Leon 1960: 232–33).

B. Adoption in the Bible.

1. Possible Cases. A list of proposed examples of adoption, arranged according to the identity of the adoptee, follows. In addition, Lev 18:9 may refer to an adopted daughter, but more probably to a case of remarriage.

a. Children of Surrogate Mother. Sarai, Rachel, and Leah each gave a female slave to her husband for the purpose of procreation (Gen 16:1–4; 30:1–13). Extrabiblical parallels are not decisive as to whether the primary wife in such a case adopted the surrogate's offspring (Thompson 1974: 254–59, 266–67). Two items in the biblical accounts may imply adoption by the wife: her regard of the children as her own (e.g., Gen 16:2; 30:3–13) and the possible allusion by Rachel to an adoption rite (Gen 30:3). The first point is generally conceded, but may be explained by the wife's ownership of the slave (Tigay *EncJud* 2:298). Moreover, the offspring are frequently called children of the slave. But (aside from source-critical considerations) it may be that, as in many societies, ties to the natural mother (or father, in the case of Ephraim and Manasseh) continued to be recognized. Regarding the second point, Rachel desired her slave to "give birth on my knees" (Gen 30:3), interpreted by Stade (1886) as referring ultimately to the practice of a woman giving birth onto her husband's knees. The husband's act, and by extension placing one's child on one's knees, was an acknowledgment of the child as a legitimate descendant (cf. Tigay *EncJud* 2: 299), while receiving or placing someone else's child on the knees signified adoption. Alternately, Rachel demonstrated her desire for children by assisting her slave in birth, or hoped to cure her own infertility (Tigay *EncJud* 2: 299).

b. Children of Foreign Wives. A proposal that the end of Ezra 10:44 refers to adoption has received new support from Akkadian and other parallels (Paul 1979–80: 183–85).

c. Foundling. After his abandonment, the infant Moses was discovered by Pharaoh's daughter "and he became her son" (*wayhî-lāh lĕbēn,* Exod 2:10). This verse and the fact that the adult Moses continued to live as an Egyptian (2:11,19) speak against mere fosterage. Commentators are quick to point out that the account reflects at most an Egyptian custom, but the point loses some of its force if the story is seen not as primarily historical, but as the Hebrew version of the widespread "birth of the hero" myth (cf. *ANET,* p. 119). The payment of Moses' natural mother to nurse him (2:7–10) echoes identical arrangements in Mesopotamian adoption contracts (e.g., Schorr 1913: nos. 8, 83). Two NT passages apparently understand Moses as the adopted son of Pharaoh's daughter (Acts 7:21, Heb 11:24).

d. (Great-)Grandchildren. The adoption of grandchildren, well known in modern times, is also attested in an Ugaritic document (Mendelsohn 1959). Three biblical cases are relevant. Ephraim and Manasseh are adopted by their grandfather Jacob (Gen 48: 5–6), who tells Joseph: "Your two sons … are mine … as Reuben and Simeon are." The adoption serves an evident aetiological purpose: to explain the place of Ephraim and Manasseh, rather than their father Joseph, among the 12 tribes of Israel. Jacob's blessing in Gen 48:15–16, in which Joseph is omitted from the sequence of generations, also has been interpreted as implying adoption. The notice that Joseph removed his sons from Jacob's knees may hint at an adoption rite (Stade 1886: 144–45).

The sons of Machir "were born on Joseph's knees" (Gen 50:23). Even granting Stade's view, this may have been merely an acknowledgment of legitimate descent. On the other hand, a tradition of the adoption of the Machirites could have served two purposes: to explain their relative prominence (e.g., Judg 5:14), or to explain the incorporation of this originally foreign clan (1 Chr 7:14) into Israel. A number of scholars have deduced a direct relationship between Joseph and Machir on independent grounds.

A third possible case is that of Naomi and Obed. After Naomi's son Mahlon died childless, his widow Ruth had a child, Obed, by Mahlon's kinsman. According to the custom of levirate marriage, Obed would be considered as Mahlon's son and hence Naomi's grandson. At one point (Ruth 4:16–17), Naomi held

Obed in her bosom (*bĕḥêqāh*) "and became his *ʾōmenet*" ("supporter," a vague term), whereupon the neighbors remarked "a son has been born to Naomi." The custom of an adoptive mother offering her breast to an adoptee is known among the Arabs and in other cultures, and an adoption account might have served to "Judaize" Obed (King David's ancestor), who would otherwise have had a Moabite mother. We do not know, however, that offering a breast to an adoptee was a Hebrew custom or that Naomi did so. The neighbors' words need not be taken literally. Adoption, it seems, would have deprived Ruth of someone to carry on Mahlon's name, and it is questionable if Naomi could unilaterally effect a change in Obed's status.

e. Illegitimate Son. Jephthah appears to have been legitimated and hence adopted, if legitimation in Israel was effected as in Mesopotamia (Schorr 1913: no. 12, Thompson 1974: 260; cf. CH §§170–71 [*ANET*, 173]). Although his mother was a prostitute, Jephthah was entitled to share his father's inheritance (Judg 11:1–2).

f. Nephew or Male Relative. The custom by which the offspring of a levirate marriage is ascribed to a childless deceased brother or male kinsman has been viewed as a postmortem adoption.

g. Orphan. Mordecai (Esth 2:7) supported his cousin Hadassah/Esther (*ōmēn ʾet-hădassâ*) and, after her parents' death, adopted her (*lĕqāḥāh ... lĕbat;* similarly Akk *ana mār (t)ūtim leqû*). It is doubtful that an unmarried woman of Esther's age could live with Mordecai except for an adoptive relationship. Although both were Jewish, they were living under Persian rule (as were those in the Jewish text from Elephantine), so it is not certain that a Jewish practice is reflected.

h. Slave. Manumission of slaves by adoption is well known in the ancient Near East, and manumitted slaves occasionally are named heir (e.g., Schorr 1913: no. 35; Muhammad's adopted son Zaid ibn Ḥāritha). Abram's fear that his slave would be his heir (Gen 15:2–3) seems to imply the slave's (possibly future) adoption, since normally only a relative could inherit (see e.g., Num 27:8–11). Although in Hurrian law an unrelated *ewuru* "heir" could inherit by default, there is no hint of this in biblical law. On Genesis 15, see further Thompson 1974: 203–30.

Jarha (1 Chr 2:34–35) is a probable example of the manumission and adoption of a slave. According to the common Mesopotamian practice, the slave (and foreigner) Jarha would have been manumitted by adoption before being married to his master Sheshan's daughter. Jarha's children are listed as Sheshan's descendants.

i. Son-in-law. Jarha also serves as an example of an adopted son-in-law. Barzillai, who married and took his father-in-law's name (Ezra 2:61, Neh 7:63), is probably another. Many features of the Jacob and Laban narrative, and particularly parallels to two Nuzi adoption texts (*ANET*, pp. 219–20, nos. 2 and 3), have suggested it as another example. Other features, however, distinguish this case from standard Mesopotamian adoption arrangements, and similarities to herding contracts have been noted. See recently Eichler 1989: 114–16.

j. Wife. An adoption of a wife as daughter is known from Egypt, but the oft-repeated notion that in Hurrian practice a wife could be adopted as her husband's sister and that this explains the "wife-sister" motif in the Bible (Gen 12:13 and parallels) is now widely rejected as based upon the (mis)interpretation of a small number of texts (Eichler 1989: 112–13).

2. Metaphorical Use. The father-son relationship of Yahweh and Israel may have been conceived at times as an adoptive one (Jer 3:19; explicitly in Rom 9:4). The relationship between God and king is illustrated using what are evidently adoption formulae in Ps 2:7, 2 Sam 7:14 (Tigay *EncJud* 2: 300–1). See Paul 1979–80: 177–80, 184.

Adoption (*huiothesia*) appears as a metaphor five times in NT writings ascribed to Paul (Rom 8:14, 23; 9:4; Gal 4:5; Eph 1:5), where it serves to distinguish the believer's sonship from that of Jesus and to illustrate the Christian's change of status, both accomplished and prospective. The background of the metaphor has variously been seen as Roman, with its concept of strong paternal authority; Greek, as the term *huiothesia* implies; or Hebrew, as implied in Paul's use of the semitic term *abba* in describing the adoptive father.

3. Issues. Definitions of adoption have varied, leading to varying evaluations of the extent to which it was practiced in Israel. Attempts to adhere to the strict meaning of Latin *adoptio* have led some scholars to include as true adoption only those cases where a person under paternal authority (*patria potestas*) is transferred to the authority of a third (free) individual and appointed heir. Adoption, thus narrowly defined, has been said not to have existed in Israel. But in addition to running counter to the general usage by scholars of the ancient Near East, this definition ignores the concept of adoption reflected in our texts. Adoption into sonship (*ana mārūtim*), for example, can occur when the adopter is a slave (Speiser 1930; no. 5) or a woman (Schorr 1913: no. 29); when the adoptee is a foundling (Landsberger 1937: 44–46), the adopter's illegitimate child (Schorr 1913: no. 12: cf. CH §§170–71) or a free individual (adrogation; Kohler, Koschaker, and Ungnad 1909–23: no. 1425); and in numerous cases where an inheritance is not mentioned.

Although adoption was practiced in ancient Israel, it is impossible to say to what extent this was true. Many of the biblical cases occur in the patriarchal narratives or on foreign soil, involve foreigners, or are uncertain. Moreover, adoption is not mentioned in biblical law. The nature of our sources is no doubt partly responsible for the seeming scarcity of biblical adoption. Biblical references are generally not explicit enough to allow confirmation (or denial) of proposed cases. The silence of biblical law collections may simply reflect their selective and incomplete nature; compare the haphazard notice adoption receives in the Mesopotamian collections. Since adoption was, it seems, of little theological interest (except as a metaphor), there was no particular reason to mention it; if we read of a barren woman, it is often only to set the stage for a miraculous birth.

The absence of adoption in postbiblical Jewish law, however, suggests that it was not prevalent in Israel, at least in later periods. Various explanations have been suggested (Boecker 1974): the importance of blood lineage to the Hebrews, the practice of polygyny, the custom of levirate marriage, and the belief that fertility or barrenness reflected God's will, which adoption would circumvent. No single explanation is completely satisfactory, and all address only the "demand" side of the equation, without explaining, for example, the place of orphaned or unwanted children in Israelite society.

FREDERICK W. KNOBLOCH

ADORAIM (PLACE) [Heb ʾ*adôrayim* (אַדּוֹרַיִם)]. Var. ADORA. A town in the central hill country of Judah, listed among the cities fortified by Rehoboam near the beginning of his reign (2 Chr 11:9). An examination of the list of cities fortified by Rehoboam (2 Chr 11: 5–12) shows that they form a logical and fairly consistent defensive line on the western, southern, and eastern frontiers of Rehoboam's

domains, supplemented by additional fortresses at key road junctions (*LBHG*, 290–94). This strongly suggests that the author of Chronicles had access to some sort of official military document delineating the defenses of the Kingdom of Judah. During Hellenistic and Roman times, this fortress-town was known as Adora (GK *adōra*). According to 1 Macc 13:20–21, Simon Maccabeus stopped the advance of Trypho at Adora. Josephus records (*Ant* 13.9.1) that Adora was captured by John Hyrcanus following the death of Antiochus 7 in 129 B.C., and that it still remained in Hasmonean hands at the time of Janneaus (*Ant* 13.15.4). It must have fallen into Roman hands soon thereafter, for it was among the cities rebuilt in 59 B.C. by Gabinius, proconsul of Syria (*Ant* 14.5.3). In the form "Aduram," this town appears in the book of Jubilees (38:9–24) as the location of the burial of Esau following his battle with Jacob. The ancient name is clearly reflected in the modern town of Dura, located approximately 7 km W, and slightly S, of Hebron (M.R. 152101). There is little doubt that the ancient town is to be located here, or at least in the immediate vicinity.

WADE R. KOTTER

ADRAMMELECH (DEITY) [Heb *ʾadrammelek* (אַדְרַמֶּלֶךְ)]. In 2 Kgs 17:31 it is reported that the Babylonians who were resettled in Samaria "burned their children in the fire to Adrammelech and Anammelech, the gods of Sepharvaim." The place name "Sepharvaim" may refer to the Babylonian city of Sippar, but the identity of the Babylonian god Adrammelech is unknown.

A. KIRK GRAYSON

ADRAMMELECH (PERSON) [Heb *ʾadrammelek* (אַדְרַמֶּלֶךְ)]. According to 2 Kgs 19:37 (= Isa 37:38), one of the sons of the Assyrian king Sennacherib who, along with his brother Sharezer, assassinated their father. This Adrammelech may be identical with Arda-Mulishi, who is identified as a son of Sennacherib in Assyrian sources.

ADRAMYTTIUM (PLACE) [Gk *Adramytteion* (Ἀδραμυττειον)]. An ancient city of Mysia located along the NW coast of the Roman province of Asia (modern Turkey). A ship from this city, probably a small trading vessel, is mentioned in Acts 27:2. The ship was homeward bound when Paul, Luke, Aristarchus, and Julius the Centurion boarded it in order to journey from Caesaria to Rome via the Asian coast.

This city, located at the base of Mt. Ida, controlled a substantial port from its position at the head of the Gulf of Adramyttium (Hdt. 8: 42), which is across from the island of Lesbos. Today the harbor is filled with alluvial deposits and the site of the city is known as Karatash, while the original appellation is preserved in the name of the nearby town Edremit.

The founding of the city is problematic with three prevalent theories: it is the *Pedasus* of Homer; it was founded by Adramys, the brother of Croesus, in 3 B.C.; or it was one of many colonies established by merchants from the spice-rich area of S Arabia known as Hadhramaut (Harris 1925). The reading of the name with a rough breathing is indicated in the Vulgate rendering as *navem Hadrumetinam.* This may lend credence to Harris' theory.

The commercial importance of the city, indicated by the coins found at the site, peaked when Pergamum was the capital of the region but had faded by the NT period. Adramyttium, one of the chief cities of the province, was chosen to be the host of the provincial governor's law court, the assizes (*conventus*) of the NW district of the Roman province of Asia. It was the original place of the worship of Castor and Pollox and home of the orator Xenocles (the tutor of Cicero) (See Strabo 8: 1.66; Plutarch, Cicero 4). Adramyttium was noted for the production of a special ointment (Pliny N.H. 13: 2.5).

JOHN D. WINELAND

ADRIA, SEA OF (PLACE) [Greek *Adrias* (Ἀδριας)]. An arm of the Mediterranean between Italy and the Balkan Peninsula joining the Ionian Sea in the southeast, commonly known as the Adriatic Sea. It is mentioned in the NT in relation to the apostle Paul's journey to Rome (Acts 27:27). Today, the name denotes the sea which extends from northwest to southeast, a length of nearly five hundred miles. The Italian shore is low, especially in the northeast basin around the delta of the Po, which is the largest river that flows into it. The east coast is rather rugged and fringed with islands. This allows for many good harbors on the Dalmatian coast as opposed to the relatively few found on the Italian side. The northeast winds, together with the prevalence of sudden squalls, makes navigation in winter difficult and dangerous.

The Sea was known in antiquity as Adrias, Adriatike Thalasa, Adriatikon Pelagos in Gk, and Adriaticum Mare, Adrianum Mare, or Mare Superum in Latin. According to Strabo (5.1), the name was derived from the old Etruscan city-colony ATRIA located north of the Po River. Justin (20, 1.9), however, suggests a Greek origin for the name. Originally, the name was applied to the upper (northwestern) part of the sea, but it became gradually extended southeastward some 6000 stadia (approx. 700 miles) as far as the Ionian Sea (Strabo 2,123), and even to the Sicilian Sea, including waters between Crete and Malta (Orosius 1, 2.90). Thus in antiquity it was understood that Malta lay at the western extremity of the Adriatic Sea (Procopius 1, 14), while Crete was surrounded by the same on the west (Strabo 3.17) and the same waters encompassed Sicily on the east (Strabo 3.4, 15). It seems that the name was first used interchangeably with the Ionian Sea, and gradually came to include it. "The Ionian Sea is part of what is now called the sea of Hadria," wrote Strabo (2, 5.20). According to Livy (5,33), Italy was surrounded by two seas, the Tuscan on the west and the Hadriatic on the east. The name therefore is more restricted today than it was in the past, when it not only included waters between Sicily and Crete, but might have been applied to the whole of the eastern Mediterranean with the exception of the Aegean Sea.

Therefore, it would be misleading to limit the reference from the Acts to what is today known as the Adriatic Sea. Because many of the Gk manuscripts call Malta *Melite* (with several variations in Greek and also Latin manuscripts), some have tried to see in the name an island other than Malta, namely modern Mljet in the Adriatic. Yet the most probable east-northeast direction of the wind called Northeaster (Gk *euroklydon* or *eurakylon,* Acts 27:14) would not support this suggestion. Scholars are still more inclined to understand the NT reference to *adrias* in a more general way, as opposed to the more restricted modern usage of the term.

To avoid a possible confusion in the use of different names some have suggested a strict distinction in the use of the terms the "Adrian Sea" and the "Adriatic Sea." Even though this may be done today, Ptolemy used the two names interchangeably (3. 4:Adria, and 3.17:Adriatic).

Acts 27:27 states that the vessel upon which Paul was going to Rome was "driven up and down" for fourteen days by high winds before its shipwreck on Malta. That the sea earned a tempestuous reputation in ancient times can be documented by records of such famous writers as Josephus (*Vita* 3) and Horace (Odes 1, 33).

ZDRAVKO STEFANOVIC

ADRIEL (PERSON) [Heb *ʿadrîʾēl* (עַדְרִיאֵל)]. A Meholathite, the son of Barzillai, and son-in-law of King Saul through marriage to one of the two royal princesses. There is some confusion as to which daughter of Saul he married. According to 1 Sam 18:19, he married the elder daughter MERAB, who had been promised to David, while the MT and LXX Codex Vaticanus of 2 Sam 21:8 report that he married the younger daughter MICHAL (PERSON). In 2 Sam 21:8, other manuscripts (LXX^{LN} and 2 Heb mss) read Merab in agreement with 1 Sam 18:19 (instead of Michal). The Targum, in an attempt to resolve the conflicting readings, combines the names in the phrase *myrb drby't mykl,* lit. "Merab who is the [young] girl of Michal," which identifies Adriel's wife (Merab) while introducing a new element to the

relationship between Michal and Merab. Most scholars favor Merab as the true spouse, although a minority favor Michal, in spite of the conflicting traditions, believing the MT testimony in 2 Sam 21:8 to be the more difficult reading and the tradition to be an older and more reliable source than 1 Sam 18:19 (i.e., Stoebe 1958: 229; Glück 1965; Lemche 1978: 7–8). The royal marriage produced at least five sons, who were later executed by the Gibeonites for Saul's bloodguilt (2 Sam 21:8).

As a Meholathite, Adriel was an inhabitant of the town of Abel-Meholah, probably located at Tell Abû Sûs, in the W ghor (see ABEL-MEHOLAH). His marriage to a Saulide princess may have sealed a treaty between his city-state and Saul's new Israelite state (Edelman 1990). Such diplomatic marriages were an established convention in the ancient Near East (Malamat 1963:8–10). Abel-Meholah did not become a corporate part of the Israelite state until David or Solomon's reign, as indicated by the city's inclusion in Solomon's fifth district (1 Kgs 4:12). His name means "El is my help," and seems to be Aramaic. Some manuscripts read *ʿzryʾl,* which has the same meaning, but substitutes the Hebrew word *ʿzr* for its Aramaic cognate *ʿdr* (Nestle 1897; McCarter *2 Samuel* 439).

DIANA V. EDELMAN
MARK J. FRETZ

ADUEL (PERSON) [Gk *adouēl* (ἀδουηλ)]. The son of Gabael and great grandfather of Tobit, a descendant of the tribe of Naphtali (Tob 1:1). The name "Aduel" is a possible variant of ADIEL; the *yod* in Heb *ʿădîʾēl* (1 Chr 4:36; 9:12; 27:25), if replaced with *waw,* would result in the Heb consonants *ʿdwʾl,* logically transliterated as Gk *adouēl.* Nonetheless, the name "Aduel" only occurs in this genealogy of Tobit.

MARK J. FRETZ

ADULLAM (PLACE) [Heb *ʿădullām* (עֲדֻלָּם)]. ADULLAMITE. A city in the Shephelah region at approximately the midpoint of a line running from Bethlehem to Gath. It has been identified with modern Tell esh Sheikh Madhkur (Albright 1924:3–4; M.R. 150117).

In Gen 38:1, 12, and 20, in the story about Judah and Tamar, a character is identified as Hirah the Adullamite. He is called Judah's friend (38:12,20) and is entrusted with the deliverance of a pledge (38:20).

Adullam appears twice in Joshua. The king of Adullam is listed in Joshua 12 as one of the local kings whom the Israelites defeated on the west side of the Jordan (Josh 12:15). Adullam was allotted to the tribe of Judah (Josh 15:35).

Adullam occupies a prominent place in the story of David's rise to kingship. David fled from Saul to a cave near Adullam and there surrounded himself with a band of about 400 men (1 Sam 22:1). That this was a place of security for David's warriors is spelled out in 1 Chronicles 11, which refers to the place as "the rock." The syntax of the parallel passage in Samuel is confusing and probably the result of scribal error. Apparently there has been a substitution of the word for "harvest" or "harvesttime" (Heb *qāṣîr;* BDB, 894) for "the rock" or "the secure place" (Heb *haṣṣūr;* BDB, 849), the second of which is the term employed in Chronicles. Some versions of the LXX also have "the rock" instead of "harvesttime" at 1 Sam 23:13.

Chronicles lists Adullam as among the cities which Solomon's successor REHOBOAM fortified in anticipation of the invasion of Judah by the Pharaoh SHISHAK ca. 918 B.C.E. (2 Chr 11:7). Many commentators and historians accept the placing of this list in the reign of Rehoboam (see *BHI,* 233;

Na›aman 1986:6). Others, partly on the basis of archeological evidence at these sites, feel that the list belongs to the reign of another king, either JOSIAH (Fritz 1981) or HEZEKIAH (Na›aman 1986).

MICAH, a contemporary of Hezekiah's, mourns over Adullam among the cities of the Shephalah (Mic 1:15), possibly in advance of Sennacherib's invasion (see 2 Kgs 18:13 = 2 Chr 32:1).

Adullam appears twice in postexilic contexts. It is named as one of the places where the people of Judah settled after the Exile (Neh 11:30). In the time of the Maccabean revolt, Adullam once again served as a refuge, this time for Judas Maccabeus and his army after they defeated GORGIAS, the governor of Idumea (2 Macc 12:38). Here the place is referred to with a variant Greek spelling, *odollam.*

JEFFRIES M. HAMILTON

ADULTERY [Heb *ni›upîm* (נִאֻפִים)*;* also *zĕnût* (זְנוּת)*, zĕnûnîm* (זְנוּנִים), "whoredom," "harlotry"].

Sexual intercourse between a married or betrothed woman and any man other than her husband. The marital status of the woman's partner is inconsequential since only the married or betrothed woman is bound to fidelity. The infidelity of a married man is not punishable by law but is criticized (Mal 2:14–5; Prov 5:15–20). Biblical law shows similar leniency for sexual relations before a woman's betrothal (Exod 22:15–6; Deut 22:28–29; for possible exceptions [Lev 21:9, Deut 22:13–21], see below).

———

A. Adultery as a Crime and Sin.

Adultery was a capital crime according to Lev 20:10 and Deut 22:22. Both parties must die. The reasons for the gravity of this crime are never explicitly stated in the OT, yet the patrilineal nature of Israelite society strongly suggests that mistaken paternity would surely be dreaded. If an act of undetected adultery produced offspring, a likely result would be the bequeathal of the family inheritance to this illegitimate heir. This is emphasized by Ben Sira (23:22–23); for a similar thought, see Qoh 6:1–2. Philo remarks that the deceived husband would be like a "blind man knowing nothing of the covert intrigues of the past," yet "forced to cherish the children of his deadliest foe as his own flesh and blood" (*Dec* 24:126–29). Fustel de Coulanges (1956:97) writes "… by adultery the series of descendants was broken; the family, even though living men knew it not, became extinct and there was no more divine happiness for the ancestors." While these remarks concern ancient Greece in particular, it is probable that the same could be said regarding Israel. Dread of the extinction of the family line is evident in the Priestly Code, among other places, with its punishment of *karet* (Gen 17:14, Exod 30:33,38, Lev 17:4,9, 20:3,5–6, etc.) and childlessness (Lev 20:20–21). The term *karet,* according to traditional Jewish exegesis, refers to early death and childlessness or the death of one's progeny without issue (see Rashi, Ibn Ezra, and S. D. Luzzato on Gen 17:14). According to the LXX and traditional Jewish law, the issue from an adulterous

union, like all prohibited unions, is the *mamzer* or "bastard" of Deut 23:3 (*m. Yebam.* 4:13; *m. Qidd*, 3:12), who is excluded from membership in the assembly of the Lord.

The economic aspect of the crime, i.e. as a simple violation of the husband's property, seems to have played a minor role compared with the social and religious dimensions of the crime. Adultery is the height of treachery (Jer 9:1; Mal 3:5; Ps 50:18) and adulterers are linked with murderers (Job 24:14–15). Adultery is an assault upon the sanctity of the nuclear family, which is divinely ordained (Gen 2:18,24; Prov 18:22). The prohibition of adultery, the 7th commandment of the Decalogue, along with the 5th—"Honor your father and mother …"—seek to protect this sacred institution. This may be the reason for the reversal of the 6th and 7th commandments and thus the juxtaposition of the 5th and 7th in the Nash Papyrus, some manuscripts of the LXX, and Philo (*Dec* 24:121).

Both parties to the illicit union are ritually defiled or rendered impure (*ṭm*›; Lev 18:20; Num 5:13; Ezek 18:6; 23:13,17; 33:26). The adulterer commits an "abomination" (*tô*‹*ēbâ;* Ezek 22:11), while adultery is included in the Pentateuch's catalog of sexual crimes which defile the land of Israel, causing it to "spew out its inhabitants" (Lev 18:20,24–25). It is considered a "great sin" (*ḥăṭā*›*â gĕdōlâ*) by the biblical author (Gen 20:9) and a "sin against God" (Gen 20:6; 39:9; Ps 51:6).

This characterization of adultery as a "great sin" was not limited to Israel. It is found in texts from Ugarit (Moran 1956: 280–81) and Egypt (Rabinowitz 1956: 73; see *ANET*, 24, where adultery is labeled a "great crime"). In several Akkadian texts, *ḫaṭû,* cognate to Heb *ḥṭ*›, "to sin," refers specifically to adultery (*CAD* 6:157); *ḫāṭītum* (fem. sing. part. of *ḫaṭû*) indicates an adulteress (*CAD* 6:153).

That the prohibition of adultery was included in the Decalogue, the only direct and unmediated address of YHWH to Israel (Exod 20:19; Deut 4:10; 5:20–21), indicates its grave nature. In accordance with the later conception of the Decalogue as the epitome of biblical law, Saadiah Gaon, followed by Abraham Ibn Ezra and Abarbanel, understood the 7th commandment as inclusive of all sexual acts prohibited in the Torah. While dealt with in the Decalogue and books of Leviticus (20:10) and Deuteronomy (22:22), adultery is neglected in the 4th major law collection of the Pentateuch, the so-called Covenant Code (Exodus 21–23).

B. Adultery and the Betrothed Maiden.

The betrothed maiden is one for whom a bride-price *(mōhar)* has been paid, but who still resides in her father's house awaiting consummation of the marriage (inferred from Exod 22:15–16; Deut 20:7 and comparative material, cf. Code of Hammurabi 130 [*ANET*, 171]; and the Laws of Eshnunna 26 [*ANET*, 162]). She is also subject to the Bible's harsh penalty for adultery. Deut 22:23–24 prescribes death for the betrothed woman who is found having sexual relations with a man "in the city" if their discovery is not prompted by her calls for help; her compliance is therefore assumed.

Deuteronomy's law concerning the slandered newlywed wife (22:13–21) may be another instance of the Bible's equation of betrothal and marriage. She is condemned to death for "whoring in her father's house" (v 21) but this, according to traditional Jewish exegesis, refers to her defloration subsequent to betrothal but before cohabition with her husband, when she still resided in her father's house. If, on the other hand, this law prescribes capital punishment for sexual relations which occurred before the woman's betrothal, Deuteronomy's harsh stand is unique both for the Bible and ancient Near Eastern law. Other laws prescribe a relatively light penalty for the ravisher of the unbetrothed virgin (Exod 22:15–16; Deut 22:28–29; also Code of Hammurabi 130 [*ANET*, 171] and Middle Assyrian Laws 55–56 [*ANET*, 185]). Finkelstein writes that while adultery was treated with the utmost gravity, the rape of an unmarried woman, by contrast, "seems to have been treated as a relatively mild offense, and except for the talionic element in Middle Assyrian Law 55 … was considered only an economic injury to the girl's father—or master, where the victim was a slave girl" (1966: 366–67).

According to Lev 19:20, the betrothed (*neherepet*, literally "assigned") slave girl and her lover are not executed because she "has not yet been freed," i.e. the regular penalty for adultery does not apply because she is still a slave and not because her "assignment"/betrothal is anything less than marriage (Milgrom 1977: 44–45): in the Bible, as in the ancient Near East in general, a slave girl is not a legal person and her

sexual violation is treated as a transgression of her owner's property for which he would seek compensation, not prosecution (Finkelstein 1966: 360).

C. The Prosecution of Adultery

1. The Death Penalty. Determining the legal reality in ancient Israel for the prosecution and punishment of the adulteress and her partner is problematic. At the close of the law on adultery, the Deuteronomist commands his audience to "sweep away evil from Israel" (Deut 22:22), which suggests that members of the community have the right and obligation to initiate proceedings against known adulterers in their midst. The collective divine punishment envisioned by the legislators of Deuteronomy and the so-called Holiness Code (Leviticus 17–26) make it imperative that transgressors of the law be prosecuted irrespective of the wishes of the offended party (Lev 18:24–30; 26:14–41; Deut 28:15–68). M. Greenberg contends that the law codes' decree of capital punishment was carried out "in all events. There is no question of permitting the husband to mitigate or cancel the punishment. For adultery is not merely a wrong against the husband, it is a sin against God, an absolute wrong" (1960: 12).

Others maintain that in practice, however, the penalty for adultery in Israel was more flexible, and further, that the initiation of proceedings against the offenders was the exclusive right of the husband (Loewenstamm 1962: 55–59; Jackson 1973: 33–34; Yaron 1969: 188, n. 77; McKeating 1979: 62–65). According to this view, Israelite judicial practice would have resembled that of Mesopotamia. While Mesopotamian law codes allow for the death penalty, the injured husband retained the right of pardon (Code of Hammurabi 129 [*ANET,* 171]; Middle Assyrian Law 15 [*ANET,* 181]; Law of Eshnunna 28 [*ANET,* 162] on its face doesn't allow for mitigation, but see Yaron 1969: 188–90).

Greenberg thinks that the biblical law's demand for execution was uncompromising because of the Israelite view that adultery was a sin against God; thus man could not opt to forgo it. Yet ancient Mesopotamia seems to have held a similar view of adultery, i.e. as an offense to the deity (see above; Lambert *BWL,* 119, 131), but its law codes do indeed allow the husband to mitigate the punishment. Perhaps this same dichotomy existed de facto in Israel.

Prov 6:32–35 suggests that execution was the maximum penalty imposed and that the fate of the adulterers was at the husband's discretion. The enraged husband will "show no pity on his day of vengeance; he will not have regard for any ransom." The cuckold, according to Proverbs 6, will not accept ransom (*kōper*) because of his insatiable anger, not because of its prohibition. Num 35:31–32 specifically rules out ransom in the case of homicide but not adultery (in which case it may have been permissable). On the other hand, the compensation mentioned in Proverbs 6 may refer to an illegal payment of money to the husband to avert prosecution; *šoḥad,* the parallel of *kōper* in v 35 suggests this (cf. Exod 23:8; Isa 5:23). Further, the international flavor of the book of Proverbs and scholarship's imperfect understanding of the "foreign woman" pericopes (Proverbs 2 and 5–7; see below) advises against viewing Israelite jurisprudence in the light of Prov 6:32–35.

Job refers to marital infidelity as an *ʿāwōn pĕlîlîm* (31:11), which Speiser (1963: 304) translates as "an assessable transgression" in accordance with his view that all examples of the root *pll* in Hebrew share the underlying concept of "assess." This suggests that the adulterer could compensate the cuckolded husband, who would determine the amount of damages according to his own discretion. Yet this translation appears inaccurate given its context. Job also calls adultery *zimmâ,* a word used regularly for "indecent and disgusting sexual conduct" (Pope, *Job* AB, 203) and a "fire burning down to Abaddon" (31:12). "Assessable transgression," however, suggests the relative mildness of the offense, which can be compensated by payment rather than corporal or capital punishment. Until our understanding of the root *pll* in this verse and its counterparts (Job 31:28 and Deut 32:31) is more certain, the preferred translation remains "criminal iniquity" or "criminal offense," which better conveys the severity of the deed.

Several biblical texts suggest that other measures short of execution were utilized to punish the adulteress.

2. Divorce. The Pharisaic school of Shammai suggested that the legal, biblical term for divorce, *ʿerwat dābār* (Deut 24:1–4), literally "nakedness of a thing," referred to adultery as a ground for such action (*m. Git.* 9:10), but this has been convincingly rejected (Neufeld 1944: 178–89; Lieber, *EncJud* 6: 123–24).

Both Jer 3:8 and Hos 2:4 suggest that the adulteress was divorced, but since the former text refers symbolically to the exile of the N kingdom, divorce (Heb *šlḥ,* literally "send off," "dismiss") provides the most appropriate metaphor. Hos 2:4 echoes the ancient Near Eastern formula for divorce, "You are not my wife" (Gordon 1936: 277–80, Yaron 1961: 46–47), although there is some doubt that divorce is intended here because "there would be no basis for all that follows" (Andersen and Freedman *Hosea* AB, 222).

3. Public Stripping of Adulteress. Stripping is mentioned in Hos 2:5, 12; Jer 13:22–26; Ezek 16:37, 39; and 23:26, 29. In all of these cases, the faithless wife who suffers this penalty is a symbol for apostate Israel (cf. Nah 3:5). Stripping, however, may have served as a prelude to execution rather than as an alternative to it (Ezek 16:37–41; Susanna 32). In *m. Soṭa* 1:5 the suspected adulteress is partially stripped before drinking the potion of "bitter waters" (Num 5:11–31).

4. Mutilation. Mutilation of the adulteress is mentioned in Ezek 23:25, but this should not be viewed as an Israelite practice since the prophet himself states, "and they (Oholibah's former lovers) shall judge you according to their law" (v 24; cf. Middle Assyrian Law 15 [*ANET,* 181]).

It should be noted that the biblical texts alluding to divorce, public stripping, and mutilation contain prophetic metaphors and hence they are not dependable sources for actual Israelite legal practice. In Ezek 16:39 and 23:26, 29, personified Jerusalem is stripped by her lovers, not her husband. In Hos 2:5, Jer 13:26, and Akkadian sources, the offending wife is stripped by her husband or his family to symbolize the withdrawal of her maintenance (Gordon 1936: 277; Greenberg, *Ezekiel* AB, 287). Apparent in Ezekiel 16 and 23, then, is the intrusion of the tenor of the metaphor, Israel's pillaging by foreign armies.

Obviously the de facto procedure for the prosecution of adultery is uncertain. In the biblical law of murder, the prosecution and execution of the murderer is left in the hands of the wronged individual, the kinsman of the deceased or "redeemer of blood" (Num 35:19–21, Deut 19:6, 12), yet the Bible's legislation seeks to regulate this ancient practice and transfer some responsibility to the public domain with the appointment of the refuge cities and the participation of public officials to distinguish between the intentional and unwitting manslayer (Exod 21:13–14; Num 35:9–29; Deut 19:1–13). After all, if the redeemer shirks his responsibility or kills an unintentional manslayer (the intention of *dām nāqî,* "blood of the innocent" of Deut 19:10), all Israel would be subject to blood-guilt (Num 35:33–34; Deut 19:10). Similarly, the criminalization of adultery in Israel was an expected development. An act which transgressed Israel's covenent with YHWH, the basic principles of which are found in the Decalogue, endangered the entire community, and so it was only natural that the prosecution of adulterers be transformed from a right which individuals may forgo to a duty incumbent upon all members of the community.

D. Means of Execution.

The method of execution for the guilty pair is not stated explicitly in either Lev 20:10 or Deut 22:22. The unchastity of the betrothed virgin of Deut 22:24 is punished by stoning, as is the premature defloration of the newlywed bride in Deut 22:13–21. Ezek 16:40 and 23:47 list stoning and stabbing among the punishments for wayward Jerusalem, yet here the crime is compounded by idolatry and infanticide.

The LXX of Susanna, v 62, mentions flinging those who accused the heroine of adultery into a ravine (see Deut 19:16–19); this practice coincides with the rabbinic mode of "stoning"–casting the criminal into a rocky ravine rather than casting stones at the criminal (*m. Sanh.* 6:4). The Talmudic means of execution for adultery was strangulation; this according to the exegetical rule that anytime the death penalty was decreed but the means not specified in the biblical text, strangling was intended (Sipra, Qedoshim 10:8; *b. Talm. Sanh.* 52b; according to R. Josiah, this was because it was the most merciful).

Burning is mentioned in Genesis 38 as the penalty for Tamar, whose status was that of a married woman (because she was promised to her *levir* Shelah). While fornication for the lay Israelite is not penalized in the law codes (see above on Deut 22:13–21), a priest's daughter who "defiles herself through harlotry" is burned to death because of the extraordinary demand of holiness for the priesthood (Lev 21:9).

Both parties, when known, are executed (Lev 20:10; Deut 22: 21, 22). According to A. Phillips (1970: 110), the execution of the adulteress in addition to the adulterer is an innovation of the Deuteronomic reform, but this is based on his uncommon notion that the Decalogue was addressed only to male Israelites and therefore only they were penalized. In the Bible's decree of the death sentence in Lev 20:10b, a singular verb, *yûmat,* is found with the compound subject, "the adulterer and the adulteress," which suggests to some that the latter is an addition (Noth, *Leviticus* OTL, 150; Phillips 1970: 111). Yet this grammatical irregularity is common enough in Biblical Hebrew (GKC, 145o), while Fishbane attributes it to the fact that the penalty clause *môt yûmat* is a frozen technical term (1974: 25, n.2). The equal punishment of both parties is typical of Mesopotamian law (Code of Hammurabi 129 [*ANET*, 171]; Middle Assyrian Law 13 [*ANET*, 181]; Hittite Law 197–98 [*ANET*, 196]). This serves to preclude the possibility that two of the involved parties conspired against the third. The phrase *gam šĕnêham,* "one as well as the other," (Deut 22:22), echoes this demand for equal justice.

E. Adultery in the ANE.

Several features distinguish Israel's laws on adultery from those of her neighbors.

1. Hittite Law 197 (*ANET*, 196) and perhaps Middle Assyrian Law 15 (*ANET*, 181; see Driver and Miles 1975: 45–50) allow the cuckolded husband to execute the couple with impunity if he finds them *in flagranti delicto,* i.e., in the very act of adultery. The biblical laws of jurisprudence seem to forbid this (Deut 17:6–7, 19:15, Num 35:30).

2. The paramour's knowledge about or ignorance of the woman's marital status is taken into account. If he was not aware that she was married, he would be acquitted (Finkelstein 1966: 369–70; Middle Assyrian Laws 13–14 [*ANET*, 181]). Biblical laws make no such allowance. Gen 20:3 suggests that in YHWH's eyes, the guilt of adultery is absolute.

3. The Mesopotamian law codes are more comprehensive, dealing with other matters tangential to adultery. For example, all of the major law codes deal with the cohabitation of a married woman with a second man in the event of desertion by her husband or his prolonged captivity in a foreign land (Laws of Eshnunna 29–30 [*ANET*, 162]; Code of Hammurabi 134–36 [*ANET*, 171]; Middle Assyrian Law 36 [*ANET*, 183]). Only later Jewish law takes up this issue (for sources, see Schereschewsky, *EncJud* 2: 429–33). Akkadian laws also deal with the accusation of adultery by a third party (Middle Assyrian Law 17–18 [*ANET*, 181]; Code of Hammurabi 132 [*ANET*, 171]; the Bible deals only with accusation brought by the woman's husband [Num 5:11–31; Deut 22:13–21]); and pandering as incidental to adultery (Middle Assyrian Law 22–24 [*ANET*, 181–82]).

F. Adultery in Biblical Narrative.

The theme of adultery is found several times in the book of Genesis. Both Abraham and Isaac try to pass off their wives as their sisters, allowing them to be taken (or nearly taken) by foreigners (Genesis 12:10–20; 20; 26:1–11). Both patriarchs assume that the people of Gerar and Egypt took the "great sin" of adultery very seriously and would rather make widows out of Sarah and Rebecca than incur the guilt of adultery (David Kimchi). YHWH's punishment for adultery in all three chapters is collective (12:17; 20:7, 17; 26:10).

In Genesis 38, Judah sentences his daughter-in-law Tamar to be burned for apparent adultery, i.e., having sexual relations while waiting for her *levir* to come of age. In Genesis 39 is found another false accusation of adultery, here in the guise of the attempted rape of a married woman, which is treated alongside uncoerced adultery in the law codes (Deut 22:23–27; Law of Eshnunna 26; Code of Hammurabi 130; Hittite Law 197–98).

King David committed adultery with Bathsheba, daughter of Eliam and wife of Uriah the Hittite, one of his faithful warriors (2 Samuel 11; 23:39). David's guilt is compounded by his successful plot to have Uriah killed in battle. This was necessary to prevent the disclosure of the king's role in Bathsheba's pregnancy. His fear was prompted certainly by the expected popular censure of his deed (Prov 6:33) but perhaps also by the application of Israel's law even to the king himself (Deut 17:19; cf. 1 Kings 21, where the limitation of royal power in Israel is apparent).

G. Adultery in the Prophetic Books.

The prophets frequently indicted Israel for marital infidelity (Hos 4:2,13–14; Jer 5:7; 7:9; 13:27; Ezek 22:11; 33:26; Isa 57:3; Mal 3:5). Jeremiah specifically condemned the prophets of his day for this act of treachery (23:14; 29:23).

Adultery is used as a metaphor for apostasy in several prophetic books (Hosea 1–3, Jer 2:23–25; 3:1–13, Ezekiel 16; 23). This symbolism is apt because both represent the betrayal of exclusive fidelity. Raw material for the creation of this symbolism is found in the Pentateuch. Israel is commanded to revere only YHWH (Exod 20:3; 22:19; 34:14; etc.) and the formula used to express their covenant relationship is similar to the "solemn words" for marriage in ANE texts (Lev 26:12; Deut 26:17–18; 29:12; see Yaron 1961: 46–47; Muffs 1965). YHWH is "jealous" or "impassioned" (*qannāʾ*) where Israel is concerned (Exod 20:5; 34:14) and idolatry, specifically calf worship, becomes Israel's "great sin" (Exod 32:21; 2 Kgs 17:21). Israel's worship of other gods is called "whoring" (Exod 34:16; Deut 31:16). It has also been suggested that the promiscuous behavior supposedly typical of the Canaanite fertility cult lies at the background of this motif.

Hosea is the first prophet explicitly to analogize apostasy and adultery. Some suggest that this notion first came to him as the result of his wife Gomer's infidelity; YHWH's command to take a "wife of harlotry" (1:2), then, was written after the prophet's domestic adversities and conveys his understanding of these events as determined by God. Others discount the historicity of Hosea 1–2 because of the obscure and allegorical nature of these chapters, while in Hosea 3 the promiscuous woman is probably not the prophet's wife. Cohen argues that Hosea's perception may be an outgrowth of the Israelite religion itself—a sort of "midrash" based on the commonly held analogy in Israel of marriage and covenant—rather than the result of an experience unique to Hosea (1966: 9–11).

Jeremiah 3:1–5, uses the legal form of Deut 24:1–4 to illustrate the injurious effects of Israel's "whoring with many lovers." Verses 6–13 tell the tale of two sisters, "Rebel Israel" and "Faithless Judah," both of whom are married to YHWH. While the former is divorced for adultery (the exile of the northern kingdom), the latter repents only halfheartedly (a reference to Josiah's reform, 2 Kings 22–23), and then proceeds (v 13)—despite YHWH's pleas to repent—to "spread her legs to strangers under every leafy tree" (Rashi's paraphrase of the difficult *wattĕpazzŭrî ʾet-dĕrākayik;* others render the vague "you scattered your ways"). Several of Jeremiah's other references to adultery may also be references to idolatry (5:7; 7:9; 13:22).

Ezekiel devotes more verses to this motif than either of his two predecessors. Indeed, chap. 16, with 63 verses, is the longest in his book, yet its excessiveness is not limited to quantity. Jerusalem here is a murderous nymphomaniac who makes even Sodom (here her "sister") seem righteous. In chap. 23, Ezekiel in 49 verses reworks in a similarly extreme fashion the motif of Jer 3:6–12, YHWH's marriage to two sisters.

H. Adultery in Wisdom Literature.

The Book of Proverbs, chaps. 2 and 5–7, warns against consorting with the adulteress, labeled also "a woman of evil" (6:24), but most often a "foreign" or "strange" woman (2:16; 5:3,20; 6:24; 7:5). She is dressed like a harlot (7:10), although is not identified as one (6:26 contrasts the harlot to the adulteress). Only in Proverbs 5 is the correspondence between an adulteress and the "foreign woman" uncertain since only her intended victim is presented as married (vv 15–20). She lures foolish men to her home with crafty words (2:16; 5:3; 6:24; 7:14–20). Associating with her leads to "death" (2:18–19; 5:5; 7:26–27), which may be a reference to judicial execution, premature death at the hands of God, or perhaps spiritual demise. She has forgotten the "covenant of her God" (2:17), a reference either to the Decalogue, which prohibits adultery, or perhaps to her marriage vows.

Her characterization as "foreign" or "strange" is explained in several ways: (1) as a dissolute woman, she places herself outside the circle of proper relations or outside the norms of the community (Snijders 1954: 88–100); (2) *zār* here as in other places refers to a third party or one other than the members of a specific group, family, or tribe (Deut 25:5; 1 Kgs 3:18; Prov 5:10, 17); (3) she is indeed a foreigner. Egyptian wisdom warns against consorting with a "woman from abroad," traveling without her husband and waiting to ensnare the naive youth (*ANET*, 420). Bostrom argues that she is a non-Israelite devotee of

a fertility goddess and that her sexual activity has a cultic function (1935: 103–55); or (4) she symbolizes either a Canaanite goddess and her cult, non-Israelite religion in general, or "the seductions of this world" (so Saadiah Gaon); most recently Fishbane (1974: 44) labeled Prov 6:20–35 an "inner biblical midrash on the Decalogue" in which the foreign woman symbolizes "the seduction of false wisdom" in direct contrast to divine wisdom in Proverbs 8 and 9.

Prov 30:20 underlines the nonchalance of the adulterous woman who euphemistically "eats, wipes her mouth," and then says, "I have done no wrong." According to Job, the adulterer wears a disguise to conceal his identity and, like the murderer and robber, waits for the cover of night to commit his crime (24:13–16). In his oath of piety, Job curses himself with his own wife's infidelity if "his heart was ravished by the wife of his neighbor and he lay in wait at his door" (31:9–12).

ELAINE ADLER GOODFRIEND

ADUMMIM (PLACE) [Heb *ʾădummîm* (אֲדֻמִּים)]. After the conquest described in Joshua 6–12, Joshua divided the land by lot among the tribes of Israel. Joshua 15 describes the lot which fell to the tribe of Judah and gives a description of the boundaries of Judah. The N boundary (v 5) ran from the mouth of the Jordan River, where it empties into the Dead Sea, to Debir from the Valley of Achor and northward, turning toward Gilgal, which is opposite the ascent, *ma'aleh* of Adummim—which is on the S side of the valley (v 8). In Josh 18:11, we find a description of the lot falling to the tribe of Benjamin. The S boundary (v 15) goes from Kiriath-jearim to the Dead Sea and the mouth of the Jordan River (v 19). In 18:17 we read that the border goes from Enshemesh (*ʿên šemeš*) to Geliloth which is opposite the ascent of Adummim (LXX *Aithamin*).

The root means "red" (BDB, 10) and is in the plural form so one might translate it "double red" or "Big Red." It has also been translated "red places." Smith (1974:180–81) thinks the name is from the "curious red streaks" which appear from time to time on the stone. These in turn provided meaning for later names

like the Red Khan (inn), Khan el-Ahmar (M.R. 181133), one of the sites of the Inn of the Good Samaritan (Luke 10:34). The Arabic name for a nearby hill and fortress NE or the Khan is Tal›at ed-Dumm, the ascent of blood, which probably also refers to the red marl rock formations, rather than the more pietistic derivation of the wounded traveler of the Good Samaritan story, or Jerome's reference that the pass was the way of the robbers.

The fortress was the Crusaders' Chastel or Citerne Rouge built by the Templars to protect the pilgrims going down to the Jordan River to the site of Jesus' baptism. The Crusaders also called the place la Tour Maledoin, perhaps following Eus. (*Onomast.* 260–340), who refers to the place as Maledomni, i.e., *ma›ale-adum-mim,* the ascent of Adummim. It was already a fortress in an earlier day. Eus. refers to a castle. Jerome (342–420) lists Adummim as a stronghold midway between Jerusalem (2500 ft. above sea level) and Jericho (770 feet below sea level). It is ca. 6 m SW of Jericho. Josephus (*JW* 4.8.3 § 474) describes the Jericho-Jerusalem distance as 18 Roman mi. 150 stadioi. He claims the Tenth Legion (Fretensis) came this way for the seige of Jerusalem (5.2.3 §69–70). The road itself is the middle one of three ancient caravan or trade routes from the Jordan Valley to the hill country. It follows the Wadi Qelt up through this pass at Adummim to Jerusalem (the N one goes to Bethel and the S one to Mar Saba). From Adummim, Jericho can be seen in one direction and the Mt. of Olives at Jerusalem in the other.

The name "Adummim" appears in the lists of Thutmose III and Sheshonk I and again in Papyrus Anastasi I, the Egyptian letter of Hori (*ANET* 242, 475–79). The latter asks sarcastic questions of a would-be scribe named Amen-em-Opet. These refer to locations in Canaan such as Shechem, Hazor, Adummim, Beth-shan, the Jordan River, etc. (*ANET* 477). However, these references may be to a different Adummim. Aharoni (*LBHG*, 61) identifies this Adummim with Adami-Nekeb while S. Ahituve considers it Tel Qarnei Hittin, the Horns of Hittin (quoted by Na›aman, 1986: 128 n.23).

HENRY O. THOMPSON

ADVERSARY. See SATAN.

ADVOCATE [Gk *paraklētos* (παρακλητος)]. Originally *paraklētos* had a passive sense, "one who is called alongside [to someone's aid]," and so was rendered in Latin as "*advocatus.*" In the NT it is used in an active sense (as is "advocate" in current English): "one who appears on another's behalf," "mediator," "intercessor," or "helper." In 1 John 2:1, Jesus Christ is referred to as our *paraklētos* who intercedes with (God) the Father on behalf of sinners. Some English versions paraphrase the word: "one to plead our cause" *(NEB),* "someone who pleads … on our behalf" (GNB), or "one who speaks in our defense" *(NIV).*

In the Gospel of John (14:16, 26; 15:26; 16:7), *paraklētos* is identified with the Holy Spirit and is variously translated as the "Comforter" *(KJV, ASV),* "Counselor" *(RSV, NIV),* "Advocate" *(JB, NEB),* and "Helper" *(GNB, NASB).* R. Brown (*John 13–21* AB, pp. 637, 649, 685, 703; note also appendix V), recognizing that no single English word covers all the meanings of *paraklētos,* employs a virtual transliteration, "Paraclete" (see also *NAB* and *NJB*).

HERBERT G. GRETHER

AENEAS (PERSON) [Gk *Aineas* (Αἰνεας)]. A man at Lydda, bed-ridden with paralysis, whom Peter was instrumental in healing (Acts 9:32–35). This person is not otherwise attested, though the name itself is fairly common and is found in Greek classical writers and in Josephus (*Ant* 14.10.22).

HERBERT G. GRETHER

AENON (PLACE) [Gk *Ainon* (Αἰνον)]. John the Baptist baptized at this well-watered site along the Jordan River. According to Eus. (Onomast 40.1), this site is 6 miles S of Roman Scythopolis (*Beth-shean*), the capital of a Decapolis territory. John 3:23 identifies a nearby Salim (Salumias), a description in agreement with Eus. Aenon, perhaps from Ar ›*ain* spring, is appropriate for an area near Tell Sheikh Selim which has several springs. Wadi Far‹ah qualifies Nablus, E of Shechem, as yet another possibility

for Aenon (Albright 1954). Ironically, modern Salim, 3.5 miles E of Nablus, is also a contending site (Albright 1924). But the ancient location of Salim (Gen 14:18; Jer 48:5) was nearer to the aforementioned wadi Far‹ah than the modern site bearing the same name.

A Madeba mosaic map (ca. 560 A.D.). from Jordan complicates a positive location of Aenon. The map, on a Madeba church floor, shows two Aenon sites. One of the two sites positions Aenon W of the Jordan and may be synonymous with modern Salim, mentioned above. The mapmaker identifies this vaguely placed site as "near Salim," and a row of bluish-green cubes. Atheria (ca. 385 A.D.) qualifies Aenon as in a garden with a pool or spring, perhaps represented by the colored cubes. The second map site is N of the Dead Sea, on the E side of the Jordan, yet S of the first map site. The second site, near a hill and a spring, may also be the hill of Elijah, i.e., where he ascended to heaven.

JERRY A. PATTENGALE

AESORA (PLACE) [Gk *Aisōra* (Αἰσωρα)]. A site mentioned in the book of Judith, whose exact location is unknown (Jdt 4:4). It forms part of the list of towns N of Jerusalem called upon to defend the city from attack by HOLOFERNES. The Greek name may be a translation of the Hebrew Hazor (Heb *ḥāṣôr*) or Hebrew Jazer (Heb *ya‹zēr;* see HAZOR; JAZER). If it is a translation of biblical Hazor, there are five cities in the Hebrew Bible with this name (Josh 11:1; Josh 15:23; Josh 15:25; Neh 11:33; Jer 49:28). Of these five, the two likeliest candidates for identification are the Hazor in Josh 11:1, located 10 miles N of the Sea of Galilee (modern Tell el-Qedah), or the Hazor in Neh 11:33, a town located in Benjaminite territory (modern Kh. Hazzūr). The likelier identification is with biblical Jazer, a fortified city in Gilead (Num 21:32, 32:35), which was disputed among the Israelites, Ammonites, and Moabites. It has been identified by Avi-Yonah and Aharoni (*MBA*, 179, map 211) with Kh. es-Sar (M.R. 228150), located 7 miles SW of Philadelphia in Transjordan, and thus in the line called for by the book of Judith, between Samaria and Jerusalem. However, given the genre of the book of Judith, it is possible that the name is entirely fictitious.

SIDNIE ANN WHITE

‹AFFULA, EL- (M.R. 177223). The remains of ancient ‹Affula are located within the modern town of that name, on the N slopes of the hill of Moreh in the heart of the Jezreel Valley. Little of the mound survives, but its occupation is known to extend from the mid-4th millennium through the Roman period, with Crusader and Ayyubid remains attested as well.

The name apparently derives from early Semitic *‹ōpel,* or "citadel." The site may be mentioned in the Egyptian Execration texts of the 19th century B.C., and again in the well-known list of Thutmose III in the 15th century B.C. In the Israelite period, ‹Affula would have been reckoned as one of the "daughters" of Megiddo (Josh 17:11). It may be identified with Arbela of Eusebius' *Onomasticon* (14.20) and with Afel of the medieval period.

‹Affula was excavated by E. L. Sukenik in 1926 and 1931; again in 1937 by Sukenik and N. Avigad; and then in 1950–51 by I. Ben-Dor and M. Dothan. These excavations, however, were little more than scattered soundings and clearance of tombs, and no final reports have appeared.

Stratum X belongs to the Late Chalcolithic and EB I (mid-late 4th millennium B.C.). The remains were mostly hearth and pits/silos, with pottery of the gray-burnished "Esdraelon" type marking the latest occupation. Stratum IX, later in EB I, with band-slipped wares, had crude house foundations. After a gap, Stratum VIII represented a reoccupation in EB III; few building remains were found, but the characteristic KHIRBET KERAK WARE appears. Stratum VII belongs to EB IV (ca. 2400–2000 B.C.). Subrectangular dwellings with ovens were found, together with typical large storejars, with "folded envelope" ledge handles.

Strata VI–V belong to the MB, spanning perhaps the entire period ca. 2000–1500 B.C. A planned settlement revealed streets, courtyards, domestic dwellings, pits/silos, pottery kilns, and several dozen intermural tombs.

Late Bronze I was not attested, but Stratum IV belongs to LB II (ca. 1400–1200 B.C.). Little but tombs were found, some containing Mycenaean and Cypriot imported pottery.

Stratum IIIB-A was the only Iron Age settlement, belonging to Iron I, and following closely in the ceramic tradition of Stratum IV. Phase IVB contained some Philistine Bichrome ware; phase IIIA was apparently destroyed in the mid-11th century B.C., perhaps during the time of Saul. A few large courtyard houses marked the first phase, as well as granaries, a kiln, and a few tombs. Only a few Iron II remains were noted, including a few sherds of Samaria ware.

Stratum II dates to the Roman period (2d–4th centuries A.D.), and Stratum I to the Crusader and Ayyubid period (11th–13th centuries A.D.).

WILLIAM G. DEVER

AGABUS (PERSON) [Gk *Hagabos* (Ἀγαβος)]. A Christian prophet from Judea (Acts 11:27–30 and 21:10–14). In 11:27–30 Agabus goes with a group of other prophets from Jerusalem to Antioch and prophesies that there would be a famine "over all the world." Luke states that the prophecy was fulfilled during the reign of Emperor Claudius (41–54 C.E.). Although no worldwide famine occurred during the reign of Claudius, there are references to isolated famines throughout the Roman Empire during this time (Tac. *Ann.* 12.43; Seut. *Claud.* 18.2; Dio Cas. 60.11). According to Josephus (*Ant* 20.2.5 §49–53; 20.5.2 §100–1), there was a famine in Palestine during the procuratorship of Tiberius Alexander (46–48 C.E.), during which Queen Helena of Adiabene bought grain from Egypt and figs from Cyprus and distributed them in Jerusalem. Agabus's prophecy stirred the Christians in Antioch to send a collection by Paul and Barnabas to aid the Judean Christians (cf. Eus. *Hist. Eccl.* 2.3.4).

In 21:10–14 Agabus goes to Caesarea and delivers a prophecy accompanied by a vivid symbolic act in the fashion of the classical prophets (e.g. Isaiah 20; Jer 13:1–11; Ezekiel 4–5). He takes Paul's girdle and binds his own hands and feet and prophesies that the Jews would bind Paul and hand him over to the Romans if he proceeded to Jerusalem. His prophecy was not strictly fulfilled, for although the Jews did seize Paul, they did not hand him over to the Romans. Rather the Romans rescued Paul from the Jews and bound him in chains in order to protect him from the Jewish rabble (21:33). In any case, Luke clearly holds the Jews responsible for delivering Paul to the Romans (28:17).

Late tradition identifies Agabus as one of the Seventy and a martyr at Antioch.

JOANN FORD WATSON

AGAG (PERSON) [Heb *ʾăgag* (אֲגַג)]. The name of two kings of the Amalekites (Num 24:7 and 1 Sam 15:8–9, 20, 32–33), and perhaps a traditional or common name of all their kings—like Pharaoh in Egypt and perhaps Abimelech (Achish) among the Philistines. Though the etymological meaning is not certain, it is usually taken from Akkadian *agāgum,* "to get angry, furious." The Greek name "Ogygos," which appears to be Semitic in origin, has been derived from *ʾāgag,* "to flame" (Astour 1964: 200).

1. The name of a (legendary?) king mentioned by Balaam in an archaic poetic context, "his king shall be higher than Agag" (Num 24:7). Its usage here appears to be a wordplay on the term *gag,* "roof," which is found in Ugaritic and South Canaanite (EA 287:37). The context suggests a mythological character, which is rendered by LXX as *Gōg,* a figure that later leads the evil forces that rise up to war against

Yahweh in a climactic eschatological battle (Ezekiel 38–39). In Num 24:23 the term "Gog" (or more frequently "Og") is inserted by LXX in an obscure passage, which has been rendered (Albright *YGC* 14, n. 40):

And he saw Gog and delivered an oracle about him, saying:
The isles shall be gathered from the north,
  And ships from the farthest sea;
And they shall harass Aššur and harass ʿEber,
  But he (Gog) will perish forever.

2. The name of a king of the Amalekites whom Saul spared, contrary to a sacred ban imposed by Samuel in which the Amalekites were devoted to destruction because of their opposition to Israel at the time of the Exodus (1 Sam 15:2–3). Samuel's inference of perpetual war against the Amalekites seems to reflect the content of another fragment of archaic Hebrew poetry concerning Amalek (Exod 17:16) which has been rendered (Christensen 1975: 48):

For the hand is on Yahweh's banner;
The battle belongs to Yahweh,
Against Amalek from generation to generation.

In the Holy War tradition of ancient Israel, Amalek apparently played the role of archenemy. It would appear that Agag was the name of the king of Amalek within a body of archaic poetry, the "Song of the Wars of Yahweh" (cf. Num 21:14).

W. R. Smith (1927: 491–92) has argued that Saul spared Agag in order that he might be sacrificed according to an ancient Arab pattern for victorious warriors on their return from a foray; and that Samuel actually accomplished this offering by slaying Agag "before Yahweh" in Gilgal. In the biblical story, Saul's disobedience at this point occasioned his final break with Samuel.

The term "Agag" appears also in the book of Esther as the gentilic name of Haman (ch. 3:1, 10; 8:3, 5; and 9:24). Haupt (1906: 8, 12–14, 42 [nn. 111, 112]) argued that the designation "Agagite" here, perhaps a Hebrew adaptation of the epithet Gagite (*Gōgaios,* "northern barbarian"), was used to indicate to a Hebrew what "Macedonian" would to a Greek; and that it meant "Amalekite" in the sense of a contemptible, hateful person, but not implying that Haman actually had any genealogical tie with Amalek. However, Jewish tradition makes much of the connection, arguing that Samuel's execution of Agag came one day too late. It was during that brief interval between Saul's sparing of Agag and his execution by Samuel that he became the progenitor of Haman (*Meg.* 13a, *Targ. Sheni*; to Esther 4:13). See also AGAGITE.

DUANE L. CHRISTENSEN

AGAGITE (PERSON) [Heb *ʾăgāgî* (אֲגָגִי)]. A gentilic name identifying HAMAN, the enemy of the Jews in the book of Esther (Esth 3:1, 10; 8:3, 5; 9:24). By identifying Haman as an offspring of "Agag the descendant of Amalek" (Aram *ʾgg br ʿmlq*), the Targums elaborate on the MT, and Josephus supports this identification by referring to Haman as "the Amalekite" (*Ant* 11.6.5, 12). However, the LXX and its variant manuscripts prefer Gk *bougaion, gōgaion,* or *makedōn.* In the Latin witnesses, support is found for the MT (Vg. *Agag*), as well as for Gk *bougaion* (OL *bagogeum*).

Such diverse readings indicate that the ancient translators, like modern scholars, were attempting to interpret the term "Agagite." Of the modern scholars who support the MT reading, Paton (*Esther* ICC, 194) represents the position well. He suggests that the term "Agagite" literarily identified Haman as a descendant of Agag the king of the Amalekites, Israel's ancient and continual antagonists (Exod 18:8–16;

Num 24:7; Deut 25:17–19; 1 Samuel 15). Based on this premise, other scholars point out that the term "Agagite" fits the typology of "the enemy" of the Jews, which may account for LXX variants like *bougaion, gōgaion,* and *makedōn,* since these were "the enemy" at different periods of time (Altheim and Stiehl 1963: 212; Ringgren and Weiser *Esther* ATD, 127; Moore *Esther* AB, 35; Stein 1982: 569). Other suggestions are that Agagite may be a nickname for Haman (Simons 1959: 485), possibly an official title like "Pharaoh" (Keil *Chronicles, Ezra, Nehemiah, Esther* BKAT, 632), or simply an Elamite name *A/Ag-ga-ga* (Zadok 1984).

Of those who emend the MT, Haupt (1908: 123) posits an original Heb **g›gy,* "Gagean or northern barbarian," from Codex Vaticanus' *Gōgaios* (Esth 3:1; see LXX *gōg* in Num 24:7), and also based on the correspondence of spelling in Gk and Heb. He thus identifies Haman as a northern enemy of the Persians, rather than of the Jews. Lewy (1939: 134), viewing the LXX *bougaion* as a transmutation of the West-Iranian word *baga,* "god," proposes an original Heb **bwgy,* "Bougaite or worshipper of Baga," identifying Haman as a devotee of the god Mithra (Esth 3:1; Add Esth 12:6). He contends that a Babylonian story about the persecution of Marduk worshipers ("Mardukians") by their enemies, the "Bougaions" (worshipers of Mithra), was adapted to the Jewish experience by supplying the appellative "Agagite." In Homeric literature Gk *bougaion* means "braggart" (*Il.* 13.824; *Od.* 18.79), but this seemingly has no relation to the LXX use of the term. Finally, based on evidence also cited by Lewy (above), and on the assumption that Gk *bougaios* and *bagaios* are the same, Hoschander (1923: 23) emends Heb *h›ggy* to read *hbgy,* "the Bagoan." However, unlike Lewy, he views this not as the name of a deity, but as a Persian gentilic name.

On literary grounds, it can be seen that the term "Agagite" functions on more than one level. As the textual variants cited by most scholars suggest (see e.g. Paton *Esther* ICC, Moore *Esther* AB), the term "Agagite" harkens back to the story of Agag (1 Samuel 15), with which the Esther story has some parallels (McKane 1961: 260), especially since Mordecai, like Saul (1 Sam 9:1–2), was a "son of Kish, a Benjaminite" (Esth 2:5). Within the book of Esther, Haman's role as the sole enemy of the Jews is indicated by the term "Agagite" (3:10; cf. 8:1; 9:10; see Clines 1984: 14, 42). Definition of the term "Agagite" is provided by parallel occurrences of other appellatives with the name "Haman" (Jones 1978: 40): the most complete identification of Haman, "Haman, the Agagite, the son of Hammedatha, the enemy of (all) the Jews" (3:10; 9:24), can be abbreviated by omitting one or the other of the appellatives. Therefore, in Esth 3:1 and 8:5 Haman is identified simply as "the Agagite," whereas in 9:10 the only label applied to him is "the enemy of the Jews." Also, the identification "Haman, the enemy of the Jews" (8:1) is complemented by "Haman, the Agagite" (8:3). These variant identifications of Haman in parallel verses in Esther clearly make "Agagite" virtually synonymous with "the enemy of the Jews."

MARK J. FRETZ

AGAPE MEAL [Gk *agapē* (ἀγαπη)]. "Love feast," a specialized Christian use of the Greek word for love (*agapē*) to refer to a fellowship meal which was a principal occasion for charity to the poorer members of the church.

Agapē occurs with this meaning in the NT only in Jude 12 ("These are blemishes on your love feasts, as they boldly carouse together, looking after themselves") and as a variant reading in the parallel passage in

2 Pet 2:13. These passages reflect later problems associated with the agape—immoral conduct and selfish interest in the food more than genuine community love. Love (*agapē*) in early Christian usage was practical (1 John 3:17–18), so one use of the word came to be the meal served for benevolent purposes. The instructions of Jesus in Luke 14:12–14 were taken seriously in the early church. That *agapē* came to mean "love feast" is a testimony to the practical nature of early Christian love and to the prominence of a meal as a way of expressing love.

A. Greco-Roman Religious Meals

Greco-Roman society knew various types of religious meals. Especially important in the social life of the early Roman empire were the monthly banquets of the private associations. Whether based on nationality, a common occupation, or social concern, these clubs nearly always had a religious aspect (with a patron deity, a priest or priestess among the officials, and libations or other sacrifices as part of their gatherings) and provided burial services for their members. Whatever other functions these clubs served, the social fellowship of their regular meals together constituted an important feature. The members paid a monthly fee, but patrons often supplied the food or drink for the banquet. These convivial occasions had to be tightly regulated by statutes because of their rowdiness. Some of these regulations assess fines for disorderly conduct, prohibit a member taking another member to court to settle a dispute, and provide for functionaries to enforce proper conduct during the meetings (IG II^2 1368). Celsus, the 2d-century pagan critic of Christianity, compared the agape to meals in pagan secret associations (Origen, *C. Cels.* 1.1).

B. Jewish Religious Meals

Judaism also had its religious associations whose members ate together, especially on sabbaths and festivals. These gatherings were of a soberer and more disciplined character than Greco-Roman club meals. The Mishnah's report of rabbinic disputes about the order of activities reveals the following elements accompanying the meal: washing hands, lighting lamps, blessing and breaking of bread, and blessing a cup of wine (*m. Ber.* 8). These features appear in Christian accounts of the agape. The Qumran community had its group meals at which the priest blessed the bread and wine (1QS 6.3–6; 1QSa 2.17–22), and the Therapeutae in Egypt had a festal meal and vigil which included prayer, exposition of the scripture, hymns, and a meal of bread and water (Philo, *Vita Cont* 64–89). Jewish religious meals provided the immediate antecedent for the practice of Jesus and his disciples.

C. Jesus and His Disciples

Religious meals in the early church may have had their origin in Jesus' meals with his disciples. The NT places a particular emphasis on Jesus' eating and drinking with his disciples after the resurrection (Luke 24:30, 41–42; John 21:12–14; Acts 10:41). During the ministry of Jesus the feeding miracles occupied a prominent place (Mark 6:35–44; 8:1–9 pars.); Luke showed a special interest in Jesus' teachings associated with meals (Luke 14:1–24).

The Lord's Supper was instituted in the context of a Jewish religious meal (Mark 14:22–25 pars.), and it continued to be observed in a meal setting (1 Cor 11:20–34). The disturbances at Corinth which Paul sought to correct may have resulted from Greeks carrying over into a Christian setting the convivial practices of their own (religious) club life. The poorer members were humiliated, since those better off ate the food and drink they furnished instead of sharing it or ate the best portions provided from the common fund before the poorer (workers) could arrive (1 Cor 11:21–22).

D. Relation to Eucharist

When the eucharist was separated from the meal in time and location (as it may have been from the beginning in intention and purpose), the latter moved more decisively in the direction of fellowship and charity. Terminology, however, continued to be interchangeable. Ign., *Smyrn.* 8 appears to use *agapē* for the eucharist (*Smyrn.* 7; cf. *Ep. Apos.* 15, which uses agape for the remembrance of the Lord's death), and Hippolytus, *Ap. Trad.* 26 (in some of its versions) uses "Lord's supper" for the love feast. The lack of clear distinctions shows in the competing interpretations of *Did.* 9–10. Do the prayers refer to a eucharist, an agape, or to a eucharist in the context of an agape? Since the compiler called the prayers eucharistic, the absence of a memorial of the death and resurrection is hardly conclusive that an agape is described.

Pliny the Younger at the beginning of the 2d century refers to two gatherings by Christians in Bithynia: one before dawn and another in the evening "to partake of food—but food of an ordinary and innocent kind" (*Ep.* 10.96). The latter meeting, he says, was suspended when he enforced the edict against unauthorized associations. The separate evening meeting and the willingness of Christians to give it up might suggest an agape rather than the eucharist. All later sources show a separation of the eucharist from the agape.

E. Purpose

The NT indicates the early disciples had meals for fellowship and/or benevolence. According to Acts 2:46, "Day by day … they partook of food with glad and generous hearts." The "daily distribution" to the widows in Acts 6:1–2 may have been of funds or of food. Such activities may have continued and later have been described by the word *agapē* or may have served as a precedent for the institution of the agape. A 2d-century apologist for Christianity declared that Christians "have their meals in common" (*Diogn.* 5).

F. Later Descriptions

The fullest descriptions of the love feast come from about the year 200. Tertullian gives this information:

> Our feast shows its motive by its name. It is called by the Greek word for love. Whatever is reckoned the cost, money spent in the name of piety is gain, since with that refreshment we benefit from the needy … We do not recline at the table before prayer to God is first tasted. We eat the amount that satisfies the hungry; we drink as much as is beneficial to the modest. We satisfy ourselves as those who remember that even during the night we must worship God; we converse as those who know that the Lord listens. After the washing of hands and lighting of lamps, each one who is able is called into the center to chant praise to God either from the holy scriptures or from his own talents. This is proof of how much is drunk. Prayer in like manner concludes the meal (*Apol.* 39.16–18).

The more detailed account by Hippolytus (*Ap. Trad.* 25–27) shows a concern with tight ecclesiastical control, for one of the clergy must preside. The benevolent purpose of the meal is highlighted and the recipients of the food were expected to pray for the host.

It was necessary that the love feasts be tightly regulated. Clement of Alexandria protested against the almost exclusive use of *agapē* for the social meal: "The meal occurs because of love, not love because of the meal" (*Paed.* 2.1.4–9). He attests that the meal had become the chief thing about Christianity for many, but he wanted to lift thoughts to a higher plane. Pagans misunderstood what they heard about the Christians' meal (Min. Fel. *Oct.* 9; 30–31), but their charges of immorality (Athenagoras, *Plea* 3) may have had some basis in fact in irregularities associated with the love feast (Tertullian, *Fasting* 17). Disorders in connection with love feasts led to efforts to suppress them in the 5th century. For further discussion see *DACL* 1: 775–848.

Art. Meal scenes are common in the Catacomb paintings. It is often difficult to know what is being depicted: a feeding miracle from the Gospels, the Last Supper, the eucharist, the heavenly banquet of the redeemed, a funerary meal in commemoration of the deceased, or an agape. The inscriptions "love" and "peace" suggest that some of the pictures depict an agape. These paintings may be a further confirmation of the central place which the common meal had in the religious experience of many ordinary Christians. The martyrs in the *Passion of Perpetua and Felicitas* 17 in their last meal on the day before their martyrdom, perhaps in anticipation of the heavenly banquet, partook of an agape "so far as they could."

EVERETT FERGUSON

AGE In the OT usually in the sense of the age of a person or of people. In this sense it renders a number of terms or expressions in Hebrew. See OLD AGE. While this meaning also is found in the NT, much more often there it is used in the sense of one or both of the two ages (Gk *aiōn*) of the world, as conceived in late Jewish thought. This meaning is found in expressions such as "this age," "the present age," "the end of the age," and "that age," "the age to come."
HERBERT G. GRETHER

AGEE (PERSON) [Heb *ʾāgē* (אָגֵא)]. The father of the Hararite Shammah, one of King David's three chief "mighty men" (2 Sam 23:11). The name Agee only occurs once within this roster of David's "mighty men" (2 Sam 23:8–17) and is conspicuously absent in the parallel passage 1 Chr 11:11–19; the Lucianic text of LXX reads *ēla,* to which Mazar (1986: 91) emends the MT. However, based on occurrences of the term "Hararite" in the Samuel list and its Chronicles parallel, Agee may be related to another of these "mighty men." Compare the MT of the following verses:
(1) 2 Sam 23:11a *šammāʾ ben-ʾāgēʾ hārārî*
(2) 2 Sam 23:32b–33a *yĕhônātān šammâ hahărārî*
(3) 1 Chr 11:34b *yônātān ben-šāgēh hahărārî*
(1) "Shammah the son of Agee the Hararite" and (2) "Jonathan, Shammah the Hararite" become in Chronicles 11 (3) "Jonathan the son of Shagee the Hararite." It may be suggested that Heb *šāgēh* (1 Chr 11:34b) results from a combination of *šammāʾ* and *ʾāgēʾ* (2 Sam 23:11a), which reflects an association between Agee and Jonathan in 2 Samuel 23 (see Elliger 1935: 31). According to some scholars (McCarter *2 Samuel* AB, 493), the term "Hararite" (Heb *hrry;* see 2 Sam 23:11), together with its close variant (*hhrry,* see 2 Sam 23:33 and 1 Chr 11:34–35) and other proximate forms in these lists (*hʾrry,* see 2 Sam 23:33; *hḥrdy,* see 2 Sam 23:25; *hhrwry,* see 1 Chr 11:27), is a gentilic associated with an unknown clan. Others hold that "Hararite" is the name of Agee's hometown, and identify it with "Araru" of the Amarna Letters (Elliger 1935: 56).

MARK J. FRETZ

AGIA (PERSON) [Gk *Augian* (Αὐγιαν)]. The daughter of Barzillai and wife of Jaddus, whose sons returned from exile and laid claim to the priestly office without proof of priestly ancestry (1 Esdr 5:38). The name Agia is absent in the parallel lists of Ezra 2:61 = Neh 7:63). Although the sons of Jaddus were excluded from priestly service, their ancestral lineage through Agia to Barzillai gave them venerable connection to Israel since the family of Barzillai had been especially favored by King David (2 Sam 17:27; 19:31–40; 1 Kgs 2:7).
MARK J. FRETZ

AGING. See OLD AGE.

AGORA (PLACE) [Gk *agora* (ἀγορα)]. A gathering place in the city or town that was used for business, social, and political purposes. The word derives from *ageirein,* meaning "to bring together." Paul and Silas were dragged to the *agora* at Philippi by irate citizens who were bringing a complaint there before the Roman authorities (Acts 16:19–21). Paul also debated with Epicurean and Stoic teachers in the *agora* in Athens (Acts 17:17). In view of such use of the space, some modern versions render the word as "public square" or "city square," rather than the traditional "market place" (RSV).

In the Gospels, the word is rendered "market place," and the contexts show that it referred to a place where more than buying and selling went on: An employer found workers (Matt 20:3), men liked to be greeted with respect (Matt 23:7 and parallel), and children played (Matt 11:16). But there is no evidence in the Gospels that the market places of Palestinian towns were used for political purposes.
HERBERT G. GRETHER

AGRAPHA. A word used to designate the noncanonical "sayings" of Jesus.

A. Toward a Definition
B. Sources
C. Study of the Agrapha
D. The Value of the Agrapha

A. Toward a Definition

The term agrapha has been used since J. G. Koerner (1776) to refer primarily to "sayings attributed to Jesus which are not found in the four canonical Gospels." The choice of the designation agrapha, or unwritten sayings, was related to the idea that these materials were initially preserved orally and only later were incorporated into written documents, frequently as individual, isolated sayings. Sayings of Jesus such as those in Acts 20:35 and 1 Thess 4:15–17 have been referred to as agrapha, though they are within canonical writings. The vast majority of the agrapha are found outside the canonical writings. The term is currently used apart from the claim or attempt to demonstrate that the materials involved owe their existence to oral preservation of sayings or teachings of Jesus. The question of the origin of individual sayings is more an issue treated in investigating the materials than of defining the term.

Though the definition given above is the most widely used, one encounters others in the critical literature which warrant mention. Hennecke (1913: 17, 25) limited the designation agrapha to extracanonical, isolated sayings of Jesus. Quotations from known apocryphal writings were thus excluded. This distinction was related to the organization of his influential *New Testament Apocrypha* (1963), in which many of the sayings were treated elsewhere in the collection as parts of discussions of documents such as the apocryphal gospels. Mangenot (*DTC* 1: 625) restricted the designation to "authentic" or genuine sayings of Jesus not found in the four canonical Gospels. Resch (1906), in the second edition of his comprehensive collection of materials, used the term to refer to extracanonical scriptural fragments whether of the OT or NT.

In current usage the term agrapha is frequently a virtual synonym for, and may even be replaced by, "extracanonical sayings of Jesus." This latter designation is intended primarily to indicate location, not to suggest judgments concerning origin or theological or historical value. Most of the same range of materials is included, even those sayings attributed to Jesus in the canonical NT outside the Gospels, such as Acts 20:35. The major difference is that the term "extracanonical sayings of Jesus" usually includes more variant manuscript readings and citations from early Christian writings which parallel canonical sayings than was the case earlier with the designation agrapha. A major reason for this shift would seem to be the decreased emphasis on the search for "authentic" sayings and the increased emphasis on other types of studies of the formation and transmission of sayings of Jesus. More will be said in this regard when the value of the materials in the study of early Christianity is discussed below.

The sayings treated as agrapha are, in terms of their form, relatively analogous to those of the synoptic tradition. Most may be categorized using the form-critical designations initially developed by Rudolf Bultmann (1963) for the study of the synoptic tradition (parables, apophthegms, prophetic and apocalyptic sayings, wisdom sayings and proverbs, I-sayings, and community rules). Koester (1968) has used these categories in treating the sayings in the *Gospel of Thomas* and, more recently, Stroker (1988) has used them in categorizing the extracanonical sayings generally.

Since the term agrapha has been used primarily to refer to relatively short sayings essentially containing teachings, certain types of materials attributed to Jesus in early Christianity are usually excluded. (1) The infancy gospels contain some words attributed to Jesus, but these are usually comments on the miraculous deeds, or other events and encounters narrated, and are of a rather different nature from teachings. (2) Several documents are largely revelatory discourses of Jesus, usually in the form of dialogues between Jesus and one or more of his disciples. Lengthy dialogues, whether from the Nag Hammadi corpus or from analogous treatises in Codices Brucianus and Askewianus, and Papyrus Berolinensis 8502 are not treated as agrapha. The same is the case with most of the materials, also largely revelatory discourses, in the *Epistula Apostolorum*, *The Testament of the Lord*, and the Ethiopic *Apocalypse of Peter*. Shorter

sayings from some of these documents are found in some collections of agrapha, however. (3) Sayings attributed to the preexistent Jesus are usually not included. (4) Quotations of biblical passages, whether from the OT or NT, are also not included when the understanding is present that Jesus was the one who spoke through the words of the biblical writers.

B. Sources

The sources in which agrapha or extracanonical sayings of Jesus are found are numerous and of wide variety. The following categorization is representative of those frequently found in the critical literature: (1) NT writings apart from the four Gospels; (2) variant readings or additions found in manuscripts of the Gospels; (3) quotations contained in the writings of the church fathers and other early Christian literature, such as the early liturgies and church orders; (4) manuscripts or fragments of manuscripts of noncanonical gospels and other noncanonical writings, usually designated NT apocrypha; (5) Manichaean and Mandaean writings; (6) ancient Jewish writings; and (7) Islamic writings.

Some documents from the Nag Hammadi corpus warrant special mention in this context, though they are a part of category 4 above. The importance of the *Gospel of Thomas* is unparalleled for the study of the extracanonical sayings. It consists of a collection of some 114 sayings, including parables, and is thus the largest single collection of sayings of Jesus outside the canonical tradition. Approximately one half of the sayings in Thomas have parallels within canonical materials, whereas the rest are without significant parallel. The relation of Thomas to the canonical gospels is debated, but an increasing number of scholars assess it as preserving a tradition of Jesus' sayings, literarily independent from the canonical tradition. Assessments of the agrapha since the initial publication of the *Gospel of Thomas* (Guillaumont 1959) have been significantly affected by this major new discovery. The sayings attributed to Jesus in the *Gospel of Philip* are easily distinguished from their context and are also to be included in collections and treatments of the agrapha.

Somewhat more complicated are the *Dialogue of the Savior,* the *Book of Thomas the Contender,* and the *Apocryphon of James.* These writings are currently in the literary form of revelation discourses. Recent studies indicate, however, that each may have made use of earlier collections of shorter sayings, many of which can be distinguished, at least tentatively, from their present literary context and reconstructed in an earlier form (Turner 1975; Koester 1979; Hedrick 1983; Cameron 1984; Emmell 1984). The analysis of these documents, and also of the revelation discourses mentioned earlier as usually not included among the agrapha, will likely yield an increasing number of shorter sayings, viewed as representing an earlier stage of tradition. These reconstructed, shorter sayings will likely become incorporated in future treatments of the agrapha or extracanonical sayings of Jesus.

C. Study of the Agrapha

The agrapha have been the subject of numerous and varied studies. Long before the major manuscript discoveries of the 19th and 20th centuries, scholars had called attention to these extracanonical sayings, had made collections of varying degrees of completeness, and had attempted to give some explanation of them and their place in the history of early Christianity. The best bibliography of the older literature was done by Pick (1908: 126–52). Resch (1906: 14–22) provides an assessment of much of the early works. Jeremias (1964: 4–13) has surveyed the materials since Resch.

The history of research is too extensive for inclusion here; nonetheless, a sketch of the major types of studies is necessary in order to understand current research and assessment of the importance of the agrapha.

An emphasis on collecting the materials understandably characterizes the first type of study. The earliest treatments of the agrapha were made by editors of the Apostolic Fathers and other early Christian writings, the first to my knowledge being that by Cotelier in 1672. He dealt with a number of important examples, citing parallel material, and was the first to indicate the wide distribution of extracanonical sayings of Jesus. Lists and short treatments of the agrapha are to be found from this time on. The first book which limited itself to the treatment of agrapha was by Dodd (1874).

An apex in collecting material was reached in 1889 with the publication of the first edition of Alfred Resch's work. Resch provided the most comprehensive collection of materials prior to the discovery of

the Egerton Papyri and the Nag Hammadi Codices. The second edition of his work (1906) dealt with the newly discovered Oxyrhynchus Papyri. Resch's goal, more strongly stated in the first edition than in the second, was to restore an *Urevangelium* or original gospel, written in Hebrew, fragments of which could be reconstructed from some of the agrapha and other material he had collected. Despite the failure of his broader attempt, Resch's collection of materials has remained not only useful but also, until recently, the most comprehensive available.

Preuschen (1901) published a collection of isolated sayings as well as fragments of apocryphal NT writings. Still useful collections of the texts of much of the material in the original languages were made by Erich Klostermann (1911; 1929) which contain fragments of noncanonical gospels, the Oxyrhynchus sayings, and a collection of 88 additional agrapha. The most complete early collection of the materials in English translation was made by Pick (1908). His earlier work (1903) also contained a sizable listing of agrapha. A comprehensive collection of the materials, in original language with English translations and parallel materials, has recently been published (Stroker 1988).

The question of authenticity dominates the second type of study (i.e., whether the passages in question contain sayings to be viewed as spoken by the historical Jesus). Nestle (1896) treated 27 agrapha he considered to be authentic sayings of Jesus. Ropes (1896) provided a critical evaluation of Resch's work, not only of his general thesis, but also of the underlying treatment of the agrapha and related material. Ropes eliminated from the main focus of the discussion passages whose contexts did not claim they were sayings of Jesus and also quotations from canonical texts secondarily attributed to Jesus. The question of authenticity was asked with rigor and persistence. Only a few passages from the mass of material collected by Resch were considered by Ropes to have any real claim to authenticity. With the publication of Oxyrhynchus Papyri 1: 654, 655 (Grenfell and Hunt 1898; 1904) the question of authenticity was posed with renewed urgency and, with some notable exceptions, has dominated research on the agrapha until relatively recently.

Following Ropes no comprehensive treatment of the agrapha appeared until that of Joachim Jeremias (1958; 1964) whose work has been very influential. Jeremias treats in detail only a small number of sayings, but in the initial sections of his work has a survey of the larger body of material. In his introduction he speaks of the unfortunate overemphasis on the question of authenticity, while the meaning of the sayings has largely been neglected. Jeremias is, however, in essential continuity with the quest for authentic sayings, departing from this type of study only in giving an exposition of the agrapha selected as potentially authentic (21 initially, 18 in later editions) in terms of their religious significance, finding or constructing a situation in Jesus' life in which they could have been said and expounding the sayings on the basis of such a context.

Jeremias stands at the virtual end of an approach to the study of the agrapha for which the quest for authentic sayings of Jesus was the primary concern, a quest which has focused on an ever-diminishing number of passages and relegated the bulk of the materials to the periphery. Hofius (*TRE* 2: 103–10) eliminated half of Jeremias' 18 sayings and considers the question of authenticity properly to *begin* with the investigation of the remaining 9, for some of which he harbors doubts.

The question of authenticity will never fully be given up; it has the same validity as the quest for authentic sayings of Jesus within the canonical tradition. The value of the agrapha, however, lies primarily in other areas.

A third type of study focuses on the processes of the formation of the extracanonical sayings. Here the quest for authentic sayings of Jesus is not primary; rather, extra-canonical sayings, including ones which parallel those within the canonical gospels, are studied for clues to understanding the ways in which Jesus' teachings were shaped and adapted in early Christianity. Walter Bauer (1909) is an early example of this type. As a methodological consideration, Bauer treats all sayings attributed to Jesus not found in the earliest reconstructable version of the NT as not originating from him or as modifications of earlier forms of Jesus' sayings. He then classifies the changes which can be observed by comparison with the canonical materials. Leon Wright (1952) is primarily concerned with materials which can be shown to have obvious contacts with the texts of the canonical Gospels. Differences between the agrapha and

patristic quotations on the one hand, and the canonical versions on the other, are grouped in terms of types of motivations which the alterations seem to evidence. The categories chosen are ones generally recognized by textual critics. Wright concludes that by and large the agrapha are dependent upon the canonical, and thus not upon an independent, parallel tradition. Bultmann (1963) has made more use of extracanonical sayings than one is aware of at first reading. There is no separate study of the agrapha, but examples are used to show the continuation in the extracanonical and postcanonical materials of tendencies in the development of tradition which Bultmann holds he has discerned within the synoptic materials themselves.

Helmut Koester (1957b), while reviewing Jeremias' work, called for a rather different approach to the study of the agrapha. Koester asserts that the same type of treatment should be given the agrapha as given the canonical sayings of Jesus, since neither can be properly assessed primarily in terms of the question of authenticity. "This demand is to be placed on the study of the extracanonical sayings of the Lord. They receive their own proper value from their *Sitz im Leben* and are immune against the verdict of inauthenticity even if they have their *Sitz* not in the life of Jesus but in that of the community" (1957b: 222). Both groups of materials are to be regarded as units of early Christian tradition, to be understood as representing situations in the life and thought of the early Christian communities. Their place and use in the life, thought, and worship of the early church are the key to the value of the extracanonical sayings. Neither the distinction between canonical and noncanonical nor the question of authenticity should rob them of their significance.

Studies along the lines called for by Koester thus may be viewed as representing a fourth type: that is, treating the agrapha and extracanonical sayings that closely parallel the canonical as parts of a larger treatment of the tradition of Jesus' teachings in the works of a given writer or a given body of tradition. Examples of this type are Bellinzoni (1967) and Kline (1975).

D. The Value of the Agrapha

As already indicated, the value of the agrapha and other extracanonical traditions of Jesus' teachings cannot be limited to the search for those few sayings which might be viewed as authentic sayings of the historical Jesus. Rather, the importance of these materials lies in their role in broadening our understanding of the development and transmission of traditions of Jesus' teachings. The following three areas may be mentioned as especially important in this regard.

The canonical tradition and the sources immediately behind the canonical gospels were neither the only collections nor the sole bearers of the traditions of Jesus' teachings. Koester (1957a) has shown that many of the sayings in the Apostolic Fathers are independent of the synoptic gospels. Further, the sayings in the *Gospel of Thomas* are best viewed as stemming from a collection which is independent of, and perhaps earlier than, the canonical Gospels. Thus the question of the earliest stages of the tradition of Jesus' teachings cannot be investigated on the basis of the canonical Gospels alone. Extracanonical sources provide some sayings without parallel in the canonical Gospels which, on the basis of their form and content, are to be viewed as stemming from very early stages of the Jesus tradition. Further, extracanonical sayings sometimes preserve a less-developed version of a canonical saying and may give us thereby access to a stage of tradition earlier than that of the canonical Gospels.

Secondly, Jesus' sayings were transmitted and redacted independently of the canonical tradition as well as in dependence upon it. In both the extracanonical and the canonical traditions, sayings were shaped and redacted in large measure to meet the needs of the communities. The processes of redaction of individual sayings and groups of sayings are largely analogous in the canonical and extra-canonical tradition. Thus the extracanonical sayings can help us achieve a more complete picture of the transmission and redaction of the sayings of Jesus and the relation of these processes to different groups within early Christianity.

Finally, the extracanonical tradition provides evidence that sayings from other sources have become attributed to Jesus. Our understanding of the extent to which sayings from other sources have become attributed to Jesus, a process discernible also in the canonical tradition, would necessitate study of the extracanonical materials.

Study of the agrapha or extracanonical sayings can thus broaden our understanding of the total picture of the early history of the Jesus tradition. In this context, the agrapha have considerable value, to the theologian as well as to the historian.

WILLIAM D. STROKER

AGRICULTURE. Agriculture is the cultivation of the soil for food products or any other useful or valuable growth of the field or garden; also, by extension, it includes any industry practiced by a cultivator of the soil in connection with such cultivation, as fruit raising, animal husbandry, dairying, and gardening. The study of ancient agriculture relies on archaeological finds (installations, tools, organic remains), biblical and extrabiblical (including literary and economic) texts, and comparisons with traditional practices in preindustrial societies.

———

A. Background.

Agriculture was the economic backbone of biblical Israel, where it was practiced by city dwellers as well as villagers. Its influence was very strong on many facets of daily life, including religion, law, and social behavior. The biblical farmer was the heir to a long agricultural tradition which originated in the Near East some time before the Neolithic period (ca. 7000 B.C.E.) with the domestication of plants and animals (Butzer 1971; Flannery 1973). However, while the biblical farmer did not introduce any new species, he improved farming methods and techniques for utilizing the produce. Domestication of food plants and animals was an important factor in the establishment of permanent villages. The earliest domesticated plants were cereals (two-rowed barley, emmer wheat, and einkorn wheat; Renfrew 1973: 30–81) and legumes (lentils and peas; Zohary and Hopf 1973). Fruit trees were domesticated much later ca. 4000 B.C.E. and included olive, vine, date, pomegranate, and fig (Stager 1985b). Among the earliest domesticated animals were sheep and goats (Nissen 1988: 24–27) which continue to dominate animal husbandry up to the present. Documentary and archaeological evidence shows that the last animal to be domesticated was the camel during the transition period from the LB to the Early Iron Age. The appearance of the camel in the Bible as a household animal of the Midianites in the Gideon stories (Judg 6:5; 7:12; 8:26) agrees with archaeological finds, while any earlier mention (e.g., Genesis 24) is anachronistic. See also ZOOLOGY.

Canaan's agricultural richness was recognized already in early historical times as evidenced by Egyptian records from the Old, Middle, and New Kingdom. Her agricultural wealth made her a target for invading armies coming to loot (*ARE* 1: 143; 2: 187, 189, 191; *ANET* 19, 228).

The repertoire of plants cultivated by the biblical farmer included several types of cereals, legumes, vegetables and spices, and a variety of fruit trees, each of which was grown in the area most suitable for it. The country is divided into several regions, highlands and valleys, each dominated by different geomorphological and climatic conditions, which determine soil types and water availability, the most important factors in agriculture (Hopkins 1985: 55–133; see PALESTINE, CLIMATE OF). The short rainy season (mid-October to April; see RAIN), the fluctuation in precipitation, and the rocky and hilly nature of most of the terrain made agriculture hard to practice; yet by careful selection of the proper species it became the mainstay of the country's economy throughout history. Some solutions to these problems were provided by the development and wide use of terracing and run-off farming in the highlands and in the Negeb, and the improvement of water collection and storage in underground reservoirs. Some scholars suggest that these factors enabled the Israelites to settle the Galilean, Samarian, and Judean highlands and to overtake the land whether by force or slow encroachment (Aharoni 1956; Stager 1985a). Later, during the monarchical period, these methods allowed settlement in newly acquired lands and along trade routes, for defense and economical reasons (Evenari et al. 1971).

Land could be owned by individuals (Num 27:1–8; Deut 21:15–17, 1 Kgs 21:1–3), royalty (1 Chr 27:26–28), and the priesthood (Num 35:1–8), all of whom, according to Israelite ideology, served as safekeepers because the land ultimately belonged to YHWH.

B. Conditions.

Conditions for agriculture in the Near East, and especially in Israel, are not very favorable. Many hardships have been encountered by the farmer, and these include lack of sufficient amount of water and soil. The terrain in most cases is uneven and rocky, and very few natural water sources are available; thus, farming in biblical times depended heavily on rain (Deut 12:11) and on the ability of the farmer to clear and prepare land (Josh 17:17–18; Isa 5:2). In most cases, irrigation was out of the question. Since the rainy season is short (October to April) and droughts are common, agriculture was always considered dependent upon the grace of the supernatural, be it the Canaanite fertility and nature gods or YHWH. For the Israelite farmer, the dependence on YHWH meant the observance of the covenant, which was rewarded by "rain … in its season" (Deut 11:13–17). Other conditions which caused crop failure included

diseases, locust attacks (Amos 7:1; Joel 1:4; 2:25), and other pests such as mice, worms, fruit bats, and weeds. Several of the plant diseases are mentioned either by name (smut, Heb *šiddāpôn;* rust, Heb *yērāqôn;* bunt, Heb *boʾšâ*) or by symptom (black rot in grapes, Heb *bĕʾūšîm,* Isa 5:2, 4; loss of olives to peacock eyespot, Deut 28:40; see Borowski 1987: 153–162).

On the other hand, the farmer could restore soil fertility and increase his yield by several methods which are not specifically mentioned in texts but can be surmised from written descriptions of certain practices or through analysis of the technology available to the farmer. Fallowing, using the Sabbatical Year (Exod 23:10–11) or another program, and organic fertilizing were probably used to a certain degree, the latter included the use of dung, compost, and ash. There is a very strong possibility that crop rotation, suggested by Isa 28:24–29 (see Borowski 1987: 148–151), was also used as a method for increasing crop yield and lowering plant diseases. One of the elements available to the biblical farmer for crop rotation and increased yield was "green manuring," the cultivation of legume plants to increase nitrogen presence and its availability to other plants (Borowski 1987: 148–149).

C. Agricultural Products. (See also FLORA.)

1. Field Crops. The biblical farmer did not introduce new plants to the variety already existing, however he chose those which suited his needs best. Field plants cultivated by the biblical farmer, as attested in the Bible and archaeological remains, included cereals (Heb *dāgān*), and legumes (Zohary 1982: 74–76, 82–84). Most common among the cereals were wheat (*Triticum durum* Desf. and *Triticum vulgare* [VIII.] Host.; Heb *ḥiṭputâ*), emmer (*T. dicoccum* [Schrank] Schuebl.; Heb *kussemet*), barley (*Hordeum;* Heb *śĕʿōrâ*), and millet (*Panicum miliaceum* and *Setaria italica;* Heb *dōḥan*). Legumes included lentil (*Lens culinaris Medic.*; Heb *ʿădāšîm*), broad bean (*Vicia faba;* Heb *pôl*), bitter vetch (*Vicia ervilia Wild.*), chick-pea (*Cicer arientum;* Heb *ḥāmîṣ*[?];), pea (*Pisum sativum*), and fenugreek (*Trigonela graecum*). In addition, the biblical farmer cultivated several spice plants such as black cumin (*Nigella sativa;* Heb *qeṣaḥ*), cumin (*Cuminum cyminum;* Heb *kammōn*), and coriander (*Coriandrum sativum;* Heb *gad*). Other plants were flax (*Linum usitatissimum;* Heb *pištâ*) and sesame (*Sesamum indicum*).

2. Vegetables. Vegetables (Heb *zērûʿîm; yārāq*) were part of the agricultural repertoire, although not as highly regarded as the other plants (Dan 1:11–16). They were grown in small plots or gardens and included cucumbers (*Cucumis sativus* or *C. chate;* Heb *qiššūʾîm*), watermelon or muskmelon (*Citrulus vulgaris* or *Cucumis melo;* Heb *ʾăbaṭ-ṭîhîm*), leeks or other greens (Heb *ḥāsîr*), onion (*Allium cepa;* Heb *bĕṣālîm*), and garlic (*Allium sativum;* Heb *šûmîm*).

3. Fruit Trees. Fruit trees were as important an element in biblical agriculture as field crops; however, they were not domesticated as early as cereals and legumes (Zohary and Spiegel-Roy 1975). The earliest remains of fruits in Canaan come mostly from the EB Age, although fig remains were found in Neolithic and Chalcolithic Jericho. The most popular fruit tree in biblical times was the grapevine (*Vitis vinifera;* Heb *gepen*), the fruit of which was used for making wine (*yayin*), raisins (*ṣimmûqîm*), and syrup (*mišrat ʿănābîm*). Other common fruit trees were fig (*Ficus carica;* Heb *tĕʾēnâ*), pomegranate (*Punica granatum;* Heb *rimmôn*), date (*Phoenix dactylifera;* Heb *tāmār*) and sycamore (*Ficus sycomorus;* Heb *šiqmîm*). Less common were the *tap-pŭḥ* (possibly quince or apricot), and mulberry (Heb *bākāʾ*). One common tree not mentioned specifically in the Bible is the carob (*Ceratonia siliqua*); however, there is no question that it was cultivated in biblical times.

The olive (*Olea europaea;* Heb *zayit*) was as important to the economy of ancient Israel as was the grapevine. Its fruit was made into oil (Heb *šemen*) to be used for cooking, lighting, ointments, and other religious and secular purposes. Like wine, oil was exported to other parts of the Near East and was one of the three main elements of the agricultural economy along with grain (Heb *dāgān*) and wine (Heb *tîrôš;* Hos 2:10—Eng2:8; etc.).

Several nuts were also cultivated, including almond (*Prunus amygdalus* Stokes; Heb *šāqēd*), pistachio (*Pistacia atlantica Desf.*; Heb *boṭnîm*), and walnut (*Juglans regia;* Heb *ʾĕgôz*).

D. Field Work.

The agricultural seasons are well enumerated in the OT; however, the best source of information is the Gezer calendar, a 10th century B.C.E. inscription from the site of biblical Gezer, which reads:

two months of ingathering [olives]/two months
of sowing [cereals]/two months of late sowing [legumes and vegetables]
a month of hoeing weeds [for hay]
a month of harvesting barley
a month of harvesting [wheat] and measuring [grain]
two months of grape harvesting
a month of ingathering summer fruit

A study of this inscription shows that sowing of cereals started after the Festival of Booths (Tabernacles) in the N Kingdom (end of October), harvesting barley commenced at the Passover festival (end of March), and the conclusion of wheat harvesting was celebrated with the festival of weeks/Pentecost (end of May; Borowski 1987: 31–44).

According to the Gezer calendar, sowing took place in the fall. Two months were devoted to sowing cereals and two more to late sowing and planting of legumes and vegetables. Since no sowing could have been done without plowing, either before or after, the farmer had to wait for the first autumn rains to soften the ground. Plowing was done with a wooden-frame plow to which a metal point (copper, bronze, and later iron) was attached, pulled by a team of animals, usually oxen. The same was done in large orchards and vineyards. In small plots, on slopes, and near the plants, a hand-held hoe was used. Sowing was performed either by broadcasting or by a seed drill attached to the plow.

Harvesting agricultural produce started in the spring, first with reaping barley, then wheat (see book of Ruth), followed by grapes and other fruit (see HARVESTS, HARVESTING). The Gezer calendar assigns seven months to the harvest. Harvesting cereals (*qāṣîr*) was followed very closely by threshing and winnowing to separate the grain. Grapes were immediately turned into wine or raisins and the same was done with other fruits. Storage of agricultural produce in its raw or finished state was done in specially constructed structures underground in pits and silos and above the ground in small rooms or large store-houses. The produce was stored in bulk or jars, depending on its nature and the nature of the storage facility.

Much of the technology used in processing agricultural produce is known from biblical descriptions, archaeological discoveries, and artistic representations from different parts of the Near East. Threshing was done either by stick for small quantities of certain types of plants (cumin) or by a threshing sledge or a wheel-thresher. Winnowing took place during times when the threshed material could be thrown in the air by a fork (*mizreh;* Isa 30:24) or a wooden shovel (*raḥat;* Isa 30:24) and be separated to its components (grain, straw, chaff) by the wind according to weight. Final cleaning was done with two different types of sieves, *kĕbārâ* (Amos 9:9) and *nāpâ* (Isa 30:28). The clean grain (*bār*) was stored in jars or in storage facilities such as grain pits (*ʾăsāmîm*) or storage houses (*miskĕnôt*).

Wine had to be produced immediately after harvest (*zāmîr* or *bāṣîr*) because fresh grapes could not be stored. The grapes were treaded on a flat, hard surface, and the juice which ran into a reservoir hewn in the rock or built out of stones and clay was collected into large jars, which were put for fermentation in a cool storage place. Raisins and raisin cakes were also made at that time by drying fresh grapes. The same process was used for drying and making cakes of figs and dates. These and other fruits such as pomegranates were also used for wine making.

Oil, like wine, was one of the exported commodities produced in ancient Israel. During the Iron II period, oil production technology made great strides with the development of the beam press. Until then, oil production was a simple matter. The olives were beaten or cracked in a mortar and then placed in straw baskets directly under stone weights. The pressed oil flowed into a container from where it was scooped into jars and stored. Small quantities of oil were produced by placing the beaten olives in water and scooping the floating oil. The beam-press innovation enabled the exertion of a much greater pressure on the olives by tying weights to a beam used as a lever under which the baskets were placed. This method facilitated the production of larger quantities of oil in less time and less effort (Eitam 1979; Gitin 1985; Kelm and Mazar 1989: 47–49).

E. Influence on Culture.

Agriculture dominated not only the economy but the whole of Israelite daily life. The Bible is saturated with agricultural symbolism, similes, and metaphors in parables, proverbs, prophecies, admonitions, hymns, and other literary forms (Judg 8:2; 9:8–15; Isa 5:1–8; Ezek 17:6–10). Many laws related to agriculture were formulated, such as those protecting the family inheritance (Num 27:1–8), concerning the protection and support of the poor, taxation, etc. (Exod 23:11; Lev 23:22; Deut 24:21). Israelite laws also regulated many aspects of agriculture such as the age at which fruit trees could be harvested, types of plants and where they could be planted (the law of *kil*ʾ*ayim,* Lev 19:19, Deut 22:9), and fallowing (sabbatical year). Religion and cult were strongly dominated by agricultural themes. The three main festivals associated with pilgrimages to Jerusalem all celebrate the beginning or ending of agricultural seasons. Passover (Heb *pesaḥ*) celebrates the beginning of cereal (barley) harvesting; Weeks (or Pentecost; Heb *šābūʿôt*) celebrates the end of the wheat harvest and with it the end of cereal harvesting; Booths (Heb *sukkôt*) marks the end of fruit ingathering and the beginning of the sowing season. Sacrifices and contributions to the Temple and its personnel were agricultural in nature (Num 18:8–32; Deut 18:1–9). Finally, and significantly, the rewards for observing the covenant with YHWH were spelled out in agricultural terms; ample rain in its appropriate season and resistance to plant diseases which led to abundance were the direct benefits of adherence to the covenant (Deut 28:22).

ODED BOROWSKI

AGRIPPA (PERSON) [Gk *Agrippas* (Ἀγριππας)]. The name held by two Herodian rulers in 1st century Palestine. Josephus' writings constitute our primary source of information for both, although both are also mentioned in the NT book of Acts: Agrippa I as the "Herod" who persecuted the early church in Jerusalem (12:1–23), and Agrippa II as the king who, years later, heard Paul's defense prior to Paul's journey to Rome (25:13–26:32).

1. Agrippa I was born in 10 B.C., son of Aristobulus and Bernice and thus, through Aristobulus, grandson of Herod. In early childhood he was sent with his mother to Rome. There he was brought up in the company of Claudius, who was his same age, and Drusus, son of Tiberius, who was slightly older. At the imperial court he made connections which were to prove vital to him in later life—not only with Claudius and Drusus, but also, through his mother, with Antonia, wife of the elder Drusus (Tiberius' brother), and with others besides, not least imperial freed-men (*Ant* 18.143, 191). It was largely in the pursuit of such connections that Agrippa borrowed and spent large sums of money. After the premature death of his companion Drusus in A.D. 23, Agrippa returned to Judea in a state of considerable poverty and, we are told, contemplating suicide.

By now Agrippa had married Cypros, daughter of Phasael. Her good offices won for Agrippa the help of his sister's husband, Antipas (*Ant* 18.145ff.). Antipas gave Agrippa an allowance and the post of *agoranomos* (market supervisor) at Tiberias, where he was to live. However, Agrippa soon found his position to be as ignominious as it was inadequate. We are told that Antipas taunted Agrippa over his dependence. Instead Agrippa looked to L. Pomponius Flaccus, Roman governor of Syria. He had become a friend of Flaccus during his time at Rome (*Ant* 18.149–50). At first Agrippa prospered in Flaccus' entourage. But he fell from favor when he took a bribe from the Damascenes to support their cause with Flaccus in a boundary dispute with the people of Sidon. Agrippa's brother and enemy, Aristobulus, had brought the bribe to Flaccus' attention (*Ant* 18.151–4).

Agrippa resolved to return to Italy but he lacked the funds to do so. He contracted a loan on disadvantageous terms with one Protos, a freedman of his mother whom she had left to Antonia. Agrippa sailed first for Alexandria, narrowly escaping the clutches of Herennius Capito, an imperial procurator who sought payment of Agrippa's outstanding debts to the imperial treasury (*Ant* 18.156–8). At Alexandria, Agrippa gained further funds through his wife, Cypros, who obtained a loan from Alexander the alabarch, who had already refused her husband (*Ant* 18.159–60).

Agrippa was received warmly by the emperor Tiberius on Capri, until a letter of complaint arrived from the outraged Capito. Tiberius now ordered that Agrippa be refused admission to him until his debt to the treasury had been paid. Antonia loaned Agrippa the necessary sum in memory of his mother and his upbringing with Claudius, her son. Tiberius now received him once more and placed him in the entourage of his grandson, Tiberius Gemellus. Meanwhile, Agrippa also sought the company of Antonia's grandson, Gaius, better-known by his nickname, "Caligula." A huge loan from a Samaritan freedman of Tiberius enabled Agrippa to pay his debt to Antonia and to spend lavishly as he pursued Gaius' favor (*Ant* 18.161–7). But Agrippa went so far in currying favor with Gaius that he found himself condemned by Tiberius on a charge of treason. Antonia's influence won him some privileges during his 6 months of imprisonment under the ever-present threat of execution (*Ant* 18.168–204).

Agrippa was only released upon Gaius' accession, after Tiberius' death, in A.D. 37. Gaius assigned him the northern domains of Philip the tetrarch and Lysanias with the title of king. Agrippa also received the symbols of the rank of praetor (*Ant* 18.228–37; Philo *In Flaccum* 40). Returning to Judaea in A.D. 38 he visited Alexandria where he eclipsed the Roman prefect of Egypt in his splendor (Philo *In Flaccum* 26–29). Upon the exile of Antipas in A.D. 39, Gaius gave Agrippa his tetrarchy (Galilee and Perea) in addition to Agrippa's other lands (*War* 2.183; *Ant* 18.255). At about this time Agrippa used his favor with Gaius and his diplomatic skills to block Gaius' plan of erecting a statue of his imperial self in the Temple at Jerusalem (Philo *Leg. ad Gaium* 261ff.).

At Rome again in A.D. 41, Agrippa is credited by Josephus with a major role in the tense negotiations which followed Gaius' assassination and which resulted in the accession of Claudius without full-blooded civil war. In reward, Claudius bestowed upon him the rest of the kingdom of Herod, his grandfather. Claudius formalized Agrippa's new position with a treaty ceremony in the Forum at Rome, held according to archaic custom, as Agrippa's coinage indicates (*Ant* 19.275 with *HJP²*, 445 n. 19). Agrippa also received the symbols of the rank of consul. For his brother Herod, Agrippa won rule over Chalcis (Dio 60.8.2–3).

Agrippa soon returned to his newly enlarged kingdom where he ruled to the benefit of Jerusalem and other cities, notably Berytus in Syria (*Ant* 19.335ff.). Yet, despite his close relationship with Claudius, Agrippa was instructed to abandon his fortification of Jerusalem by the emperor through Marsus, governor of Syria. Such fortifications were considered to be a potential threat (*Ant* 19.326–7 with *HJP²*, 448). On similar grounds Marsus broke up a gathering of kings which Agrippa had convened at Tiberias in A.D. 44 (*Ant* 19.338–42).

In general, Agrippa observed Jewish traditions scrupulously (*Ant* 19.331; though see *HJP²*, 451 on his coinage). He persecuted the Christians James and Peter, executing the former and chaining the latter (Acts 12:1–5). He died in A.D. 44 after a short illness which suddenly afflicted him while he presided at a festival in the emperor's honor at Caesarea-Strato's Tower. At the festival, Agrippa dressed in a silver

robe; the crowd, impressed with his radiance, acclaimed him a god. He did not reject the acclamation, and this act of vainglory was seen as the reason for his death (*Ant* 19.343–52; Acts 12:22–23).

Agrippa and Cypros had several children: Marcus Julius Agrippa (= Agrippa II); Drusus, who died before his father; Bernice; Mariamme; and Drusilla. Their names indicate a mixture of Jewish and family traditions with a concern for the Roman imperial family (Braund 1984: 111). Agrippa's own nomenclature, Julius Agrippa, indicates not only the Roman citizenship which he had inherited through Herod but also his family's links with the Roman Agrippa, a stalwart of Augustus' regime. Agrippa must have had a Roman forename, but this is not known: Marcus is usually assumed on the grounds that his son was Marcus, but it is also likely since the Roman Agrippa had also been Marcus. Like his son after him, Agrippa as king boasted the titles "Great King, Friend of Caesar, Pious and Friend of the Romans" (*HJP²*, 452; cf. 475). The book of Acts is exceptional in according him the name "Herod."

2. Agrippa II—or, to give him his Roman name, Marcus Julius Agrippa—was born in A.D. 28 the son of Agrippa I and Cypros (*War* 2.220 with *Ant* 19.354). At the time of his father's death in 44 A.D., young Agrippa was in Rome, where he was being brought up at the court of the emperor Claudius. Claudius, we are told, wished immediately to appoint him as his father's successor on the throne: Josephus implies that Claudius' formal treaty with Agrippa I may have contained some mention of the succession (*Ant* 19.360–2). However, the emperor's advisers dissuaded him from this plan in the light of Agrippa's youth and the kingdom's importance. In his stead Claudius therefore appointed a Roman governor (*Ant* 19.363).

While at Claudius' court, Agrippa took the opportunity of representing Jewish causes (*Ant* 15.407; 20.10ff. and 135). Claudius gave him the kingdom left vacant by the death of Herod of Chalcis, husband of his sister Bernice, in about A.D. 50 (*Ant* 20.104; *War* 2.223, with *HJP²*, Appendix 1). Josephus reckons the years of Agrippa's reign there from A.D. 49 (*JW* 2.284; cf. *Ant* 20.138). In 52 A.D. Agrippa was in Rome once more (*Ant* 20.134ff.). In A.D. 53, instead of Chalcis, he was given the former domains of Philip, Lysimachus, and Varus (*Ant* 20.138; with *HJP²*, 472 n. 7). Nero added parts of Galilee and Peraea, most importantly Tiberias, Tarichea, and Julias (*Ant* 20.159; *War* 2.252). These additions may be linked with the new eras which appear on his coinage in 56 A.D. and 61 respectively. In Nero's honor he renamed Caesarea Philippi as Neronias (*Ant* 20.211).

Agrippa has been acccused of excessive slavishness towards the Romans (notably by Schürer [*HJP²*, 474]); however, the accusation is not easily substantiated. His concern for Judaism is not in doubt; his discussions on Jewish legal matters with Rabbi Eliezer ben Hyrcanus tend to indicate as much (as Schürer [*HJP²*, 475] allows). That Agrippa's sister's husbands underwent circumcision may or may not be a further indication (*pace HJP²*, 475, who overemphasizes this). The book of Acts tends to suggest some interest in matters of religion, if a little detached, for he and his sister Bernice wished to see and hear Paul (25:22ff., especially 26:3). In particular, Agrippa's support of Jewish causes with Claudius ought not to be forgotten (above), nor the fact that he took costly steps to save the Temple from subsidence (*War* 5.36; *Ant* 15.391).

In A.D. 66 Agrippa was in Alexandria to congratulate Tiberius Julius Alexander, a man of Jewish origin who had become Roman prefect of Egypt. As the Jewish revolt developed in that year, Agrippa returned to Jerusalem to quell it. He failed to do so and became a target himself as the revolt flared up and split into factions (*War* 2.426). He was left little choice but to join with the Romans, which gave him the considerable military might and resources at his disposal (*War* 2.500–3; 523–5). Parts of his kingdom joined the revolt, notably Tiberias, Tarichea, and the fortress of Gamala, but Agrippa preferred to rule through delegates. He spent much of his time outside his kingdom at Berytus, a favorite city of the Herods, until the arrival of Vespasian in A.D. 67. Thereafter he kept close to Vespasian and his son Titus, who had also spent his youth at the court of Claudius (*HJP²*, 477).

Upon Nero's death in A.D. 68, Agrippa left for Rome together with Titus in order to congratulate the new emperor, Galba. In the course of their journey news arrived that Galba had been assassinated and replaced. Agrippa continued to Rome, but Titus returned to his father. On July 1, A.D. 69, Vespasian was proclaimed emperor at Alexandria; war with the other claimant, Vitellius, followed, so Agrippa returned

from Rome, staying with Titus, whom his father had left to deal with the Jewish revolt (Tacitus *Historiae* 2.1–2; 2.81; 5.1).

When Vespasian had established himself as emperor and the Jewish revolt had been crushed, Agrippa was rewarded for his loyalty with additional territory (details are lacking; see *HJP²*, 478). In Rome in A.D. 75 Agrippa was awarded the symbols of praetorian rank. Thereafter he all but disappears from history. Josephus tells us that Agrippa corresponded with him on the subject of his book on the *Jewish War,* praising its accuracy and admitting that he owned a copy (*Life* 65; *AgAp* 1.9). Agrippa seems to have died in the reign of Vespasian's younger son, Domitian, about A.D. 93 (*HJP²*, 480–83). His attitude toward the Romans, in part at least, is summed up in the speech which Josephus attributed to him. If Agrippa did not actually deliver this speech in trying to quell the revolt, he apparently later read and approved of it. The main point of the speech seems notably well-reasoned: namely, that the Romans were simply too strong to succumb to any uprising which Jewish revolutionaries could mount (*War* 2.345ff.).

Agrippa seems not to have married and not to have fathered any children. It was rumored that his relationship with his sister Bernice was incestuous: Josephus' denial of that rumor is as predictable and inconclusive as Juvenal's eager acceptance of it (*Ant* 20.145; Juv. 6.158).

AGUR. (PERSON) [Heb *ʾāgûr* (אָגוּר)]. The son of Jakeh, and author of a collection of Proverbs beginning in Prov 30:1. It remains unclear whether the pericope ends with the conclusion of the chapter or at an earlier point (verse 14?). See McKane *Proverbs* OTL, 643 for discussion. Cohen (*Proverbs* SonB, 200) cited a midrash that identified Agur as Solomon, the one who "stored up" (*ʾagar*) wisdom and (*nqh*?) "spewed it out" (*hiqqi*—for Jakeh) by taking many wives. Another ancient view of the passage understood "Agur" allegorically, i.e., as a reference to Solomon and saw "Jakeh" as David. Apparently, the Vulgate translated *ʾāgûr* as a passive participle, hence, "the Assembler" (from *ʾāgûr* "to gather"), an appellative rather than a proper name. The LXX reads "fear (my words)" based on the Hebrew *gûr* or *tāgûr* (*BHS*:1315), from *gûr* ("to dread").

The collection displays no unique character that would aid in recovery of information on the obscure Agur. The translation of the proper names (Agur and Jakeh) provides a preferred solution for the difficult passage, but the solution itself is not beyond question. Some commentators (e.g., Ringgren *Sprüche* ATD; Scott *Proverbs* AB, 175) read *hammassaʾî* ("the Massaite") for the difficult *hammassāʾ* ("the oracle"). Keil and Delitzsch (1950: 266–67) translated Prov 30:1 as "The words of Agur the son of Jakeh, of the tribe (the country) of Massa," claiming that both Agur and LEMUEL were Arabs. The name Agur does occur in Sabean inscriptions, though it is not found elsewhere in the Hebrew Bible. The word *hamassāʾ* has been emended to *mašālô* ("his *mašal*") by a number of recent interpreters. The most popular approach has been to read *massāʾ* as the common noun meaning "burden" or "oracle." Toy's suggestion that the word be omitted as a gloss is the most extreme solution (*Proverbs* ICC, 518). He also suggested that Agur was either a sage who lived well after Solomon, or an older figure whose authority was used by a later writer.

DONALD K. BERRY

AHAB (PERSON) [Heb *ʾaḥʾāb* (אַחְאָב)]. The name of two persons in the Hebrew Bible.

1. Son and successor of Omri, who ruled N Israel during the second quarter of the 9th century B.C. The exact dates of his reign are disputed: 871–852 B.C. (Begrich 1929; Jepsen and Hanhart BZAW 88); 874–

853 (Thiele 1965); 875–854 (Andersen 1969). The Deuteronomistic and prophetic traditions single him out as one of the worst kings of the N kingdom (1 Kgs 16:33; 2 Kgs 21:3, 13; Micah 6:16).

A. Sources

The sources for Ahab are 1 Kings 16:29–22:40, with the exception of chapter 19 (in which Ahab is mentioned only in verse 1, the introduction), chapter 20, and 22:1–38. These latter two references originally were not in the context of traditions about Ahab but instead of a later phase of the Omride dynasty or earlier phase of the Jehu dynasties, despite the occasional mention of Ahab's name (20:2, 13, 14; 22:20, see below). Given the tendentious nature of the remaining texts, however, caution is necessary when using them as historical sources. For example, the Elijah stories originate in prophetic circles of tradition which opposed the royal house of Omri (especially its religious policies), and which therefore depict Ahab as Elijah's antagonist. Also, the framework for the reign of Ahab (16:29–33; 22:39–40) is formed by the Deuteronomistic redactors of the book of Kings, who insert important traditional material here going back to the royal records of the N kingdom, but who utilize this material for their own negative assessment of Ahab.

These sparse historically relevant accounts of Ahab in the OT are supplemented by extrabiblical sources. Ahab is expressly mentioned in the so-called monolith inscription of the Assyrian king Shalmaneser III (see *ANET*, 277ff.). Likewise, the inscription of King Mesha of Moab refers in part to the reign of Ahab, without, however, mentioning him by name. The historical value of the excerpts from the historical work of Menander of Ephesus quoted by Josephus (*Ant* 8.13.2; cf. 8.13.1) is doubtful.

B. Ahab's Foreign Policy

Ahab was the exponent of a political program introduced by his father Omri, shaped mainly to counter the threat posed by the expanding power of the neighboring Aramean kingdom of Damascus (Unger 1957; Hallo 1960; Mazar 1962; Tadmor 1975; Lipiński 1978). Since the incursion of the Arameans into Galilee under Baasha (1 Kgs 15:16–22), the kingdom of Damascus remained a constant source of trouble which kept particularly the area E of the Jordan under pressure. However, we have no information about actual conflicts between Damascus and Israel in the time of Ahab. A massive Aramean invasion into the center of the Israelite territory, as reported in 1 Kings 20, is not likely to have occurred under Ahab. The story, originally transmitted anonymously, and referring to a later historical situation, was placed into the reign of Ahab by redactors, who inserted his name in various places (vv 2, 13, 14). The battle for Ramoth-Gilead, in which Ahab purportedly died (22:29–38), is also unhistorical. For a discussion of problems associated with the battles reported in 1 Kings 20 and 22, see ARAM (PLACE). Nevertheless, one may assume a constant state of tension between Aram-Damascus and Israel and possibly even border skirmishes.

These hostilities came to an end toward the end of Ahab's reign when a more dangerous enemy appeared on the scene and threatened both Syria and Palestine: the Assyrian king Shalmaneser III. Aram and Israel temporarily suspended their hostilities in order to oppose the Assyrians in a grand alliance of the Syro-Palestinian states ca. 853 B.C. The major part of Ahab's reign, however, seems to have been overshadowed by the Aramean threat. To meet this threat, Ahab conducted a deliberate policy of peace

and alliances with the neighboring states, especially Judah and Phoenicia. The border skirmishes with Judah, which had erupted periodically since the division of the kingdom at the time of Rehoboam, were probably terminated by Omri, but certainly by Ahab. The new state of peace and alliance was sealed by a political marriage: ATHALIAH (more likely a sister [2 Kgs 8:26] than a daughter of Ahab [2 Kgs 8:18]) was given in marriage to the Judean crown prince Jehoram. In the following period the Judean kings appear as partners in alliance with the N Israelite monarchs of the Omride dynasty.

In similar fashion, the relationship with the Phoenicians was placed on a new footing. Ahab, probably already as crown prince, married the Phoenician princess Jezebel, daughter of "Ethbaal, King of the Sidonians" (1 Kgs 16:31) or "Ittobaal, king of Tyre and Sidon" (Josephus *Ant* 8.13.1). It is doubtful whether the area of Mt. Carmel—which from time to time was in the hands of the Phoenicians—was returned to Israel in connection with the new alliance (Alt, *RGG*^{3} 1: 189). By the time of Ahab, however, it was firmly under Israelite control. Furthermore, the alliance with the Phoenicians probably was intended less to settle territorial disputes than to insure a condition of peace in the NW and to encourage trade with the Mediterranean coast.

Finally, even the border wars with the Philistines (1 Kgs 15:27; 16:15) ceased. During Ahab's reign and beyond, relations with the Philistine city states seem to have been peaceful (2 Kings 1). East of the Jordan Ahab initially maintained Israel's hegemony over Moab and secured the S frontier of the Israelite settlement of the wadi Heidan against the mounting pressure from the Moabites. He doesn't seem to have attempted to recapture the territory between the Heidan and the Arnon, which was occupied by the Moabites. Thus, Ahab achieved a truce on all borders, and in some areas even secured allies, in order to meet the Aramean threat in the N.

C. Ahab's Domestic Policies

Ahab's domestic policies likewise were aimed at consolidating power. In order to relieve and obviate internal tension he pursued a policy designed to strike a balance between the Israelite population and traditionally Canaanite segments of the population. The speculation that Ahab opened his new capital of Samaria to the Canaanite influence in particular while his secondary residence Jezreel was intended primarily for the Israelite component of the citizenry (Alt *KlSchr*^{2} 3: 258–302) cannot be documented. Yet it has a certain ring of truth, because Jezreel maintained its role as royal residence only among the rulers from the House of Omri and apparently lost this function after the revolution of Jehu and the anti-Canaanite purge of Samaria (2 Kings 9–10).

Ahab's policy of balancing Israelite and Canaanite interests also had consequences in the religious sphere. The Canaanite cult of Baal attained equal status and even received special governmental support through the influence of Queen Jezebel and her court. In Samaria, Ahab erected a temple to Baal with a Baal altar and an image of Asherah (1 Kgs 16:32f.). The god Baal who was worshipped there was identical to the Phoenician god Melkart whom Jezebel knew from her homeland. Ahab himself, however, was hardly a Baal worshipper (contrary to 1 Kgs 16:31); the names of his sons Ahaziah and Jehoram contain the root of Yahweh's name, and these names were Ahab's way of demonstrating his attachment to the God of Israel. Nevertheless, his policies of religious compromise and coexistence earned him the opposition of circles more zealously loyal to Yahweh, especially the prophet Elijah, who viewed Ahab's policies as a challenge to the requirement of exclusive worship of Yahweh (cf. 1 Kgs 18:21). This violent opposition continued among the prophetic groups even after the death of Ahab and has led to the dim view of Ahab preserved in the biblical tradition. Subsequently this portrait was adopted and further intensified by the Deuteronomistic redactors of the book of Kings (1 Kgs 16:30–33).

D. Traditions about Ahab

1. The Drought and the Contest on Carmel. The reign of Ahab is linked to the tradition of a severe drought whose beginning and end was traced to the activity of Elijah the prophet (1 Kgs 17:1; 18:41–46). It seems, however, that at this point the two were not yet antagonists. It is debatable whether this drought is identical with the one which Menander of Ephesus alleges occurred under Itto-baal of Tyre in Phoenicia (Josephus *Ant* 8.13.2), or whether the link between them was established by Josephus himself. The implication that the drought was caused by Ahab's idolatry (1 Kgs 16:29–17:1) was a construction of the

Deuteronomistic redaction: The original prophecy itself (17:1) contained no such attribution. It is possible (if not provable) that, like other originally basic information (e.g., a more detailed identification of the rank of Ahab and of the place of the prophecy), the original "cause" for the drought was deleted by the redactors in favor of their own explanation.

The tradition of the contest on Mt. Carmel was originally unrelated to Ahab. True, he is mentioned in the introduction (18:20), but he appears nowhere else in the entire narrative (18:21–40). The contest on Mt. Carmel was thus definitely not a "Haupt- und Staatsaktion" (Alt, *KlSchr*^{4} 2: 147), but was likely a much more limited, local event in which the powers of state were unlikely to have participated. Nor does the first half of chapter 18 contain any historically reliable information on Ahab. The passage which describes how Ahab and his house minister, Obadiah, scour the whole country in search of feed for the royal mares (vv 3–6) most likely does not recount an historical incident, but is intended to demonstrate vividly the severity of the drought's burden on the land. The scene of the encounter between Ahab and Elijah (vv 16–20) serves primarily to link the theme of the drought to the tradition of the "divine judgment on Mt. Carmel."

2. Naboth's Vineyard. The story of Naboth's vineyard at Jezreel (1 Kings 21), on the other hand, is explicitly an Ahab tradition. In the present form of the chapter it is Jezebel, to be sure, who is the chief character of the episode. Yet it is Ahab who was most likely the original focus of the tradition. This is already evident in the fact that, at first, Elijah addresses only Ahab (vv 17–22), while the word of judgment over Jezebel appears as a later addition to the story (v 23). Furthermore, there exists a short parallel tradition to this story in 2 Kgs 9:25–26. Here, too, only Ahab is mentioned as the offender; Jezebel is not mentioned at all. Similarly, the story's motif of "intrigue"—Jezebel staging a fast day with Naboth presiding, bribing false witnesses to denounce him, and then putting him to death on trumped up charges—probably should be attributed to a secondary embellishment of the tradition. Originally it is probable that Ahab on his own initiative appropriated a piece of land belonging to Naboth of Jezreel (more likely a field outside the city [2 Kgs 9:25f] than a vineyard next to the royal palace [1 Kgs 21:1]) by falsely accusing Naboth (of high treason?) and executing him together with his sons (2 Kgs 9:26), who would retain a legal claim to the land.

This was probably an instance of conflict between the old Israelite property laws and the interests of the king. The former guaranteed the Israelite protection from sale or exchange of his inherited land, while the latter accommodated the expansion and consolidation of crown property. According to 1 Kgs 21:2, Ahab shared the belief common in the ancient Orient (as well as in Canaan) that property could be freely traded, bought, exchanged, or mortgaged (not unlike his father Omri, who purchased the hill of Samaria, 1 Kgs 16:24). He was thwarted, however, by Naboth's implicit appeal to the Israelite law of property (21:3) which prohibited the sale or exchange of inherited land except for its transferral as inheritance. The intent of this tradition was probably to show how Ahab employed the power of his royal office to eliminate Naboth and his sons unlawfully and to gain possession of their land. This instance of might before right was a perversion of the king's role, and indicates that in some ways the Israelite monarchy resembled ancient Oriental despotism. Consequently, Ahab received an announcement of impending judgment; in 1 Kgs 21:17ff. it is understood to have been conveyed by Elijah, but in 2 Kgs 9:25–26 it is mentioned only as the word of Yahweh without naming any prophet. According to the latter text the judgment was executed not against Ahab but his son Jehoram. See NABOTH.

3. Building Projects. The reign of Ahab brought Israel not only military strength and security, but also increase of commerce, economic prosperity, and material culture. As might be expected, Ahab's building activity is also emphasized by the Deuteronomistic frame (16:32f.; 22:39) which itself derives from the royal records. It is likely that he completed the construction of the new capital, Samaria, which his father Omri had founded. Mention has already been made of the construction of a Baal temple with altar and Asherah statue (16:32f.), which was intended primarily for Jezebel and her retinue, but also for a wider Canaanite population. The shrine was totally demolished during Jehu's rise to power (2 Kgs 10:25–27) and therefore it is no longer accessible to archaeological examination. According to 1 Kgs 22:39, Ahab

also built an "ivory house": This designates the royal palace (or a part thereof), the walls of which were decorated with ivory carvings.

The excavations at SAMARIA illustrate this fact. The ivory plaques found there represent the most important collection of Palestinian miniature art of this era. At least a part of it belongs to Ahab's time (Dussaud 1925). The images manifest the strong influence of Egyptian style, but are probably of Phoenician origin. A fortified casemate wall (stratum 2) ascribed to the Ahab period demonstrates Ahab's efforts to enclose the city. The design of the palace is no longer exactly ascertainable because of numerous structural additions. Especially noteworthy, however, is the brilliant wall construction using ashlars in a nearly seamless headers-and-stretchers technique, which cannot be attributed to indigenous Israelite traditions of craftsmanship. It is more likely that Ahab, like Solomon before him, employed Phoenician specialists who contributed their technical expertise in the construction of the capital city.

Besides Samaria there are other cities in the land which Ahab completed or developed into fortifications (Pienaar 1981). The latter normally were sitated in strategically important locations. Hazor, Dan, and En Gev protected the land against the Aramean threat; Megiddo shielded the plain of Jezreel against incursions from the coastal plain, especially by the Philistines; while Jericho (1 Kgs 16:34) apparently served as protection against possible Moabite attacks, or as a base of operations in S Cis-Jordan. Of course, it is not possible in every case to determine precisely whether the strata in question belong to the time of Ahab or to other Omride kings; however, in view of the remark in 1 Kgs 22:39 it seems most likely that the bulk of these should properly be attributed to Ahab.

The most striking archaeological findings come from MEGIDDO and HAZOR, both of which were heavily garrisoned fortresses. In the W part of the Hazor settlement there was a large citadel with unusually thick walls and a monumental gate which was originally adorned with proto-aeolic columns (Stratum 8). The excavations in Megiddo between 1960 and 1970 have caused a considerable revision of the old stratigraphy (Yadin 1975). The famed "stables of Solomon" now have turned out to be buildings from the time of Ahab (Stratum 4a); their function, however, remains disputed. In view of the large contingent of war chariots at Ahab's disposal, their use as stables cannot be ruled out; however, their interpretation as storehouses, or even as garrisons, is currently favored. A similar columned building in Hazor from the same era (Stratum 8) is plainly a storehouse. The immense water systems in Megiddo and Hazor are particularly striking. They, too, may be dated to Ahab's time. They each consisted of a vertical shaft (of 35 m at Megiddo; 30 m at Hazor) leading, via a stairway, to a horizontal tunnel. At Hazor this tunnel of 25 m led to the groundwater table in a gentle descent. At Megiddo water from a spring protected externally by a wall was carried to the shaft over a distance of 63 m. Both structures were engineering masterpieces of their time, insuring unhindered access to water from inside the city in the event of a siege.

4. The Battle of Qarqar. Toward the end of Ahab's reign a newly emerging enemy upset the balance of power in Syria and Palestine: the kingdom of Assyria. In 853 B.C. the Assyrian king Shalmaneser III mounted his first campaign against Syria. This event is not mentioned in the OT, but is known from Assyrian sources, particularly from the so-called Monolith Inscription of Shalmaneser (*ANET*, 278f.). Observing the Assyrian expansion, the Syro-Palestinian states suspended their internecine hostilities and formed a protective alliance against the greater danger. At the head of this coalition apparently stood the Aramean king of Damascus, Hadadezer. Immediately following him, Irḫulēni, king of the Arameans of Hamath, and Ahab of Israel (*aḫabbū sir›ilā›a*) are mentioned as most important allies. They were joined by lesser Syrian and Phoenician rulers as well as Arabian cameleers. With 2,000 war chariots, Ahab deployed the largest chariot force of all the allies. Shalmaneser had attacked the area of Hamath and had conquered and destroyed the town of Qarqar. It was here that the army of the allies challenged him. As may be expected from the style of the Assyrian royal inscriptions, the Assyrians won a brilliant victory; it was, however, more likely a failure, for Shalmaneser discontinued his advance and apparently gave up his plans of subjugating the enemy. In the years following he avoided marching into Syria and resuming the battle with the allies.

5. Ahab's Death. Ahab died shortly after the battle of Qarqar. According to 1 Kgs 22:29–38, he lost his life in a battle with the Arameans over the E Jordan city of Ramoth-Gilead. This implies that the Israelite-

Aramean alliance disintegrated quickly. However, the formula in 22:40 ("he was laid to rest with his father," which is generally used for a nonviolent death) contradicts such an implication, reflecting correctly the actual historical facts. 1 Kgs 22:29–38 is not a tradition yielding reliable historical data; at best it may reflect residual memories of the wounding of Ahab's son Jehoram near Ramoth-Gilead (2 Kgs 8:28–29; 9:14ff.). Furthermore, a notice of fulfillment has been inserted (22:38; cf 21:19). Thus it seems likely that Ahab died a peaceful and natural death in Samaria.

E. Conclusion

The portrait of Ahab and his dynasty (the "House of Ahab") has been negatively distorted in the OT tradition primarily because of his religious policies which were seen as a danger to the traditional worship of God in circles loyal to Yahweh. His skillful foreign policies, which provided Israel with strength, security, and prosperity, which safeguarded peace and the balance of power, and which, finally, contributed to the (temporary) containment of Assyrian expansionism, may be inferred from the few sources that yield reliable historical data. However, his contributions in this regard were ignored in the decidedly theological perspective of the OT witnesses (Whitley 1952; Gooding 1964; Cohen 1975). The negative picture of Ahab in the OT is influenced (1) by the circles of opposing prophetic groups who transmitted the events of that time through their own biased perspective and (2) by the transitions accompanying the Jehu revolution, which put an end to the "House of Ahab". In the judgment of later Deuteronomistic circles, Ahab was the worst of all the kings of the N kingdom (1 Kgs 16:33). For them, his behavior yielded a negative criterion for the assessment of subsequent kings or groups and their fortunes (2 Kgs 21:3, 13; Micah 6:16).

2. The son of Kolaiah who, along with Zedekiah the son of Maaseiah, was condemned by Jeremiah for prophesying false things to the Judean exiles in Babylonia (Jer 29:21–23). The two were also accused of committing adultery. Although the LXX omits 29:16–20 (the Lucianic text preserves them in a different order), the context of the passage suggests that, like their contemporary Hananiah (Jeremiah 28), these two prophesied a quick end to the exile. Apparently their prophetic activity earned them the disfavor of Nebuchadnezzar, who had them executed (probably for sedition). Consequently, Jeremiah anticipated that their deaths would be cited in a popular curse: "May Yahweh make you like Zedekiah and Ahab, whom the king of Babylon roasted in the fire."

TRANS. DIETLINDE M. ELLIOTT

AHARAH (PERSON) [Heb *ʾaḥĕraḥ* (אַחְרַח)]. The third son of Benjamin, following Bela and Ashbel in 1 Chr 8:1 (LXX variants include *aara, deira,* and *iaphaēl*). Since the name Aharah does not occur in parallel genealogies of Benjamin (Gen 46:21; Num 26:38; 1 Chr 7:6), it is difficult to identify him. These various genealogies differ in the names, number (from three to ten), and order of sons listed. The close variant name "Ahiram" is listed as the 3d son of Benjamin in Num 26:38 (like Aharah, this name occurs only once), suggesting that the list in 1 Chronicles 8 is dependent on Numbers 26.
MARK J. FRETZ

AHARHEL (PERSON) [Heb *ʾăḥarḥēl* (אֲחַרְחֵל)]. The son of Harum and bearer of the family name (1 Chr 4:8). Located within a fragmented list of Judah's descendants (vv 1–23), the MT shows no connection between this verse and the surrounding context. The MT of v 8 (*wĕqōs hōlîd ʾet-ʿānûb wĕʾet-haṣṣobēbâ ûmišpĕḥōt ʾăḥarḥēl ben-hārûm,* "And Koz was father of Anub, and Zobebah, and the families of Aharhel the son of Harum") may be connected to v 7, if it is assumed that Heb *wĕqōṣ* has dropped out of the end of v 7 through haplography (Williamson *1, 2 Chronicles* NCBC, 59). This would make Koz the last named son of Ashhur and Helah, and thereby relate his offspring to Judah. Similarly, v 8 and v 9 are not interconnected, unless it is assumed that Jabez was also a son of Koz (Curtis and Madsen *Chronicles* ICC, 107).

Most scholars agree that the text of 1 Chr 4:5–9 is corrupt, and that v 8 stands apart from the preceding and succeeding verses. Therefore, genealogical connections between individuals in these verses are not easily established. If, as the MT suggests, Aharhel is indeed the son of Harum, it seems unlikely for him also to be a son of Koz (Rudolf *Chronikbücher* HAT, 30). If Harum is a gentilic variant of "Ram" (Heb *rûm*), with a prefixed definite article, then Aharhel is a descendant of Ram (Yeivin 1971: 199, n. 109). The LXX reading suggests a third possibility: The name Aharhel itself (*ʾăḥarḥēl*) is a textual corruption of the phrase *ʾăḥî rēkab,* "brother of Rechab" (*gennēseis adelphou Rēchab huiou Iareim,* "the progeny of the brother of Rechab, the son of Iarim"). Since the names Aharhel and Harum do not occur elsewhere in the Bible, and the foregoing questions cannot be satisfactorily resolved, no clear identification of Aharhel is possible.

MARK J. FRETZ

AHASBAI (PERSON) [Heb *ʾăḥasbay* (אֲחַסְבַּי)]. The father of Eliphelet (2 Sam 23:34), one of David's champions (the *šālišîm;* RSV: The Thirty). That Ahasbai was from Maacah may indicate that he was a Syrian (see MAACAH), making his son one of the many foreign nationals among David's retainers. The town of Abel, in Beth-Maacah (2 Sam 20:14) probably refers to the region of Maacah in southern Syria as well (cf. Aharoni *LBHG* 167). On the other hand, 1 Chr 2:48; 4:19 list Maacah as a family group in southern Judah, raising the possibility that Ahasbai was a Judean. The parallel list in Chronicles (1 Chr 11:35b–36a) reads Eliphal the son of Ur, followed by Hepher the Mecherathite, instead of Eliphelet, the son of Ahasbai of Maacah. In this case it seems probable that the scribe misread the Hebrew consonantal text *ʿḥsby* as *ʿwr ḥpr,* though in other instances it appears as if the Chronicler is working with a somewhat different text from that in 2 Sam 23:8–39 (see DAVID'S CHAMPIONS).
D. G. SCHLEY

AHASHTARITES [Heb *hāʿăḥaštārî* (הָאֲחַשְׁתָּרִי)]. See HAAHASHTARI.

AHASUERUS (PERSON) [Heb *ʾăḥašwērôš* (אֲחַשְׁוֵרוֹשׁ); Gk *asyēros* (ἀσυηρος)].

1. The Persian king who chose Esther to be his queen (Esth 1:1; 2:16–17; cf. also Ezra 4:6). See ESTHER. He is to be identified with the famous XERXES (485–465 B.C.), but was mistakenly identified

in Jewish Midrash with Artaxerxes. Hoschander (1923) argued that Ahasuerus was to be identified with Artaxerxes II (403–359 B.C.). But extrabiblical evidence leaves little doubt that Ahasuerus was Xerxes, the son of Darius I. Shea (1976: 228) is able to list the spelling of both Xerxes and Artaxerxes in seven languages: Greek, Old Persian, Elamite, Aramaic, Hebrew, Akkadian, Egyptian (there is always a *t* in the spelling of the latter name).

Apart from Esther, this Ahasuerus is mentioned only in Ezra 4:6 in relation to an accusation which was lodged against the Jews in his reign. Morgenstern (1956, 1957, 1960, 1966) postulated a destruction of Jerusalem in 485 B.C. in the reign of Xerxes as the immediate background of Ezra and Nehemiah, but most scholars regard such a thesis as highly improbable.

Herodotus, in addition to depicting Xerxes' role in the invasion of Greece in 480 B.C., presents an unflattering portrait of the king as an impatient, hot-tempered monarch with a wandering eye for women. According to Herodotus (9.108–13), Xerxes (Gk *assouēros*) not only tried to have an affair with his brother's wife, but also did have an affair with her daughter.

According to Barucq (1961: 3), the role which Ahasuerus holds in Esther "conforms perfectly to Xerxes" as we know him from Herodotus. Moore (1975: 69) agrees: "Much of what the author of Esther says about King Xerxes corresponds fairly well with what the classical writers had to say about such things, for example, … his nasty and at times irrational temper (1:12; 7:7–8) …"

Ahasuerus is prominently portrayed on his throne in a fresco of the famous Dura Europos synagogue (Levit-Tawil 1983).

2. The father of Darius the Mede (Dan 9:1). See DARIUS THE MEDE.

3. The ruler who helped Nebuchadnezzar destroy the city of Nineveh (Tob 14:15). However, given the romantic and unhistorical nature of this apocryphal book, the identity of this character is in doubt. The author's chronological sequence seems to be so skewed (cf. Tob 1:4, which condenses events two centuries apart into one generation) that it is impossible to determine which ancient ruler he had in mind. He may have regarded this as the same Ahasuerus mentioned in Esth 1:1 and Ezra 4:6 (i.e., the Persian Xerxes; see 1. above), who came to the throne about 75 years after Nebuchadnezzar died. Other ancient sources confirm that Nineveh was actually destroyed in 612 B.C. by a coalition led by Nebuchadnezzar's father Nabopolassar and Cyaxares (*Uvaxšatra*) the Mede.

EDWIN M. YAMAUCHI

AHAVA (PLACE) [Heb *ʾahăwā* (אַהֲוָא)]. Var. THERAS. The river (and possibly also a town) mentioned in Ezra's memoirs as the place where Ezra first gathered the exiles and proclaimed a fast before departing to return to Palestine (Ezra 8:15, 21, 31). Although limited data is available, and all proposed identifications assume a particular route for Ezra's return, Ahava presumably was located within a radius of 200 km from Babylon (Zadok 1979: 117).

One obstacle to identification lies in the abundant textual variants found in the relevant verses. In v 15, the Ethiopic *ahua* reflects MT tradition, but LXX variants including *euei (m)* and *thousi* do not support the MT. In vv 21 and 31, the LXX reads variously *thoue, aoue, daouath.* The 1 Esdras 8 parallels read

theran (41, 60—Eng8:61), while a variant of v 41 reads *potamon* (river) as the proper name itself. Josephus mentions no name, but simply refers to the place as the "other side of the Euphrates" (*Ant* 11.5.2). It is difficult to decipher whether the various mss reflect different *vorlagen*, or whether the scribes were attempting to make an identification of the site.

Although the canal Ahava still has not been positively identified by scholars (Delitzsch 1881: 193), and may simply refer to a large, unsettled area outside Babylon, it may be associated with various settlement sites. According to Williamson (*1, 2 Chronicles* NCBC, 116), Ahava may have been one of Babylon's artificial canals or waterways constructed for defensive purposes, whose source was the Euphrates. Winckler (1901: 518) identifies Ahava with the ancient city of *Opis* (Babylonian *Upi*), which was probably located north of Sippar along the Tigris. Obermeyer (1929: 15) identifies Ahava with "Awana" (where "na" signifies a district), a village located ca. 53 km north of Baghdad near the Tigris. Based on LXX *aoue* and *euei*, Gutman (*EncMiqr* 1: 122) proposes *Itu* (modern *Hīt*, probably the same as *Is*), a city located ca. 200 km northwest of Babylon on the Euphrates.

AHAZ (PERSON) [Heb *ʾāḥāz* (אָחָז)]. The name is a hypocoristicon: a shortened form of names such as Ahaziah and Jehoahaz, "the LORD holds." These names probably reflect confidence in God's imminent presence, as in Ps 73:23, "I am always with you, you hold (*ʾāḥaztā*) my right hand" (*IPN*, 179).

1. The great-great-grandson of Saul, mentioned only in post-exilic genealogies (1 Chr 8:35, 36, and 9:41, 42; Ahaz is absent in the Hebrew of 9:41, probably as a result of haplography). These verses appear in the two nearly identical genealogies of Saul's family in 1 Chr 8:33–40 and 1 Chr 9:39–44. This list is from the end of the First Temple period (Demsky 1971: 20), and was preserved by Benjaminite families that survived the Babylonian exile (Williamson 1979: 356). The existence and preservation of the Saulide genealogy probably reflects the continued prominence of Saul's family, and perhaps even their hope that they would return to power (Ackroyd, *Chronicles Ezra Nehemiah* CBC, 42; Flanagan 1982: 25). The genealogy of Benjamin in 1 Chronicles 8 corresponds to the genealogy of Judah in chaps. 2–4, forming a frame around the other tribes of Israel. Benjamin and Judah are given this prominent position by the Chronicler because of their past loyalty to David and the Temple (Williamson, *Chronicles* NCB, 46–47) and because they are the two main tribes that returned from the exile (Ezra 1:5). The repetition of the genealogy in chap. 9 serves as a bridge to the narrative of Saul's death in chap. 10 (Demsky 1971: 17).

MARC Z. BRETTLER

2. The son and successor of Jotham, who assumed the throne when he was 20 years old and reigned for 16 years, ca. 742–727 B.C.E. (2 Kgs 16:2). The fuller form of the name Jehoahaz is found in the Assyrian annals of Tiglath-pileser III as Yauhazi (*ANET*, 282–4). The chronological difficulties connected with this reign are notoriously difficult. The precise timing of Ahaz's accession is obscured by the conflicting references in 2 Kgs 16:2 and 2 Chr 28:1 when compared with the contradictory information about the death of Ahaz and the accession of Hezekiah (2 Kgs 16:19–20; 18:1). If Hezekiah succeeded Ahaz when he was 25 years old (2 Kgs 18:2), then Ahaz could only have been 11 years old when he became a father since he is said to have been 36 at the time of his death (2 Chr 28:2).

Various aspects of the reign of Ahaz are described in three separate accounts in 2 Kings 16, 2 Chronicles 28, and Isaiah 7, as well as in Assyrian annals and inscriptions (*ANET*, 282–84). These accounts give very different assessments of the reign of Ahaz, as well as a number of conflicting details which are difficult to reconcile. Historians have tried to reconstruct the Syro-Ephraimite war on the basis of the accounts of Ahaz's reign in Kings, Chronicles, and Isaiah. All note that the broad outline appears to be recognizable, while the actual details are much more contentious. See SYRO-EPHRAIMITE WAR. A good account of the various difficulties can be found in Bright (*BHI*, 276–77) or Miller and Hayes (*HAIJ*, 340–46). These accounts are dependent upon critical judgments about the date of the various narratives as well as assessments of the priority of various conflicting details in the different accounts. There is some dispute over the correct date of Ahaz's appeal to Tiglath-pileser for assistance in fending off the anti-Assyrian coalition formed by N Israel and Syria. Judah was deprived of the important economic and strategic port of Elath by the Arameans (according to the MT of 2 Kgs 16:6) or by the Edomites (as many commentators emend the text). According to the Chronicler, the Edomites joined the attack upon Judah (2 Chr 28:17–18), while the Philistines made incursions into the Shephelah and Negeb. However, it is clear that the Assyrians soon subdued the region and defeated the Syro-Ephraimite coalition (ca. 734–732 B.C.E.).

Furthermore, it is often concluded that the consequences of Ahaz's action was to reduce Judah to a vassal state of Assyria (*BHI*, 276–77). A particular area of debate (Cogan 1974; McKay 1973) has been whether or not Ahaz introduced the worship of Assyrian astral deities into the Jerusalem temple and so throughout Judah. Such a view is based on the description of Ahaz's voluntary introduction of the altar from Damascus into the Jerusalem temple after his visit to Tiglath-pileser (2 Kgs 16:10). This is then thought to be confirmed by the fact that Ahaz was forced to pay tribute, in the form of temple treasures, to his Assyrian overlord. However, this standard interpretation has been challenged, particularly by Cogan (1974) and McKay (1973). They question the fact that Tiglath-pileser ever imposed Assyrian religion upon vassals or that Ahaz was forced to modify indigenous cults (McKay 1973: 5–12). It has been pointed out that the Deuteronomistic condemnation of Ahaz was for the introduction of Palestinian indigenous cults rather than for those of Assyria (Cogan 1974: 72–88). Ahaz's sacrificial cult is described in 2 Chr 28:23 as being carried out in honor of the "gods of Damascus." This suggests that the Jerusalem cult was based on common Syro-Palestinian models, rather than necessarily subject to Assyrian imperial religion. Cogan and McKay deny that the type of altar described is found in Mesopotamia. Ahaz is also seen as reviving the cult of child sacrifice associated with Molech. The phrase "he made his son pass through the fire" is taken as a reference to child sacrifice rather than some ritual ordeal: RSV "he burned his son" (cf. Deut 18:10).

The differing biblical and scholarly assessments of Ahaz's reign highlight the tendentious nature of the biblical narratives. Ackroyd (1968) has highlighted the differing theological concerns in the three narratives and their difficulty as historical sources. He maintains that it is not possible to conflate the accounts in order to arrive at an historical picture. Thompson (1982) has produced the most detailed study of the theological shaping of these narratives. Ackroyd (1984) has recently argued that Ahaz's submission to Assyrian power enabled Judah to survive the catastrophe which overtook the northern kingdom in 722 B.C.E., whereas Hezekiah's rebellion against the Assyrians resulted in disaster. He concludes that the biblical assessments of Ahaz's reign from a purely theological point of view present the opposite of an historically accurate picture.

The account of Ahaz's reign in 2 Kings 16 forms an important part of the Deuteronomistic presentation of the climactic advance of the S kingdom to its ultimate fate at the hands of the Babylonians in 587 B.C.E. Ahaz's reign is highlighted by the Deuteronomists in a number of important ways. He is not only condemned with the standard assessment that "he did not do what was right in the eyes of the LORD …," but his reign is introduced without mention of his mother, a very rare occurrence in regnal formulae paralleled only in the introduction to the reign of Jehoram (2 Kgs 8:16–17). Again, like Jehoram, Ahaz is also reviled further by being compared in his wickedness to the kings of Israel (2 Kgs 16:3; see 2 Kgs 8:18). The amount of space devoted to detailing Ahaz's religious and political deviations from the

Deuteronomistic ideal highlights the significance of this chapter within the Deuteronomistic History. Ahaz is presented as adding significantly to this spiral of cultic decline by following the abominable practices of the nations driven out by Yahweh and sacrificing and burning incense on the high places, hills, and under every green tree. His cultic failings are couched in language that makes his crime in the eyes of the Deuteronomists unambiguous and unforgivable. The appeal to Tiglath-pileser against the Syro-Ephraimite coalition, his subsequent building of the altar on the Damascus model, the payment of tribute, and various alterations to the temple are introduced without explicit comment or condemnation. However, in the context of the severe condemnation in the opening verses of the chapter (2 Kgs 16:2–4), this has to be read as further evidence of the inherent corruption of Ahaz's reign. Most reigns of S kings who are judged as unworthy as Ahaz are dismissed in a few verses. The significance of this chapter is that it stands immediately before the important editorial section in 2 Kings 17 detailing the destruction of the N for its apostasy. The present context, therefore, highlights that the S kingdom is progressing at an ever increasing rate to a similar fate.

The Chronicler's presentation of the reign of Ahaz further highlights the different theological assumptions underlying these major complexes within the Hebrew Bible. It is generally recognized that the Chronicler reworks the material from Kings in line with his/her own tendentious design. The overall condemnation at the opening of the chapter remains very much the same. However the details of the account are often strikingly different while much of the material is unique to the Chronicler. The treatment of Judaean captives by the N kingdom (2 Chr 28:8–15) is an addition by the Chronicler. Ahaz's problems with Israel and Syria are not presented as due to a coalition but as separate matters. Whereas 2 Kings 16 and Isaiah 7 state that the coalition besieged Jerusalem but was unable to take it, the Chronicler details devastating defeats by Syria and Israel. Williamson (1977: 114–18) has pointed out the significance of the chapter within the Chronicler's work. The various additions and changes made by the Chronicler to the Kings account reverse the presentations of the S and N kingdoms in 2 Chronicles 13. He highlights very significant literary parallels between 2 Chronicles 28 and 2 Chronicles 13 which emphasize the tendentious way in which the material is presented. At the end of the reign of Ahaz both communities have been defeated and are in partial exile. It is made clear that Ahaz has reversed the religious policies of Abijah and that Judah has assumed the apostate role previously attributed to N Israel.

Isaiah 7 provides a different perspective on the Syro-Ephraimite coalition and Ahaz's role in the affair. Ahaz symbolizes a lack of faith and trust in Yahweh. The symbolic naming of the children, Shear-jashub and Immanuel, are signs of hope presented to the king confirming that the coalition will be divinely defeated, provided Judah remains faithful. The implicit threat is to the Davidic dynasty since the signs are given to "the house of David" (7:2). Clements (*Isaiah* NCBC, 84) also points out that the attempt by the coalition to place Ben Tabeel on the throne further symbolizes the threat since it is usually assumed that the reference is to an Aramaean of non-Davidic descent.

KEITH W. WHITELAM

AHAZIAH (PERSON) [Heb *ʾăḥazyāh (û)* (אֲחַזְיָהוּ)]. The name of two kings in the OT. The name means "Yahweh has seized."

1. King of N Israel, the son and successor of Ahab, who reigned little more than one year. The calculations for his reign differ only slightly: 852–851 B.C.E. (Begrich and Jepsen), 853–852 (Thiele), 854–853 (Andersen).

The sources for Ahaziah of Israel are found in 1 Kgs 22:40, 50, 52–54 (—Eng 22:40, 49, 51–53; 2 Kgs 1:1–18; and 2 Chr 20:35, 37. The subsequent division of the book of Kings has split the account of Ahaziah's reign into two halves. Little is reported about the period of his reign. One can assume that it was too short a period of time to enable him to make changes in the policies he had inherited from his father Ahab, even if he had wanted to do so. He probably continued Ahab's policies, externally seeking peace and alliances and concentrating all his efforts on the prevention of a potential Syrian (and later an Assyrian) threat. Domestically, he probably continued to strive for a balance between the Israelite citizens and the traditionally Canaanite population by promoting equality of rights in social and religious affairs. This caused him (like his father Ahab before him) to be criticized by circles loyal to Yahweh, especially by the prophet Elijah. A concrete case of this is found in the narrative of 2 Kings 1. Because these few notices about Ahaziah derive from the prophetic tradition and the Deuteronomistic redactors, he is depicted negatively, as was his father Ahab.

2 Kgs 1:1, a noteworthy verse that seems rather abrupt, informs the reader that Moab rebelled against Israel after Ahab's death (i.e., during the reign of Ahaziah). This note appears in an almost identical formulation in 3:5, where it refers to the time of Jehoram, Ahaziah's successor. It introduces the narrative about the campaign of the kings of Israel, Judah, and Edom against King Mesha of Moab. This is most likely the original source of this information (3:5), but later Deuteronomistic redactors moved it to 2 Kgs 1:1, because it fit the chronological context better there ("after Ahab's death," which had just previously been reported). In this new context, however, this note served no purpose. Besides, the "defection of Moab" is difficult to imagine as a sudden event. In the last years of Ahab's reign the Moabites were probably already attempting to shake off their dependency, in order to exert more pressure on the areas of Israelite settlement in the N after Ahab's death (cf. *KAI* 2,174). The growing expansion of the Moabites under the rule of their king Mesha must have burdened the administrations of Ahaziah and Jehoram.

According to 1 Kgs 22:50 Ahaziah offered to let the Judean king Jehoshaphat participate in his naval enterprise in the Red Sea. It is certain that this notice depends on old reports. Jehoshaphat used his sovereignty over Edom in order to imitate the model of Solomon (1 Kgs 9:26–28; 10:11) and to resume his shipping trade headquartered at the Gulf of Aqabah. He had a fleet built at Ezion-geber (a location that has not yet been exactly determined near present-day Elath, perhaps Ǧesīret Faraʿūn), which was supposed to travel to Ophir (probably in S Arabia) where it would acquire gold through trade (22:48–49). Ahaziah also wanted to be involved in this financially promising expedition. It is possible that he offered Jehoshaphat the chance to join the undertaking by introducing him to the arts of ship construction and nautical affairs, which the Israelites had learned in their dealings with the Phoenicians. Whatever the circumstances and the background for this may have been, Jehoshaphat rejected Ahaziah's offer. The expedition miscarried; soon after its departure the fleet, which had been constructed by Judeans inexperienced in shipbuilding, was dashed to pieces.

In 2 Chr 20:35–37, the sole passage in Chronicles that mentions Ahaziah, this event receives a theological interpretation. By changing the details of 1 Kgs 22:48–50, the naval project was depicted as an enterprise shared by both kings. The words of an otherwise unknown prophet announce and interpret this failure as God's punishment for Jehoshaphat's alliance with the impious Ahaziah.

The most extensive story about Ahaziah, found in 2 Kgs 1:2–17, is a tradition about Elijah. Ahaziah is mentioned by name only at the beginning (v 2), although it is almost certain that he was indeed Elijah's opponent in this conflict. The original story encompassed only vv 2–8, 17. It derives unquestionably from historical facts, but uses them only as a framework for a theological statement. This narrative reports that Ahaziah has had an accident, falling from his upper chamber—either through the wooden window lattice or through the enclosure surrounding the roof, injuring himself seriously. In this condition he sent messengers to Ekron to obtain an oracle concerning his fate. The name of the god to which he appealed in 2 Kgs 1:2 is Baalzebub, "Lord of the Flies," which seems to be a distortion of the original name Baal-Zebul, "Prince Baal" (as attested in Ugaritic texts and even NT passages [Matt 10:25; Matt 12:24 = Mark 3:22 = Luke 11:15; Matt 12:27 = Luke 11:18f.; on the other hand, "Beelzebub" is attested in ms variants). This name refers to a salvation god of apparent supraregional importance. By sending messengers to this

deity in Ekron rather than to Yahweh, Ahaziah behaved as if there were no god in Israel to impart information and to decide matters of life and death. For this reason Elijah announces to Ahaziah his death, which then comes to pass. Therefore, Ahaziah died as a result of falling from the upper chamber of his palace in Samaria. Since he had no son, his brother Jehoram followed him on the throne (2 Kgs 1:17–18, in a textually difficult formulation which arose from the combination of diverse textual components: the end of the original story about Elijah, a Deuteronomistic framework for Ahaziah, and a synchronistic dating).

In their introduction (1 Kgs 22:52–54—Eng 22:51–53) the Deuteronomistic redactors of the book of Kings assess Ahaziah negatively, presenting him as an adherent of Baal. That has a certain basis in the following story in which Ahaziah appeals to "Baalzebub" of Ekron. As in the case of Ahab, it is questionable whether this evaluation is accurate in a strict sense. See also AHAB.

2. King of Judah, son of Jehoram and Athaliah, who ascended the throne as his father's successor at the age of 22 and reigned just barely one year, i.e., 845–44 (Begrich), 845 (Jepsen), 841 (Thiele) or 843–842 B.C.E. (Andersen).

Notices about Ahaziah of Judah are found in 2 Kgs 8:24–29; 9:16, 21–29; 10:13–14; and 2 Chr 22:1–2, 6–11. His name is mentioned also in 2 Kgs 11:1–2; 12:19; 13:1; 14:13; and 1 Chr 3:11. It is found in the distorted form "Azariah" in 2 Chr 22:6 (cf. 2 Kgs 8:29); he is called "Jehoahaz" in 2 Chr 21:17 (cf. 22:1) and 25:23 (cf. 2 Kgs 14:13), where the two elements that form the name are reversed. In all these cases the person's identity is guaranteed by the parallels.

The sources are diverse in nature. The Deuteronomistic framework for Ahaziah is found in 2 Kgs 8:25–27 and 9:28–29. It is possible that 8:28 derives from the notices of annals, and 8:29 corresponds nearly verbatim to the passage 9:15a, 16b. The large unit 9:1–10:17 was written to justify the demise of the Omride dominion and to legitimate the Jehu dynasty. In respect to Judah, it seems not to be tendentious.

According to 2 Kgs 8:28, Ahaziah, together with Jehoram of Israel, defended the E Jordanian boundary city Ramoth-Gilead (Tell er-Rāmīṯ) against the Syrians from Damascus who were led by their king Hazael. If this is true, Ahaziah had apparently little time to exert his power in Jerusalem and left the business of ruling principally to his mother Athaliah. In express contrast to 8:28, however, 9:14 knows nothing about Ahaziah's participation in the battles around Ramoth-Gilead. Like 9:16b, 8:29b knows only Ahaziah's visit to the wounded king Jehoram in Jezreel. Two possible solutions are imaginable. One can explain the conflict as a difference between S Judean (8:28) and N Israelite perspectives (8:29b = 9:16b; 9:14b, 15a), while a more radical solution anticipates the inauthenticity of the information in 8:28. The assumption of a small textual error at the beginning of 8:28 removes the subject Ahaziah from the sentence, producing the following reading: "And Joram, the son of Ahab, went into battle against Hazael, the king of Syria, in Ramoth-Gilead" (thus Würthwein *Kings* ATD 11/2, 324, following Ewald and Klostermann). Of course, this must be a very old textual corruption, since this wording is assumed in 2 Chr 22:5.

In any case, Ahaziah was present in Jezreel when Jehu arrived for the purpose of exterminating the Omride dynasty (8:28; 9:16b, 21, 23). Jehu killed Jehoram of Israel and also ordered the execution of Ahaziah of Judah, who fled S toward Beth-Haggan (En-Gannim) apparently hoping to fight his way back to Jerusalem. However, near (Ibleam Khirbet Bel'ame) he was seriously wounded by those who were pursuing him. He made it as far as Megiddo (Tell el-Mutesellim) where he died. His body was brought to Jerusalem and buried in the tombs of the kings (9:27–29). Concurrently, "forty-two brothers of Ahaziah," who likewise were staying in the N kingdom, presumably fell unexpectedly into the hands of Jehu, who had them executed (10:12–14). The authenticity of this bloody episode is not undisputed, although the number of Ahaziah's "brothers" seems unusually high. Either it is exaggerated, as often occurs in the OT, or the "brothers" should be understood in a nonliteral sense as members of the Davidic royal line, whose sovereign at that time was none other than King Ahaziah. The motives which led Jehu also to have the Judean king and his relatives killed are not entirely clear. Did he, by taking these measures, want only to prevent the dead king's (Jehoram's) cousin from taking blood revenge? Or did he also want to destroy the Omride dynasty along with its palpable allies? In any case, Jehu's sanguine deed ironically enabled the

Omrides to come to power in Jerusalem (i.e., Queen Athaliah's assumption of the government [11:1–3]), something he could not have anticipated or desired.

The Deuteronomistic redactors judge Ahaziah's religious behavior negatively and equate it with the "way of the house of Ahab." The context attributes his behavior to the influence of his mother Athaliah (8:26–27). The Chronicler expressly states (2 Chr 22:3) that Ahaziah's mother encouraged his apostasy from God. Ahaziah is described in this context as a person who subjected himself both religiously and politically to the influence of the "house of Ahab" (22:4–5). Otherwise, Chronicles provides information that is not present in its Vorlage in the books of Kings. According to 2 Chr 21:17 and 22:1, Ahaziah was supposed to have been the youngest son of Jehoram, who came to the throne, because all of his older brothers had either been led away or killed by Philistines and Arabs who had invaded Judah. In this case, one may suggest that the Chronicler had access to a special source. However, the historicity of this information is subject to serious reconsideration. This especially applies to the Chronicler's depiction of the demise of Ahaziah (22:5–9), which in part consists of excerpts from 2 Kgs 8:28–10:14 (v 5 = 2 Kgs 8:28; v 6 = 2 Kgs 8:29), and in part of summaries reported in that text (v 7 = 2 Kgs 9:21; v 8 = 2 Kgs 10:12–14). However, Ahaziah's death is described quite differently by the Chronicler than by the Deuteronomistic redactors. According to 2 Chr 22:9, Ahaziah hid in Samaria, where he was discovered and killed by Jehu, and subsequently also buried there. This completely contradicts the information presented in 2 Kgs 9:27–28. Even if one should think that a special tradition was used in Chronicles, its presentation is much more improbable than that found in 2 Kgs 9:27–28.

TRANS. PHILLIP R. CALLAWAY

AHBAN (PERSON) [Heb *ʾaḥbān* (אַחְבָּן)]. A son of Abishur and Abihail, of the tribe of Judah (1 Chr 2:29). The identity of Ahban is uncertain, a fact reflected by LXX variants (e.g., *achabar, ozabar,* and *adab*). The name itself occurs only in this extended genealogy of Israel identifying tribal locations within Palestine (1 Chronicles 2–8).

MARK J. FRETZ

AHER (PERSON) [Heb *ʾaḥēr* (אַחֵר)]. The father of Hushim according to the MT of 1 Chr 7:12; the name is attested only in this tribal genealogy. The MT of 1 Chr 7:12 reads *wĕšuppim wĕḥuppim bĕnê ʿîr ḥūšim bĕnê ʾaḥēr,* lit. "And Shuppim and Huppim the sons of Ir, Hushim the sons of Aher." The difficult grammatical construction of a plural "sons" preceded by only one name (Hushim) is only one problem in this text; the other problem is the fact that although Dan is included in the list of Jacob's sons (1 Chr 2:2), there is no Danite lineage in the subsequent tribal genealogies (1 Chronicles 2–8). The occurrence of the word *ʾaḥēr* in this difficult text can be interpreted not only as a personal name, but also as an adjective; if the text is emended, one can reconstruct in its place either different personal names or a cardinal number.

Klostermann (*RE* 4: 94) emends 1 Chr 7:12 to read *bny dān ḥšm bĕnô ʾeḥād,* "Sons of Dan: Hushim his son, one." This solution is supported by Gen 46:23 and less so by Num 26:42, while the proposed reading *bĕnô,* is supported by the LXX reading *huios autou,* "his son." The emendation of MT *ʾaḥēr* to the cardinal number "one" (Heb *ʾeḥād*) is justified since the Heb letters *dalet* and *reš* are easily confused, and since the Chronicler tends to number the sons (cf. 1 Chr 7:1, 3, 6–7). Although Rudolf (*Chronikbücher* HAT, 68) concurs with Klostermann's conclusion, he presumes that a marginal note (Heb *lĕpānîm lāʿîr šēm ʾaḥēr,* "previously the city had another name") on Judg 18:29a (MT *wayyiqrĕʾû šēm-hāʿîr dān,* "and they call the name of the city Dan") became a gloss in Klostermann's proposed text of 1 Chr 7:12. According to Rudolf's explanation, *ʾaḥēr* is an adjective ("another") displaced through textual corruption.

Along other lines Noth (*ÜgS* 1: 118) concludes that 1 Chr 7:12 should read "… and Shupham and Hupham. The sons of Dan: Suham. The sons of Asher [sic.]: …" Based on the assumption that the order of the tribes in Numbers 26 is the Chronicler's source, he completely revises the MT, and includes a postulated lacuna between vv 12 and 13. In order to place Dan and Asher in their proper order between Benjamin and Naphtali, according to Num 26:38–50 (cf. Gen 46:8–27), Aher (Heb *ʾaḥēr*) is either deleted, or emended to read Asher (Heb *ʾāšēr*). One other solution (Williamson 1973) is to emend the final word of 1 Chr 7:12 (MT *ʾaḥēr*) to read either *ʾard* (cf. Gen 46:21; Num 26:40 where Heb *ʾard* follows *ḥpm* in the order of names), or *ʾaddār* (cf. LXX of Num 26:40, *adar;* and 1 Chr 8:3 where a scribe may have mistaken the Heb letter *dalet* for *ḥet*). If, as Williamson proposes, 1 Chr 7:12 is a fragmentary verse that was added to vv 6–11, then the word Aher would have been produced by a scribal error. Thus, the absence of Dan is not a problem, because it did not occur in the fragment, which must be treated separately from the rest of the name list.

MARK J. FRETZ

AHI (PERSON) [Heb *ʾăḥî* (אֲחִי)]. The son of Abdiel and chief of one of the Gadite clans in the "pasture lands of Sharon" during the overlapping reigns of Jotham of Judah and Jeroboam II of Israel (1 Chr 5:14–16). The name occurs in a textually corrupt genealogical list, and combined with the fact that it is a form of the Hebrew word for "brother," it has presented problems for translators and interpreters alike. The pattern "son of X, son of Y, son of Z, etc." in 1 Chr 5:14–15 is interrupted by Heb *ʾḥy.* One solution is to retain the MT and take *ʾḥy* as a personal name, possibly a shortened form of Ahijah (Rudolf *Chronikbücher* HAT, 46), without the expected "son of." Another option, reflected in various ancient versions, is to read *ʾḥy* as the construct form of the common noun ("brother of;" see LXX *adelphou* and Vg. *fratres*); however, an expected proper noun does not follow the construct "brother of" in these mss, therefore, the sense is no more clear with this translation. Another option is to emend the text, as do some other LXX mss (1 Chr 5:14) by transposing *ʾḥy* and the preceding name Buz (e.g. *zaboucham, achibouz*). Although Heb *ʾḥy* occurs 35 times in the MT, the RSV translates it "Ahi" only here. In a similar instance (1 Chr 7:34) the RSV prefers to emend the text (*ûbĕnê šāmer ʾăḥî wĕrāwhgâ*, lit. "The sons of Shemer: Ahi and Rohgah") to read "The son(s) of Shemer his brother: Rohgah …" (*ʾăḥîw rā[w]hgâ*). This emendation seems to be based on the parallel in v 35 (*ûben-hēlem ʾāhîw,* "The son(s) of Helem his brother"). In 1 Chr 7:34 some LXX mss combine the two names (e.g., *achiouraoga, hēeig-kairagous*), others render Ahi quite literally (*achi kai rooga,* "Achi and Rooga"); but in support of the RSV, other mss combine *ʾḥy* with the following *waw* (LXX *achiouia;* Armenian *achiu;* see also LXX v 35 *adelphou autou*). Since *ʾḥy* is a common element in NW Semitic names (*AI,* 93.6; *PNPI,* 263–64; *APNM,* 160–61), it is plausible to argue that Ahi is indeed a personal name in 1 Chr 5:15; however, because the text is corrupt, an emendation similar to that made by the RSV in 1 Chr 7:34 could just as easily solve the problem.

MARK J. FRETZ

AHIAH (PERSON) [Heb *ʾăḥîyâ* (אֲחִיָּה)]. A clan leader who signed Nehemiah's pledge of reform (Neh 10:27—Eng10:26). In this list of leaders (vv 2–28) Ahiah's is the only name preceded by the Heb conjunction *waw.* Meyer (1896: 142) suggests that this distinguishes *wʾḥyh;* thus, by emending it to *wʾḥyw,* he changes the text to read "Rehum, Hashabnah, Maaseiah, and his brother Hanan …" The LXX of Neh 10:27, however, renders the name as *ara,* suggesting the name Arah, a prominent family name mentioned in Ezra 2:5 (= Neh 7:10).

MARK J. FRETZ

AHIAM (PERSON) [Heb *ʾăḥîʾām* (אֲחִיאָם)]. One of the Hararites listed in the parallel rosters of King David's warriors (2 Sam 23:33; 1 Chr 11:35). In the MT, these parallel lists spell the name of Ahiam's father as Sharar (2 Sam 23:33) or Sachar (1 Chr 11:35). Some variants of the LXX read *sacharō,* or *sachar ho*—lending support to Sachar as the original form. The designation "Hararite" possibly signifies either Ahiam's clan name (translated "the Urite" by McCarter *2 Samuel* AB, 493), or the name of his hometown, which Elliger (1935: 56) identifies with the town Araru of the Amarna letters.

MARK J. FRETZ

AHIAN (PERSON) [Heb *ʾaḥyān* (אַחְיָן)]. The son of Shemida, and grandson of Manasseh (1 Chr 7:19) listed within the extended genealogy of Israel (1 Chronicles 2–8). Ahian is not mentioned elsewhere in connection with Shemida, who is allotted land in the Cisjordon (Num 26:32; Josh 17:2). According to ostraca discovered at Samaria (Reisner, Fisher, and Lyon 1924: 228–29), Shemida is either the name of a tribal unit involved in commerce, or a place name like Shechem which also appears in the ostraca. Although Ahian does not occur in the ostraca, since other names in the biblical genealogy which are or might very well be geographical names do appear there, Ahian may be the place name which came to be associated with a tribal unit located in the Manassite region of Samaria.

MARK J. FRETZ

AHIEZER (PERSON) [Heb *ʾăḥîʿezer* (אֲחִיעֶזֶר)]. **1.** The son of Ammishaddai and leader of the tribe of Dan, who assisted Moses in taking a census of Israel (Num 1:12; 2:25). As tribal representative, Ahiezer contributed offerings on the 10th day of the tabernacle dedication (Num 7:66, 71) and commanded the Danites as a rear guard for Israel on the march from Sinai to Palestine (Num 10:25).

2. Chief of the Benjaminites who defected from King Saul to David at Ziklag (1 Chr 12:3). If the plural "sons" (Heb *bĕnê*) refers both to Joash and Ahiezer, as the RSV translates the MT, then Ahiezer would also be one of two sons of Shemaah the Gibeathite in this list of Benjaminite defectors. Of all the members of Saul's army who went over to serve David, some of the most noteworthy were these Benjaminites, since they were from Saul's own clan (see Rudolf *Chronikbücher* HAT, 105; Williamson 1981; Zeron 1974).

MARK J. FRETZ

AHIHUD (PERSON) [Heb *ʾăḥîhûd* (אֲחִיהוּד); *ʾăḥîḥud* (אֲחִיחֻד)]. Two individuals mentioned in the Hebrew Bible bear this name. In both its forms, this name has been translated "the brother (i.e., the god) is exalted" (*EncMiqr* 1: 215), with the kinship term *ʾaḥ* (brother) representing the theophoric element. Johnson (*IDB* 1: 67) offers the translations of "the (divine) brother is exalted" or "the (divine) brother is glorious." One suggestion (*Enemiqr* 1: 215; see esp. *IPN*, 146, 192) is that the name expresses the glory and majesty of the Lord that appear in nature and particularly in the heavens. However, the textual transmission of these vv has not been clear, as exemplified by the many LXX variants.

1. An Asherite, the son of Shelomi (Num 34:27), and one of those named (MT *ʾăḥîhûd*) in a list of tribal leaders. These leaders, "*neśîʾ îm,*" (Speiser: 1967), were appointed by Eleazar the Priest and Joshua the son of Nun to oversee the allotment of the land of Canaan W of the Jordan River to the 10 tribes of Israel. Based on the LXX variant (Gk *achiōr*) in this verse Ahihud has been identified with the name ACHIOR in the book of Judith (see Cowley 1913: 244).

2. A Benjaminite, his name (MT *ʾăḥîḥud*) appears in a genealogy which lists him as either the son of Heglam or the son of Gera (1 Chr 8:7). This genealogical ambiguity reflects the unclarity of the transmission of this and other vv in this passage. See ABIHUD.

RAPHAEL I. PANITZ

AHIJAH (PERSON) [Heb *ʾaḥîyâ* (אֲחִיָּה)]. Nine persons in the Hebrew Bible/OT bear this name.

1. A priest, the son of Ahitub and great-grandson of Eli (1 Sam. 14:3). He was a priest in Shiloh and provided oracular guidance for Saul (1 Sam 14:18–19, 41–42). In 1 Sam 14:18, the MT indicates that Ahijah was in charge of the ark of God which was housed at Kiriath-jearim. The LXX reads instead "the ephod" which Ahijah is said to carry in 1 Sam 14:3. The ephod was an item of priestly apparel (Exod 28:1–43), which was also apparently used for oracular guidance. It is speculated that the garment contained a pouch to hold the Urim and Thummim. The fact that Saul requests oracular guidance is cited in support of the LXX reading against that of the MT. Since he was the son of Ahitub, it is assumed that he was also the brother of Ahimelech, the priest of Nob (1 Sam 22). Ahijah's connection to Saul is also important in literary terms, since the rejection of the house of Eli parallels the ultimate fate of Saul and his descendants.

2. A secretary within Solomon's bureaucracy (1 Kgs 4:3). Mettinger (1971: 24–30) believes that "Ahijah" disguises an Egyptian name similar to that of his brother "Elihoreph." The name of his father is Shisha, derived from the Egyptian *sš* "scribe." The phrase might be read as "sons of a scribe," i.e., members of a scribal guild. Mettinger has demonstrated that Solomon probably modelled his own bureaucracy on that of the Egyptians.

3. A prophet from Shiloh (1 Kgs 11:9) who supported Jeroboam's abortive coup against Solomon. He plays a crucial role in the Deuteronomistic History's portrayal of the split between the S and N kingdoms during the reign of Rehoboam. Ahijah meets Jeroboam, Solomon's overseer over compulsory labor, outside Jerusalem and through symbolic action and prophetic utterance provides the theological justification for the division of the kingdom after Solomon's death. The rending of Ahijah's cloak into 12 pieces and the giving of 10 to Jeroboam is reminiscent of Samuel's rejection of Saul in 1 Samuel 15. However, the LXX differs in a number of details from the MT, including the claim that this action was carried out by Shemaiah and not Ahijah. It is made clear that, although the socioeconomic reasons for the division stem from the oppression of the Davidic monarchy brought to a head by the policies of Rehoboam (1 Kings 12), the theological justification offered is the apostasy of Solomon. Ahijah promises Jeroboam a "sure house" (1 Kgs 11:38), echoing the dynastic promise to David in 2 Samuel 7. The final break brought about by the heavy tax burden levied by Rehoboam is presented in typical Deuteronomistic terms as the fulfillment of the prophecy of Ahijah (1 Kgs 12:15).

Later Jeroboam sends his disguised wife to Ahijah in old age in order to enquire if his son Abijah will survive his childhood illness (1 Kgs 14:1–18). The prophecy delivered by Ahijah is the fulcrum for the Deuteronomistic rejection of all N kings. Jeroboam is rejected for his apostasy, particularly the setting up of the rival N shrines of Bethel and Dan. The dynastic promise, which was couched in conditional terms in 1 Kgs 11:38–39, is withdrawn. The death of the child is again presented as confirmation of the prophecy of Ahijah. It is further fulfilled with the slaughter of the house of Jeroboam by Baasha (1 Kgs 15:29).

The prophecies of Ahijah are presented in Deuteronomistic terms and play a central role in the overall design of the Deuteronomistic History. Ahijah represents the ideal Deuteronomistic prophet whose words are fulfilled. Despite this clear Deuteronomic shaping, the narratives are thought to be multilayered. Many commentators accept that these narratives preserve authentic historical information about the nature of Israelite prophecy and sociopolitical disputes at the time of the division of the kingdom. Cohen (1965;

1971) believes that Ahijah represents a Shilonite priestly faction who supported Jeroboam's struggle with Rehoboam. This faction is thought to represent the pre-monarchic religious specialists, identified with Abiathar, who had become increasingly marginalized by the centralizing policies of Solomon. Jeroboam's establishment of royal shrines at Dan and Bethel also failed to restore the fortunes of the Shilonite priesthood. The view that Ahijah championed the restoration of the shrine at Shiloh was challenged by Noth (1966: 132–144) who argued that he was in favor of the political break with the S but not with a break with the Jerusalem cult. Wilson (1980: 184–87) has followed this general analysis in his discussion of Ahijah as a typical peripheral prophet from Ephraim. He represents the views of a group outside of and opposed to the royal establishment. His support group is presumably drawn from Ephraimites and probably from the old Shilonite priesthood ousted by Solomon. Ahijah challenged the royal establishment in an attempt to redress the balance in this struggle for power. Similarly, his rejection of Jeroboam is to be understood in factional terms of a center-periphery struggle for power.

The Chronicler refers to "the prophecy of Ahijah" as one of the sources for the reign of Solomon (2 Chr 9:29). There is no agreement over whether or not this refers to the material preserved in 1 Kings 11 and 14 or is a collection of material which did not find its way into the canon of the Hebrew Bible.

4. The father of Baasha, king of Israel, and member of the tribe of Issachar (1 Kgs 15:27, 33; 21:22; 2 Kgs 9:9). The LXX reads "who was of Beth Belaan" for "Issachar." Gray (*1–2 Kings*[3] OTL, 357, n.b) suspects that Beth indicated a place name in Issachar, yet only Bethshemesh appears in the tribal list in Josh 19:17–23. Belaan is not mentioned elsewhere as part of Issachar. The house of Baasha ben Ahijah becomes as reviled as that of Jeroboam I ben Nebat, who was the symbol of royal apostasy in the Deuteronomistic History (1 Kgs 21:22; 2 Kgs 9:9).

5. One of the sons of Ehud, a Benjaminite, carried into captivity (1 Chr 8:7). Ahijah may be a variant of Ahoah in v 4, as suggested by LXX^B and the Syriac. The MT is difficult. 1 Chr 8:6 reports that the sons of Ehud were the heads of clans in Geba who were exiled to Manahath. However, Braun (*1 Chronicles* WBC, pp. 120–1) understands the phrase *wayyaqlûm* as "who were moved," i.e., emigrated, rather than as "they were carried into exile." Geba is mentioned in the list of Levitical cities (Josh 21:17; 1 Chr 6:60) and was fortified by Asa (1 Kgs 15:22; 2 Chr 16:6). The location of Manahath is disputed, but often identified with Malah near Jerusalem (*LBHG*, 381). The list of Ehud's sons in 1 Chr 8:7 begins with a conjunction suggesting that a name or phrase is missing. Furthermore, the names of two of the sons, Naaman and Gera, appear as sons of Bela (1 Chr 8:4–5). The various lists of Benjamin's and Bela's sons and their descendants show considerable variation (Genesis 46; Numbers 26; 1 Chronicles 7 and 8) and numerous textual difficulties, as evidenced in 1 Chr 8:6–7.

6. One of David's mighty men, a Pelonite (1 Chr 11:36). The MT of the corresponding list of David's mighty men in 2 Sam 23:8–39 provides an entirely different reading: "Eliam son of Ahithophel the Gilonite" (2 Sam 23:34). The two lists not only show considerable variations but are placed in different positions in relation to the reign of David. The Chronicler places the list at the very beginning of his reign, whereas in 2 Samuel it is found as an appendix to the reign of David. The list in Chronicles functions as a legitimation of David through the support of these warriors and all Israel (1 Chr 11:10).

7. One of the sons of Jerahmeel, a member of the tribe of Judah (1 Chr 2:25). Some mss of the LXX suggest that this is not a proper name but read "his brothers," while the Syriac reads "your brothers." Williamson (1979) has noted that the list of Jerahmeel's descendants (1 Chr 2:25–33, 33–41) forms the center of a chiasm within the genealogy of Judah. Interestingly the first part of Jerahmeel's genealogy (1 Chr 2:25–33) is segmented, while the latter half (1 Chr 2:33–41) is linear.

8. A Levite in charge of the temple treasury (1 Chr 26:20). There is some doubt whether a personal name is contained here or a more general phrase that introduces the Levitical families in charge of the temple treasuries. The LXX reads "Levites, their brothers," while NIV and Braun (1 Chronicles WBC, 248) translate the phrase as "their fellow Levites."

9. Ahiah, one of the chiefs of the people, who set his seal on the covenant of Nehemiah (Neh 10:27—Eng10:26). It is puzzling that this is the only name in the list of signatories to be preceded by the conjunction "and," *wa·ăḥîyāh*. The originality of the list of signatories placed at the beginning of the

document has been disputed (see Williamson, *Ezra, Nehemiah* WBC, 325–31 for a discussion of the various proposals).

KEITH W. WHITELAM

AHIKAM (PERSON) [Heb *ʾăḥîqām* (אֲחִיקָם)]. The son of Shaphan, and member of a very prominent Jerusalem family who held government office under Josiah (ca. 640–609 B.C.E.) and Jehoiakim (ca. 609–598 B.C.E.).

Ahikam's father, Shaphan, was royal secretary during the reign of Josiah (2 Kgs 22:3–20). Ahikam's brothers, Elasah (Jer 29:3) and Gemariah (Jer 36:10–12, 25), and Gemariah's son Micaiah (Jer 36:11–13), were also court officials. Although Ahikam's title is not given in the Hebrew Bible, it is evident that he was high-ranking. The office of *ăšer ʿal habbayit* ("who is over the house;" see, e.g., 1 Kgs 16:9; 18:3; 2 Kgs 18:18) was probably held by Ahikam's son Gedaliah. Most scholars now believe that a contemporary seal inscribed "to Gedaliah, who is over the house" belonged to this Gedaliah, son of Ahikam. It is possible that this office was hereditary and had earlier been held by Ahikam himself (cf. Katzenstein 1960: 153–54; Lohfink 1978: 338).

During the reign of Josiah, Ahikam (along with his father Shaphan) was appointed to a delegation sent to consult the prophetess Huldah on the occasion of the finding of the lawbook (2 Kgs 22:12–13; 2 Chr 34:20–21). Following Jeremiah's fiery "temple sermon" at the beginning of Jehoiakim's reign, Ahikam is reported to have saved the prophet from execution at the hands of the people (Jer 26:24; this note is preceded in Jer 26:20–23 by an account of how the prophet Uriah, who had delivered a similar message, had been executed). This incident not only attests the influence wielded by Ahikam, but also indicates that he, like other members of the family of Shaphan, was kindly disposed toward Jeremiah. Furthermore, Ahikam and his family were undoubtedly sympathetic to the pro-Babylonian position supported by Jeremiah. Ahikam's son, Gedaliah, was appointed ruler of Judah by Nebuchadnezzar after the fall of Jerusalem in 587–586 B.C.E. (2 Kgs 25:22; Jer 40:7).

While it is possible that Ahikam was deported in 597 B.C.E. (passages such as Jer 38:1–6 reveal that a new group of court officials surrounded Zedekiah), the fact that Ahikam's name fails to appear in Jer 36:9–26 suggests that he may have died some time before the reading of Jeremiah's scroll in Jehoiakim's 5th year.

JOHN M. BERRIDGE

AHIKAR/AHIQAR (PERSON). Ahiqar has long been familiar as an Assyrian sage who was the hero of a book that was read and preserved by Jews of antiquity. There is no doubt that the many versions of the work that bears his name are nonhistorical in character, but recent discoveries have made it quite likely that there once was an Assyrian scholar by this name who served in the time of Esarhaddon (680–669 B.C.E.). The name is spelled *ʾḥyqr* in the Aramaic papyrus from Elephantine. It means "my brother is precious/valuable."

A. Ahiqar in the Book of Ahiqar

The earliest extant form of the book is the fragmentary Aramaic text copied on a late-5th-century papyrus from Elephantine (Naveh 1970: 35). See also AHIQAR, BOOK OF. The text (text: Cowley 1923; translation: Lindenberger *OTP* 2: 479–507) describes him as "a wise and skillful scribe" (i.1: *spr ḥkym wmhyr*) who was "[ke]eper of the seal of Sennacherib" (i.3: *ṣb]yt ʿzqth zyśnḥ›ryb*). He was also "father of all Assyria, on whose counsel King Sennacherib and [all] the Assyrian Army [used to rely]" (iv.55: *›bwh zy ›twr klh zy ʿl ʿṭth snḥ›ryb mlk› wḥyl ›twr [kl› hww]*). He continued to hold high office into the time of Sennacherib's successor Esarhaddon (i.4–5), who calls him "O wise [s]cribe, counselor of all Assyria" (i.12: *s]pr› ḥkym› yʿṭ ›twr klh*). By this time, however, Ahiqar had reached an advanced age. As he had no son, he adopted his nephew Nadin and taught him his wisdom so that he could become his replacement. The nephew proved to be a scoundrel who plotted against his uncle and convinced Esarhaddon that he should be executed. (According to later, more complete versions of the story Nadin forged correspondence from Ahiqar which showed that he was scheming to seize the kingdom with foreign assistance.) A royal officer named Nabushumishkun was commissioned to kill Ahiqar, but the clever sage reminded him that under reversed circumstances he had saved the officer's life. A eunuch was executed instead of Ahiqar, and the Nabushumishkun hid the fallen wise man in his house. The preserved portion of the Aramaic narrative ends at this point in the story. The fuller versions (e.g., the Syriac, Armenian, and Arabic) continue the tale by relating that Esarhaddon soon needed Ahiqar's remarkable savoir faire because the Egyptian king, who had heard of the sage's "death," challenged the Assyrian monarch to send him someone who could construct a palace between heaven and earth. If he could, he would receive Egypt's revenue for 3 years; if he could not, Egypt would receive a similar amount from Assyria. Just when Esarhaddon feared that the challenge would prove disastrously costly, the officer told him that Ahiqar was alive. He was swiftly retrieved from his hiding place and dispatched to Egypt where he handled all difficulties with astonishing flair. He returned with great wealth to Assyria where he promptly settled accounts with Nadin. After Ahiqar had beat him severely and lectured him at length, Nadin died.

B. Ahiqar in the Book of Tobit

Although the Ahiqar papyrus was found at the Jewish military colony at Elephantine, nothing in the text suggests Jewish authorship of the work or even Jewish influence on it. Indeed, the presence of divine names such as El (vii.107; x,154,156,161 [?]; xii. 173 [?]), Šamaš (vi.92, 93; vii.108; ix.138; xi.171) and Šamayn (? vii.95) betray a polytheistic origin for the book. In the deuterocanonical book of Tobit, however, Ahiqar has been transformed from an Assyrian to an Israelite of the tribe of Naphtali who is a relative of Tobit. Tobit, which may date from the 3d century B.C.E. (Doran 1986: 299), manifests a number of important similarities with the book of *Ahiqar* (Greenfield 1981: 329–36). Both are set in Assyria at the time of the kings who ruled around the time of the destruction of Samaria (Tobit mentions Shalmaneser, Sennacherib, and Esarhaddon [1:15–22]) and both are sapiential novels in which wise instructions are conveyed by an elderly character to his son at two similar locations. The book of Tobit mentions Ahiqar in four passages. In 1:21–22 Tobit reports that Esarhaddon "appointed Ahikar [*Achicharon*], son of my brother Anael to supervise all the finances of his kingdom; he had control of the entire administration. Then Ahikar interceded on my behalf and I came back to Nineveh. For he had been chief cupbearer, keeper of the privy seal, comptroller, and treasurer when Sennacherib was king of Assyria; and Esarhaddon renewed the appointments. Ahikar was my nephew and so one of my kinsmen" (NEB). The picture presented here resembles that in the book of *Ahiqar* except that the sage is now an Israelite. Later Tobit, after he became blind, notes that Ahikar cared for him for two years (2:10). Further evidence that the author of Tobit knew the Ahiqar story comes from 11:18 (v 19 in Greek) in which he mentions Ahiqar and Nadab (= Nadin), who are both identified as Tobit's cousins (so Sinaiticus [*hoi exadelphoi*]) or, in Vaticanus and Alexandrinus, Nadab is called Ahikar's nephew (*ho exadelphos autou*). Finally, 14:10 alludes to another part of the Ahiqar narrative: "My son, think what Nadab did to Ahikar who brought him up: he forced him to hide in a living grave. Ahikar survived to see God requite the dishonour done to him; he came out into the light of day, but Nadab passed into eternal darkness for his attempt to kill Ahikar. Because I [?] gave alms, Ahikar escaped from the fatal trap Nadab set for him, and

Nadab fell into the trap himself and was destroyed" (NEB). The end of this passage reflects the words of the final proverb in Ahiqar (Syriac 8:41; Greenfield 1981: 333–34).

C. Other References

Several ancient writers mention a character whose name closely resembles that of Ahiqar; they may be referring to the hero of the book (Harris, Lewis, Conybeare *APOT* 2: 715–17; Küchler 1979: 344–46; Lindenberger *OTP* 2: 491). The Christian writer Clement of Alexandria (ca. 150–215) claimed that the Greek author Democritus (ca. 460–370 B.C.E.) plagiarized from a stele of Ahiqar (*tēn Akikarou stēlēn* [*Str.* 1.69, 4]). In this connection, the Persian Muslim philosopher Shahrastani (1071–1153), in a collection of sayings from Democritus, cites three sayings which agree very closely with proverbs from the versions of Ahiqar. Strabo (ca. 63 B.C.E.–23 C.E.), in his *Geography* 16,2,39, gives from Poseidonius (135–51 B.C.E.) the names of famous seers; among them he names *Achaikaros* as being among the people from the Bosporus. It has been suggested that *Bosporus* is an error for *Borsippa,* so that the Mesopotamian savant could be intended (Harris, Lewis, Conybeare *APOT* 2: 716). This must be regarded, however, as quite uncertain. Diogenes Laertius (3d century C.E.) provides a list of the works by Theophrastus (372–287 B.C.E.), among which is one named *Akicharosa.* If all of these intend the Ahiqar known from the story and proverbs, they show that his fame, especially as a dispenser of wise words, was early and spread over a wider area than the Semitic world. The same could be concluded from the fact that the Greek *Life* of Aesop borrows heavily from the story and proverbs of Ahiqar in chaps. 23–32. It has also been suggested that Ahiqar's name should be restored on the 3d-century C.E. Roman mosaic of Monnus in Trier. In it there are 9 octagonal sections in each of which are pictured a Muse with a symbol of the art with which she is connected and an expert in that art or founder of it. In the section for Polymnia, the Muse often associated with dance and mime, is a figure only part of whose name is preserved. The letters *-icar* could well be part of Acicarus or Ahiqar (Lindenberger *OTP* 2: 492), though combining him with Polymnia is surprising (Küchler 1979: 352–55).

D. Ahiqar as a Figure of History

There have been several attempts to relate aspects of the Ahiqar story to history. W. von Soden (1936: 1–13) argued that Adad-šum-uṣur, one of Esarhaddon's advisors, was the historical point of origin for the Ahiqar legends. This official wrote many letters and exercised considerable influence in the court. As Ahiqar did, he requested from the king that his son Arad-Gula be given an important position. The son eventually did gain a post. Moreover, there is evidence that Adad-šum-uṣur fell from grace, though it is not known whether he was restored to his former status. But, as von Soden noted, no high official in the time of Sennacherib and Esarhaddon bore the name Ahiqar. In his opinion, a change of names took place during the transmission of the story so that Adad-šum-uṣur became Ahiqar. E. Reiner (1961: 7–8) has observed that the theme which provides the framework of the Ahiqar story—the "disgrace and rehabilitation of a minister"—was known in Babylonia and that it was fused with the other major theme—the "ungrateful nephew." A recent discovery at the site of ancient Uruk has cast some interesting new light on the Ahiqar tradition. German excavations there in 1959–60 unearthed in a room next to the *reš*-sanctuary a tablet (W 20030, 7) which provides a list of Assyrian kings from before and after the flood (van Dijk 1962: 44–52). An official called an *ummānu*—a term for both a learned man and high official (Reiner 1961: 9)—is named for each of the kings. For the time of King Esarhaddon (11. 19–20) it mentions that a man named ^{1}a-ba-^{d}NINNU-da-ri (= aba-enlil-dari) was the *ummānu* and notes that the Ahlamu (= the Arameans) called him ^{1}a-ḫu-'u-qa-a-ri. This is the name Ahuqar or Ahiqar. Consequently, there is now documentary evidence that Esarhaddon, who is the king with the primary royal role in the book of *Ahiqar,* had a chief advisor whose Aramaic name was the one found in the Aramaic version of the book. The list in which his name appears was copied in the year 147 of the Seleucid Era (= 165 B.C.E.), when Antiochus (IV) was king (11.23–24). It has also been noted that the only case of an Assyrian proverb that parallels one in *Ahiqar* (the Syriac version) is quoted in one of Esarhaddon's letters (Greenfield 1981: 335 n. 20), and that the name Nabushumishkun is the same as that of Merodach-Baladan's son who was taken captive by Sennacherib (Greenfield 1981: 335 n. 21).

It is clear from the reference to Ahiqar in the Uruk list that some sort of historical kernel lies behind the story. There was a wise man, possibly an author (Lindenberger 1983: 22), named Ahiqar in the court of Esarhaddon. Nevertheless, it is just as evident that the book which now bears his name has assumed folkloristic traits (Niditch and Doran 1977: 182–85) and can hardly be termed a historical document.

AHILUD (PERSON) [Heb *ʾăhîlûd* (אֲהִילוּד)]. **1.** The father of Jehoshaphat, the "recorder" in the royal administrations of David and Solomon (2 Sam 8:16; 20:24; 1 Kgs 4:3; 1 Chr 18:15). In the parallel lists of officials (2 Sam 8:16–18 = 1 Chr 18:15–17), the Gk provides numerous variants of the name Ahilud, tending to substitute more familiar names from nearby verses. For example, LXX *acheia* may be associated with *ʾăḥîyāh* (Ahijah), mentioned along with Ahilud in the list of Solomonic officials (1 Kgs 4:3); LXX *achimelech* (Ahimelech) is listed on verse after Ahilud (2 Sam 8:17) as one of the priests; while LXX *abimelech* (Abimelech) appears in the parallel of 1 Chr 18:16; Lucian's *acheinaab* may reflect Heb *ʾăḥînādāb* (Ahinadab), which occurs in the list of Solomonic officials (1 Kgs 4:12). Callaway's (1983) recent find of a jar handle with the name Ahilud on it makes it likely that by the end of the 11th cent. it was a common name.

The title held by Ahilud's son Jehoshaphat (Heb *mzkyr*) is usually translated "recorder," "herald." The extensive discussion of this term (see McCarter *2 Samuel* AB, 254 for citations) leads one to conclude that JEHOSHAPHAT was some type of spokesperson for the royal court. Accordingly, it can be presumed that Ahilud's family had a favored position during the United Monarchy.

2. The father of Baana, prefect over the fifth of King Solomon's 12 administrative districts that included at least Taanach, Megiddo, and Beth-shean (1 Kgs 4:12; see *HG,* 61–64). Baana no doubt was favored because of the high status of his father's family within Israel. Presumably this Ahilud is the same as the father of Jehoshaphat (see above); the political situation would have favored the appointment of two brothers from a seemingly loyal family, the one (Jehoshaphat) as trusted "recorder," the other (Baana) as district prefect (see Mettinger 1971: 121).

MARK J. FRETZ

AHIMAAZ (PERSON) [Heb *ʾăḥîmaʿaṣ* (אֲחִימַעַץ)]. The meaning of the name Ahimaaz is uncertain. Ar *maʿiḍa* "be angry" may be related, and thus BDB (p. 591) interprets the name as "my brother is wrath" (cf. the Safaitic personal name *ʾmʿd;* Ryckmans 1934: 131a). See, however, *IPN,* 235: 97. Three different men in the OT bear this name.

1. The father of Saul's wife Ahinoam. Both father and daughter appear only in 1 Sam 14:50.

2. Son of the priest Zadok; Ahimaaz was one of the supporters of David who stayed in Jerusalem or its environs after the king was forced to flee the city in the coup d'etat by his son Absalom (2 Sam 15:27). Ahimaaz and a companion, Jonathan the son of the priest Abiathar, were stationed at En-Rogel, a short walk from Jerusalem. From there they relayed information about Absalom's activities to the exiled king. In one celebrated incident (2 Sam 17:15–23), Ahimaaz and Jonathan, on their way to David with vital information about an impending attack by Absalom, were forced to hide in a well in Bahurim while agents of Absalom searched for them.

Although the son of a priest of the highest rank, Ahimaaz served David as a messenger (at least during the king's exile), evidently having an athletic bent; hence David's choice of him to bring word from En-Rogel. On one occasion Ahimaaz outran another messenger (2 Sam 18:23) and was identified from afar by a watchman on the basis of his gait (v 27), a detail which shows that he regularly brought messages to the king. He is nowhere said to perform a priestly role; rather it was Zadok's son Azariah (1 Kgs 4:12) who served as priest in Solomon's temple. (It is possible, however, that Azariah was Zadok's grandson, Ahimaaz's son; cf. 1 Chr 5:34–6—Eng6:8–10; the gloss at 5:36 is evidently placed with the wrong Azariah.)

The events related in 2 Sam 18:19–33 are informative with regard to Ahimaaz's character. Upon Absalom's death and the defeat of his army in the Forest of Ephraim, Ahimaaz volunteered to take word to David in Mahanaim. But Joab, the commander of David's forces, feared the king's reaction to news of his son's death, and sent an unnamed Cushite messenger instead. Ahimaaz, however, refused to be dissuaded, in spite of Joab's protest (v 22) that he would not be rewarded for his efforts. After asking for a third time, and less politely (v 23; the polite particle *nā*› is dropped and a simple future ("I will run") is used in place of the previous cohortative), he obtained Joab's leave. Although setting out later than the Cushite, Ahimaaz passed him by taking the apparently faster "Way of the Plain" (see Budde *Samuel* KHC, 287). Upon reaching David, he related only the defeat of Absalom's army; it devolved upon the hapless Cushite to tell David that his son was dead.

Some commentators have argued that Ahimaaz had good intentions, but became confused (Klaus) or evasive (Hertzberg *1 and 2 Samuel* OTL) under David's questioning, or that he acted in good faith throughout, having not heard of Absalom's death (McCarter *2 Samuel* AB). The latter is a difficult position to maintain; it was Absalom's death that brought an end to the fighting between the armies of David and Absalom (2 Sam 18:16), and as even Ahimaaz hints (v 29), it caused a great tumult. Even if Ahimaaz somehow had not previously heard the news—which was surely on everyone's lips—Joab mentions Absalom's death to him in v 20. McCarter (*2 Samuel* AB, 408) suggests that these are the narrator's words, not Joab's, but it nevertheless appears from Ahimaaz's conversation with Joab (particularly Ahimaaz's words in vv 22–23) that he understands Joab's reason for not sending him to David. Moreover, Ahimaaz's claim of ignorance about Absalom's welfare (that he heard a commotion but left before learning what it was about) is patently false, since it is without foundation in the preceding narrative, and since the Cushite, who left earlier, knew of Absalom's death. Ahimaaz, who was high-born and on close terms with David's general Joab (the latter calls him "my son" and tries to protect him from David's displeasure; Ahimaaz, for his part, is not afraid to argue with Joab), can hardly have been ignorant of Absalom's execution at the hands of Joab and his ten armor-bearers (18:14–5). Lastly, if Ahimaaz were to be seen as acting in good faith, the narrative would lose much of its rich irony and literary raison d'être.

It appears, on the contrary, that Ahimaaz possessed the same sort of craftiness that made Jacob an entertaining figure. The nameless Cushite, doubtless running along with dreams of a handsome reward from David, acts as a foil for Ahimaaz. (The notice of the latter's quicker route rules out the interpretation that the Cushite was passed because he ran slowly, reluctant through fear of David's response; on the contrary, as is seen in his words to David [vv 31–32], he believed that he carried good news.) The reader knows what the Cushite does not: that David will be devastated by the "good news," and that Ahimaaz is in hot pursuit. On the other hand, the reader is led to see Ahimaaz as an overeager naïf who carries news which is both bad and (since the Cushite left first) no longer new. But Ahimaaz takes this no-win situation

and turns it to his advantage, first by taking a shortcut and reaching David first, and second by appropriating the good news for himself, leaving the Cushite with the bad. In a final twist, however, Ahimaaz's actions come to nought as David senses that he has not been told everything, and bids Ahimaaz to stand by until the second messenger arrives.

David's statement that Ahimaaz "is a good man, and comes with good tidings" (v 27), is not to be taken at face value, but as an ironic touch. It is not Ahimaaz's goodness, but rather his opportunism, which makes him a bearer of good news. Similar irony is apparent when Jonathan (Ahimaaz's companion in 2 Sam 15:27, 36 and 17:17–21) comes bearing news for Adonijah (1 Kgs 1:42); the latter exclaims "Come in, for you are a worthy man and bring good news," but Jonathan replies (v 43), "No, for our lord King David has made Solomon king …"

3. A son-in-law of King Solomon and prefect over the district of Naphtali, charged with supplying provisions for the palace in the 8th month of every year (1 Kgs 4:15, cf. 4:7). Ahimaaz married Solomon's daughter Basmath. His name (found only in 1 Kgs 4:15) is lacking a patronym. Possibly "Ahimaaz" is in fact the surviving part of a patronym, since 5 of the preceding 7 names listed in 1 Kgs 4:8–14 are in patronymic form (i.e., early damage to the text may have destroyed the personal names of these individuals). Possibly identical to Ahimaaz 2.

Maaz, a shortened form of Ahimaaz or of a similar name, appears in 1 Chr 2:37. The related name Abimaaz was found on a seal impression from Jerusalem which reads *lṣpn ʾ/bmʿṣ* "belonging to *ṣpn* (the son of) Abimaaz" (Avigad 1970: 131 and pl. 30:c). A seal impression which, though missing one letter, appears to contain the same inscription was found at Azekah (Bliss 1900: 14–15, and 18 Cut 2/2).

AHIMAN (PERSON) [Heb *ʾăḥîman* (אֲחִימַן)]. Name of two people in the OT.

1. One of the "giant" descendants of ANAK (Num 13:22; Josh 15:14; Judg 1:10). Although it is possible that Ahiman could be the son of Anak (Josh 15:13), it seems unlikely since Anak is related to the legendary Nephilim (Num 13:33; see also Gen 6:4) which seems to put Anak himself back in the mists of history. Ahiman, along with Sheshai and Talmai, was probably a leader of the Anakim in the Hebron area (Num 13:22; Judg 1:10). The spies who were sent out by Moses to investigate Canaan were the first to encounter Ahiman (Num 13:22). The Anakim, whose unusual height and strength made them appear invincible (Num 13:33), were cited by 10 of the spies as the prime reason for their belief that Israel could not conquer Canaan. The biblical writers apparently felt it necessary to ensure that the eventual destruction of the Anakim was recorded in detail to indicate the power of God to triumph over even his most fearsome enemies. Although the text is unclear as to who conquered the Anakim (Joshua in Josh 11:21; Caleb in Josh 15:14; and Judah in Judg 1:10), both Joshua and Caleb, the spies who were confident that Israel could conquer Canaan, are associated with the conquest of Ahiman and the other Anakim. This desire to provide specific instances in which faithful individuals triumphed against incredible odds is probably responsible for the names of Ahiman, Sheshai, and Talmai being recorded throughout Israel's dealings with the Anakim rather than merely listing the Anakim as one of the nations conquered by Israel.

2. A Levite who was one of the gatekeepers in the temple after the return from exile in Babylon (1 Chr 9:17). According to 1 Chr 9:17, Ahiman is 1 of 4 gatekeepers, but Neh 11:19 excludes Ahiman and Shallum and lists only Akkub and Talmon. Curtis and Madsen (*Chronicles* ICC, 174) and Braun (*1 Chronicles* WBC, 136) suggest that since Ahiman is the last gatekeeper mentioned in the list in 1 Chr 9:17, the text should read *ʾăḥêhem* "their brothers" as does Neh 11:19 (rather than the proper name Ahiman). 1 Chr 9:24–26 emphasizes the fact that there were 4 gatekeepers, 1 for each side of the temple.

The Chronicler may well have added the name Shallum to the list in Neh 11:19 and changed "their brothers" in Neh 11:19 into the proper name Ahiman to produce the required 4 gatekeepers. At this time, however, it is impossible to decide definitely on the historicity of Ahiman. Neh 11:19 may well list only the 2 significant gatekeepers while 1 Chr 9:17 lists all 4 of the gatekeepers.
ROBERT C. DUNSTON

AHIMELECH (PERSON) [Heb *ʾăḥîmelek* (אֲחִימֶלֶךְ)]. **1.** The son of Ahitub, and father of Abiathar (1 Sam 21:2–10—Eng 21:1–9; 22:9–20; 23:6; 30:7). Ahimelech is sometimes identified with Ahijah (1 Sam 14:3, 18), but it is more likely that Ahijah is his brother (McCarter, *1 Samuel* AB, 239). If true, this would make Ahimelech the great-grandson of Eli.

Ahimelech was in charge of the priests at Nob located N of Jerusalem and close to Gibeah where Saul lived. Therefore, he was part of the religious establishment of Saul's kingdom. On one occasion David came to Ahimelech seeking food and a weapon. David pretended he was on a mission for Saul though he was really taking flight from Saul. Even though he was suspicious of David, Ahimelech gave him sacred bread and the sword of Goliath. Like Michal and Jonathan before him, Ahimelech was another of Saul's supporters who helped to preserve David's life. Unlike the others, he did not knowingly help David escape from Saul. However, Doeg the Edomite witnessed Ahimelech's act and later told Saul. Saul accused Ahimelech of treason, refused to accept his denial, and told his servants to kill Ahimelech and the other priests. When his own servants refused, Saul returned to Doeg. Doeg, who apparently had no reverence for Israelite priests, killed Ahimelech and 84 other priests, and wiped out the town of Nob. Only Abiathar, son of Ahimelech, escaped and fled to David. This fulfilled the prophecy of 1 Sam 2:31ff. about punishment on the house of Eli. It also shows that Saul was without further benefit of priestly counsel while David protected and preserved Abiathar. Later, Abiathar came to share priestly duties with Zadok.

2. A Hittite (Heb *ḥittî*) companion of David who remained silent when asked by David to accompany him into Saul's camp (1 Sam 26:6). The names of persons called "Hittites" in the OT are almost all good Semitic names, e.g., Ephron and Zohar, Gen 23:8; Judith, Gen 26:32; Adah, Gen 36:2, etc. Ahimelech likewise is a good Semitic name, meaning "my brother is king." Therefore, it is most likely that Ahimelech is part of a group of Canaanites and not a Hittite from Anatolia.

3. Son of Abiathar and grandson of Ahimelech in 1. above, according to 1 Chr 24:3, 6, 31. This Ahimelech worked with Zadok to organize the priests into 24 ancestral classes. His identity can be supported by the common practice (1 Chr 5:30–41—Eng 6:1–15) of naming the grandson after his grandfather (*CMHE*, 212–214). Others (e.g., Braun, *1 Chronicles* WBC, 238) argue against a separate identity for this Ahimelech for two reasons. First, Ahimelech is Abiathar's *father* elsewhere (1 Sam 22:20; 23:6; 30:7). Abiathar was active with Zadok (2 Sam 20:25) during David's reign and was replaced by Zadok (1 Kg 2:35) in Solomon's reign. Those verses that read "Ahimelech, son of Abiathar" could be either a scribal error, or the writer's judgment on Abiathar for supporting Adonijah instead of Solomon for the kingship. Second, the later Ahimelech is descended from Ithamar (1 Chr 24:3) while the earlier Ahimelech is descended (with Zadok) from Eleazar. This makes the later Ahimelech's lineage subordinate to Zadok. "Ahimelech, son of Abiathar" in 2 Sam 8:17 is usually taken as a scribal error and should be "Abiathar son of Ahimelech" (McCarter, *2 Samuel* AB, 253). The same approach is suggested for the parallel passage 1 Chr 18:16 (Abimelech is a scribal error there for Ahimelech).
JAMES C. MOYER

AHIMOTH (PERSON) [Heb *ʾăḥîmôt* (אֲחִימוֹת)]. The son of El-kanah, brother of Amasai, and father of another Elkanah, all Levites descended from Kohath (1 Chr 6:10—Eng6:25). In a subsequent genealogy, this line of descent differs by naming Mahath as the son of Amasai and father of Elkanah (1 Chr 6:20–21—Eng6:35–36; cf. 2 Chr 29:12). Rudolf (*Chronikbücher* HAT, 54) suggests that the name Ahimoth resulted from the conflation of an original MAHATH (Heb *maḥat*) with a later marginal gloss "his brother" (Heb *ʾāḥîw*); thus *ʾāḥîw* plus *maḥat* became *ʾăḥîmôt.* Further speculation on his identity is

difficult, because the name Ahimoth is unattested outside this genealogy of Levites (1 Chr 6:1–15—Eng6:16–30).
MARK J. FRETZ

AHINADAB (PERSON) [Heb *ʾăḥînādāb* (אֲחִינָדָב)]. The son of Iddo and prefect over the seventh of King Solomon's twelve administrative districts named after the town Mahanaim (1 Kgs 4:14). As prefect, Ahinadab was in charge of supplying the royal court (family, servants, officials) one month per year. The district comprised the southern half of the Transjordan and included tribal territory from Gad (*HGB*, 65, 262–73; Jones *1 and 2 Kings. Vol. 1.* NCBC, 143) and possibly also from Manasseh and Reuben (Mettinger 1971: 118). The appointment of Ahinadab as prefect indicates that his family enjoyed high social standing at the time of Solomon.

AHINOAM (PERSON) [Heb *ʾăḥînōʿam* (אֲחִינֹעַם)]. **1.** The daughter of Ahimaaz (1 Sam 14:50), who became the wife of SAUL BEN KISH, and the first queen of the Israelite state. The name means, "my brother is joy." The Bible does not record her hometown. It appears that she bore Saul seven children: five sons and two daughters. According to the list of offspring in 1 Sam 14:47–48, which seems to derive from the early years of Saul's reign, Merab was the first-born; then Jonathan, the eldest male; Ishvi; Malchishua; and Michal, the younger daughter. Abinadab and Eshbaal, who are not named in the first list, but who are included in the Saulide genealogies in 1 Chr 8:33–40 and 1 Chr 9:39–44, appear to have been the last two born, with Eshbaal the youngest. Ishvi is not mentioned in the later genealogies, and probably died as a youth (see ISHVI).

2. A woman from the town of Jezreel, who became one of David's early wives (1 Sam 25:43; 27:3; 30:5; 2 Sam 2:2; 3:2; 1 Chr 3:1). While he was in flight from Saul, David is reported to have married her along with Abigail, the widow of Nabal (1 Sam 25:43), and the two women were to have accompanied him to Gath and resided there during his early mercenary service (1 Sam 27:3). Both Ahinoam and Abigail are reported to have been among those taken captive from Ziklag by the Amalekites while David was joining the Philistine troop muster at Aphek to do battle against Saul (1 Sam 30:5). The authenticity of the Amalekite incident is questionable; it serves on a literary level to contrast David's actions against the Amalekites with Saul's failure to eradicate them at Yahweh's command in 1 Samuel 15 (i.e. Gunn 1980: 110), illustrating once more his legitimate role as divinely anointed heir-elect to the throne on the eve of Saul's death. His defeat of the Amalekites emphasized his ability to serve as God's earthly vice-regent and military commander, while providing him with a convenient alibi for his whereabouts as Saul died on the battlefield at Gilboa (Edelman 1990). She bore David his first child, Amnon, after David had terminated his service to Achish of Gath and had moved from the Philistine town of Ziklag to Hebron (2 Sam 2:2; 3:2; 1 Chr 3:1).

It has been proposed that the two Ahinoams were the same individual on the basis of Nathan's comment to David that Yahweh had given him "his master's wives" in 2 Sam 12:8 (Levenson 1978: 27). Such a presumption would require David to have run off with the queen mother while Saul was still on the throne, which seems unlikely. In view of the possession of the royal harem as a claim to royal legitimacy (see ABNER), Nathan's comment can be related to David's eventual possession of Saul's wives after he ascended the throne in the wake of Eshbaal's death. Nathan refers to David's possession of more than a single wife of Saul's in v 23, which precludes the application of the phrase to Ahinoam alone. it is likely that the Jezreel that was Ahinoam's home was the town in S Judah, rather than the town in the Jezreel Valley. In his bid to build a rival state to Saul's in the hills of Judah, it would have been expedient for David to have wed the daughter of an important member of the community of Jezreel in the vicinity of Carmel (Josh 15:55, 56; Kh. Tewana?), an area with established viticulture that could offer David a possible economic base for his political growth (see DAVID).

DIANA V. EDELMAN

AHIO (PERSON) [Heb *ʾaḥyô* (אַחְיוֹ)]. According to the Hebrew text, 3 different people were named Ahio. However, since the consonantal spelling of Ahio (*ʾḥyw*) is identical with the word "his brother" or "his brothers," it is uncertain if all these Ahios should be read with the MT as personal nouns. The form of the name is unique; it is the only name in the Hebrew Bible to end with *-yô.* This might suggest that *ʾḥyw* should never be read as a personal name. However, extrabiblical epigraphic evidence of various types suggests that the suffix *-yô* was used in preexilic Israel: it is found in names in the Samaria ostraca (e.g., Gadio [*gdyw*; *KAI* 185), on seals (e.g., Abio [*ʾbyw*]; Hestrin and Dayagi-Mendels 1978: 36) and on the Kuntillet Ajrud inscriptions (e.g., Shemaio [*šmʿyw*]; Meshel 1978). Furthermore, the name Ahio itself is attested to in a preexilic seal, "Belonging to Ahio son of Saul" (*lʾḥyw bn šʾl;* Avigad 1975) and on a bronze bowl probably of Palestinian origin found in Nimrud (Barnett 1967: 4–6). The Ahio son of Saul seal is especially tantalizing given the connection of the name Ahio to the tribe of Benjamin and specifically to the family of Saul. In later sources, the name Ahio is used of at least 3 individuals in the Elephantine papyri. Thus, Ahio certainly existed as a personal name in Israel and the relative merit of the reading Ahio or "his brother(s)" must be decided on a case by case basis.

The recent epigraphic evidence suggests that the *-yô* element is theophoric (Zevit 1980: 12), and the name is a variant of Ahijah and should be understood as "my (divine) brother is YHWH." The suggestion that it is a profane name, "my little brother" (Noth *IPN,* 22) is unlikely given the newer evidence of *-yô* as a theophoric element.

Ahio refers to the following 3 individuals:

1. Son of Abinadab, who along with his brother Uzzah, drove the cart that transported the ark (2 Sam 6:3–4 = 1 Chr 13:7). Uzzah plays a major role in that narrative; when the cattle leading the cart stop, he steadies the ark, is killed by God, and David names the site Perez-Uzzah (2 Sam 6:6–8). Since Ahio played such an insignificant role in that narrative, there is no obvious reason why his name should have been remembered. Indeed, several ancient translations to 1 Chr 13:7 read the common noun "his brother(s)" rather than the proper noun, Ahio. These factors have suggested that Ahio in Samuel be emended to "his brother" or "his brothers." This is possible, though not compelling. The more radical solution of Budde (1934: 48–49), that Ahio has replaced an earlier "and his brother Zadok" (*wʾḥyw ṣdq*) involves too many conjectures concerning the text and the origins of the Zadokite priesthood.

2. A Benjaminite mentioned only in 1 Chr 8:14. His exact relation to others in the genealogy is unclear; some have seen him as the son of Beriah, mentioned in the previous verse (e.g., NEB), while others have suggested that he is descended from Elpa'al, mentioned in verses 12 and 18 (e.g., RSV). The abruptness of this genealogy and its use of parenthetic geographical statements make it unusually difficult to know how the people mentioned in it are related, and several scholars have rearranged it (Hogg 1899; Rudolph *Chronikbücher* HAT, 78). Furthermore, many have followed the Lucianic family of the LXX, and have emended Ahio to *ʾăḥêhem,* "their brothers" (so BHS). However, there is no contextual or syntactic reason to expect *ʾăḥêhem,* "their brothers" to appear in the genealogy at this point. Therefore, the vocalized Hebrew text Ahio, as a personal name, should probably be retained. In this case, it is noteworthy that another Benjaminite Ahio is mentioned in 1 Chr 8:31 = 9:37 (although that text too is beset with textual problems). Either the same individual is referred to, and he is placed in varying positions in different genealogies because of the respective author's differing conceptions about Ahio's importance, or Ahio might have been a traditional name among the Benjaminites. (See ALEMETH.)

3. A Benjaminite of the clan of Gibeon, brother of Kish (1 Chr 8:31 = 9:37). On the repetition of this genealogy in chap. 8 and 9, see AHAZ #1. It is unclear if this Ahio is related to Saul; this depends on whether the Kish of 1 Chr 8:30 is to be identified with the Kish of v 33 (Demsky 1971: 16–20) and

whether we assume (with Curtis and Madsen *Chronicles* ICC, 164) that the Chronicler has intentionally substituted Gibeon for Gibeah, Saul's birthplace. The Septuagint translates "and his brother," reading *wĕ›āḥîw*, but this is probably a misreading of the consonantal *w›ḥyw* by the translator; there is no contextual or syntactic reason for "and his brother" to appear in this type of genealogy. As noted above, the relationship between this Ahio and the Ahio of the Benjaminite genealogy in 8:14 is uncertain.

MARC Z. BRETTLER

AHIQAR, BOOK OF. The book of *Ahiqar* is a rare example of a polytheistic work which was used and adapted by some Jewish groups. Like Tobit, it is a sapiential novel, i.e., it combines a dramatic story with wise instruction. It is the most ancient of the extrabiblical works preserved and read by Jewish people.

A. The Story

According to the most fully preserved versions of the plot, Ahiqar was a wise scribe and counsellor of the Assyrian kings Sennacherib and Esarhaddon (their order is reversed in the later versions). See AHIKAR/AHIQAR. As he lacked a son, the sage adopted his nephew Nadin whom he trained to be his successor by instructing him with wise words. Nadin did succeed the aging Ahiqar, but far from exhibiting appropriate gratitude to his uncle, Nadin framed him by forging treasonous letters in Ahiqar's name. When Esarhaddon was informed of Ahiqar's alleged crime, he sentenced him to death. It happened that Nabushumishkun, the officer commissioned to execute Ahiqar, had been saved by him at an earlier time when their roles were reversed and Ahiqar had been ordered to kill him. The officer agreed to spare Ahiqar and to kill a eunuch in his place. Once it became known abroad that Ahiqar was dead, the Egyptian king issued a challenge to the Assyrian monarch: If he sent him someone who could construct a palace between heaven and earth, Esarhaddon would receive the revenue for 3 years from Egypt. If no such expert could be found, then the Assyrian king would have to pay the Egyptian sovereign a similar sum. Esarhaddon bemoaned the loss of Ahiqar and was overjoyed to discover that his earlier order had been countermanded. Once he had recovered from his confinement, Ahiqar went to Egypt and handled all problems with stunning wit and wisdom. He returned to Assyria with the Egyptian revenue and took his revenge on Nadin. He severely punished him and scathingly criticized him for what he had done; the battered Nadin then swelled up and died.

B. Versions

The earliest extant version of Ahiqar is the fragmentary Aramaic text which was found at Elephantine. The papyrus dates from the late 5th century B.C.E. and contains parts of the narrative in 5 columns (through the "execution" of Ahiqar) and sayings on the remaining 9. Later, many other versions of the book appeared. Some small, very fragmentary parts of what may have been a 1st-century C.E. Demotic translation of Ahiqar have been identified (Küchler 1979: 333–37; Lindenberger 1983: 310–12), but their nature remains unclear. The two fragments with narrative sections do not agree in all details with known versions of the story, and the one fragment with sapiential teachings offers no correspondence with the other texts. Ahiqar was, in all likelihood, translated into Greek, but no copy of this version has been found. The Gk *Life of Aesop* (chaps. 23–32) does, however, contain sections which parallel the book, with Aesop assuming the role of Ahiqar and the Babylonian king Lykeros that of the ruler whom he serves. The hypothetical Greek Ahiqar eventually served as the base for translations into Rumanian and Slavonic, with the latter becoming the *Vorlage* of Russian and Serbian editions. The Syriac translation, which exists

in more than one recension, is the oldest and most valuable of the complete versions. From it Armenian and Arabic (and Karshuni) renderings were made, with the Armenian becoming the base for Georgian and Old Turkish translations. Some of the proverbs of Ahiqar are included in the Ethiopic *Book of the Wise Philosophers* which was translated from Arabic (Lindenberger 1983: 4–7). In some instances Ahiqar has been included as an appendix to *A Thousand and One Nights.*

C. Date and Origin

Even before the Elephantine papyrus was found, it was known that Ahiqar was pre-Christian in date because elements of its story, some of its principal characters, and aspects of its instruction are mentioned in Tobit (1:21–22 [Ahikar is called Tobit's nephew; see also 4QTobaram[a]]; 2:10; 11:18–19; 14:10 [see 4QTobaram[d]; his name in some mss at 14:15 is a mistake, perhaps for Cyaxares]). The discoveries in Egypt simply confirmed the antiquity of the work. The script of the Elephantine papyrus can be classified as "… formal or semi-formal of the end of the fifth century" (Naveh 1970: 35; Cowley 1923: 204). The story must, therefore, have been written at some time after the beginning of Esarhaddon's reign (680 B.C.E.) and before the copy of it from Elephantine was made. This battered text, which does not appear to be the autograph (Lindenberger 1983: 19), contains parts of both the narrative and the sayings, but the point (or points) where there was a change (or changes) from one to the other has not survived. This raises the problem whether the book as it stands is a unity (and thus probably composed at one time) or is a later combination of narrative and sayings which were originally separate and from different dates. As far back as the story can be traced, they are combined, but the proverbs or sayings appear to be written in an older form of Aramaic—in a Western dialect—than the official Aramaic of the narrative (Greenfield 1978: 97; Lindenberger 1983: 19, 279–304). If this is true, it may mean that different authors composed them and that it would then be possible to date the proverbs at an earlier time than the *terminus a quo* implied by the narrative; but the conclusion is not inevitable, in as much as traditional material such as the proverbs would naturally be in a more archaic or poetic diction than the narrative. Moreover, even in the Aramaic there are references to the narrative in the sayings. Finally, as noted by Küchler (1979: 330), the first words of the Aramaic papyrus (*ʾlh m] ly ʾḥyqr* [these are the words of Ahiqar]) imply that sayings are involved.

It was once thought that Hebrew might have been the original language of the book, but scholarly views changed with the discovery of the Aramaic text. The Assyrian setting of the tale suggested to some that the author wrote in Akkadian (so Cowley 1923: 205–08; Grelot 1972: 429) from which the Aramaic was translated (Cowley posited a Persian intermediary translation). Nevertheless, while this view continues to find defenders, it now seems more likely that both narrative and sayings were composed in Aramaic (Lindenberger 1983: 16–17, who notes an Aramaic word play in saying 41 [*ḥṭ* (arrow) and *ḥṭʾ* (sin)]).

D. Structure

As indicated above, it has been claimed that the sayings originated separately from the narrative so that the present combination of the two is due to a later editorial operation. All extant texts, however, contain both, but questions remain about the shape of the book because of uncertainties regarding the exact location of the sayings. It is obvious that major differences separate the Aramaic sayings and those of the later versions, and that for the sapiential material the latter also show variation relative to one another. But a more significant structural problem has to do with the original location of the proverbs, once they were joined to the narrative (if they were ever separate). In the Aramaic text, the columns numbered i–v contain narrative and vi–xiv offer sayings. None of the fragmentary narrative lines indicates a transition to the proverbs. This may entail that in the Aramaic version the sayings came at the end of the narrative (Cowley 1923: 210; Lindenberger *OTP* 2: 480). Grelot (1972: 432–51) attempts to integrate the two by arranging the columns in the order i, vi–xiv, ii–v, but the state of the text makes any conclusion quite uncertain. The major later versions—Syriac, Armenian, and Arabic—present two sets of sayings: the first (chap. 2) contains Ahiqar's instruction of Nadin and the second (chap. 8) his harsh words for him near the conclusion. The parallel sections in the *Life* of Aesop are distinctive in that the one section of sayings which Aesop delivers to his adoptive son Ennus is found before Aesop leaves for Egypt and just before Ennus' death. As nothing definite can be deduced from the Aramaic text and the Aesop material is a

special case, it is reasonable to suppose that the arrangement as given in the Syriac, Armenian, and Arabic versions is the original one. See also *ANET* 427–30; *APOT* 2: 715–84; *Proverbs* OTL.

JAMES C. VANDERKAM

AHIRA (PERSON) [Heb *ʾăḥîra* (אֲחִירַע)]. The son of Enan and leader of the tribe of Naphtali, who assisted Moses in taking a census of Israel (Num 1:15; 2:29). As tribal leader, Ahira contributed offerings on the 12th day of the tabernacle dedication (Num 7:78, 83), and took charge of the military troop of Naphtali throughout Israel's march from Sinai to Palestine (Num 10:27).

MARK J. FRETZ

AHIRAM (PERSON) [Heb *ʾaḥîrām* (אַחִירָם)]. AHIRAMITES. The third of 5 sons of Benjamin and head of the Ahiramites, according to one Benjaminite genealogy (Num 26:38). While this is the only occurrence of the name, scholars have suggested that corrupt forms of "Ahiram" may exist in several other Benjaminite genealogies. One such case is Genesis 46:21, which lists 10 sons of Benjamin, including "Ehi, Rosh, Muppim, Huppim." It is widely agreed (e.g., Speiser *Genesis* 343) that these 4 names are a mechanical corruption of "Ahiram, Shephupham, Huppim." This correction would bring these names to agree with the 3d, 4th, and 5th sons of Numbers 26:38–9. A metathesis of the final *mem* of "Ahiram" and the initial *šin* of "Shephupham" would have created a name with the consonants *ʾalep-ḥet-reš-šin,* which could then have been broken into 2 names, "Ehi, Rosh." The resulting names, "Ehi, Rosh, and Muppim" do not occur in any other Benjaminite genealogy. Another possible occurrence of the name "Ahiram" is in the name "Aharah" who is listed in 1 Chr 8:1 as the 3d son of Benjamin. Schumacher (IDB 1:70) suggests that yet another corrupt form of "Ahiram" exists in the name "Aher" in 1 Chr 7:12. While this may seem superficially to be the case, most scholars follow the suggestion of Klostermann (*RE* 4) that the name should be read *ʾeḥād,* "one." There are other possibilities for the name "Aher" (which is nowhere else attested), including that of reading "Addar" (="Ard"), a name found in several Benjaminite genealogies (Williamson *1 Chronicles* NCBC, 78).

SIEGFRIED S. JOHNSON

AHISAMACH (PERSON) [Heb *ʾăḥîsāmāk* (אֲחִיסָמָך)]. A Danite and father of tabernacle craftsman OHOLIAB (Exod 31:6, 35:34, 38:23). Ahisamach is a rather typical W Semitic verbal sentence name (*IPN* 66–70). In such names kinship elements such as *ʾāb* "father" and *ʾāḥ* "brother" are "generally theophoric, the deity being identified as a protective relative." (*IDB* Sup, 620) The name, then, means "My [divine] brother supports/has supported." A similar name with the same verb, *Semachiah* "Yahweh supports/has supported" (1 Chr 26:7) is clearly theophoric. See also *TDOT* 1:7, 193.

STEPHEN A. REED

AHISHAHAR (PERSON) [Heb *ʾăḥîšaḥar* (אֲחִישַׁחַר)]. A son of Bilhan (1 Chr 7:10), grandson of Jediael, appearing in a curious Benjaminite genealogy in 1 Chr 7:6–12a. The name means "brother of the dawn." This is the only appearance of the name in the MT (LXX *Achisaar*), and it does not appear in the Apocrypha or the deuterocanonical literature. Scholarship has been divided concerning the authenticity of this genealogy because of its place in the text, the more complete Benjaminite genealogy which follows in 1 Chr 8:1–40, the lack of reference to Zebulun and Dan within 1 Chronicles 1–9, the naming of only 3

sons of Benjamin (Bela, Becher, and Jediael), and the singular appearance of Jediael in the genealogy. Curtis and Madsen (*Chronicles* ICC, 147) and Brunet (1953: 485f.) opt for the possibility of the genealogy being that of Zebulun. However, this approach suggests corruption of the text without sufficient manuscript support. Coggins (*Chronicles* CBC, 49), Braun (*1 Chronicles* WBC, 108), and Williamson (*Chronicles* NCBC, 78) suggest that this genealogy has replaced the tradition of Gen 46:21 at this point and reflects a postexilic military census list complete with inflated numbers of fighting men (see also Meyers *1 Chronicles* AB, lii). Since Ahishahar and the other sons of Bilhan are called *rā›šē hā›ābôt,* or heads of families, political and social organization may be reflected somewhat, as well as military organization. In early Israel, and probably continuing even as late as postexilic times, the *bēt ›āb* was the basic and most important socioeconomic unit. Harmon (1983: 150) has indicated that the head man of a *bēt ›āb* may have functioned along the lines of the bigmen of anthropological terminology. Orme (1981: 139) states that bigmen are successful, involved in community affairs, associated with feasts, and involved in arbitration in local disputes.

G. EDWIN HARMON

AHISHAR (PERSON) [Heb *›ăḥîšār* (אֲחִישָׁר)]. One of Solomon's high officials *(śārîm),* who was in charge of the palace (1 Kgs 4:6). His duties as royal chamberlain, or majordomo (*‹al-habbāyit,* "over the house"), were centered on the administration of the royal household. Near Eastern parallels to this office suggest that he regularly received instructions from the king, controlled important communications and access to the palace, and oversaw other officials (*AncIsr* 1: 128–31; cf. Isa 22:22). In Israel the office may not yet have gained the importance which it held in other lands, as is suggested both by the occurrence of Ahishar's name toward the end of the list (1 Kgs 4:2–6), and by the fact, unusual for this list, that the name of his father is not mentioned. J. Gray (*Kings* OTL, 133) speculates that the lack of a patronymic may indicate the inferior nature of the office, or that Ahishar was of foreign, or humble, origin.

Even the form of the name is uncertain. As it stands, the name might mean "my brother has sung" (*ISBE* 1: 81). The Gk has *Achei* (G^B) or *Achiēl* (G^L). Montgomery (*Kings* ICC, 119) suggested that in the Gk text *Achei ēn,* the *ēn* may have been an error for *ēl,* pointing to a Heb *›ḥy›l,* with *šr* as a remainder of the patronym. Another possibility would be to vocalize *›aḥyāšār* ("my brother is righteous," *IPN* 189).

KENNETH H. CUFFEY

AHITHOPHEL (PERSON) [Heb *›ăḥîtōpel* (אֲחִיתֹפֶל)]. A famed wise man and royal counselor of David who figured prominently in Absalom's revolt against his father.

The name itself is composed of the theophoric element *›ăḥî-* followed by the obscure *tōpel,* otherwise unknown except as a place name in the lower Transjordan (Deut 1:1), which is to be identified with modern *Tafîla.* Noth suggests that the 2d particle be identified with the later Heb word *ṭpl = tpl,* meaning "to add to" (*IPN* 236).

Ahithophel's role in Absalom's revolt earned him a permanent place in the later Syriac vocabulary, where his name became an adjective—*›aḥitōpēlājā*—meaning "traitor." This same wise man was also the father of Eliam, one of David's champions (the *šālišîm;* RSV: The Thirty), who may be identified with Ammiel (*IPN* 15, n.2), the father of Bath-shua (= Bath-sheba, 1 Chr 3:5; see below).

As a wise man, Ahithophel was reputed to be "like the oracle of God" (2 Sam 16:23). Thus it was a fortunate turn of events for Absalom when Ahithophel threw in his hand with the rebels. It was on Ahithophel's advice that Absalom violated David's concubines "in the sight of all Israel" (2 Sam 16:21–23), as prophesied by Nathan (2 Sam 12:11), in order to demonstrate Absalom's complete break from his father. (In the ancient Near East, the usurpation of the royal authority of one's father also meant the

usurpation of his male virility, hence the great symbolic power of Absalom's act.) Ahithophel further advised Absalom to let him take a body of 12,000 men and strike David and his men immediately, while they were still weak and dispirited from the coup. Absalom was at first pleased with this suggestion, but Hushai the Archite, one of David's counselors (who was secretly working to undo Ahithophel's sound advice), opposed the plan. Hushai argued instead that Absalom should wait until all Israel had gathered to him. Then, when Absalom and the Israelites met David and his professional soldiers in the field, they would overrun David and his men by sheer force of numbers. When Absalom chose to follow the advice of Hushai, Ahithophel, certain of the impending disaster, went home and set his affairs in order, and hanged himself.

Ahithophel's participation in Absalom's revolt is indicative of the deep dissatisfaction with David's rule, even within the inner circle at court. While many may have joined the rebels in order to anoint a king who took a more direct interest in the affairs of the people than David (2 Sam 15:1–6), Ahithophel's reasons may have been private. That is, he may have been motivated by David's treacherous murder of Bath-sheba's husband, Uriah. If Ammiel, father of Bath-shua (1 Chr 3:5; Bath-shua, as the mother of Solomon, is to be read Bath-sheba) is the same person as Eliam, son of Ahithophel (2 Sam 23:34)—and this is not certain: the names are related, but in the same way that Joab [= Yahweh is father] is related to Abijah [= father is Yahweh], so that they are not identical—Bath-sheba would have been the granddaughter of Ahithophel. Ahithophel would then have had a very real and personal stake in the rebels' cause, namely revenge. One should wonder, however, at the absence of Ammiel (Eliam?) from among the conspirators. Bath-sheba's father would certainly not have been ignorant of what his own father had known of his daughter's marriage. In the end, Ahithophel's relationship to Bath-sheba must remain uncertain, as must his reasons for joining Absalom's revolt.

D. G. SCHLEY

AHITUB (PERSON) [Heb *ʾăḥîṭûb* (אֲחִיטוּב)]. **1.** A Levitical priest, the father of Ahijah and Ahimelech, and grandfather of Abiathar (1 Sam 14:3; 22:9, 11–12, 20). Ahijah was priest to Saul in Shiloh (1 Sam 14:3) and served the same king at Gibeah in his warfare with the Philistines (1 Sam 14:18–19, 36). Ahimelech the priest (contra the gloss in Mark 2:26) gave David holy bread and Goliath's sword at Nob (1 Sam 21:7, 10—Eng 21:6, 9) and perished when Doeg the Edomite massacred the priesthood there (1 Sam 22:18). Ahimelech's son Abiathar escaped to serve David as his chaplain during his "outlaw" period (1 Sam 22:20; 23:6; 30:7) and remained an important priest during David's early kingship (2 Sam 15:35; 20:25; 1 Chr 27:34?). Moreover, it is difficult to reconcile the claim that Ahimelech was Abiathar's son (2 Sam 8:17 = 1 Chr 18:16; also 1 Chr 24:6) unless there was an Ahimelech II. We are told that Abiathar's son/Ahitub's great-grandson, Jonathan, stayed behind in Jerusalem as one of David's spies after David's flight from Absalom (2 Sam 15:27, 36). Ahitub's brother's name was Ichabod, and both men are termed sons of Phinehas and grandsons of Eli, the high priest at Shiloh in the days of young Samuel (1 Sam 1:3; 4:21; 14:3). While one tradition traces Ahitub's ancestry through Eli back to Eleazar, Aaron's third son (2 Esdr 1:1–3), another tradition links this Ahitub through his son Ahimelech and grandfather Eli with Ithamar, the fourth son of Aaron (1 Chr 24:3; Josephus, *Ant* 5.11.5).

2. A Levitical priest, the son of Amariah (I?), father of Zadok (I?), and grandfather of Ahimaaz (2 Sam 8:17 = 1 Chr 18:16; 1 Chr 5:33–34—Eng6:7–8; 6:37–38—Eng6:52–53). Zadok (I?), with Abiathar, was a priest to David (2 Sam 15:35; 2 Sam 8:17; 20:25; 1 Chr 18:16). When Abiathar supported Adonijah as David's successor instead of Solomon, Solomon appointed Zadok (I?) as his high priest in place of Abiathar (1 Kgs 2:35). Ahimaaz, son of Zadok (I?) and grandson of Ahitub (I?), together with Jonathan ben Abiathar, likewise kept David informed of developments in Jerusalem following Absalom's conspiracy (2 Sam 15:27, 36).

3. A Levitical priest, the son of Amariah (II?), and the father of Zadok (II?), and grandfather of Shallum (1 Chr 5:37–38—Eng6:11–12). This Ahitub (II?) appears to be the same person listed in Neh 11:11 and 1 Chr 9:11 as the father of Meraioth and grandfather of Zadok (II?) and great-grandfather of Meshullam (= Shallum above?).

It may well be that 3. and 2. (and even 1.) above are actually all one and the same person (Curtis and Madsen *Chronicles* ICC, 128–29). Beside the Ahitub of Eli's lineage, the name Ahitub appears in 7 biblical genealogical lists: Neh 11:11; 1 Chr 9:11; Ezra 7:1–5; 1 Chr 5:27–41—Eng6:1–15; 1 Chr 6:35–38—Eng6:50–53; 1 Esdr 8:1–2; and 2 Esdr 1:1–3. Yet in only one of these lists, namely 1 Chr 5:27–41—Eng6:1–15, does the name Ahitub appear more than once. The fact that the pattern Amariah-Ahitub-Zadok occurs twice only in this one particular list readily suggests either a copyist's error or some deliberate scribal intention. This list is a long one, covering 26 generations in all, from Levi to Jehozadak, the high priest who went into exile (1 Chr 5:4—Eng6:15). The 2d list in the same chapter (1 Chr 6:35–38—Eng6:50–53) limits itself to repeat only the 12 names from the first half of its chapter counterpart, the high priests from Aaron through Ahimaaz. On the other hand, Neh 11:11 and 1 Chr 9:11 represent lists of only 6 names each, but names more suggestive of the lower half of the same long list in 1 Chr 5:27–41—Eng6:1–15. Neh 11:11 reads the names Ahitub-Meraioth-Zadok-Meshullam-Hilkiah-Seraiah; 1 Chr 9:11 reiterates the same first 5 names but changes the last name to Azariah. If Neh 11:11 and 1 Chr 9:11 should exhibit an early form of the list, Ezra 7:1–5 reflects another stage in its development as it solves the previous last name mixup through conflation (Azariah-Amariah-Ahitub-Zadok-Shallum-Hilkiah-Azariah-Seraiah-Ezra) and expands the upper end of the list to include the high priests from Aaron down through Meraioth. The long list in 1 Chr 5:27–41—Eng6:1–15 goes further, repeating the upper and lower pattern of names from Neh 11:11; 1 Chr 9:11; and Ezra 7:1–5. What turns up basically new in this long list are the hitherto unparalleled names Amariah-Ahitub-Zadok-Ahimaaz-Azariah-Johanan, filling the gap between Meraioth and Azariah of the former lists. Significantly the first 3 names of this addition of 6 names contribute to the double pattern of Amariah-Ahitub-Zadok already noted above. The remaining 2 somewhat-later lists from 1 and 2 Esdras then go on to presuppose the final stage reflected in the long list as the 12 names of 1 Esdr 8:1–2 draw from both the top and the bottom of the long list. 2 Esdr 1:1–3 parallels Ezra 7:1–5 closely, but between Amariah and Ahitub it includes 3 names completely new to all the previous lists: the names Eli-Phinehas-Ahijah. This suggests that the Ahitub intended in this last list is Ahijah, person 1. above, and, this, in a list which purports to link Ezra the priest to the line of Eleazar, not Ithamar.

If the double names Zadok and Ahitub in the long list are in fact a literary fiction created to supply a lineage to an otherwise unknown Zadok, the name of Ahitub known from the house of Eli (the house which Zadok displaced) could have been singled out by the biblical writer as a convenient and appropriate priestly ancestor (Rehm, *IDBSup*, 976–77). On the other hand, were it granted that the long list, though unique, is reliable, and that there were in fact historically more than one Ahitub and one Zadok in the priesthood descendent from Eleazar, the threefold delineation above might stand.

Interestingly, Katzenstein (1962), in his study of the high priests from Solomon to Jehozadak, thinks there may have been as many as 22 high priests in office during this time span. This would add 9 names to the 13 currently on record in 1 Chr 5:27–41—Eng6:8–15 for this span in the long list. Besides the one Ahitub expected in this part of the list, he postulates 3 Zadok's, 4 Azariah's, and 2 Amariah's. Katzenstein follows closely the sequence of high priests given by Josephus (*Ant* 9.1.1; 9.7.1; 9.10.4; 10.8.5–6) and believes that the extra names in Josephus were omitted by the biblical writers because they knew these priests to be non-Zadokites (see Katzenstein 1962: 382–84).

4. The son of Elijah and the father of Raphaim and the distant ancestor of Judith, the heroine of the apocryphal book of the same name (Jdt 8:1). As Judith's supposed ancestry is traced back 16 generations to Israel or Jacob, the author sought to impress upon his readers the rich Jewish heritage of the God-fearing widow of Bethulia who single-handedly captivated and decapitated the fearsome invader Holofernes.

AHLAB (PLACE) [Heb *ʾaḥlāb* (אַחְלָב)]. A town within the tribal boundaries of Asher whose non-Israelite inhabitants were driven out during the Heb conquest of Palestine (Judg 1:31). Although in Josh 19:24–31 the list of towns located on Asher's territorial boundary does not mention Ahlab, LXX^{B} of Josh 19:29 reads *apo leb* "from Leb," which may reflect a Heb *vorlage* of **mlb*. However, the LXX reading *aalaph* in Judg 1:31 supports a derivation from Heb *ʾḥlb* rather than *ḥlb*.

Discussion focuses on a metathesis within the name of the letters *lamed* and *bet*. Whereas Judg 1:31 reads "Ahlab, and Achzib, and Helbah," Josh 19:29 concludes with "Mehebel to Achzib." Boling and Wright (*Joshua* AB, 453) argue that Heb *mʾḥlb* "from Ahlab" was the original reading in Josh 19:29, and identify Ahlab with Mehebel. Other scholars identify the two towns, but view Ahlab as an equivalent or variant of Mehebel (Meyer 1906: 540; Fisher 1975: 286). More specifically, Abel (*GP*2: 67), followed by Aharoni (*LBHG*, 235), concludes that the doublet of Ahlab and Helbah in Judg 1:31 expresses a metathesis of Mehebel. In contrast, Kallai (*HGB*, 222) suggests that Ahlab has no parallel in Josh 19:29, whereas Helbah matches a proposed reconstruction Heb **mḥlb* (MT *mḥbl*). This might be supported by the Assyrian inscription of Sennacherib (*ANET*, 287), which lists towns in the area of Sidon, and mentions the town of Maḫalliba. Since the time of Delitzsch (1881: 284), scholars have associated Ahlab with this Maḫalliba, identifying Ahlab with modern *Khirbet el-Maḥalib* located ca. 6 km northeast of Tyre (Boling and Wright *Joshua* AB, 455). See also MAHALAB.

MARK J. FRETZ

AHLAI (PERSON) [Heb *ʾaḥlāy* (אַחְלָי)]. **1.** Although listed as a son of Sheshan (1 Chr 2:31), Ahlai probably was a daughter (in view of v 34) given in marriage to Sheshan's Egyptian slave, Jarha (v 35). However, some scholars understand vv 34–41 as representing a different genealogical source and feel no need to harmonize this passage with v 31, thus concluding that Ahlai was a son. The expression "son(s) of" may be used in the sense of "descendant" or "offspring." Since the MT of 1 Chr 2:31 uses the plural "the sons of," the single daughter (or son) Ahlai, may possibly be understood here as the progenitor of a clan or family bearing her/his name. Because of Sheshan's failure to produce sons, Ahlai probably was the founder of a branch of the important family of Jerahmeel, the first-born of Hezron, grandson of Judah. The Jerahmeelites' association with the Kenites (1 Sam 27:10; 30:29), the similarity of several of their names with the Edomite genealogy in 1 Chronicles 1, and the correspondence of some personal names with place names, allows some scholars to identify them with foreign elements in Israel (Gen 15:19) and the shift of Edomites from southern Judah northward following the destruction of Jerusalem (Braun, *1 Chronicles* WBC, 45 and Myers, *1 Chronicles* AB, 15).

2. The mother (or possibly father) of Zabad, who was one of the mighty men of the armies of David (1 Chr 11:41b). Zabad is listed as a descendant of Sheshan's daughter in 1 Chr 2:36, supporting the conclusion that Ahlai was his mother and identical with #1 above. 1 Chr 11:41b–47 appears to be a continuation of the comparable list in Samuel (2 Sam 23:24–39) and contains names not found there.

AHLAMU. See ARAMEANS.

AHOAH (PERSON) [Heb *ʾaḥôaḥ* (אַחוֹחַ)]. 6th son of Bela and grandson of Benjamin, according to one Benjaminite genealogy (1 Chr 8:4). Many scholars have proposed that "Ahoah" is a mistake for AHIJAH (e.g. Williamson *1 and 2 Chronicles* NCBC, 84), due to the evident dittography in v 7, "Naaman, Ahijah, and Gera." The Hebrew script of the two names *ʾaḥôaḥ* and *ʾahîyāh* are nearly identical. This proposal is supported by the Gk (LXX), Syr, and Aramaic versions. The Gk reads *achia* for the name in both v 4 and v 7.

SIEGFRIED S. JOHNSON

AHOHI (PERSON) [Heb *ʾăḥôḥî* (אֲחֹחִי)]. Var. AHOAH. AHOHITE. Although seen by some as a corruption of Ahijah (Heb *ʾăḥîyāh* vs. *ʾăḥôḥî*), Ahohi is a gentilic noun designating membership in the clan of Ahoah (Heb *ʾăḥôaḥ*), which was counted among the descendants of Benjamin (1 Chr 8:4). That David usurped the Israelite throne from the Benjaminite king Saul did not prevent a number of Benjaminites, including some from the clan of Ahoah, from fighting in David's service. These included Eleazar the son of Dodo (2 Sam 23:9–10; 1 Chr 11:12), the second of "the three," one of David's most renowned warriors. Although the RSV lists Eleazar as "the son of Dodo, the son of Ahohi," the correct reading is probably "Eleazar, the son of Dodo, son of an Ahohite." Either reading would reflect the same Hebrew phraseology; it simply makes more sense to read Ahohi in its plain sense as a gentilic noun, rather than construing it as a proper name.

In the Chronicler's list of David's heroes, the deeds of Eleazar, the son of Dodo, and Shammah, the son of Agee the Hararite, have been combined into a single account (1 Chr 11:12–14; probably when the copyist skipped from the Hebrew *neʿespû-šām* [2 Sam 23:9b] to *wattĕhî-šām* [2 Sam 23:11]). Besides Eleazar, 2 Sam 23:28 recalls one Zalmon, the Ahohite, whose name parallels that of Ilai (Heb *ʿîlay*, emend to *ṣîlay?*) the Ahohite in 1 Chr 11:29. See ILAI; ZALMON.

Finally, the mention of Dodai the Ahohite in the list of monthly levies (1 Chr 27:4) may refer to the father of Eleazar the son of Dodo. Thus, at least two or three Benjaminites from the clan of Ahoah fought in David's select corps of heroic warriors, a fact which may testify both to David's popularity among Saul's picked men (cf. 1 Sam 18:6–8), and to the antiquity of David's own corps of champions (Heb *šālišîm*).

AHRIMAN. See ZOROASTER, ZOROASTRIANISM.

AHUMAI (PERSON) [Heb *ʾăḥûmay* (אֲחוּמַי)]. A member of the tribe of Judah and the son of Jahath (1 Chr 4:1–2). However, he may have been a Calebite, since Shobal, the grandfather of Ahumai, is identified as a descendant of Caleb in 1 Chr 2:50, 52. The genealogy found in 1 Chr 4:1–7 was originally a Calebite list, which has been incorporated into the overall genealogical list of Judah (1 Chr 2:3–4:23). The motivation for this incorporation may have been the Chronicler's interest in "all Israel" as a whole and the tribe of Judah in particular. (For further discussion, see Curtis and Madsen *Chronicles* ICC; Braun *1 Chronicles* WBC; Williamson *1 and 2 Chronicles* NCBC.)

H. C. LO

AHURA MAZDA (DEITY). The name of the supreme god worshipped in the Zoroastrian religion. Ahura means "Lord" and Mazda means "Wisdom". The name was originally an appellation of an ancient Iranian divinity, conceived of as the spirit or force of wisdom. His earthly prototype was presumably the high priest who counseled and guided the tribe. Zoroaster, in founding the religion, exalted him as the one eternal Being, wholly wise and good, and very powerful, but not yet omnipotent, that is, his power is presently limited by that of the Evil Spirit, likewise self-existent (see ZORASTER, ZOROASTRIANISM), whom at the end of time he will destroy. For this purpose Ahura Mazda created

by his thought lesser divinities and this world (*Y[asna]* 31.11). This creative act was accomplished with the aid of the Holy Spirit (*Y.*44.7, 51.7, cf. 31.3), who is one with him, and yet distinct. The lesser divinities are of the same essence and will as their Creator, and to venerate any one of them is to venerate Ahura Mazda. Zoroastrianism is also known to its adherents as "the Mazda-worshipping religion," which emphasizes its essential monotheism.

Zoroaster invoked Ahura Mazda in all his hymns (the *Gathas*), and the whole *Avesta* was regarded by the orthodox as revealed by him to his prophet. This view is still upheld by some, on the grounds that, though of multiple authorship, it all derives essentially from Zoroaster's teachings, and so is informed by Ahura Mazda's omniscience. All devotional acts begin with veneration of Ahura Mazda, and the 5 obligatory daily prayers in Avestan are prefaced by the affirmation in Persian: "Ohrmazd is Lord." The Sassanian king Vahram V answered Christian accusations of polytheism by declaring that "he acknowledged only one God. The rest were but as courtiers of the King" (Hoffmann 1880: 42).

Zoroaster believed that he saw and spoke with Ahura Mazda repeatedly. He declared himself "eager to behold and take counsel" with him (*Y.*33.6), and when rejected as his prophet turned to him for aid. "Take heed of it, Lord, granting the support which friend should give to friend" (*Y.*46.2). He saw him anthropomorphically ("the tongue of Thy mouth" *Y.*31.3, cf. *Y.*28.11; "the hand with which Thou holdest …" *Y.*43.4); but also with awe, as clad with the sky as garment (*Y.*30.5), the One who "established the course of the sun and stars … upheld the earth from below, and the heavens from falling" (*Y.*44.3, 4).

The earliest recorded reference to Ahura Mazda, as *as-sa-ra ma-za-aš,* is in an Assyrian cuneiform text of probably the 8th century B.C. This was presumably the Old Iranian divinity, since Zoroastrianism had probably then only just reached western Iran. Ahura Mazda was named many times by Darius the Great (522–486 B.C.) in his inscriptions; and Western scholars used to think that he was represented on Achaemenian monuments by a crowned male figure in a winged circle. This is now interpreted rather as a symbol of the Royal Fortune. Zoroastrianism remained, it seems, aniconic until the late 5th century B.C., after which cult statues were created of Ahura Mazda and other divinities. None of these survives, because of the successful iconoclasm of the Sassanians (224–652 A.D.). Rock sculptures show him as a kingly figure, standing or on horseback, and once holding the *barsom,* the priestly bundle of rods (Pope 1938: 154A, 156, 160A; Christensen 1936: 90–1, 226–7, 255). No representations of him are now made, but in living Zoroastrianism, as in the religion's earliest days, his worship is conducted in the presence of ever-burning fire, regarded as a symbol of truth and enlightenment.

MARY BOYCE

AHUZZAM (PERSON) [Heb *ʾăḥuzzām* (אֲחֻזָּם)]. A member of the tribe of Judah and son of Asshur (1 Chr 4:5–6). According to the problematic MT text of 1 Chr 2:24, Ashhur was the posthumous son of

Hezron. On the other hand, the LXX text indicates that Ashhur was the son of Caleb who, after the death of Hezron, married Ephrathah, Hezron's wife. Thus Ahuzzam may have been a Calebite. The incorporation of the Calebite descendants into the Judahite genealogy may reflect a later period when the tribe of Caleb was absorbed into the tribe of Judah.
H. C. LO

AHUZZATH (PERSON) [Heb *ʾăhûzat* (אֲחֻזַּת)]. Accompanied Abimelech, king of Gerar, and Phicol to make a covenant with Isaac (Gen 26:26—only occurrence of the name in OT). Ahuzzath is referred to as Abimelech's "friend" (*mērēʿēhû*). This was an official title devoid of emotional connotation; it denoted a counselor to the king on various administrative matters (Donner 1961; Van Selms 1957). A priest named Zabud, for example, is called a "friend of the king" in a list of court officials (*śārîm;* 1 Kgs 4:2–6; cf. Hushai, 2 Sam 15:37; 16:16–17). Abimelech and Phicol also appear in Genesis 21 when they make a covenant with Abraham. The long time span between this covenant and the one with Isaac makes it unlikely that the same parties were involved in both instances. Thus, scholars have suggested that either "Abimelech" and "Phicol" were recurring titles or family names (Kidner 1967: 154), or that only one covenant was actually made but it was differently reported in variant traditions (Speiser *Genesis* AB, 203).

DAVID SALTER WILLIAMS

AHZAI (PERSON) [Heb *ʾaḥza (y)* (אַחְזַי)]. Father of Azarel and grandfather of Amashsai who is cited as a leader of one of the important priestly families in Jerusalem at the time of the rebuilding of the walls of Jerusalem by Nehemiah (Neh 11:13). Meshillemoth and Immer are reported as his father and grandfather. In the comparable list of 1 Chr 9:12 this person seems to be known by the name of Jahzerah (Heb *yaḥzērâ;* LXX^{B} *iediou*). There Meshullam, Meshillemith, and Immer are named as his ancestors.
ROGER W. UITTI

AI (PLACE) [Heb *hāʿay* (הָעַי)]. Var. AIATH; AIJA? The name (meaning "the ruin") of a place mentioned in connection with Abram's early migration into the land of Canaan (Genesis 12–13), and with Joshua's subsequent conquest of that land (Joshua 7–8). It is usually identified with Et-Tell (M.R. 174147), a 27.5 acre site E of modern Beitin (biblical Bethel).

A. Biblical References

Genesis 12:8 reports that Abram "removed to the mountain on the east of Bethel, and pitched his tent, with Bethel on the west and Ai on the east." Bethel and Ai seem to be landmarks locating the mountain on which Abram built his altar to the Lord, as is the case also in Gen 13:3–4. The conquest of Ai, related in Josh 7:2–5 and 8:1–29, is related from the perspective of the site as a landmark: "So Joshua burned Ai, and made it forever a heap of ruins, as it is to this day" (8:28). Topographical descriptions in the accounts indicate that it is the same landmark referred to in Gen 12:8. Ai is mentioned again in Josh 10:1–2 and 12:9, first in relation to Gibeon (el-Jib), and second, to Bethel. The statement in 10:2 that Gibeon "was greater than Ai" does not appear in the Septuagint, and is probably an expansion of the tradition similar to that found in Joshua 7–8 in the MT. In 12:9, Ai is located "beside Bethel," similar to the location in 7:2.

The name "Aiath," which seems to be a variation of Ai, appears in Isa 10:28 in association with Rimmon (possibly modern Rammun, E of et-Tell), Michmash (Muchmas), Geba, Ramah (er-Ram), and Gibeah (Tell el-Ful). Whether the reference is to Et-Tell is not clear, although Aiath would be in the same vicinity. Neh 11:31 lists an "Aija" among the villages of Benjamin in the postexilic period, among the same villages named in Isa 10:28f., and since "Bethel and Ai" are named in the list in Neh 7:32, Ai and Aija seem to be understood as two different places. However, it should be noted that the reference to "Aija" does not appear in the Septuagint. The biblical evidence thus favors identification of Ai with the landmark site known as et-Tell, E of Beitin and atop the watershed plateau overlooking Jericho 9 miles eastward in the Jordan Valley.

B. Location and Description

In his *Onomasticon,* Eusebius wrote that Bethel was located 12 Roman miles N of Jerusalem on the right side of the road leading to Neapolis (modern Nablus), and that Ai was located at a minor ruin E of Bethel. Whether he referred to the site of et-Tell is not certain, because there are other small ruins in the vicinity. It is possible that only the acropolis area of et-Tell was regarded as Ai, because John Garstang in 1928 made the same identification, overlooking the other three-fourths of the ancient tell that stretched down the slope eastward (see Callaway 1972: 14–18).

Et-Tell and another site in the SE edge of modern Deir Dibwan, Khirbet Haiyan (M.R. 175145), were suggested by E. Robinson in 1838 as possible locations of biblical Ai. The position of et-Tell recommended itself to Robinson, but he did not discern the presence of ancient walls and buildings because they were covered with heaps of unworked stones. Thus he favored the small ruin just S of Deir Dibwan whose name he did not record. It was later identified as Khirbet Haiyan by C. R. Conder in the Palestine Exploration Fund Survey (Saunders 1881: 95–96).

Captain Charles Wilson did a reconnaissance survey from Nablus to Jerusalem in 1866, and gave particular attention to Bethel and Ai. He noted the modern village of Beitin, 9 miles S of Shiloh, which he identified with biblical Bethel. On a hill adjoining the village, and E of it, was a fortified Christian church, and E of it the hilltop ruins locally known as "Et-Tel, 'the heap'." Its location corresponded to the description in Gen 12:8 and Joshua 7–8, so Wilson identified et-Tell with biblical Ai on the evidence of the biblical references and the topography of the area.

In a surface survey of the region E of Bethel in 1924, W. F. Albright became convinced that et-Tell was indeed the ruin of an ancient city, and that no other proposed site could possibly date to the time of the Israelite settlement in Canaan. Khirbet Haiyan had no surface pottery that could be attributed to the LB Age, or to Iron Age I. The tradition that Joshua "burnt Ai and made it a heap (tell) forever" (Josh 8:28) seemed to support his position. Albright's identification of et-Tell with Ai was therefore based upon biblical traditions and the topography of the region and was supported by the evidence of an ancient city of the Canaanites which lay under the heaps of stones. His location of the site of Ai has not been seriously challenged in the last half-century (*EAEHL* 1: 36).

C. History of Excavations

1. The Garstang Soundings (1928). The first excavations at Ai (et-Tell) were conducted by John Garstang in September, 1928. 8 trenches were opened, 5 against the outer face of the S city wall, and 3 inside the city in the acropolis area. The results of his work were never published although a summary report of 3 typed pages and a sketch plan was submitted to the Department of Antiquities. He did claim in

a later book that LB pottery dating to ca. 1400 B.C. was found, and was left "in the collection of the American School," now the Albright Institute in Jerusalem. This pottery has not been located for a 2d opinion of its dating. The supposed discovery of a 1400 B.C. city at Ai supported Garstang's dating of the fall of Jericho at the same time, and confirmed the traditional date for the Exodus and Conquest generally accepted at the time (Callaway 1980: 1–4).

2. The Rothschild Expedition (1933–35). Judith Marquet-Krause directed the second excavation at Ai, with the support of Baron Edmond de Rothschild of Paris. Inspired by the prospect of "resurrecting" the ancient biblical city of Ai from the dust of its ruins, she embarked upon a series of annual campaigns in 1933 which were abruptly terminated by her death in 1936 as she prepared for the 4th year of work.

The Rothschild excavations were confined to the upper part of et-Tell, between contours 835 and 850 on the site plan (see Fig. AIP.01). This was the area sketched by Garstang in 1928 as the entire site. During 2 months of work in the 1st campaign, the so-called palace was unearthed, a part of the Iron Age I village was discovered and tombs in the necropolis NE of the tell were excavated. A long and productive six-month campaign in 1934 continued excavations of the Iron Age village, uncovered the lower-city fortifications near contour 835, and discovered the "sanctuary" in the citadel area of the acropolis (see D.4. below). A final campaign in 1935 focused on completing excavation of the Iron Age village, which was found to be constructed on top of EB remains with no intervening occupation evidence. The lower city was also extended inside the city walls, and the "Postern Gate" inside an elliptical tower was found. All of the lower-city remains belonged in the EB Age. This limited the Iron Age village to the acropolis area (Callaway 1972: 18–22; 1980: 4–7). See Fig. AIP.01.

3. The Joint Archaeological Expedition (1964–76). Beginning in 1964, J. Callaway directed 9 seasons of work at Ai and other sites in the region until 1976. 8 sites were opened at et-Tell in areas adjacent to the Rothschild excavations and in new areas along the lower E city walls as follows: site A, the sanctuary and citadel fortifications; site B, the Iron Age village; site C, the lower city near contour 835; site D, the temple-palace complex on the acropolis; site G, the lower-city residential area; site H, the east city-wall fortifications; site J, the wadi gate fortifications; and site K, the corner gate and reservoir (see Fig. AIP.01). All of the city below contour 845 on the site plan was found to be EB, dating before ca. 2400 B.C., with Iron Age agricultural terraces indicating it was placed in cultivation by the founders of the Iron Age village ca. 1200 B.C.

Three sites in the vicinity of et-Tell were excavated to complete an archaeological profile of the region. Khirbet Haiyan, located on the regional plan and a candidate for the location of biblical Ai, was excavated as site E in 1964 and 1969. It was found to be a Byzantine settlement founded on scattered remains of the First Temple period, or 1st century A.D. Khirbet Khudriya, E of et-Tell, was excavated as site F in 1966 and 1968, and was also a Byzantine settlement or possibly a monastery. Tombs in the valley adjacent to the settlement yielded pottery, ossuaries, and objects from as early as the 1st century B.C.

Salvage excavations were conducted in 1969, 1970, 1972, and 1974 at Khirbet Raddana (M.R. 169146), in the N edge of modern Bireh, with sites designated R, S, and T. Hewn pillars of two Iron Age I houses, contemporary with those at site B at et-Tell, were uncovered during the construction of a new road on the site, and the Joint Expedition was invited to excavate them. It was thought that the evidence of these houses would supplement that of the houses at et-Tell. They were found to be part of a small unfortified village settled about 1200 B.C., and abandoned about 1050 B.C., the same as the village at Ai (et-Tell) (Callaway 1972: 22–26; 1980: 7–18).

D. Settlement Phases

The following settlement phases have been identified:

STRATUM	PHASE	DESCRIPTION	PERIOD	CHRONOLOGY
Pre-Urban	I–II	Unfortified Village	EB IB	3200–3100 B.C.
Urban A	III	Walled City of 27.5 Acres	EB IC	3100–2950 B.C.
Urban B	IV–V	Remodeled Buildings and Fortifications	EB II	2950–2775 B.C.

Urban C	VI–VIII	Reconstructed City and Fortifications	EB III	2775–2400 B.C.
Intermediate	IX	Site Abandoned	———	2400–1200 B.C.
Iron Age	X–XI	Unfortified Village above Contour 845	Iron Age I	1200–1050 B.C.
Byzantine-Islamic	XII	Site Terraced and Cultivated	———	5th Century to Present

1. The Pre-Urban Village. Remains of an unfortified village, reaching from site C at contour 835 to the acropolis area, were found underneath the first-city wall system. The village was at least 200 m in length, making it larger than the Iron Age village built centuries later. Artifacts from this phase reflect a population made up of overflow from other sites, such as Jericho 9 miles away in the Jordan Valley, together with an increment of newcomers to the region. The new elements in the village culture at Ai eventually dominated in later periods that carried over from Chalcolithic by the indigenous population. There seem to have been movements of population from N Syria and Anatolia as early as EB IA that introduced pottery forms such as carinate platters, holemouth jars with inward rolled rims, and painted decorations of line-group designs.

2. The Urban A Walled City. A well-planned walled city enclosing about 27.5 acres was constructed at the beginning of EB IC, or ca. 3100 B.C. Its fortifications were laid out on natural contours of the hilltop site, and they fixed the limits of the city in its succeeding phases until final destruction about 2400 B.C. There is debate among scholars whether the EB IC walled city grew out of the previous unwalled village, or was imposed upon the village by newcomers (see Schaub 1982: 67–75). My view is that newcomers who brought with them experience in city-building imposed the Urban A plan upon the local villagers. Fortifications at sites A and C were built over large areas of village houses, and the entire site was carefully divided into spatial components seemingly too sophisticated to have emerged from the village culture.

Components of the city that can be located on the site plan are: (1) the acropolis complex at site D; (2) the citadel and later sanctuary at site A; (3) a market and residential area at site C, houses at site G, and 4 city-gate complexes at sites A, K, J, and L. Urban life in the city revolved around the temple-palace compound on the acropolis. Enclosed by its own walls (2-m-wide) inside the city, the temple and palace lay side by side with the temple on the E, and the palace structures (that continued in use until EB III) enclosing both ends and the back side of the temple (see D on Fig. AIP.01).

Of the 4 city gates in the Urban A phase, 3 were 1 m wide and constructed straight through the fortification walls. These were the citadel (site A), postern (site L), and corner (site K) gates. Walls at the postern gate were preserved more than 2 m high, and there was evidence that the narrow passageway was covered, making it a kind of tunnel through the wall. Only 1 side of the wadi gate (site J) was uncovered, and since the excavated area was more than 1 m wide, this gate must have been wider than the others.

The Urban A city was inhabited by a substantial element of indigenous people whose pottery culture is rooted in the Chalcolithic period, indicating that the village population of EB IB was largely absorbed by those whom I regard as newcomers in EB IC. Radical changes in lifestyle from village to urban life, with the imaginative spatial planning of the new city, indicates that new leadership was imposed from the outside. Antecedents of this culture are traced to coastal and N Syria, as well as to S Anatolia.

3. The Urban B Remodeled City. Violent destruction abruptly terminated the Urban A phase at Ai ca. 2950 B.C. The citadel at site A was burned, leaving scorched stones as mute testimony of the event. A blanket of ashes covered the acropolis building floors of polished plaster. New leadership seems to have been imposed upon the population, and the city was rebuilt and extensively modified.

The culture of the new regime contrasts with that of the preceding one. Fortifications were widened and strengthened. The citadel gate was closed by an addition of about 0.75 m to the width of the original wall, and the postern gate was closed and discontinued. The lower-city gate in site C was constructed in this phase, presumably because the location was more easily fortified than the postern gate site. The temple-palace at site D was rebuilt, and the palace area was constricted to about half its original size by construction of a wall (2 m wide) with curved corners in the middle of the previous space. These modifications suggest ad hoc building and remodeling inferior to that of the original city.

Analysis of pottery and artifacts suggests that the transition to Urban B was brought about by local conflict rather than by outsiders. A movement from N to S can be traced in the pottery forms of the Urban B phase, suggesting that ultimate outside influences came from the N through settlements in N Canaan.

A massive destruction by fire over all of the excavated areas brought the Urban B city to an end shortly before the beginning of the 3d Dyn. in Egypt. At sites A and C, collapsed roof beams were covered over by stones from walls and clay which covered the beams; they smoldered with enough intensity to dissolve the stones into calcined masses, cementing pieces of pottery into lumps and baking sun-dried bricks into a pottery-like consistency. At site D, the temple-palace compound, walls either collapsed or tilted precariously, suggesting that an earthquake struck the city. In the N wall of the temple, a rift in bedrock sliced through the main room and through the wall, leaving stones tilted into the break. When the city was rebuilt in the Urban C phase, the tilted curved corner wall of the temple-palace was buttressed and preserved in the reconstruction.

4. The Urban C Reconstructed City. That the Urban B city lay in ruins for some time is evident in erosion channels in some houses that were built over in the Urban C phase. At Site A, the fortifications were rebuilt first, then houses were constructed against the inner face of the walls. Some 20 to 40 years must have elapsed, therefore, between the destruction of the Urban B phase and the completion of the Urban C city.

Egyptian involvement in the rebuilding is evident at the temple-palace area on the acropolis and at site K in the SE corner of the fortifications. Pier bases in the temple were shaped with copper saws, probably like those known in Egypt from the 1st Dyn., and the temple wall (2 m wide) was built of hammer-dressed stones shaped like bricks and laid in mud mortar like bricks. The interior of the wall was plastered, with the plaster continuing on the floor and up to the piers resting on the rectangular-shaped bases. Alabaster and stone vessels imported from Egypt were among the temple furnishings (see Callaway 1972: 248).

At site K, a carefully engineered open-water reservoir was constructed inside the corner of the city wall. A closely laid stone-paved floor was set in a backing of red clay, and a dam of red clay (2.5 m high) faced with stones formed the perimeter on three sides. The floor sloped from W to E toward the city wall. Estimates of the capacity of the reservoir (25 m wide) range from 1,800 to 2,000 cubic m. This would be enough to supplement rainfall and other sources for a population of 2,000 inhabitants (see *EAEHL* 1: 45).

An interruption in the Urban C city seems to have occurred about 2550 B.C., evidenced by broken down and rebuilt city walls, and major changes in the temple area. It seems that the fortifications inside the city around the temple were again strengthened, completely eliminating the former palace area back of the temple. The temple was made into a royal residence, and a modest sanctuary was constructed against the Citadel at site A in what had been a residence. This is the "Sanctuary" discovered by Marquet-Krause in 1934, which was actually a sanctuary only during the last half of the Urban C phase. Khirbet Kerak pottery and objects on the altar of the new sanctuary and in adjacent rooms imply a new influence from the N of Canaan during this phase (Callaway 1978: 52–55).

Another violent destruction overtook the city about 2400 B.C., during the 5th Dyn. of Egypt. No definite identity of the aggressor is known, but a scene in the tomb of Inti at Dishashi depicts the capture of a Canaanite town, and a mutilated inscription names two cities, neither of which can be identified. If Ai was taken from control of Egypt about 2550 B.C., it would be among the cities in Canaan listed for recapture in any campaign to regain control of the region. In any case, the city was completely destroyed and abandoned, and was not reoccupied until Iron Age settlers came upon the ruins of the site 1,200 years later, ca. 1200 B.C.

5. The Iron Age I Village. Waves of settlers from the N, S, E, and W made their way into the highlands of Canaan about 1200 B.C., in an unprecedented series of disruptions around the E Mediterranean combined with the decline of major powers that had controlled the area. Those who settled the small village of Ai seem to have come from the W, being part of a larger migration of refugees fleeing from the recent and more warlike newcomers to the coastal region. By the time of this migration, the original name

of the ancient city had been lost in a litterbox of history, and it was simply The Ruin, a popular designation of the mound as a landmark.

The new villagers were able to wrest a living from their arid environment by the introduction of two new technologies. First, they dug cisterns in the soft limestone underneath and beside their houses to capture rainwater. Second, they terraced hillside slopes on contours and planted them in various crops. At Ai, the village was located on the acropolis above contour 845, and the remainder of the ancient ruin was terraced and placed in cultivation. The only fortifications were those left standing from the EB city, which were broken down in places and covered over by heaps of stones. Estimates of the population range from 150 to 300 persons.

That the new settlers had experience in hill-country farming is evident in their subsistence strategy and the village layout and houses. Houses were characterized by piers, either of stacked stones or hewn monoliths, that supported the roofs and divided space in the "great-rooms." Some houses had a 3d room across the back of the main area. Streets at Ai were paved with cobblestones set in red clay which led to the thresholds of the closely spaced houses. A high dividing wall separated two compounds of houses in site B, suggesting that several extended families made up the population of the village.

An interruption in the life of the village occurred about 1125 B.C., and there seems to have been an increase in the population. Numerous silo granaries were built in open areas around houses and even in the streets. The ruins of the EB temple were occupied with a crude stone wall separating the spacious interior into 2 living areas. Silos were built in the corners of the ancient structure. The introduction of silo granaries in the new phase represents a difference in storage methods from the earlier phase, when large storejars were used for grain and other foods and occasional silos were cut into the bedrock floors of houses. The latter phase of occupation lacks the orderliness in both houses and streets of the original phase (see Callaway 1985: 37–43).

E. The Problem of the Conquest of Ai

Reconciliation of the archaeological evidence with the biblical account of the capture of Ai is difficult, because the evidence does not agree with the prevailing views of the event. The older view of a 1400 B.C. conquest based upon 1 Kings 6:1 (held by Garstang) is not supported because there was no occupation of the site at that time. Albright's view of a conquest about 1250–1230 B.C. is also unsupported, which he himself recognized. He ascribed the conquest related in Josh 8:1–29 to nearby Bethel which was destroyed at the time, instead of to Ai, and conjectured that later tradition confused the accounts and attributed the destruction to Ai. This view is weakened by the LXX omission of reference to men of Bethel participating in the defense of Ai in Josh 8:17. A fragmentary text of Josh 8:3–18 from Qumran Cave 4 is also a shortened version similar to that of the LXX, although the reference in Josh 8:17 is one of the missing fragments. It is quite probable, however, that the mention of Bethel is a Masoretic expansion and is, therefore, secondary. Martin Noth held that the Ai account in Joshua 8 is legendary and etiological in nature, and is therefore unhistorical. Marquet-Krause and de Vaux, and, more recently, Yigael Yadin and A. Malamat, view the account as primarily etiological.

We are left with the options of discounting the historicity of the Ai account or of placing the conquest in a chronological context later than LB. The latter is here proposed, and it is suggested that the interruption of the Iron Age village about 1125 B.C. would be an appropriate time (Callaway *IDB* Sup., 16). However, there is increasing evidence from excavations and surveys of the hill country from the Negeb to Esdraelon that a military conquest as described in Joshua 1–11 is without archaeological support, and that the settlement depicted in the book of Judges matches the evidence more accurately. The hundreds of villages, among which was that at Ai, founded on hilltops and supported by an agricultural subsistence, were occupied by people who fled from conflicts and violence to the safety of the hills. Indeed, the original settlers at Ai seem to have come to the highlands by way of the lowlands to the W and N instead of from the E (as depicted in popular "conquest" and "sedentarization" reconstructions). The people at Ai would thus be part of the large population of villagers in the highlands that emerged as the Israel we know in the book of Judges.

AIAH (PERSON) [Heb *ʾayyâ* (אַיָּה)]. The name means "hawk" or "falcon" (Lev 11:14; Deut 14:13; Job 28:7), and Hicks (*IDB* 1: 73) suggests it was a nickname. According to Westermann (*Genesis 12–36* BK, 567), the presence of animal names in genealogies (e.g., Genesis 36) suggests that the list developed in an early period.

1. First of the two sons of Zibeon, the son of Seir, a Horite living in Edom (Gen 36:24; 1 Chr 1:40). His brother Anah was probably the father of Oholibamah, one of Esau's wives (Gen 36:2, 18). This assumes that the Anah in Gen 36:2 is the *son* of Zibeon (reading Heb *ben* with the LXX, Syriac, and Sam Pent, rather than the MT *bat* "daughter") and therefore the brother of Aiah (Gen 36:24). Aiah's name occurs in a brief Horite lineage placed among Edomite genealogical lists in Genesis 36 and 1 Chr 1:36–42. His father was the head of a Horite clan (Gen 36:20–21) and his brother was noted for discovering "hot springs" of water in the desert (Gen 36:24). These facts are the biblical witnesses to the close relation between the Edomites and the Horites (see Bartlett 1969). The latter probably comprised the pre-Edomite population of Edom, which later became assimilated to the Edomites (Deut 2:12).

2. The father of Rizpah, a concubine of Saul (2 Sam 3:7). The name occurs four times in 2 Samuel and is exclusively used as a patronym, "Rizpah, the daughter of Aiah" (2 Sam 3:7; 21:8, 10, 11). Aiah's importance stems from the fact that his daughter was a member of the first Israelite king's harem. After Saul's death she became the concubine of his successor and son Ishbosheth, and was at the center of royal intrigue, when Abner (the military commander) was accused of sleeping with her (2 Sam 3:7). Such an act constituted an attempt to seize the leadership from Ishbosheth (cf. 2 Sam 16:21–22; 1 Kgs 2:13–25). Aiah's daughter also bore two sons for Saul: Armoni and Mephibosheth. Both were killed to appease Yahweh for a previous treacherous act of Saul against the Gibeonites (2 Sam 21:1–14).

STEPHEN G. DEMPSTER

AIATH (PLACE) [Heb *ʿayyāt* (עַיָּת)]. See AI (PLACE).

AIJALON (PLACE) [Heb *ʾayyālôn* (אַיָּלוֹן)]. Located in the tribe of Dan, Aijalon was an important city in the history of ancient Israel. The first reference to the city is in EA 273, where Aijalon and Gaza are mentioned as "falling away to the Habiru." However, Dussaud (1927: 230) has suggested that Aijalon was known to the Egyptians even earlier in the Middle Kingdom period.

Judg 1:35 reports that the Danites had initially failed in their attempt to take Aijalon from the Amorites. When it eventually fell to the Israelites it was assigned to the tribe of Dan on or near the border with Ephraim (Josh 19:42). Aijalon is mentioned in a poetic fragment, in parallelism with Gibeon, as a place where the moon and sun respectively halted at the command of Joshua (Josh 10:12). Saul and Jonathan defeated the Philistines at Aijalon after the battle of Michmash (1 Sam 14:31). Jonathan was responsible for the initial success, but Saul and the rest of the army shared in the subsequent battle. If it is correct to identify Elon as Aijalon, the next mention of Aijalon is in 1 Kgs 4:9. The RSV notes that Elon-beth-hanan belongs to the second administrative district of Solomon; the consonantal MT (*ʿylwn*), however, raises the possibility that Aijalon is the intended reference. When the monarchy was divided, Aijalon was included

in the tribe of Benjamin. In 2 Chr 11:10 Aijalon, built by Rehoboam as a defensive city, belonged to Judah and/or Benjamin, while in 2 Chr 28:18 the city belonged to Judah. In the Levitical city (Albright 1945; Peterson 1977: 340–51) lists Aijalon is the third Danite city in Joshua (21:24), while in the 1 Chronicles list there is no mention of the tribe of Dan and instead Aijalon is a continuation of the Ephraim allotment (6:54—Eng6:69).

Aijalon was located at the W end of the Valley of Aijalon on the major trunk road which led into the hill county, past Gibeon, and ultimately reached Jerusalem. The importance of Aijalon in the biblical record depended on its strategic location. The Valley of Aijalon is the most important of all the natural trade routes through the Shephelah. There is no reference to Aijalon during or after the exile, although the Aijalon Valley continued to be an important trade route. According to Josephus (*JW* 2.513–16) Cestius Gallus, governor of Syria, took the Aijalon Valley route in his campaign against Jerusalem in A.D. 66. Eusebius mentions Aijalon in his *Onomasticon* (18:13–14). (See also Epiph. *Adv. Haeres* 2.702.)

There are two sites that have been identified with biblical Aijalon, Yalo and Tell Qoqa. Since Robinson (1841: 63–65) all major geographers have identified Yalo (M.R. 152138) with Aijalon. It was Albright (1924: 10) who first observed that Tell Qoqa had many EB shards on it, making it the "older Aijalon," while Yalo has many of the later periods.

Yalo is located three kilometers E of Imwas, twenty kilometers WNW of Jerusalem, and ten kilometers ESE of Gezer. From the summit of the mound, one has a perfect view of the Aijalon Valley as it wraps itself around the N, NW, and NE sides of the tell and then disappears to the NE into the surrounding hills.

Tell Qoqa is situated immediately to the SE of Yalo, separated by a little valley. While Albright argued that Tell Qoqa was the older city, there is evidence that both sites were occupied during the same periods and that the boundary separating EB Qoqa and fortified Yalo is not as distinct as had been argued earlier.

From the surface surveys conducted at Tell Qoqa, pottery has been found from the Early Bronze Age, Middle Bronze Age II, Late Bronze Age, Iron I, and Iron II periods. At Yalo there is indication of Middle Bronze Age II, Late Bronze Age, Iron I, Iron II, Persian, Hellenistic, Roman-Byzantine, and Middle Ages and Ottoman occupation.

AIN (PLACE) [Heb *ʿayīn* (עַיִן)]. Var. ASHAN. **1.** A town marking the idealized E border of the "promised land," located in the vicinity of the Sea of Galilee (Num 34:11). The location of the place is unknown. The text indicates that Ain is located W of Riblah; if this is the same Riblah mentioned in 2 Kgs 23:33, then Ain would be near Kadesh on the Orontes River in modern Syria near the NE border of Lebanon. On the other hand, since the Vulgate here refers to Riblah in connection with "the spring (Heb *ʿên*) of Daphne," it is possible that Ain is actually identical to Kh. Dufna (M.R. 209292), 24 miles N of the Sea of Galilee (and 1.5 miles W of Tel Dan). It is also possible to identify Ain with Kh. Ayun (M.R. 212236), 2.5 miles E of the S tip of the Sea of Galilee.

2. A Levitical city mentioned three times in the OT, first in Josh 15:32, where it is assigned to the tribe of Judah and is a part of the administrative district of Hormah; second in the Levitical city list in Josh

21:16, where it is the seventh city in the Judah/Simeon list; and third in 1 Chr 4:32, where Ain is given to the descendants of Judah and Simeon.

The city of Ain presents problems, regarding even its name. In Josh 21:16 the city is called Ain (*ʿayīn*), while in the parallel Levitical city list in 1 Chr 6:44 (—Eng 6:59) it is called Ashan (*ʿāšān*). Albright (1945: 61) has suggested that Ashan should also be read in Joshua 21 as in the Chronicler. He argued that between the 2d century B.C. and the 3d century A.D. the Hebrew "Ain" replaced the correct "Ashan." Consistently the Greek texts have *Asan.*

There is a lack of clear understanding regarding the identification of the biblical Ain. It was Robinson (1841: 625) who first suggested the identification of Kh. Anim el-Ghuwein (M.R. 156084). Kh. Anim is an unimpressive small mound in the center of a small, shallow, circular valley. The surrounding hills are low. Immediately to the W of the tell is Wadi Sha'b el Jabu, which leads into Nahal Anim. The site is located not too far from the ancient highway from Hebron to Arad that passed through Juttah and es-Samu.

There have been no archaeological excavations conducted at Kh. Anim, although there have been archaeological surveys. The Archaeological Survey of Israel visited the site and there identified Iron II, Hellenistic, Roman-Byzantine, and Medieval pottery. The levitical city survey team also found Iron II, Roman-Byzantine, and Arab shards at the site.

However, the identification of Ain with Kh. Anim was challenged by Wilson (1847: 354) following the text of the Chronicler, and it was Musil (1907: 66) and others who identified Ain with Ashan. Kh. Asan is 3.2 km N of Beersheba, near Nahl Asan. There are good reasons to identify biblical Ain/Ashan with Kh. Asan simply on linguistic grounds, but there are also geographical considerations. Although the site remains archaeologically unknown, it is clearly in the tribe of Simeon and on a major trade route leading N into the Shephelah.

ʿAIN GHAZAL. A Neolithic village located on the Zarqa (Jabbok) River at the NE edge of the modern city of Amman. Although badly disturbed by highway, commercial, and civic construction until 1981, four seasons of "rescue archaeology" in the years 1982–85 have produced a relatively complete picture of the site's history.

Three major occupational phases occurred at ʿAin Ghazal: the Pre-Pottery Neolithic B (PPNB; ca. 7250–6200 B.C.), the PPNC period (ca. 6200–5800 B.C.), and the Yarmukian phase (ca. 5400–5000 B.C.) of the early ceramic Neolithic. Early in its development, ʿAin Ghazal was already a thriving village of some 10–12 acres, supported by goat herding and such agricultural products as peas, lentils, wheat, barley, and chick-peas. Hunting of wild game (especially gazelle and cattle) and the collection of wild plants (especially figs, almonds, and pistachios) still provided about half of the dietary needs. Long-range contacts are evidenced by Anatolian obsidian, S Jordan minerals, asphalt from the Dead Sea, and shells from the Mediterranean and Red Seas. As early as 7100 B.C. ʿAin Ghazal was also an important Levantine religious center, with plaster human statuary reflecting a sophisticated system of public ritual and ceremony. Smaller clay human and animal figurines indicated more personal, family-oriented concerns on health, fertility, and magic/luck in hunting. Housing consisted of spacious and sturdy rectangular stone dwellings with well-made plaster floors, many decorated on the interior walls and floors with geometric and linear designs.

By 6500 B.C. the village had doubled in size, reflecting the excellent environmental resources to sustain population growth, and by the end of the 7th millennium it extended over more than 30 acres, more than three times the size of contemporary Jericho, making ʿAin Ghazal one of the largest population centers of the Near East.

Shortly after 6200 B.C., a sudden alteration in the character of the archaeological material at ʿAin Ghazal indicates that a significant cultural change had occurred despite the evidence of occupational continuity. Conspicuously different architecture, stone tools, economic foci, and human burial practices emerged that have no counterparts in other areas of the Levant, suggesting that the Jordanian highlands underwent a locally inspired cultural adaptation, possibly associated with an increased emphasis on exploiting desert regions to the E.

It is not known yet how long this peculiarly Jordanian Neolithic development lasted, but ʿAin Ghazal was eventually abandoned sometime in the early 6th millennium. Several centuries later a new social group appeared at the site, radically different in cultural terms because of the production of well-made pottery, though the construction of flimsy and impermanent pit dwellings continued. Preliminary analysis suggests these new Yarmukian people were no longer full-time farmers but relied instead on nomadic pastoralism centering on herds of goats, sheep (?), cattle, and perhaps pigs, aided by domestic dogs.

A multiyear campaign of excavations will resume at ʿAin Ghazal, and it is anticipated that significantly greater resolution will emerge concerning the daily lives of the people of this important site.

GARY O. ROLLEFSON

ʿAJJUL, TELL EL- (M.R. 093097). A large site (ca. 28 acres) of the MB to LB located ca. 7 km SW of Gaza. According to Albright (1938: 337), the name means "Mound of the Little Calf." The tell is situated ca. 1.5 km inland from the Mediterranean coast on the N bank of Nahal Besor (Wadi Ghazzeh). The coastline S of Gaza is composed of steep slopes and low cliffs except where the Nahal Besor empties into the sea. Here the estuary meanders through low, rolling sand dunes that once provided convenient access from the sea to Tell el-ʿAjjul and the coastal road. It was along the Nahal Besor, a natural frontier between Egypt and Canaan, that the Hyksos built several fortifications including Tell el-ʿAjjul. These control points were all protected with a typical "Hyksos" rampart and fosse of the MB period.

A. Identification

Excavations at Tell el-ʿAjjul have produced no inscriptional evidence to suggest its name in antiquity. F. Petrie assumed the site to be ancient Gaza, but the consensus of modern scholarship suggests that Tell el-ʿAjjul is Eusebius' "Beth-Aglaim" (*Onomast.* 48:19), 8 Roman miles (11.6 kms or 7.3 miles) from Gaza. While the direction from Gaza is unclear in Eusebius and the Madeba Map places a "Bethagidea" SE of Gaza, Jerome locates it on the coast by referring to it as "Bethagla maritima." The objection that Eusebius' Beth-Aglaim was 8 Roman miles from Gaza rather than the 6 of Tell el-ʿAjjul is not major. First, the ancient road probably did not go straight to Gaza but skirted the sand dunes by connecting with the "kurkar" ridge S of Gaza, making the road longer. Secondly, the Nahal Besor is the only convenient access from the coast to Tell el-ʿAjjul and the coastal road for several kms.

B. Archaeological Evidence

J. Starkey first took note of Tell el-ʿAjjul and persuaded F. Petrie to excavate there. Petrie began excavations in 1930 and continued until 1934 for a total of four seasons. A fifth season of excavating at Tell el-ʿAjjul was carried on by E. H. Mackay and M. Murray in 1938. Petrie quickly published four well-illustrated volumes of the results of his excavations (Petrie 1931–34), but his methods were somewhat lacking and any early material from Tell el-ʿAjjul should be used with caution. Since it is difficult to identify Tell el-ʿAjjul in ancient sources as a particular historical site during the MB, we must rely on the archaeological remains to recreate the history of this city and ancient texts to provide the context in which this city flourished. Several eras of the settlement are represented by the terms City I, City II, and City III. There is evidence of a settlement before these three cities and of continued occupation by a military garrison after City III began its decline into the Iron Age.

1. Early Settlements. The first signs of occupation at Tell el-ʿAjjul may have been found by James Starkey on the S bank of the Nahal Besor opposite Tell el-ʿAjjul. He dated his finds to the EB. On the N side of the estuary, Petrie uncovered a cemetery W of the tell in which he found a profusion of copper weapons after which he named the area the "Copper Age Cemetery." He erroneously attributed this cemetery and a small find of vases and shards to the Chalcolithic Age (before 3150 B.C.E.). The cemetery is actually of the EB IV (as early as 2200 B.C.E. or as late as 2000 B.C.E.). The settlement at Tell el-ʿAjjul began to urbanize during the Egyptian 12th Dynasty of the MB I (Rainey 1972: 369–408). The evidence for this community were found in artifacts from the S quarter of the mound (Kempinski 1974: 147) and the contents of the "courtyard cemetery" in the N quarter that date from the late 12th to the early 13th Dyn.

2. City III and Palace I. The middle of the 18th century B.C.E. saw internal and domestic problems in Egypt. With Egypt's weakened central authority, Tell el-ʿAjjul's fortunes apparently improved. They built some of the most notable fortifications and public buildings in Canaan. In constructing the fosse around the fortification, they excavated blocks of sandstone, which were used for the foundation of the palace. The fosse measured some 6 m deep and 15–18 m across. From the bottom of the fosse to the top of the fortification was probably over 45 m. One entry faced the sea, and another was in the center of the NE wall toward Gaza. Inside the secured perimeter was built the largest palace (Palace I) of this age ever found in Palestine. It measured ca. 50 by 39 m. The walls of the palace were 2 m thick (suggesting a possible second story), and it had rooms on three sides around a courtyard. Palace I was destroyed with the coming of the 15th Dyn. or the "Hyksos" period (1668 B.C.E.).

3. City II and Palace II. The remains of City II and Palace II reflect a period of great prosperity during the MB III "Hyksos" period. This came about as a result of Tell el-ʿAjjul's strategic position at the W end of the trade routes that came from the E via Elath and the Negeb. Three particular finds of this period reveal some of Tell el-ʿAjjul's commercial and political activity. First, stylized Cypriot pottery inspired local potters to make what has become known as "Bichrome Ware." It is characterized by geometric ("Union Jack") patterns, fish, and birds. It became so popular along the coast that it has become a diagnostic indicator of this period. Secondly, the tomb of a Hyksos nobleman was uncovered and with him were found his chariot and horses. Since chariots were a new military innovation of the period and were financed and controlled by affluent nobility, it appears that Tell el-ʿAjjul was ruled by such feudal lords. Confirming the presence of an affluent nobility was the third discovery of a hoard of gold jewelry of superb craftsmanship.

4. City I and Palaces (Fortresses) III–V. With the defeat of the Hyksos by Ahmose I and the establishment of the 19th Dyn. (1567–1320 B.C.E.), Egypt gained control of trade from the E. This reduced the economic prospects of Tell el-ʿAjjul, and City I began its decline with a major part of the population moving to Gaza (the site of the new administrative center of the 19th Dyn. in Canaan). The debate continues concerning the date of Palace (Fortress) V and the continuing occupation at Tell el-ʿAjjul. Some contend (Kempinski 1974: 148) that the fortresses continued at Tell el-ʿAjjul until the middle 12th century B.C.E., after which it was abandoned near the end of the 12th century B.C.E. with the influx of Philistines into S Palestine. Others (Albright 1938: 358), relying on evidence of the cemetery

near the fortress, have dated the fortress to the latter part of Iron Age I (1000–900 B.C.E.) and have proposed occupation on the site until that time.

DALE C. LIID

AKAN (PERSON) [Heb ʿ*aqān* (עַקָּן)]. Var. JAAKAN. A clan name mentioned in the genealogy of Seir the Horite in Gen 36:27. Akan is listed as one of the three sons of Ezer, and he is thus a grandson of Seir. The name in this form only appears in Genesis 36, but it is equivalent to the name JAAKAN found in the matching genealogical clan list in 1 Chr 1:42. These clans, not to be equated with the Hurrians, are part of the original "inhabitants of the land" mentioned in Gen 36:20, who lived in the area of Edom (perhaps as cave dwellers) prior to the coming of the Esau clans.

VICTOR H. MATTHEWS

AKELDAMA (PLACE) [Gk *Akeldamach* (Ἀκελδαμαχ)]. An uninhabited area outside Jerusalem where Judas Iscariot committed suicide and was buried (Acts 1:19). The name "Akeldama" is derived from the Aramaic expression *ḥăqēl dĕmaʾ* ("field of blood"), which came to be attached to the location through its connection with Judas Iscariot (on the form, see BDF §39.3). Klostermann (*apud* Lake 1965: 13) suggests that the translation of the Aramaic in the Acts account was generated by later Christians eager to promote their perspective and that the phrase originally referred to "field of sleep" and was a euphemism for a cemetery. Klostermann's position is rejected by Kirsopp Lake, who questions the etymological argument that substitutes the word for "blood" with the word for "sleep." Lake also suggests that there is no usage of the term "field of sleep" meaning cemetery in associated ancient literature (Lake 1965: 13). The transliteration provided in Acts 1 is superior. Acts 1:18 identifies Judas as purchasing this property with the blood money acquired from the priests for betraying Jesus. Judas' purchase of the land, however, was effected only after his suicide, by the proxy of the priests (Matt 27:3). The plot they purchased with the blood money was reportedly the potter's field in which Judas had committed suicide (Matt 27:5). The potter's field was subsequently set aside as a cemetery for foreigners.

The place known as the potter's field could have been either the possession of a specific potter or a place that acquired that name through its association with potters. The significance of the previous ownership of the land arises in that the purchase of the potter's field is reported by Matt 27:10 to be a fulfillment of a prophecy of Jeremiah. This citation, however, appears to be a combination of Zech 11:12–13; Jer 18:2–12, Jer 19:1–13, and Jer 32:6–9.

The description of Akeldama as the potter's field has contributed to locating the site. The OT frequently associates the S side of Jerusalem with potters. The area beyond the Potsherd Gate (Jer 19:2) in the Hinnom Valley was the location of Jeremiah's demonstration of the smashing of a newly purchased clay jar to proclaim the coming events of the Babylonian expansion. The Potsherd Gate is equated with the Dung Gate (Neh 2:13) in the Tg. Yer. It is maintained by many that it attained its name because it overlooked a pottery dump. In Jeremiah's message he implies that the name of the location would change from Topeth or Valley of Ben Hinnom to the "valley of slaughter" following the Babylonian advance (Jer 19:6). This final description is close to the later Aramaic name.

The Hinnom Valley S of Jerusalem is argued to be the location of Akeldama. This valley was desecrated in the eyes of pious Jews from the time of Kings Ahaz and Manasseh, who promoted Molech worship there (2 Kgs 23:10). In the 1st century A.D. the valley was used as a refuse dump for the city of Jerusalem (see Mark 9:47). These aspects would have contributed to the non-occupation of the site. The

priests would have been able to purchase the land there at a relatively low price, and foreigners not concerned with Jewish religion would have had no problems with being buried in that location.

In the 4th century Jerome affirmed a S location of Akeldama in opposition to Eus., who held that it was N of Jerusalem. The traditional site is located on a level space on the S side of the Hinnom Valley, just before it joins the Kidron Valley. A ruined structure 24 m by 17 m is located on the site today. This structure was used as a communal burial place for centuries. Today a Greek monastery stands near the site and carries the name. This site cannot be conclusively shown to be the actual site of Akeldama.

ROBERT W. SMITH

AKHENATEN. Second son of Amenhotep (Amenophis) III of the 18th Dynasty by his great king's-wife Tiye, and king of Egypt for nearly 17 years (Wenig 1972), 1377–1361 (Redford 1984: 57) or 1350–1334 (Wente and Van Siclen 1976: 218).

Born probably in Memphis while his father yet resided in the northern capital, Akhenaten is not pictured on any known monument prior to his accession and would not have been in line for the throne had his older brother Thutmose not died prematurely (Gauthier 1912: 335f.). When the royal family took up residence in Thebes for the first jubilee (Redford 1984: 51–52f.) Akhenaten accompanied them. There he appears as "king's-son" in dockets from his father's reign (Hayes 1951: 172, fig. 27[KK]), and there he came to the throne as Amenhotep IV when Amenophis III died, there being no substantial evidence for any coregency (Redford 1967: 88ff.; Von Beckerath 1984: 11f.; contra Aldred 1988).

For the first few months of his reign he continued work on monuments left unfinished at his father's death: the gate of the 2d Pylon (Lauffray 1980: 87ff.), and the decoration of a monumental portal on the south of Karnak (Redford 1983: 368). On the latter the falcon-headed Re-Harakhty is the only god who appears as the recipient of Akhenaten's worship, a harbinger of things to come. To his name is added an epithet that had enjoyed some currency in solar theology: "He who rejoices in the horizon in his name 'Light which is in the Disc' " (Gunn 1923; Fecht 1967; Munro 1981; Redford 1976: 54, n. 123). That the predilection for one god constituted something more than mere henotheism is strongly suggested in an early "speech from the throne" in which Akhenaten introduces his god to the court. Therein he describes his celestial deity in terms of uniqueness, transcendence, and permanence that were to become common throughout the reign, while at the same time accusing the gods of having "ceased one after the other" (Redford 1981).

Throughout the reign frequent mention is made of the king's "teaching," which may be merely the largely poetic description of the wonders of the sun-spawned universe seen through the eyes of a sensitive aesthete. The Hymn to the Sun-disc (Auffret 1981; Bernhardt 1969; *AEL*, 96–107; von Nordheim 1979), echoes of which seem later to be heard in Psalm 104, describe the solar deity as the creator and sustainer of the universe, the guarantor of life and the eternal hypostasis of pharaonic monarchy in the heavens. In the latter capacity the deity is granted the double cartouche, hailed in royal terms, and conceived in art as the mirror image in the heavens of king Akhenaten upon earth. Pursuant to his iconoclastic urges, Akhenaten rid the cult of images of deity as well as mythology, and even the decorative arts and the script were purified of anthropomorphic and theriomorphic elements (Redford 1984: 173ff.). The great Hope of all Egyptians, the multifarious world of the Beyond, the Underworld over which Osiris and his congeners presided, was done away with; and although outward forms, such as shawabtis, mortuary texts, and sun hymns were retained, they were expurgated of all allusions to the Underworld (Assmann 1972; Redford 1980; Redford 1984: 169ff.).

Akhenaten honored his god by inaugurating a new icon, a new art style, and by championing a temple design influenced by Heliopolis. The new icon was derived from the earlier Re-Harakhty figure by the simple expedient of suppressing the figure, retaining the disc, and appending a multitude of sticklike arms. Introduced in anticipation of the jubilee to be celebrated in the 2d and 3d year, the "Sun-disc" (as Akhenaten referred to his deity) was termed "the Great, living Disc which is in jubilee, Lord of heaven

and earth," and suffered its lengthy name to be confined within two cartouches. The new art-style, an "expressionistic" treatment of natural forms based on an accentuation of the salient features of the king's personal appearance and showing a predilection for feminine softness, was introduced at the same time as the brainchild of Akhenaten himself, who issued the appropriate directives to his master artists (Aldred 1968 and 1973; Pillet 1961; Schäfer 1931).

The "Heliopolitan" type of temple consisted of a simple series of open courts (in contrast to the closed processional temples), oriented eastward and centering upon an altar. At Thebes, the erstwhile residence, four major temples were constructed, the largest of which (the *Gm[t]-p*^{3}*-itn*) was the venue of the great jubilee (Redford 1973, 1975, 1977; Smith and Redford, 1977). Additional structures were the *Rwd-mnw*, the *Tni-mnw*, and the "Mansion of the *bnbn*," given over to the queen and centered upon the sole obelisk of Thutmose IV, E of the Amun temple. Another *Gm-itn* was erected at Kawa in Nubia (Breasted 1902; Porter and Moss 1952: 180ff.), Memphis (Löhr 1975) and Heliopolis (Habachi 1971; Löhr 1974) were both provided with temples to the Sun-disc, and offering lists allude to cult installations throughout the Delta (Saad 1971). After year 5 two vast temples were included in the new city "Horizon of the Disc" (Amarna), one the "House of the Sun-disc" incorporating another *Gm-p*^{3}*-itn* and a *Ḥwt-bnbn*, and a "Mansion of the Sun-disc," possibly a royal mortuary temple (Petrie 1894; Gunn and Pendelbury, 1923–51; Samson 1972; reliefs: Roeder 1969; Hanke 1978).

The royal family is already in evidence at the outset of the reign. Nefertiti, the Great Royal Wife, of unknown parentage but undoubtedly of Egyptian birth (Seele 1955: 170), appears in the jubilee with her first daughter, Meretaten. Before the 5th year two additional daughters had been born in rapid succession, Meketaten and Ankhesen-paaten; and at Amarna three more girls appeared before year 9, but these apparently died in infancy (Smith and Redford 1977: 83ff.). Sons are conspicuous by their absence, but one Amarna text refers to the "bodily son of the king, Tut-ankhu-aten" (Roeder 1969, pl. 106). Nefertiti herself seems to lose influence and drop out of sight toward the close of the reign, but may have survived her husband (Redford 1975: 11f.). Of the other wives the best known is Kiya, who appears briefly at Amarna (Fairman 1961: 29; Harris 1974; Hanke 1978). That Nefertiti appears at the close of the reign under the guise of a *male* coregent, Smenkhkare, has been mooted but remains highly controversial (Harris 1973; 1974; 1977; Samson 1981; 1982; Tawfik 1981).

The decision to abandon the old capital, Thebes, was taken perhaps as early as year 4, when the high priest of Amun is found working in the quarries (Redford 1963). Shortly after followed the wholesale destruction of Amun's name and iconography throughout the land. By year 6 construction at the new site of Amarna, the "horizon" which the Sun-disc had chosen (Aldred, 1976), was far enough advanced for the court to take up residence. Akhetaten was the god's site, and owed nothing to Thebes or Memphis: it was planned from the outset for the services of the new god (Smith 1981, 314ff.; Samson 1972; O'Connor fc.). The old administrative families were ignored, and a roster of "new men" replaced them. Chief among these were the chamberlain Tutu, the general Maya, the high priest Meryre; of the "old guard," Ay, the general and emanuensis, and Parennefer, the butler, found places in the new order (Hari 1976). Though Akhenaten might contemplate travel abroad, the new city was to be the permanent residence of court and government.

The army remained prominent throughout the reign (Schulman 1964), but Akhenaten's aversion to accompanying his troops in the field and his self-confessed refusal to "deal harshly" in foreign affairs lent his administration an irresolute character (cf. EA 162.40–1; Helck 1971, 168ff.; Kitchen 1962; Redford 1984, 185ff.; Several 1972). A campaign was mounted in Nubia (Helck 1980; Schulman 1982), and some sort of punitive action in Asia may have been contemplated before his death. But in the north, action seems to have been largely restricted to exiling recalcitrant natives (Edzard 1970) and removing dissidents and suspects to Egypt for interrogation (EA 162.67–77). Neutralized in the war between Khatte and Mitanni, Akhenaten watched inactive as the Hittites swiftly destroyed Mitanni and subverted her erstwhile dependencies in North Syria (Astour 1981). An incipient revolt in Nu-khashshe looked to Egypt for help, but this did not materialize, and the rebels were crushed (Redford 1984: 197ff.). Before the end of the

reign, the border state of Kadesh had defected to the Hittites, to be followed upon the return of Asiru, its king, from detention in Egypt, by Amurru (Freydank 1960; Klengel 1965).

Akhenaten passed away probably less than 6 months into his 17th year of rule, perhaps in the early summer. He was probably buried in his tomb in the royal wadi at Amarna (Martin 1974), but because of pillaging, virtually nothing remains of the interment. The extent to which any of the grave goods in tomb 55 of the Valley of the Kings represents his mortuary paraphernalia is a moot point (Schnabel 1976; Reeves 1981). Branded a rebel by later generations, and omitted from the king lists (Gardiner 1938), Akhenaten lived on in a folklore only partly preserved for us (Krauss 1976; Redford 1985, chap. 8).

AKHETATEN (PLACE). See AMARNA, TELL EL-.

AKIBA, RABBI. Leading rabbinic teacher of the first third of the 2d century C.E. (d. 135). Akiba's influence on the early development of the rabbinic tradition was very great; the vast majority of the authorities cited in the Mishnah were Akiba's disciples and successors, and indeed the major texts of the early rabbinic canon are said to have been the work of these disciples (see *Sanh.* 86a). Reflecting this influence, the image of Akiba presented in rabbinic texts is that of the ideal devotee of Torah; as one might expect with any such idealized portrait, traditional narratives concerning him are so colored with legend and reverential exaggeration that biographical conclusions cannot easily be drawn from them.

The picture of Akiba as ideal Torah scholar emerges from several well-known stories. He is described as having been born to poverty (*Ber.* 27b) and has having been in his early years a bitter enemy of the emerging learned elite (*Pesaḥ.* 49b), but is said then to have devoted years of study to the Torah and finally to have become the greatest Torah master of his day. His role in historical memory as Sage par excellence is reflected as well in a number of stories putting Akiba at the center of rabbinic-Patriarchal politics of the late 1st and early 2d centuries (*Ber.* 27b–28a, *j. (Talm.) Ber.* 4:1 7cd; *Roš. Haš.* 2:9), while the end of Akiba's life too was remembered as exemplary: he joyously died a martyr's death during Hadrian's persecution of Judaism because he could not abandon the public teaching of Torah (*Sanh.* 12a, *Ber.* 61b).

Akiba's influence on the developing tradition was primarily of two sorts. He is identified as the individual chiefly responsible for the systematic arrangement of Oral Torah according to subject matter (*j. [Talm.] Šeqal.* 5:1 48c, *t. Zabim.* 1:5, *ʾAbot R. Nat.* 18), and he is credited with having devised an elaborate hermeneutic of Scripture which allowed him to find meaning in every letter and every diacritical mark of the text (*Menaḥ.* 29b). The inference from the perfection of Scripture that every detail of the text has meaning was opposed by Akiba's great contemporary Ishmael b. Elisha, who insisted to the contrary that "Scripture speaks the sort of language that people use" (*Ber.* 31b), but Akiba's hermeneutic is reflected in much subsequent *midrash* (the *Mekhilta* of R. Simeon b. Yohai, *Sifra,* and *Sifre Zuta* on Numbers, along with numerous Talmudic passages), and according to Jerome (*ad* Isa 7:14) it stimulated the production of a new Greek translation of the Bible as well. The aggadic image (*Menaḥ.* 29b) of Moses visiting Akiba's academy and finding himself unable to understand the interpretations of the Torah propounded there offers later rabbis' acknowledgment that Akiba's hermeneutic was strikingly original

but only tenuously linked to the apparently intended meaning of the text; interpretation letter by letter allowed for great freedom, but also led to disregard for context and plausibility in both aggadic and halakhic contexts (*Ḥag.* 14a, *Sanh.* 38b, 51a, 67b).

Akiba's willingness to discover unexpected and far-reaching implications in Scripture is reflected as well in his apparent interest in the more recondite aspects of early rabbinic religion, such as *merkabah* ("chariot") mysticism and the other secret teachings that came to be known as *Pardes* (the "garden"). Even in such realms, however, Akiba remained the model for later generations to emulate; of the four who "entered the garden," only he "entered in peace and came out in peace" (see *t. Ḥag.* 2:2, *j. (Talm.) Ḥag.* 2:1 77b, *b. (Talm.) Ḥag.* 14b).

On the basis of one Talmudic tradition (*j (Talm.) Taʿan.* 4:7 68d), much recent historiography has described Akiba as an enthusiastic supporter of Bar Kokhba's rebellion against Rome, but the most recent investigations (Schaefer) have cast doubt on this conception. (See also *EncJud* 2: 488–92; *JEnc* 1: 304–10.)

AKITU. The Sum Á-KI-TI, and its Akk cognate *akī tu (m),* may refer either to the *akītu* festival proper or to a temple in which this festival was celebrated. The origin and etymology of this noun is unknown. On account of the Akk plural form *akiā ti,* some scholars consider Sum Á-KI-TI to be a Sem loanword, borrowed from Old Akk (cf. *AHW*: 29). The Sum term for "New Year" is ZAG-MU(-K), lit. "the (end) limit of the year," borrowed into Akk as *zagmukku*/*zammukku.* Both the Sum and Akk terms may refer either to New Year's Day or to the New Year festival proper.

A. The *akītu* and the New Year Festivals in Sumerian Religion (ca. 2500–1800 B.C.E.)

The *akītu* and the New Year (ZAG-MU-K) seem to have been two distinct festivals in Sumerian religion.

1. The Sumerian *akītu* Festival. The earliest references to the *akītu* festival are implied in Pre-Sargonic economic texts from Ur and Adab, dated to the "Month of Á-KI-TI," i.e., the sixth month and first month of the local calendars, respectively. The *akītu* festival in Ur, during the Ur III period (ca. 2100–2000 B.C.E.) and the Isin-Larsa period (ca. 2000–1760 B.C.E.), took place twice a year: in the sixth (or seventh) month, i.e., in the beginning of the barley sowing season; and in the first (or twelfth) month, i.e., when the barley harvest began. This duality arose as a result of a shift in the beginning of the calendar year from the seventh month (i.e. the autumn) to the first month (i.e. the spring), which resulted in two *akītu* festivals: the " (*akītu* of the sowing (season)" and the "*akītu* of the harvest (season)." The same duality can also be observed in the Bible, where both the first month (Nisan) and the seventh month (Tishre) are referred to as the turning points of the year (cf. Exod 12:2; 23:16). The *akītu* in Nippur, on the other hand, took place in the fourth and twelfth months, in Lagash and Umma, perhaps once a year, in the eighth month. The exact day of the month on which the festival was celebrated is not known. The *akītu* was celebrated in a special temple in the open country, situated near a canal. It was usually dedicated to the city god, and therefore offerings were presented there to his statue or emblem. A major and joyful event of the festival was the procession, in the course of which the god's statue and his entourage were carried from his temple to the *akītu* temple and back, partly by chariot and partly by boat. The responsibility for the festival fell on the king. As to its religious significance, it is assumed that the *akītu* festival marked the beginning of the agricultural year, or semiannual season. In the course of his visit to the *akītu* temple, the city god was believed to have blessed the fields, in anticipation of the renewal of agricultural work (Falkenstein 1959: 166).

2. The New Year Festival in the Neo-Sumerian Period (ca. 2100–1800 B.C.E.). The inscriptions of Gudea (ca. 2100 B.C.E.) and some cultic-literary texts from the OB period indicate that in the Neo-

Sumerian period. New Year's Day was considered as an important festival, on which special cultic rites (Sum PILLUDA) were performed, under the aegis, and probably with the personal participation, of the king. The most important cultic event in the Sumerian New Year festival was the Sacred Marriage rite (*hieros gamos*). In Lagash and elsewhere, this rite was probably conceived as having taken place on the divine level, i.e., between the city god and his wife. The Ur III kings, however, seem to have introduced a new feature into the cult, borrowed from the Uruk tradition: sacred union between the deified king in the role of the fertility god Dumuzi, and a priestess representing Inanna, the goddess of love (cf. van Dijk 1954: 83–8; J. Klein 1981: 124–66). The kings of Isin also celebrated the sacred marriage rite on New Year's Day in their capital with a priestess, who represented Inanna, identified with the city goddess Nini-sinna. The celebrations in Isin involved a great variety of cultic personnel, including transvestites (Römer 1965: 128–49; Reisman 1973: 185–92). The sacred union between the god and the goddess, or their earthly representatives, was believed to fertilize nature and society alike for the coming year, and thus ensure plenty and abundance for the land (Jacobsen 1975: 68–71). Another important feature of the New Year festival in Sumer was the ceremony of the "Determining of Fates." The sacred marriage itself usually culminated in a blessing (lit. "fate-decreeing") for abundance and fertility, which the goddess bestowed upon the king and the land. The Lagash sources also indicate that on New Year's Day, major religious and political decisions were taken, probably by oracular guidance, including the appointment of rulers and state and temple officials. On this day, criminals and immoral persons were excluded from the communal meal in the temple, and the rights of the orphans and widows were enforced (Heimpel 1981: 66–8; 88).

B. The *akītu* (New Year) Festival in the 1st Millennium B.C.E.

1. In Babylon. In Babylon, unlike in other Mesopotamian cities, from early times the *akītu* was celebrated only once a year, in the month of Nisan, and thus it gradually merged and became identified with the New Year festival (*zagmukku*). In the 2d millennium B.C.E., with the rise of Babylon to supremacy, the *akītu*/New Year of Nisan, which was dedicated to Marduk, became the most important festival in Mesopotamia, including the city of Assur. In 1st millennium Babylon, the New Year festival was celebrated in a great pomp and rejoicing, during the first eleven days of Nisan. The climactic event of this festival was the divine procession to the *akītu* temple and the celebration of the *akītu* ritual there. The participation of the king in the *akītu*/New Year festival was obligatory, and his duties included, *inter alia*, a declaration of innocence before Marduk on the fifth of Nisan, and "seizing the hand of Bēl" (i.e., Marduk) and accompanying him to the *akītu* temple. The ritual of the Babylonian New Year festival is described in detail in a text from the Seleucid period (i.e. the 3d century B.C.E.), containing instructions to the high priest (*šešgallu*), as to the cultic activities to be performed in the temple, from the second to the fifth of Nisan (Thureau-Dangin 1921: 127–54; *ANET*, 331–34). During these days, prayers and incantations are recited to Marduk, beseeching him to calm his anger and bless the king and the people for the coming year. On the fourth day, the great Babylonian mythic poem *enūma eliš,* describing Marduk's victory over Tiamat (the primeval sea) and the creation of the world by him, is recited before the god. On the fifth day, after the temple has been thoroughly purified, the king is led before Marduk. The high priest takes away from him his royal insignia, strikes him on his cheeks, pulls his ears, and makes him bow down to the ground. At this point, the king has to utter a declaration of innocence, in which he asserts that he did not neglect the worship of the god, nor did he harm the sacred city of Babylon or its protected people. Thereupon, the high priest utters a favorable oracle, assuring the king that Marduk listened to his prayer and will bless his kingship and destroy his enemies. After the high priest returns to the king his royal insignia, he again strikes his cheek, and if "his tears flow—Bēl is appeased; if his tears do not flow—Bēl is angry; an enemy will rise and bring about his downfall" (*ANET*, 334, 429–52). The description of the *akītu* ritual in the above text has been lost. Nevertheless, some of its highlights can be culled from the inscriptions of NA and NB kings. On the fifth day of Nisan, the statues of Nabû and other deities arrived at Babylon. The festive procession to the *akītu* temple took place most probably on the ninth of Nisan (Berger 1970: 156). The king "seizes" the hand of Marduk and conducts him to the *akītu* temple outside the city. There, on the tenth of Nisan, a cultic drama, symbolizing Marduk's primordial victory over Tiamat and the forces of chaos, was enacted in some way (Lambert 1968: 104–12; 1963: 25:

189–90). The purpose and meaning of this ritual is not clear. Some see in it society's identification with the powers of nature, when the seasons change and natural life renews itself (Frankfort 1948: 314); others assume that the *akītu*, originally an agricultural festival, became a national festival, commemorating the establishment of the Babylonian empire or its reunification, in the guise of a primordial cosmic battle (Jacobsen 1975: 76). It is interesting to note that the association of the New Year with the creation of the world survived in the rabbinic interpretation of the Jewish New Year festival. Since New Year's Day was considered to be the time of decreeing the fates for the coming year, the ritual of Fate Decreeing was performed during the festival twice: once on the fifth (or sixth) of Nisan, in the sanctuary of Nabû in Babylon, called the "Dais of Fates" (Akk *parak šīmāti*), and a second time in Marduk's temple, upon his return from the *akītu* temple. The New Year festival ended on the eleventh day, and on the twelfth day Nabû and all the gods returned to their cities. According to an earlier hypothesis (Zimmern 1918: 2–20; Pallis 1926: 221–43), the New Year festival's cultic drama included another episode, in which Marduk, prior to his battle with Tiamat, was put to death, taken down to the netherworld, and resurrected, in imitation of the cult of the dying god Dumuzi—Tammuz. However, the NA cultic commentary, on which this hypothesis is based, turned out to be nothing but an anti-Babylonian or pro-Babylonian propaganda. The purpose of this text was either to justify Sennacherib's destruction of Babylon and capture of Marduk's statue, in terms of a divine trial (von Soden 1955:51: 130–166), or to explain Marduk's exile and his return to his city, in terms of death, descent to the netherworld, and resurrection (Frymer-Kensky 1983: 131–44). In any case, this vestigial and late addition to the New Year's Day ritual has nothing to do with the motif of the dying fertility god.

2. In Assur and Other Cities. In early times, most probably, the Babylonian god Marduk played the central role in the New Year celebrations in Assur. Only after Sennacherib destroyed Babylon, capturing Marduk's statue (in 684 B.C.E.) and elevating Assur to the rank of Marduk, did Assur become the central figure in the celebrations. Sennacherib reports in his inscriptions that he rebuilt the old *akītu* temple in honor of his god Assur, and renewed the *akītu* festival there. From his description of the representations engraved on the bronze gates of this temple we learn that, in Assur, just like in Babylon, a cultic drama, symbolizing Assur's victory over Tiamat, was enacted in the *akītu* temple (*LAS*, 135–43). However, contrary to an erroneous hypothesis, Sennacherib did *not* embody the god Assur in this cultic drama (cf. *LAS*, 142:15+1; *Enc Miqr* 7: 310; *CAD* K, 289a). Other Mesopotamian cities, in the 1st millennium, beside Babylon and Assur, preserved ancient local traditions and did not normally celebrate the *akītu* festival on New Year's day (cf. Falkenstein 1959: 159; 177, note 52). Thus, in Uruk two *akītu* festivals were celebrated: one in Nisan and one in Tishre. The *akītu* of Nineveh was probably celebrated on the 16th of Ṭebēt (i.e., the sixth month), whereas that of Arbela (Milkiya), sometime in the month of Ab (i.e., the fifth month).

JACOB KLEIN

AKKADIAN LANGUAGE. *See* LANGUAGES (AKKADIAN).

AKKO (PLACE). See ACCO (PLACE).

AKKUB (PERSON) [Heb *ʿaqqûb* (עַקּוּב)]. **1.** Head of a family of temple gatekeepers in the postexilic period who are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:42 = Neh 7:45 = 1 Esd 5:28). While this list appears in Ezra 2 immediately after the return of Sheshbazzar, there are several indicators that it is not a list of that group who first responded to Cyrus' edict. Not least of these is the absence of the name "Sheshbazzar," which raises the question of the relationship between SHESHBAZZAR and ZERUBBABEL. Myers (*1 Chronicles* 15–16, 146) surveys various views about the origin and purpose of this list. Recent scholarship tends to follow Rudolph (*Ezra und Nehemia* HAT 17) in understanding it as a composite list of groups who returned from exile in the early years of the Persian period (Clines 1984: 44; Williamson *Ezra, Nehemiah* WBC, 31–32). It is uncertain whether Ezra 2 is copied from Nehemiah 7, or Nehemiah 7 is copied from Ezra 2, or both are copied from some other original document (Fensham 1982: 49; Clines 1984: 44–45). The list is also found in 1 Esdras 5 as those who returned with Zerubbabel during the reign of Darius.

The family of Akkub continued as gatekeepers throughout the postexilic period (1 Chr 9:17; Neh 11:19; 12:25), the individual names in these verses being properly understood as names of families.

2. Head of a family of NETHINIM (temple servants) who also are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:45 = 1 Esdr 5:30). The names Akkub and Hagab are lacking in the parallel list at Neh 7:48. Either the Ezra list has made repetition of Akkub from v 42 and Hagabah from earlier in v 45 (Batten *Ezra, Nehemiah* ICC, 90) or the scribe copying the list for Nehemiah 7 skipped from Hagabah to Hagab (Williamson *Ezra, Nehemiah* WBC, 26). The nature of the scribal error is related to the larger issue of the literary relationship between the lists.

3. One of the men who assisted Ezra in the public reading of the law by explaining the reading to the people (Neh 8:7–8). That Akkub and his fellows are properly identified as Levites (1 Esdr 9:48 and Vg as opposed to MT) is supported by Neh 8:9 and the references to the teaching role of the Levites in 2 Chr 17:7–9; 35:3. Understanding what these men did hinges on the meaning of v 8, especially the word *mĕpōrāš* (RSV "clearly"). Traditionally this has been understood as referring to the Levites' translation from Hebrew to Aramaic. However, it may refer to their explaining the meaning and implication of the old law in a new setting. Some have understood the term as referring to the activity of the men standing with Ezra (v 4), meaning that they read clearly or divided the reading into paragraphs, pausing to allow the Levites to give their explanation. (Ackroyd *Chronicles, Ezra, Nehemiah* TBC 295–96; Kidner 1979: 106; Williamson *Ezra, Nehemiah* WBC, 277–79, 290.)

4. A post-exilic member of the royal family of David descended from King Jehoiachin (1 Chr 3:24). According to the MT, Akkub is the eighth generation from Jehoiachin. However, in v 22 "the sons of Shemaiah" may be a dittograph, because the list of five sons of Shemaiah is followed by the numeral six. If the phrase is deleted, v 22 then lists the six sons of Shecaniah, yielding only seven generations from Jehoiachin to Akkub. At v 21 the RSV follows LXX, Vg, and Syr in reading "his son" (*bnw*) instead of

"the sons of" (*bny*) before the last four names in the verse. Such a reading adds four generations, yielding eleven or twelve generations from Jehoiachin to Akkub. This uncertainty about the number of generations involved affects attempts to date the list and, as a consequence, the generation of Akkub. (See Ackroyd *Chronicles* TBC, 34 and Williamson 1982: 58.)

AKRABATTENE (PLACE) [Gk *Akrabattēnē* (Ἀκραβαττηνη)]. The district where Judas Maccabeus defeated the "sons of Esau," i.e., the Idumeans or Edomites (1 Macc 5:3). The Hellenistic form of the name may be associated with Akrabbim, an important ascent from the Arabah to the northern Negev at the southern border of Judean territory. Josephus (*JW* 2.12.4; 4.9.9) mentions a toparchy near Shechem (Nablus) with the same name, but it is not clear whether this is identical with the area where Judas fought. Regardless, the Akrabattene of Josephus should be connected with the "Akrabattine" of the Onomasticon of Eusebius (cf. Klostermann 1904: 14,10; 86,25; 108,20; 156,30; 160,14).

AKRABBIM (PLACE) [Heb *ʿaqrabbîm* (עַקְרַבִּים)]. The name, meaning "scorpions," is part of the compound geographical name *maʿăleh ʿaqrabbîm* ("ascent of scorpions"). According to Num 34:4; Josh 15:3; Judg 1:36, Akrabbim was an outermost point on the S borderline of the Judean territory SW of the Dead Sea. The name may be equated with hieroglyphic *ʿqrbt* mentioned in the topographical lists of the mortuary temple of Amenhotep III at Thebes (Edel: list "B_N li.11"), which in turn seems to be identical with a name preserved as *mqrpt* in the great Palestine List of Thutmose III (No. 94). The latter is probably a misreading of a form *ʿqrpt* supposedly existing in an earlier version of the list (Görg 1974a; but see Redford 1982). The ascent of Akrabbim should be connected with one of the passes between the Arabah and the Wadi Fiqre and Kurnub. It is usually identified with Naqb eṣ-Ṣfar (Abel 1933; Noth *Joshua* HAT; but cf. Aharoni *LBHG*). There were three way stations from the bottom to the top, known today as Rugm Ṣfar, Khirbet Ṣfar, and Qaṣr Ṣfar, all of which were "Nabataean in origin, Roman in repair, and Byzantine in reconstruction" (Glueck 1959: 207). The ascent may have been a station point on the ancient expedition routes of Egyptian kings to the different copper mines near the Arabah and to Transjordanian places as early as the 18th dyn. (Haider 1987). In Roman and Byzantine times the pass served as a convenient and important way from the Mediterranean Sea to Edom, Moab, and Elat (Harel 1959; 1967). Named after the ascent, the adjacent area seems to be the AKRABATTENE where Judas Maccabeus defeated the Idumeans (1 Macc 5:3).

AL ʿUBAID (30°59´N; 46°03´E). A small tell (350 m long and 7–8 m high) in S Mesopotamia, 6 km W of Ur, excavated by H. R. Hall in the spring of 1919 and by L. Woolley in 1923 and 1924. It is famous for having been the site of a 3d millennium B.C. Sumerian temple and for having furnished the first proof of painted ceramics characteristic of the long Neolithic period in Iraq. Consequently, the name of the site has been used to designate the Neolithic culture of Iraq.

A. The Temple and Its Artifacts

The sanctuary belonged to the series of temples built on terraces; it stands inside an oval enclosure characteristic of the Early Dynastic period (first half of the 3d millennium). Some inscriptions on bricks prove that it was still in use during the era of the third Dynasty of Ur (21st century) and that it was dedicated to Ninhursag, goddess of the mountain. Nothing has been found of the temple itself, but a study has been made of the platform that supported it (33 by 26 m), its stairway leading to the SE side and a second one leading to the NW side, and its subsequent phases of reconstruction. It was surrounded by an oval enclosure which was possibly double (85 by 65 m) and which delimited the sacred area. A magnificent collection of artwork was found where it had been deliberately stuffed into the masonry during the reconstruction of the building. Among these works were representations of bulls, birds, bronze lion heads, copper columns nailed onto wooden beams (or with mosaic incrustations encased in bitumen and pressed against the trunks of palm trees), heads of nails from the architectural decorations, and the famous relief of the Imdugud, with its lion-headed eagle binding two stags. Also discovered were several statues (some complete, others in fragments) among which is the one of Kurlil; a golden jewel belonging to Aannipadda, King of Ur and one of the most ancient kings of history; the foundation inscription of the temple dedicated to Ninhursag by this king; fragments of inscribed vases; and a very famous frieze of the dairy in stone and shell on a base of bitumen. This series of artwork represents the most beautiful collection found on one site in Mesopotamia; it is all the more remarkable given the small area and limited period of occupation of this site. This collection alone would have ensured the reputation of Al-ʿUbaid.

B. The Neolithic Culture

In his excavations, Woolley also found potsherds of painted ceramics with black motifs generally in geometric shapes on a background of greenish hue (the color of the paste) which could be dated back to a prehistoric era. Further research carried out on neighboring sites such as Eridu and later throughout Mesopotamia produced findings that indicated a particularly important phase of the historical development. It is now known that this "Ubaid culture" represents the last great stage in the evolution of Near-Eastern Neolithic societies before the intensified urbanization toward the end of the 4th millennium. This culture acquired its main characteristics during the 6th millennium and disappeared toward 3700 B.C. after having influenced in varying degrees and in various ways the entire region between the E Mediterranean and Iran, the Anatolian plateau, and the end of the Arabian peninsula.

It is from the birth of this culture that the emergence of a distinctive "Mesopotamia" is dated. Before then, the alluvial valleys in the desert areas were not subject to the agricultural techniques of the first Neolithic or pre-Neolithic societies; the colonization of this area along the Tigris and Euphrates rivers was not undertaken until the 7th millennium, and it was a fairly slow process beginning in the S regions. It is in the S—at Eridu (Ubaid 1), then at Hajji Muhammad (Ubaid 2)—that one can see the first evidence of this new culture, characterized by its ceramics, the use of curved nails and clay sickles, as well as by architecture which progressed rapidly towards a certain monumentality (thanks to the application of new techniques such as molded bricks or the use of pilasters in reinforcing the building without increasing the amount of masonry).

From Ubaid 2, this culture began to appear beyond its Mesopotamian cradle; indeed, it spread rapidly toward the N and NW along the great rivers; it is in the regions of Mandali (Hamrin basin) as well as in Assyria (Tepe Gawra) that its first developments have best been analyzed. But this culture also dominated the entire area of the Khuzistan, where it was to contribute to the elaboration of the Susiane; finally it

progressed S toward the Persian Gulf also, where its presence can be seen on many sites on the coast of Saudi Arabia. The full expansion and the greatest extension of Ubaid culture took place between 4500 and 3700 B.C. corresponding to the Ubaid 3 and 4 phases; its two centers—one in S Mesopotamia, the other in Assyria and the Hamrin—express two aspects of this culture which continue to progress in the Gulf, on the Iranian plateau, and particularly toward the countries of the Mediterranean Levant and Anatolia. Yet, the further one goes from the Mesopotamian bases, the more the unique features of Ubaid are diminished in favor of local and regional tendencies and influences.

The society associated with this Ubaid culture became increasingly complex during its two-millennia span. There was hardly anything in common between most of the 6th millennium villages and the great centers of the mid-4th millennium. These changes are seen first of all in the technical capabilities evident in the production of most of the material goods and in the economic foundations of the social structure. Originally in the marshes of S Mesopotamia, the basic occupations of life were fishing and hunting in the swamps and the neighboring deserts. But the originality of the inhabitants who settled in that region lay in their ability to apply irrigation techniques in non-marshy areas in order to develop the crops, techniques similar to those used previously during the Samarra era. This included a remarkable new step, drainage, without which it would have been impossible to cultivate the land for very long because of the high salt concentration. Irrigation and drainage also entailed a change in the group's habits and life-style; the traditional and more individualistic methods of economic subsistence would not facilitate the new strategy for exploiting the land. Without reinforcing community practices, irrigation would have been impossible. Other discoveries characterize this period, in particular one dealing with the uses of fire. Ceramics became more widespread but were still done by hand; also, metal began to appear, still on a very small scale, and primarily in the form of jewelry. Nevertheless, this indicates a growing mastery of metallurgy which would eventually take firmer hold some centuries later with the beginnings of the Bronze Age.

This better technical ability both in agriculture and in the production of material objects (pottery and metal) had important consequences on the evolution of society. If the villages showed no sign of social differentiation at the beginning of the 6th millennium, the same cannot be said during the 4th: Tepe Gawra (levels 12 and 11) in particular clearly shows the juxtaposition of simple buildings accommodating common people with larger homes which belonged to the dominant group (who undoubtedly held the power); certain other buildings seem to have been considered as specialized shops.

But why this emergence of S Mesopotamia beginning with Ubaid 2? Why was it accompanied by such a vigorous geographical diffusion of its cultural traits? Finally, why was it succeeded by a new supremacy in that region at the time of Uruk (3300–3100 B.C.), during the 3d millennium? The answers are still uncertain, but it could be that "necessity was the mother of invention": the tension created by the absence of basic raw materials (such as wood) and the need to acquire these prompted a search for other ways to meet the basic human needs. Natural waterways would have become the most favored means of transportation in order to ensure such supplies, and consequently those routes became the avenues along which the cultural characteristics of Ubaid would have spread to the surrounding countries. Therefore the transmission of ceramics is merely a material reflection of a much more vigorous exchange which resulted in a sort of standardization of Near-Eastern civilization. This uniformity began with the elaborate forms in S Mesopotamia, particularly in the region of Ubaid, where it was first recognized by modern scholars.

ALALAKH. A Bronze Age city identified with Tell ʿAṭšan (or Atchana; 36°15′N; 36°23′E). See also AMUQ PLAIN.

A. The Site and Its Yield

The Bronze Age city of Alalakh was uncovered by the British mission headed by Sir Leonard Woolley, in the years 1937–1939 and 1946–1949, at the large mound called Tell ʿAṭšan (Turk Açana). It is situated in the S part of the Plain of Antioch, some 400 m E of the Orontes and less than 3 km SE of the bridge where the road from Antakya to Aleppo crosses the river. The excavations disclosed seventeen levels of occupation, with remains of private and public buildings (palaces, temples, and fortifications), artifacts, and works of art, but most important, a rich epigraphic corpus represented by over five hundred cuneiform tablets (principally from the Levels VII and IV) and a long historical inscription engraved on a royal statue at the time of Level IV. The excavator's report (Woolley 1955; cf. 1953) was later corrected and modified in several points dealing with chronology and historical reconstruction (i.e., by Mellink 1957; Albright 1957; Astour 1972; Gates 1976, 1981, 1987). The inscription on the statue of King Idrimi was first published by S. Smith (1949) and subsequently studied and published anew by several other scholars (an English translation, *ANET*, 557–58; a collated hand copy, transliteration, and translation by Dietrich and Loretz 1981, with a commentary by Klengel 1981). A catalog of tablets numbered from one through 453a and comprising 466 items, many of them presented in copies and/or transliterations, with a general introduction, was published by Wiseman (1953, supplemented by his 1954, 1958, 1959a, and 1959b). A number of items in Wiseman's publications were collated and published in full (in transliteration) by Dietrich and Loretz 1969a, 1969b, and 1970, with an additional forty-three tablets (all from Level IV), which brings the total number of known tablets to 509; but several of them remain unpublished, and there may still be some tablets unaccounted for in the Museum of Antakya. The seal impressions on the Alalakh tablets have been collected and commented upon by Collon (1975).

B. History of Alalakh

The earliest occupational strata of Tell ʿAṭšan were found to lie below the present level of groundwater. The potsherds extracted from the liquid mud at the bottom of a special caisson pit included a small number of specimens attributable to the Amuq I and J phases of the ceramic sequence of other excavated mounds of the area and datable, respectively, to ca. 2400–2250 and 2250–2000 B.C. This proves that the site was already inhabited in the period of the EBLA archives. Alalakh appears indeed in the Ebla texts under the name *A-la-la-ḫu*^{ki}, more often spelled *ʾA*$_x$ (NI)-*la-la-ḫu*^{ki}, as a dependency of Ebla and apparently not having a vassal king of its own. Later, in the records of the Third Dynasty of Ur (2063–1955 B.C., low chronology), a state *Mu-ki-iš*^{ki} or *Mu*-(tm)xž *-gi*$_4$*-iš*^{ki} is mentioned (along with Ebla and two other cities formerly subject to Ebla) among the vassals of the kings of Ur. Late Bronze Age sources from Alalakh, Ugarit, and Hatti make certain that Mukiš was the name of the Plain of Antioch and adjacent hill areas with Alalakh as its capital. The construction of the first palace in Level XIII of Alalakh (the sequential position of which seems to coincide with the period of Ur III) also testifies to Alalakh's achievement of autonomous statehood. In the 18th century B.C. Alalakh came under the sway of the new, powerful kingdom of Yamḫad with its capital at Ḫalab (Aleppo). It must have been one of the unnamed cities of the Cedar and Boxwood Mountains and the seacoast raided by King Yaḫdun-Lim of Mari ca. 1740 B.C. (an event marked perhaps by the end of Level X at Alalakh). No inscriptional material has been found in Levels XVII–VIII.

Written documentation on the history of Alalakh (and, to an extent, of Yamḫad) first appears in Level VII, which should be dated ca. 1650–1570 B.C. According to the tablets AT 1 and 456, King Abbān I of Yamḫad gave Alalakh to his younger brother Yarim-Lim in appreciation of his loyalty to him during a civil war and as compensation for the loss of his former fief, Irridi, east of the Euphrates. Yarim-Lim's installation as the appanage king of Alalakh was marked by the erection of a new great palace, a total rebuilding of the temple of Ištar, and the construction of a citadel. The palace archives yielded at least 175 Akkadian-written tablets, including legal contracts, judicial acts, deeds of purchase or exchange of towns,

deliveries of food staples, loans, ration lists, etc. The texts bear witness to Alalakh's commercial relations with Emar and Carchemish on the Euphrates; with Ebla and other cities of Yamḫad; with Ugarit on the seacoast and Alashiya (Cyprus); with Tunip, Qatna, and Amurru in central Syria; and even with remote Babylonia. They also testify to a growing presence of a Hurrian-speaking element in northern Syria.

The period of Level VII encompassed the reigns of Yarim-Lim and his son Ammitaqum and ended in the destruction of Alalakh by the Hittite king Hattušiliš I. This event marked the beginning of a long series of Hittite campaigns aiming at the conquest of Yamḫad, which caused great destruction in northern Syria and culminated in the sack of Aleppo by Muršiliš I, ca. 1531 B.C. As for Alalakh, it was quickly rebuilt and regained a certain prosperity (Level VI) but no longer had a king of its own. Northern Syria became an object of contention among the Hittites, the Hurrian kingdom of Mitanni in northern Mesopotamia, and the 18th Dynasty of Egypt. An independent kingdom was briefly restored at Aleppo, ca. 1525 B.C., by Ilim-ilimma I, an offspring of the old dynasty of Yamḫad. The new king was, however, soon overthrown, probably at the instigation of Mitanni. A younger son of Ilim-ilimma, Idrimi, fled to Ammia in northern Phoenicia, where he was able to build ships and recruit troops and, after seven years of exile, to land in force on the coast of his homeland. He made Alalakh his capital and recovered his father's domain but was forced, after seven more years of hostilities, to enter into a vassalage treaty with Parattarna I, king of Mitanni, and to help him against the Hittites. Out of the Hittite booty he built a palace at Alalakh, part of which was uncovered in Level V. Idrimi reigned for thirty years (until ca. 1480 B.C.) and was succeeded by his son Adad-nirari, as stated in Idrimi's pseudo-autobiographical inscription.

No records survived from Level V (reigns of Idrimi and Adad-nirari) except for three of Idrimi's tablets that had been transferred to the archives of the Level IV palace. But it is known from the annals of Thutmose III and other Egyptian records of his time that, during that Pharaoh's war with Mitanni, he conquered northern Syria up to the Euphrates (in 1472 B.C.) and received tribute from Alalakh (in 1467 B.C.). In 1463 B.C., however, the Mitannians recovered all of northern Syria. The throne of Alalakh passed now to Idrimi's other son, Niqmepa, a loyal vassal of Mitanni. He built a new palace, different from the previous one in its architecture and orientation. The palace was expanded by Niqmepa's son Ilim-ilimma II, but was burned and destroyed, probably by the Hittite king Tud-haliyaš I in ca. 1430 B.C. The period of the existence of Niqmepa's palace forms Level IV of Alalakh. The ruins of the palace revealed an archive of about three hundred tablets which include interstate treaties, testimonies of Alalakh's relations with its Mitannian overlords, legal documents, census lists by settlements and socio-legal classes, ration lists, inventories, and other records. The tablets display a very significant increase of Hurrian influence in onomastica and vocabulary, which no doubt reflects the political influence of Mitanni. The inscribed statue of Idrimi dates from the time of Level IV.

Very little epigraphic material comes from Level III. Alalakh and most of the rest of northern Syria remained under the overlordship of Mitanni. When the Hittite king Šuppiluliumas I invaded Syria in 1366 B.C., the king of Mukiš-Alalakh, Itur-Addu, and his allies of Niya and Nu-ḫašše resisted him but finally lost. The fall of Alalakh to Šuppiluliumaš marks the transition to Level II. The victorious Hittite king gave much of Alalakh's territory to the pro-Hittite kingdom of Ugarit and to the newly established kingdom of Carchemiš and created from the rest of it another Hittite appanage under the name "Kingdom of Halab." After that, Alalakh was ruled by Hittite princes. Hittite presence is evidenced from a couple of Hittite tablets, several Hittite stamps, and a stele with a Hittite hieroglyphic inscription. Along with the Hittite capital, Hattušaš, and most cities of western Syria, Alalakh was utterly destroyed by the invasion of the Sea Peoples soon after 1200 B.C., and was never rebuilt.

C. Importance of the Alalakh Finds

Alalakh has no direct bearing on the Bible because of the geographical and chronological distance between them. Indirectly, however, it is of interest to biblical studies by the light it sheds on the Syro-Palestinian and Near Eastern context of biblical *realia*. The relevant points are here succinctly summarized.

1. The inscriptional and stratigraphical material from Alalakh, with its direct and indirect synchronisms with Mari, Assyria, Babylonia, the Hittite kingdom, and Egypt, was of paramount importance for the revision of ancient Near Eastern chronology of the second millennium B.C.

2. The texts from Level VII disclosed the political structure of the Great Kingdom of Yamḫad, the largest West Semitic state of the Middle Bronze Age. Of particular interest is the vassalage treaty between King Abbān of Yamḫad and his brother Yarim-Lim of Alalakh.

3. The texts of Level IV present a vivid picture of a medium-sized Syrian state of the Late Bronze Age, at the time of Mitannian hegemony. They show us a stratified society of several legally determined classes, from the highest (*mariannu*) to the lowest (*ḫubšu*), and give us a clearer notion of their respective obligations and privileges than do other sources. The term *ḫubšu* has been often equated with Heb *ḥopšî* "freeman," but most likely incorrectly.

4. The ubiquitous ḪABIRU are mentioned in several texts of Level IV (and probably in a date formula of Level VII) as a specific group of the population. Far from being described as a heterogenous and despised assemblage of refugees, fugitives, and outlaws without civil rights (as claimed by a widely accepted theory), they appear as bearers of arms in census lists, one of them is registered as a priest of the goddess Išḫara, and we hear of a Ḫapiru "house" (in this case, as often in Akk and Heb phraseology, meaning a tribal unit) consisting of 1,436 men, eighty of whom owned chariots, which would put them on the same military level as the *mariannu* class.

5. The treaties between Idrimi and Pilliya (AT 3) and between Niqmepa and Ir-^{d}IM, of Tunip (AT 2) (both translated by Reiner in *ANET*, 531–32) are among the earliest of their kind in the Near East and of considerable juridical and diplomatic interest.

6. The texts of Level VII and especially of Level IV, though none of them is written in Hurrian, contain so many Hurrian personal names and Hurrian loan words that they have made an important contribution to our knowledge of the Hurrian language (see Draffkorn 1955).

7. The biographical inscription of Idrimi, written in the first person but actually composed some years after his death, is an early and in many ways unique specimen of Syro-Palestinian narrative literature, unique in its time but anticipating, in a way, such biblical biographical stories as those of Joseph and David (see Wiseman 1955 for this and other parallels).

8. Finally, the succession of palaces and temples at Alalakh forms a chapter in the history of Syro-Palestinian secular and sacral architecture, including those of Israel and Judah.

ALCIMUS (PERSON) [Gk *Alkimos* (Ἀλκιμος)]. Name of a high priest who held office in Jerusalem in the years 161–159 B.C.E. (1 Maccabees 7; 9; 2 Maccabees 14). He is condemned by the author of 1 Maccabees as the leader of the "lawless and irreligious" Jews (1 Macc 7:5). The name "Alcimus" is Greek, and it probably stands for the Hebrew "*Yakim,*" which may be equivalent to "*Eliakim*" (cf. 1 Chr 24:12 in the LXX).

Alcimus was probably appointed to office by Antiochus V and Lysias to succeed Menelaus. When Demetrius I took over the Seleucid throne, Alcimus approached him and was reconfirmed by him in his office. About two years later he passed away, and the high priesthood remained vacant for several years.

The ancient sources are inimical towards Alcimus. According to 2 Maccabees he "defiled himself" in the time of the persecutions (14:3), while 1 Maccabees inculpates him in the treacherous murder of sixty Hasidim (7:12–16); and his death is explained as a punishment for his tearing down a wall in the temple (9:54–56). This information should be treated skeptically, since both authors had their reasons to criticize Alcimus, who was an opponent of Judas and a contender for the high priesthood, which was taken by the Hasmoneans shortly afterward (152 B.C.E.).

It is impossible to place Alcimus exactly within the various groups within Jewish society at that time. The fact that he replaced Menelaus and was negotiating with the Hasidim would show him to be lesser a Hellenizer than 1 and 2 Maccabees would like us to believe. Nevertheless the breach between him and the Hasidim, and the legend concerning him and the sage Yosi son of Yoezer (*Gen. Rab.* 65:26 and parallels) point to a certain division between him and the Hasidim which might have been on religious grounds, as well as with Judas and his followers on political grounds. The additional meager information from Josephus is that he was not of the Oniad house (*Ant* 12. 387), but we do know that he was a priest (*Ant* 20. 235). According to *Genesis Rabbah* (65. 26) Alcimus was the nephew of Rabbi Josi ben Yoezer, who himself was of priestly family. There his name is Yakim Iṣ Zerorot. Alcimus' position within Jewish society of that time is hard to define. Scholars propose various suggestions, from mild hellenizer to pietist leader. However, the most we can assume is to envision Alcimus as politically pro-Seleucid, culturally a non-hellenizer and socially opposed to the Hasmoneans.
URIEL RAPPAPORT

ALEMA (PLACE) [Gk *Alema* (Ἀλεμα)]. Usually understood as one of six cities in Gilead where Jews were being held captive by the Gentile inhabitants of the cities after the rededication of the Temple (1 Macc 5:26). News of their plight was delivered by Nabateans to Judas Maccabeus, who was already three days' journey across the Jordan, coming to the defense of Jews who had fled Gentile persecution to the city of Dathema. After Judas rescued the Jews in Dathema, he turned to attack a city whose name is listed as Alema in several MSS, and liberated Jews in Chaspo, Maked, Bosor, Carnaim, "and the other cities of Gilead" (5:36, 44). Thus, 1 Macc 5:35–44 seems to describe the defeat of five of the six cities mentioned by the Nabateans. The site of Alema is unknown, but is often identified with Alma, located eight and one-half miles SE of Bosor (Abel *GP*, 241; Baly *GB*, 216). Some scholars (e.g. Abel *GP*, 34) suggest it might also be the city of Helam mentioned in 2 Sam 10:16.

This reading of 1 Macc 5:26, 35 is by no means certain, however. Goldstein (*1 Maccabees* AB, 301) notes a change in prepositions from "*eis*" (at) to "*en*" (in) before the word "Alema," suggesting that "Alema" was the name of the district in which Bosor was located and that Jews were under siege in only five cities: Bozrah, Bosor in Alema, Chaspho, Maked, and Carnaim. Also, the mention of "Alema" in 5:35 is by no means certain. Various MSS of 1 Maccabees read "Mella," "Mala," "Mapha," or "Maapha." Goldstein cogently argues (*1 Maccabees* AB, 302) that a scribe would hardly alter a text in which one of the places mentioned in 5:26 reappeared, but might well supply a name from 5:26 not specifically listed in 5:35 as being defeated. Hence, he concluded that the place name in 5:35 was irretrievably lost.

PAUL L. REDDITT

ALEMETH (PERSON) [Heb *ʿālemet* (עָלֶמֶת)]. The name of two men in the book of 1 Chronicles.

1. Son of Becher and grandson of Benjamin according to 1 Chr 7:8. The genealogy of Benjamin in that chapter is at variance with the Benjamin genealogies in the Torah (Gen 46:21; Num 26:38–41) and elsewhere in 1 Chronicles (8:1–40); this, combined with other factors, has led some scholars to assume that 1 Chr 7:8–12 originally described another tribe, and was incorrectly attributed to Benjamin (*Chronicles* ICC, 147–149). However, it is not unusual for variant genealogical traditions to exist for a single tribe, since each variant might have served a different function, might date from a different period, or might reflect a different understanding of the power relationships within the tribe (Johnson 1969 and Wilson 1977). Thus, the received text is probably correct, and 1 Chr 7:8–12 should be understood as a Benjaminite genealogy (*Chronicles* NCBC, 77–78). Some evidence suggests that this genealogy in its final form might date to the postexilic period (*1 Chronicles* AB, 53). According to 1 Chr 6:45(— Eng 6:60), Alemeth was a levitical city in Benjamin (See ALEMETH [PLACE]). Anathoth, also a city in Benjamin, is mentioned alongside Alemeth. Thus, the creator of this section of the genealogy was defining a relationship between various Benjaminite cities by positing an ancient kinship relationship between ancestors with the city names. This practice is typical of genealogical thinking (Wilson 1977), and is found elsewhere in biblical genealogies (Demsky 1982). The connection of the personal name "Alemeth" to a specifically Benjaminite city suggests that the attribution of the genealogy to Benjamin in 1 Chr 7:6 is correct. The connection to Benjamin is further fostered by the overlap of the names Jeremoth/Jerimoth and Elioenai/Elienai in both chapter 7 (vv 7 and 8) and in the Benjamin genealogy in chapter 8 (vv 14 and 20). The minimal extent of overlap between these two genealogies and the placement of Alemeth at radically different periods of the tribe's history is not surprising; it is not unusual for very different relationships between ancestors or clans to be posited by different genealogies of the same tribe.

2. A descendant of Saul, son of either Jehoaddah (1 Chr 8:36) or Jarah (1 Chr 9:42). If we accept the reading of 9:42 and connect Jarah (*yʿrh*) with the city Kiriath-jearim (*qryt yʿrym*), then this verse which mentions Alemeth, Azmaveth, and Moza, all city names in Benjamin, is using genealogical language to describe the dispersion of the Benjaminite clans (Demsky 1971: 19). On the doubling of the Benjamin genealogy in 1 Chronicles 8 and 9, see AHAZ.

MARC Z. BRETTLER

ʾALEP. The first letter of the Hebrew alphabet.

ALEXANDER THE GREAT (PERSON). Alexander III of Macedon, "the Great," was born in July 356 B.C., the son of Philip II and the Epirote princess Olympias. His childhood years coincided with the expansion of Macedonian power both S into the Greek peninsula and E through the Balkans. Greek authors of the time described Philip II as a man of extreme ambition, a trait which Alexander himself was to display in great measure throughout his life. His mother, to whom Alexander had a much closer attachment than to his father, was also ambitious, both for herself and for her son, and may be largely responsible for his belief that he had a special relationship with the gods. For about three years (ca. 342–340) Aristotle acted as Alexander's tutor. It is impossible to say how far he influenced the thinking of his royal pupil, though Alexander's love for Homer's *Iliad* may be due in part to Aristotle.

Alexander acted as regent for his father in 340, and in 338 commanded the left wing of the Macedonian army, facing the Theban Sacred Band at the battle of Chaeronea, at which the combined forces of Thebes

and Athens were crushed and Macedonia became the arbiter of the destiny of the Greek states. After the battle, Alexander escorted the bones of the Athenian dead to Athens—the only occasion on which he visited that city.

In 337, Philip divorced Olympias and married the much younger Cleopatra, daughter of a Macedonian noble. The marriage caused great dissension in the royal family, with Alexander both indignant for his mother's sake and concerned about his own prospects of succession. Hence when Philip was assassinated in the following year, there was some suspicion that Olympias and Alexander were behind the assassination. Nevertheless, Alexander succeeded with little difficulty, thanks to the support of senior generals such as Antipater and Parmenion, though there did occur the usual liquidation of potential rivals and enemies. In Greece, he was swiftly recognized as *hēgēmōn* (Leader) of the Greek League of Corinth established by his father in the previous year and as commander-in-chief of the forces for the impending invasion of the Persian Empire. The following year, 335, was spent in securing the N frontier of Macedonia against barbarian uprisings and in suppressing a rebellion in Greece led by Thebes. The ruthless destruction and enslavement of Thebes was an act of terror to deter similar revolts during the king's absence in Asia.

The campaign against Persia was the major legacy of Philip to Alexander. It was to be a joint campaign of Macedonians and the Greeks of the League of Corinth under the command of Philip, the Macedonian king. The publicly proclaimed reasons for the attack were to liberate the Greek cities of Asia Minor from Persian control and to punish the Persians for the burning of Greek temples 150 years earlier under Xerxes. Other factors motivating Philip will have been the prospect of plunder and the acquisition of territory. A Macedonian army had been operating in NW Asia Minor since 336. We do not know how far, if at all, Philip's intentions went beyond those publicly proclaimed; and this is true also for Alexander, when he crossed into Asia in the spring of 334. The army which he led amounted to about 40,000 men and 160 ships. The kernel of the army was about 15,000 Macedonians, superbly trained and organized by Philip. The League of Corinth supplied 7,000 troops and the fleet, in whose loyalty Alexander appeared to have little confidence.

The first two years of the war (334–333) saw the majority of the coast of Asia Minor and the major centers in the interior fall into Macedonian hands. The Persian armies were twice defeated in pitched battles: at the river Granicus, soon after the crossing, and at Issus in November 333. At Issus the Persian king Darius himself led his army; his flight from the battlefield left his family hostage to Alexander. Soon after the Granicus victory, the Greek cities of Asia Minor who joined Alexander were given their freedom and democratic governments. But at the same time, his lack of confidence in his Greek fleet and the strength of the Persian fleet caused him to disband his fleet and adopt the strategy of conquering the Persian fleet from the land. This meant gaining control of all bases used by the Persians and also opened up the real danger of a Persian naval counterattack on Greece and Macedonia. Indeed, the Persians made such good use of their naval opportunities in the Aegean that Alexander was obliged to form a new navy in 333 and the danger was not finally averted until mid-332. To gain control of the home bases of the Persian fleet, Alexander was committed to the conquest of the seaboard as far south as Egypt—far beyond the limits of Asia Minor. His expanding ambitions can be further seen in his reply to the offer of peace made by Darius after Issus, in which Alexander rejects peace and claims now to be "Lord of Asia," that is, the Persian empire, only a small part of which he had hitherto conquered.

The greater part of 332 was taken up with the seven-month siege of Tyre, which supplied the main contingent to the Persian fleet. During the siege, a second peace offer, in which Darius offered to cede the whole W part of his empire as far as the river Euphrates, was rejected. The capture and enslavement of Tyre, preceded by the final breakup of the Persian fleet, was reminiscent of the brutality of the capture of Thebes. Then moving S and capturing Gaza after a two-month siege, Alexander entered the Persian satrapy of Egypt unopposed. Here, as well as honoring the local gods, he was crowned Pharaoh, thus becoming the son of Amun-Re. This divine sonship may have been one of the factors which impelled him to visit the famous oracle of Ammon in the desert at Siwah. Ammon (Amun) had long been equated by Greeks with Zeus, and sonship of Ammon could well be understood as meaning the sonship of Zeus.

Certainly Alexander visited the oracle because Perseus and Heracles, to both of whom he traced his ancestry, had consulted it; and emulation of his divine ancestors increasingly played an important part in Alexander's actions. What questions he put and what answers he received are beyond our knowledge, but it is possible that any belief he may have had in his own superhuman nature was strengthened by the visit. It was probably before the visit that he laid the foundations of what was rapidly to become the greatest city in the Mediterranean world (see ALEXANDRIA).

In spring 331, Alexander left Egypt to strike into the heart of the Persian empire for the decisive engagement with Darius, who had been gathering a new army for almost two years. The battle that took place at Gaugamela on October 1st sealed the fate of Darius and his empire, though Darius once again escaped from the battlefield. One source tells us that after the battle Alexander was proclaimed King of Asia, presumably by his Macedonians.

Instead of pursuing Darius E, Alexander turned S to seize the major cities of the Persian empire, especially Babylon, Susa, and Persepolis. At Babylon, he appointed a former Persian enemy as satrap (governor)—the first of a series of such appointments in the central and E satrapies. This practice may have been calculated to win over the Iranian governing class, but it was bound to be controversial with the Macedonians. The climax of his lengthy stay at Persepolis was the deliberate burning of the royal palace, perhaps intended as a symbol of the overthrow of Achaemenid Persia.

In late spring 330, Alexander set out in pursuit of Darius, who had been trying to raise a new army in Media. Significantly, the Greek troops of the League of Corinth were now discharged and sent home, a sign that the original purpose of the expedition was now completed. The hapless Darius was betrayed by his lieutenants and murdered. His alleged dying request to Alexander to avenge his murder enabled the Macedonian to portray himself as the legitimate successor and avenger of Darius and the assassins as regicides and rebels. When the leading regicide, Bessus, was captured, he was punished and executed in the traditional Persian way of dealing with rebels—another sign of Alexander's growing assumption of the style of the Great King. Soon after Darius' death, in Hyrcania, Alexander began to wear the dress of the defeated Medes and Persians, though perhaps at first only in his dealings with the Iranians.

The next two-and-a-half years, until early 327, were occupied with the reduction of the satrapies of the E and NE of the Persian empire, especially Bactria and Sogdiana. The fighting encountered in this area was perhaps the most difficult and constant yet encountered by the Macedonians, since for the first time they were facing what might be called "nationalist" resistance against the foreign conqueror, whatever claims to legitimacy he might make. Indeed, Alexander's marriage to the Sogdian princess Rhoxane (late 328) was probably more a political gesture than the love match described by ancient sources; it was certainly not popular with the Macedonians, who regarded it as degrading for their king to marry a foreign captive. The founding in this area of a large number of "cities," populated mainly by Macedonian veterans and Greek mercenaries, is a testimony to its warlike and rebellious nature. For the cities were intended primarily as garrisons; economic and "cultural" motives were purely secondary.

During these years in the E satrapies, there occurred three incidents which indicate a growing undercurrent of hostility and resentment among the Macedonian nobility toward Alexander, especially in connection with his orientalizing practices. The first, in late 330, was the alleged conspiracy of Philotas, the commander of the elite Companion cavalry. The execution of Philotas and subsequent murder of his father, Parmenion, removed a powerful family group inherited by Alexander from Philip. The murder by Alexander of Clitus, another of the older Macedonians, during a drunken quarrel at Bactra in 328 was caused by Clitus' outspoken criticism of Alexander's growing "orientalism." An attempt, perhaps in early 327, by Alexander to extend to Macedonians and Greeks the Persian practice of *proskynēsis,* or abasement before the king, foundered on the opposition led by Alexander's own court historian, the Greek Callisthenes, nephew of Aristotle. It is possible that Alexander's reason for trying to introduce this ceremony went beyond a desire to have a uniform court ceremonial. To Greeks and Macedonians, prostration implied the worship of a god, and Alexander, the descendent of Heracles and son of Zeus-Ammon, may have been paving the way for the announcement of his own divinity. Soon after this a conspiracy to murder the king, formed by the Royal Pages, was discovered. Their leader, when arrested,

gave Alexander's increasing orientalism and un-Macedonian behavior as the impulse for their attempt. The Pageboys were executed, as was their tutor, Callisthenes, whom Alexander believed to be behind the plot. The killing of Callisthenes probably exercised a deep influence on the attitude towards Alexander of the Peripatetic school of philosophy, founded by Aristotle, Callisthenes' uncle.

In the spring of 327, the army crossed the Hindu Kusch to begin the invasion and conquest of what the Greeks called India (roughly modern Pakistan). The Indian campaign, which lasted for over two years, had been planned by Alexander for at least three years. India had once been a part of the Achaemenid empire; Heracles and Dionysus were believed to have been there; and contemporary geography conceived of India as being much smaller than it really was and as terminating eastward in the encircling ocean. The desire to reclaim his rightful inheritance, to equal and even surpass the exploits of his ancestor and of Dionysus, and to reach the bounds of Asia and the world were powerful motives for Alexander's invasion. After securing the voluntary submission of the ruler of Taxila, Alexander defeated the neighboring king, Porus, in a battle on the river Hydaspes (modern Jhelum) in June 326. Porus was reinstated in his kingdom, but as Alexander's vassal. By now the Macedonians were probably aware that the end of India was not near; it stretched eastward interminably, with endless marching and fighting in prospect. It is not therefore surprising that at the river Hyphasis (modern Beas), the soldiers refused to go further, forcing Alexander to abandon his ambitions in this direction. The army did not, however, simply retrace its route westward, for Alexander put into operation another long-matured plan—to voyage down the river Indus to the sea and then to attempt a land march and sea voyage along the coast to the Persian Gulf and back to the center of the empire. The joint naval and military descent of the Indus involved much savage and brutal fighting, with the Brahmins leading the native resistance and Alexander pursuing a policy of wholesale slaughter. The king himself was nearly killed in the assault on one town, and the severity of his wound may have contributed to his early death. Despite the awful slaughter, the conquest of India was largely ephemeral and a failure.

Arriving at the Indus delta in the summer of 325, Alexander set about preparations for the joint naval and military expedition westward. The fleet was commanded by the king's old friend Nearchus; Alexander himself led the army, less a large detachment that had already been sent westward by an easier route. The army was to leave first and was ostensibly to reconnoitre possible harbors and leave supplies for the fleet. Its march led it through the Gedrosian desert (Makran), whose inhospitable nature Alexander must have known; but he was eager to succeed in bringing an army through a region where Cyrus the Great and the legendary Semiramis had failed. Heat and lack of food and water turned the march into an unparalleled disaster, in which as many as 90,000 persons may have died. It was a grave blow to Alexander's pride and reputation. The fleet, too, suffered great privations, but eventually, about December 325, it joined up with the remnants of the army in Carmania. The voyage had, at any rate, shown that it was possible to sail from the Indus to the Euphrates.

On his return to the center of the empire early in 324, Alexander found a state of turmoil and confusion. His prolonged absence in India had led many to believe that he would never return. Consequently many satraps had engaged in oppression and mismanagement and were behaving as independent dynasts. Many of the oppressive satraps were Iranians, but prominent Macedonians were also found guilty. Alexander's friend and treasurer, Har-palus, had grossly abused his position and fled westward to Greece before Alexander's arrival, taking with him a large amount of money and many mercenary soldiers. Harpalus' money was to play an important part in the Athenian-led revolt against Macedonia which broke out upon Alexander's death. The task of punishing the guilty and reestablishing the king's authority lasted for several months into 324.

The year 324 was eventful in other ways. Despite opposition amongst the Macedonian nobility and the apparent failure of his Iranian satraps, Alexander pressed on with his orientalizing policy. At Susa, a mass wedding celebration was held at which eighty of the king's close friends and companions married noble Iranian brides. The ordinary Macedonian soldiers too had their unions with native women solemnly legitimized. About 30,000 Persian youths, trained in Macedonian weaponry and significantly called by Alexander his "successors," reached Susa and were incorporated in the army. This last event especially

vexed the Macedonian soldiers, whose resentment of Alexander's orientalizing practices had been steadily growing over the years. Soon after, at Opis, Alexander's demobilizing of 10,000 veteran Macedonians provoked them to mutiny. They believed that their king no longer held them in high regard and was trying to get rid of them and replace them with orientals. The mutiny was broken by Alexander's clever use of psychological tactics, and the men agreed to their discharge. Before their departure Alexander, in a grand symbolic gesture, held a huge banquet for 9,000 Macedonians and Persians, with the Macedonians holding the places of honor. At the banquet Alexander pronounced his famous prayer for "concord and partnership of the empire for Macedonians and Persians." Scholarly opinion is divided as to whether this was a genuinely programmatic utterance or merely an empty gesture at the end of a dangerous incident. Certainly the basic problem still remained: if Alexander was to continue as Lord of Asia, what was his relationship to be with the Macedonians, who had won Asia for him and on whom he was still greatly dependent?

A little before this, Alexander had issued a decree to all the Greek cities to receive back their political exiles. His motives for this are puzzling: he may have wished to ensure for himself partisans in the Greek cities which were hostile to Macedonian domination, or it may have been intended as a beneficent gesture which would solve a long festering and disruptive pattern among the Greeks. But the decree, a clear breach of the covenant of the League of Corinth, was a major factor in the decision of Athens and other cities to try to shake off the Macedonian yoke. Some scholars believe that this decree was accompanied by a request from Alexander to the Greeks to worship him as a god. A god, it is suggested, could properly interfere in the internal affairs of the League of Corinth, though its Macedonian leader could not. Such an argument is almost certainly mistaken. Yet it is certain that Greek cities in 324 debated and in some instances agreed to Alexander's deification, and it is highly likely that the impulse came from Alexander himself. Why Alexander wished to be worshiped by the Greeks must remain a matter for speculation. It is improbable that he wanted to establish a theocratic empire. There is no evidence that Persians and other Iranians received such a request, and he must have been fully conscious of the hostility of his Macedonians to such an idea. But there were precedents among the Greeks for the worship of a living ruler; indeed, it is almost certain that cults of Alexander himself had already been established by the Greek cities of Asia Minor at the time of their liberation. It is almost certain too that Philip himself had, at the end of his life, both believed in his own divinity and been the object of cult worship in some Greek cities. Alexander, the son of Zeus-Ammon and the descendant of the god Heracles, had surpassed all mortals, as well as Heracles and the god Dionysus, in the magnitude of his achievements. He may well have considered that the appropriate recognition of his greatness was to be worshiped as a living god and that the Greeks were the appropriate people to accord him this honor. His deification created a powerful precedent for his successors (see below) who, in Ptolemaic Egypt and Seleucid Syria, established cults of themselves and their relatives. The worship of Roman emperors may be seen as the continuation and extension of the well-established tradition of ruler-cult among the Greeks.

But if he was given divine status by the Greeks, he did not live long to enjoy it. The death of his closest friend and virtual deputy, Hephaestion, in late 324 was a devastating blow to the king. In the late spring of 323, he was in Babylon preparing the enormous naval and military forces needed for his projected conquest of the Arabian peninsula. The motives for the expedition, which was associated with plans to colonize the Persian Gulf, were commercial and personal. Arabia was famed for its spices; but Alexander, hearing that the Arabs worshiped only two gods, was eager to be added to that number. The preparations were well advanced when the king was struck by an illness and died on 10 June 323. Some believed that he was poisoned, but it is more likely that his death was the result of disease, perhaps malaria, exacerbated by constant heavy drinking and a constitution weakened by wounds and years of hardship. His body, after lying in state in Babylon, was to have been transported to Aegeae in Macedonia, there to be buried with the other kings of Macedonia. But Ptolemy, after gaining the satrapy of Egypt in the division of the empire among the leading generals, seized the body and took it to Egypt, where it lay for centuries in the king's own city, Alexandria.

The nature of our ancient evidence, with its tendency to heroize Alexander, makes it difficult to give an accurate assessment of the king and his achievements. Some traits in his personality seem certain: he was passionate in his nature and capable of great excesses in his emotions; he could be extravagantly generous to his friends and to those who voluntarily submitted themselves to him, but ruthless and brutal in suppressing opposition, real or imagined. He was a hard drinker and capable of great violence when drunk. His admiration for Greek culture, especially the poetry of Homer, cannot be doubted. He was deeply conscious of his heroic and divine ancestors, Achilles and Heracles, and eager to emulate and surpass them, particularly Heracles. Those who speak of his "heroic" nature refer mainly to his insatiable and consuming desire for glory, which was to be gained by conquest and doing what nobody before him had done, and his constant desire to do something new was complemented by a mind that was always eager to see something new. From his early years, perhaps under the influence of his mother, he had regarded himself as set apart from the rest of humanity; and it is no cause for surprise that in his later years he should have become convinced of his own divinity.

As a general he owed much to the army and officers he inherited from Philip. He was a great tactician and cavalry commander, but his ability as a grand strategist is open to question. The siege of Tyre shows not necessarily his siegecraft, but his single-minded determination. That he was a great and inspiring leader of men is obvious from the fact that his Macedonians followed him as far as India before refusing to go further, despite the years away from home and the appalling hardships frequently encountered. Even the meeting at Opis was partly motivated by the men's jealousy for Alexander's affections, and their grief at his death was deep, though significantly they later insisted that Philip Arrhidaeus, the feebleminded but Macedonian-born half-brother of Alexander, should succeed Alexander in joint kingship with Alexander IV, the infant son of the oriental Rhoxane. They loved his person while rejecting his policies.

There are many deficiencies in Alexander as a ruler. His lust for overseas glory and conquest meant that his native Macedonia was deprived of its king for virtually the whole of his reign, though the demands made on Macedonian manpower for these conquests may have permanently weakened the homeland. His failure to reconcile the Greek city-states to Macedonian rule resulted in the widespread revolt which broke out on the news of his death. In Asia itself he made only minor changes to the Achaemenid system of government, perhaps because he regarded it as generally satisfactory, perhaps because he did not have the time, but perhaps because he was not interested in the art of government. Certainly the turmoil in which he found the empire on his return from India demonstrated the need for a period of firm and benevolent government. Yet Alexander's main concern in these last years seems to have been with plans for ever more conquest on an enormous scale. The claim of one ancient writer that "under Alexander's kingship it was not possible for the ruled to be the victims of injustice at the hands of their rulers" cannot be taken as universally valid. It is highly improbable that, as has been claimed, Alexander was a believer in universal "Brotherhood of Man" or that he wished to blend together, "as in a loving-cup," all the many different peoples of his empire. He was certainly aware of the problem facing him as a foreign conqueror ruling over a proud people with an imperial heritage. If he was to remain Lord of Asia, he must win the adherence of the traditional governing class and try to reconcile these people and the Macedonians to each other, at least as long as he needed the Macedonians. He may have intended Macedonians and Iranians to become the joint ruling class of the empire, but there are signs that his inclinations were increasingly toward the ways of the East rather than the more austere and independent ways of Macedonia. Had he lived longer, the hardest task before Alexander would have been that of defining his relationship with his Macedonians.

The effects of Alexander's reign and conquests were far reaching. From the wars which broke out among his generals after his death there eventually emerged the great successor kingdoms of the East, each under its Macedonian dynastic family; the most important are Ptolemaic Egypt and Seleucid Syria. These are the states in which Hellenic civilization became modified into what is now called Hellenistic civilization. The Near East was opened up to Greek and Macedonian settlement and exploitation. Great cosmopolitan cities, each with its Greco-Macedonian upper class, grew up in the successor kingdoms, the most famous of which was Alexander's own Alexandria in Egypt, with its royally founded and endowed

library and museum. Greek, in its modified *koine* form, became the language of the educated classes throughout the Near East. As early as the third century the OT was translated into Greek at Alexandria and Greek was the language of the NT (see SEPTUAGINT). The Greeks who migrated to these new cities took with them their culture as well as their language and thus brought about the spread of Hellenism. Nor was the process one-sided; Asian art, literature, and, above all, religion exerted increasing influence on the Greeks. For Greek religion offered little, either in the present or the future, to the ordinary person. But the mysteries of Isis and Osiris, Sarapis, Mithras, and eventually Christianity, which promised a life of bliss hereafter, were eagerly embraced by Greeks and Macedonians both in Asia and in the old country. During the second century Rome rapidly became the dominant power in the eastern Mediterranean, and it was this Hellenistic Greek civilization that overcame the fierce victors. Greek ideas, science, and literature were absorbed by the Romans and modified by their own native traditions and ways. The resulting Greco-Roman culture was in its turn transported by the Romans to their western provinces and so formed the basis of the civilization not only of the Latin countries, but of all western Europe.

ALEXANDER (PERSON) [Gk *Alexandros* (Ἀλεξανδρος)]. **1.** Alexander Balas, also known as Alexander Epiphanes, was a pretender and eventual ruler of the Seleucid kingdom between 158 and 145 B.C.E. (1 Macc 10:1, 15–21, 47–67, 88–89; 11:1–17). The author of 1 Macc 10:1 calls him "Alexander Epiphanes, son of Antiochus (IV)," while other ancient authors call him "Alexander Balas." He claimed to be the son of Antiochus IV and therefore the rightful heir of the Seleucid throne. However, among the ancient sources only 1 Maccabees, Josephus, and Strabo believe his claim; the rest deny it. The name "Balas" may have been his original family name (Just. *Epit.* xxxv.1.6) or it may have been a form of Baal, a Syrian divine name equivalent to Alexander's divine name "Epiphanes."

When Demetrius I overthrew the weak Antiochus V and his prime minister Lysias, he incurred Rome's displeasure. Roman mistrust, plus Demetrius' foreign policies, disaffected him from the kings of Asia Minor and Egypt. Therefore, these kings and the Romans were willing to support a pretender to the throne.

In 158 B.C.E. Alexander Balas claimed to be the son of Antiochus IV; he even resembled his claimed brother, Antiochus V. The next year, Attalus II, king of Pergamum and enemy of Demetrius, sent Alexander to Cilicia, on the border of the Seleucid Kingdom, to establish Alexander's claim and threaten Demetrius. In the summer of 153, Alexander received the support of the Roman Senate for his claims to the Seleucid throne with the help of Laodice, the daughter of Antiochus IV, and Heracleides of Miletus, another enemy of Demetrius. While Demetrius developed a drinking problem, Alexander and Heracleides developed support and an army. In 152 Alexander took control of Ptolmais, with the help of a populace disgusted with Demetrius.

Demetrius sought the help of the Jews against Alexander by offering Jonathan, the brother of Judas Maccabees (1 Macc 9:28–31), the right to raise an army and rebuild the walls of Jerusalem. Alexander made Jonathan a counteroffer that included the high priesthood, royal honors, and military benefits.

Despite Demetrius' further offer of lower taxes, freedom of religion, and political rights, Jonathan sided with Alexander (1 Macc 10:7–47; 11:28–37).

The ancient sources do not describe clearly the war between Alexander and Demetrius. Yet they do agree that in the summer of 150 Alexander secured the throne after Demetrius died in battle when he fell from his horse into a swamp. At that point the 23-year-old Alexander declared himself king. Ptolemy VI (Philometer) came to Ptolemais, where he gave his daughter, Cleopatra, in marriage to Alexander. Jonathan rode in state from Jerusalem to Ptolemais where Alexander honored him with a royal purple robe, the privilege of "Friend of First Rank," and the military and administrative governorship of Judah and three sections of Samaria (1 Macc 10:51–66).

Unfortunately, Alexander was lazy, inept, and licentious. Domination by his mistresses and friends alienated him from the populace. His friend Ammonius used the position of prime minister to eliminate his personal enemies. While Alexander lived at Ptolmais, his friends, Hierax and Diodotus (Tryphon), oppressively ruled Antioch.

After four years of growing discontent, Demetrius II, son of the dead king, sailed from his refuge at Knidos, Crete, with a mercenary army to Cilicia. Alexander moved from Ptolmais to Antioch to halt Demetrius' advance. The governor of Palestine, Appollonius, rebelled against Alexander, but Jonathan stopped the revolt. In 145, Ptolemy came to Alexander's aid with a land army and a navy. However, Ptolemy switched his allegiance from Alexander to Demetrius, claiming there was an attempt on his life by Alexander's friend Ammonius. When Alexander would not hand over Ammonius for punishment, Ptolemy assumed that Alexander had conspired against him. The sources do not agree on the story. Diodorus (32.9) claims that Ptolemy invented the story in order to justify his change of allegiance (1 Macc 11:8–12).

Alexander left Antioch and went to the area around Cilicia, presumably to fight Demetrius. Hierax and Tryphon also switched allegiance and turned the people of Antioch against Alexander. Ammonius tried to escape the city dressed as a woman but was found out and killed. Ptolemy VI then marched into Antioch and crowned himself the king of Asia. Then he offered his daughter, Cleopatra, to Demetrius II, along with a promise of support. Demetrius accepted both offers and came to Antioch, where Ptolemy crowned him as king of Asia and therefore as vassal to Egypt.

At this point Alexander returned from Cilicia to Antioch, where his army fought the armies of Demetrius and Ptolemy on the plains next to the Oinoparas River. When Alexander's army lost, he fled to Abai in Arabia, probably in the Syrian desert. He took refuge with a sheik variously named by the ancient sources as Diocles or Iamblichos (Diodorus), Zabdiel (1 Macc 11:17), or Eimalkouai (1 Macc 11:39). Alexander had left his infant son in the safekeeping of this sheik a year earlier. Assassins decapitated Alexander at Abai, though sources do not agree on their identity. Diodorus says that it was two of Alexander's friends, Heliades and Cassius (32.9c–10.1), while 1 Macc 11:17 says it was Zabdiel the Arab. Perhaps Zabdiel was the Arabic name of either Heliades or Cassius (Goldstein *1 Maccabees* AB, 428). Alexander's assassins brought his head to Ptolemy, just before Ptolemy died of battle wounds. Thus, Demetrius II Nicator replaced Alexander Balas.

MITCHELL C. PACWA

2. Son of Simon of Cyrene and brother of Rufus (Mark 15:21). In view of the large Jewish community in Cyrene and the probability that Simon had come to Jerusalem for the pilgrimage feast of Passover, we may assume Alexander and his family were Greek-speaking Jews (cf. Acts 2:10; 6:9; 11:20; 13:1). This judgment may receive further support from an ossuary discovered in the Kidron Valley in 1941, on which were found Greek and Hebrew inscriptions identifying the box as having been prepared for "Alexander, son of Simon" and, perhaps, "Alexander the Cyrenian." This latter reading is debated, though additional evidence in the tomb suggests that its owners were a family from the Diaspora Jewish community of Cyrenaica. Presumably, Alexander and his brother are mentioned by Mark because they were known to

Mark's intended audience. This is suggested, first, by the fact that Simon is introduced curiously, not with reference to his father, as we might expect (cf. Mark 1:19; 2:14; 3:17, 18; 10:46), but to his sons. Second is the problem of the retention of the names by Mark; their omission by Matthew and Luke—most likely dependent on Mark—suggests that these two names had an additional significance beyond mere received tradition. This significance is obviously known only to Mark, but not important to Luke or Matthew. Indeed, elsewhere Mark is sparing enough with his use of proper names. Third, although mention of Simon in Mark allows a minor character to exemplify the humble role of a disciple, an important Markan motif, no such theological role can be assigned to the casual naming of Simon's sons. Some scholars find additional evidence of the connection of Alexander and Rufus with Mark's intended audience in the reference to Rufus, "chosen in the Lord," in Rom 16:13, but this begs many questions related to the location of Mark's church, the authorship of Romans 16, and the possibility of multiple persons bearing this name.

3. A relative of the high priest Annas (Acts 4:6). In this passage, Alexander appears to exert considerable influence in the affairs of the temple as a member of the high priest's family, which is contrasted with the uneducated apostles (Acts 4:13). Apart from this reference, nothing is known of this Alexander.

4. A Jew of Ephesus (Acts 19:33). In the course of Paul's evangelistic mission at Ephesus, the silversmith Demetrius incited a riot among the smiths of the city, who feared damage to their industry as a result of the iconoclasm of Paul's converts (Acts 19:23–41). During the confusion of the ensuing rally for Artemis in the theater, the Jews put forward Alexander as their spokesperson. Presumably, they expected him to disassociate the Jews from the followers of the Way. Recognizing Alexander was a Jew, thus no friend to Artemis, however, the mob refused him the opportunity to speak. Some have suggested that Alexander was himself a smith and was thus well suited to speak in this instance, and that this same Alexander reappears as an enemy of Paul in 2 Tim 4:14 (see #6 below); this is highly speculative.

5. False teacher at Ephesus (1 Tim 1:20). Alexander, together with Hymenaeus, is identified as having repudiated the faith (i.e., the gospel) and a good conscience, then as a result, as having been excommunicated from the church. If Alexander's teaching was consistent with the false teaching with which 1 Timothy is concerned, it was speculative, argumentative, given to asceticism, dualistic (with an attendant dim view of the material world), and possessive of an over-realized eschatology (cf. 1 Tim 1:3–7; 3:1–13; 4:3; 6:3–10). In spite of the reference to *gnosis* (knowledge) in 1 Tim 6:20–21, it is doubtful that we can claim Alexander as an early teacher of Gnosticism per se. It is easier to find here a less-developed attempt to syncretize the Christian faith with Jewish and Hellenistic philosophy. In any case, as a result of his activity, Alexander has been "handed over to Satan," an apparent reference to his being set outside the fellowship of the Christian community. Some, however, influenced by the parallel expression in 1 Cor 5:1–5, see here a more focused reference to Satan's role in physical punishment. The goal of this disciplinary action was restorative—i.e., that Alexander be taught not to blaspheme. Some have tried to identify this Alexander with that mentioned as Paul's foe in 2 Tim 4:14 (see #6 below). In this regard, it is noteworthy that both references, 1 Tim 1:20 and 2 Tim 4:14, refer to his being judged. Proponents of this view assume that, by the time of the writing of 2 Timothy, either Alexander has not yet been excommunicated or, even after having left Ephesus, he continues to pose a threat to Christian leaders like Timothy.

6. Metalworker at Ephesus (2 Tim 4:14). According to 2 Tim 4:14–15, Alexander had done great harm to Paul and had strongly opposed his message. It has been argued that this great harm should be identified with Alexander's role as a witness for the prosecution in Paul's trial in Rome. Others, noting that Timothy was warned to beware of Alexander in Asia Minor, have argued that he was instrumental in Paul's arrest. There is no firm evidence to identify this Alexander with either of the two men of the same name in Acts 19:33 and 1 Tim 1:20 (see #4–5 above). The name itself was common in the Hellenistic and Roman periods. (See Fee *Timothy, Titus* GNC).

ALEXANDRA SALOME (PERSON) [Gk *Alexandra Salome* (Ἀλεξανδρα Σαλομε)]. Var. SALINA. Wife of the Hasmonean kings Aristobulus I and Alexander Jannaeus; mother of the high priest John Hyrcanus II and of the pretender to the throne Aristobulus II; and ruler of Judaea 78–69 B.C.E. (*Ant* 13.11.2; 13.12.1; 13.15.5; 13.16.1–6). Alexandra's first husband, Aristobulus I, had seized power from his mother, imprisoned her and his brothers, and let her starve in prison. As Aristobulus lay dying, Alexandra engineered the death of his brother and successor Antigonus in order to avoid her mother-in-law's fate. When Alexandra succeeded Aristobulus, she freed his brothers from prison and married the youngest, Alexander Jannaeus. Expecting him to be weak, she hoped to influence him to favor the Pharisee party. However, his monarchical claims and his aggressive foreign policy alienated the Pharisees, leading to an unsuccessful rebellion (90–85 B.C.E.) that cost 50,000 lives.

In 78 B.C.E., upon Alexander's death, Alexandra completed the conquest of Ragaba and triumphantly returned to Jerusalem as the queen. She made peace with the Pharisees and appointed as high priest her elder, weaker son, John Hyrcanus, a supporter of the Pharisees. The Pharisees executed anyone who helped Alexander Jannaeus persecute them, including Diogenes, the leader of the Sadducees. Her younger son, Aristobulus, a Sadducee supporter, complained to Alexandra. She acceded to his demand for control of some Judaean forts, unfortunately setting the stage for civil war after her death.

In foreign policy, Alexandra remained neutral in wars of Roman expansion and in Seleucid and Ptolmaic disputes. She fostered Judaean security by enlarging her army and by taking hostages from neighboring territories. The only military expedition during her reign was a futile attempt by her son, Aristobulus, to prevent the conquest of Damascus. Later, when Tigranes, king of Armenia, attacked Phoenicia, Alexandra avoided conflict by paying him large tribute. Otherwise, her reign was exceptionally prosperous.

In 69 B.C.E., when Alexandra fell ill, Aristobulus revolted by capturing twenty-two Judaean cities. Though reluctant to believe that he was rebelling, Alexandra eventually took his wife and children hostage. She underestimated Aristobulus' power when she advised Hyrcanus and the Pharisees not to worry. After her death, Aristobulus and Hyrcanus fought a civil war that led to Roman intervention and domination.

A. History

Alexandria was founded by Alexander the Great in 331 B.C.E. on a site already partially occupied by a native Egyptian village, Rhakotis (31° N; 30° E). (The name "Rakote" was retained as a designation for Alexandria in Coptic usage.) Cleomenes of Naukratis was its first governor, and Deinokrates of Rhodes was its first architect. Upon the death of Alexander in 323 B.C.E. Egypt came under the rule of Ptolemy, a Macedonian general and companion of Alexander. Under Ptolemy I ("Soter") the city became the capital of Egypt, though as a Greek city it was often distinguished from Egypt proper. The city prospered under the Ptolemies and quickly became the cultural and educational center of the Hellenistic world.

1. The Jewish Community. Jewish immigration into Egypt from Palestine had begun as early as the 6th century B.C.E., and Jews flowed into the new city in large numbers almost from the beginning, many as prisoners of war. (Josephus reports that Alexander himself settled Jews in the city, *JW* 2.487; cf. *AgAp* 2.35.) The earliest archeological evidence for the Jewish community of Alexandria consists of tombs in the E necropolis of Ibrahimiya dating to the time of Ptolemy II, or perhaps as early as Ptolemy I (323–285 B.C.E.).

The Jews were organized as a *politeuma* ("Community"; cf. *Let. Aris.* 310), and were encouraged by the Ptolemies and later by the Roman emperors to live according to their ancestral customs. By the 1st century C.E. the Jewish population in Alexandria numbered in the hundreds of thousands. Philo claims that in his time there were at least a million Jews in Egypt (*Flacc* 43), and a large proportion of these must have lived in Alexandria.

With the coming of Roman rule in 30 B.C.E., the economic situation of the Jews in Egypt began to change. With the imposition of the *laographia* ("poll-tax") in 24/23 B.C.E., applicable to native Egyptians and other non-Greek groups, the concern for civic rights among many of the Jews became acute, and relations with the Greek population became strained. A pogrom against the Jews in 38 C.E. prompted a group of Jews, led by Philo, to appeal to the emperor, an appeal that was unsuccessful. The assassination of Caligula in 41 and the favorable attitude adopted by Claudius brought a temporary lull in the strife. Matters came to a head again in 66 when, with great loss of life, a riot was put down by Philo's apostate nephew, Tiberius Alexander, Prefect of Egypt (*JW* 2.487–98). A revolt of the Jews under Trajan in 115 brought massive destruction, and by the time it was put down in 117 the Jewish community had been virtually annihilated (Eus. *Hist. Eccl.* 4.2). One monument destroyed by the Jews during that revolt was the Nemeseion, built by Julius Caesar for the head of Pompey (Appian *BCiv.* 2.380), a structure some scholars have identified with the famous "Alabaster Tomb" now located in the Latin cemetery (cf. Fraser 1972,2: 108).

Jews did not become a significant presence in the city thereafter until the 4th century C.E. From that time a good deal of tension existed between them and the Christians, culminating in the destruction of the Jewish community under Archbishop Cyril in 415.

2. The Christian Community. The origins of Christianity in Alexandria are obscure, but it is safe to assume that the earliest Christians were Jews from Palestine. During the 2d century C.E. Christianity became a significant presence in the city, although archeological evidence for Christianity before the 4th century is very scanty.

After the Jewish revolt of 115–17 Hadrian sponsored considerable rebuilding in the city, but from the time of Caracella on (211–217) a number of disasters ensued: the city was sacked by Caracella in 215, by Aurelian in 273, and by Diocletian in 295. Further destruction, aimed at uprooting paganism, occurred under Christian rule. The most significant was the destruction of the Serapeum under Theodosius I in 391, led by Archbishop Theophilus. Further devastations occurred with the invasion of the Persians in 617 and its aftermath.

After the Arab conquest of Alexandria in 641, the city entered a period of many centuries of decline, eclipsed by the new capital at Fustat (Old Cairo) and by the maritime city of Rashid (Rosetta) on the mouth of the W branch of the Nile. By the time Napoleon and his forces arrived in Alexandria in 1798 it had been reduced to a small village of a few thousand inhabitants. The modern development of Alexandria as a city began under Muhammad Ali (1805–1848).

B. Topography

Alexandria was built on a ridge of land lying between the Mediterranean Sea to the NW and Lake Mareotis to the S. The dominant feature of the area is the bay formed by a promontory called in ancient times "Lochias" (modern Silsileh), protected by the island of Pharos lying offshore. Our knowledge of the topography of ancient Alexandria is based almost exclusively on the detailed description provided in Book 17 of the *Geography* written by Strabo, who was resident in the city ca. 24–20 B.C.E. (For extensive discussion of Strabo's account and the correlative evidence, see Fraser 1972,1: 7–37; 2: 12–111 [notes].) Unfortunately, many of the details of his account cannot be corroborated archeologically, since in the last century intense building activity has taken place in those areas which could have yielded important archeological information had scientific excavations been carried out in time. In addition, Alexandria lies on land which has subsided some four meters since antiquity. Hence the contours of the shoreline have changed; some built-up areas of the ancient city now lie submerged beneath the sea, and early occupation levels in some parts of the city are now below the water table.

Strabo gives the dimensions of the city as 30 stades in length (E–W) and 7 or 8 stades in width (N–NW S). He mentions the wide streets intersecting the city, the two broadest of which cut one another into sections at right angles (17.1.8). The long one, Via Canopica, ran from the Necropolis in the W to the Canopic Gate in the E (1.10), and is now thought to correspond generally with the modern Sharia el-Hurriya.

Up to a third of the entire city was occupied by an area called "the Palaces" (*ta basileia*), resplendent with beautiful buildings such as the Museum (presumably including the Library, which, however, Strabo does not mention) and the *Sēma,* containing the burial places of Alexander and the Ptolemies (1.8). The sites of these structures are unknown, but the "Palaces" neighborhood extended from Cape Lochias W and S. In the Roman period that area was called "Brucheion" (Bruchium) and was largely abandoned during the reign of Aurelian. Strabo distinguishes that larger area from the "inner royal palaces" (*ta endoterō basileia,* 1.9) concentrated on and near Lochias.

Strabo next describes the city as one would encounter it if sailing into the Great Harbor (the E harbor, now silted up and used only for small craft). To the right lay the island of Pharos, with its famous lighthouse. (That island is the traditional site of the translation of the LXX; cf. *Let. Aris.* 301; Philo *Vita Mos* II.35–36.) To the left were the reefs and promontory of Lochias, with its royal palace and private royal harbor. Opposite that small harbor was Antirrhodos, an island with a royal palace and another harbor. Rising in the background was the Theater, and the Poseidium, an elbow of land on which was a temple of Poseidon. Mark Antony had extended a mole from there out into the harbor, at the end of which he built a palace called the "Timonium" (1.9). No certainly identifiable remains of the Theater have turned up, but it is thought to have been situated near the modern Government Hospital. Remains of the Poseidium and Timonium were visible in the 19th century, and underwater excavations could probably even now turn up some evidence of value. See Fig. ALE.01.

Strabo continues his discussion by referring to structures further W: the Caesarium, the Emporium and warehouses, and ship buildings extending as far as the Heptastadion. The Heptastadion ("seven stades" long) was a mole connecting the mainland with Pharos; it served to divide the Great (E) Harbor from the Eunostos (W) Harbor (1.9). No trace of the Heptastadion remains; it has been silted over, with the result that Pharos is no longer an island. The site of the Caesarium, or Sebasteion (cf. Philo *Gaium* 151) is known, and the obelisks standing at its entrance remained until the 19th century, when they were removed respectively to London ("Cleopatra's Needle") and New York. The Caesarium was turned into a church in the 4th century and became the Patriarchal Cathedral until its destruction in 912.

Strabo next describes the W part of the city. The Eunostos Harbor, today the main harbor of Alexandria, had within it an artificial harbor called "Kibotos," which was connected to Lake Mareotis by a canal. The Kibotos was the main commercial harbor for boat traffic from the Nile River inland. A "Necropolis" is mentioned as lying outside of the city to the W. The only building specifically mentioned for this part of the city is the Serapeum (1.10). Strabo saw the Ptolemaic Serapeum, but it was greatly extended in the Roman period and then destroyed by Christian zeal in 391. It is the only temple in Alexandria that has been excavated (see Adriani 1966: 90–100; plates 28–31, for summary and full bibliography). Its ruins lie

in what was the native Egyptian neighborhood Rhakotis. One of its prominent landmarks is the so-called "Pompey's Pillar" (set up in honor of Diocletian).

Strabo next turns his attention to the central part of the city, mentioning the beautiful Gymnasium with its porticoes and groves, situated on the main E–W street (Via Canopica), and the Paneium, a sanctuary of Pan lying on a hill (1.10). No certain archeological corroboration is available for these structures (cf. Adriani 1966: 222, 233). Proximity of the Gymnasium to the Great Synagogue (see below) is suggested by Philo's account of the troubles in 38 C.E. (*Gaium* 132–35; cf. Pearson 1986: 148, n. 85). Outside the Canopic Gate to the E lay the Hippodrome (cf. *3 Maccabees* 4–6), and then, 30 stades from Alexandria, Nicopolis (1.10), a new community founded by Augustus Caesar.

Strabo does not provide any details concerning the city wall, nor does he mention the necropoleis that lay to the E of the city. The first systematic attempt to locate the ancient walls and the street grid on the basis of archeological probes was that of the astronomer Mahmoud-Bey, whose map showing the walls and the streets has been the basis for subsequent topographical research (Mahmoud-Bey 1872). Unfortunately, his results are not reliable, though his street grid, representing the Roman (not Ptolemaic) streets, is widely used (cf. Fig. ALE.01). Especially problematic is his location of the E wall, which would accordingly have enclosed the Ptolemaic necropoleis of Shatby, Ibrahimiya, and Hadra. These necropoleis, as dictated by custom, must necessarily have lain *outside* the original wall of the city. The 9th century Arab wall, of which some traces remain, enclosed a much smaller area of the city.

Strabo does not say anything concerning the location of the Jewish neighborhoods, or those of other ethnic groups, nor does he mention the division of the city into quarters named for the first five letters of the Greek alphabet (cf. *Ps.-Callisthenes* 1.32). However, in his lost historical work (*Historica Hypomnemata*) he states that a "great part" of the city of Alexandria had been alloted to the Jews (quoted in Josephus *Ant* 14.117; cf. Stern 1976: 277–82). Philo reports that two of the "letters" were predominantly Jewish, though Jews lived elsewhere in the city as well (*Flacc* 55). In his *Jewish War* Josephus describes the 66 C.E. Roman attack on the Jews concentrated in "Delta" (*JW* 2.495). The "Delta" quarter has often been identified with the Jewish neighborhood he mentions elsewhere as the city's finest residential quarter, adjacent to the palaces, by the sea "without a harbor" (*AgAp* 2.33–36), an area easily identifiable as the section to the E of Lochias (modern Silsileh) near Shatby Beach. But, since a papyrus dated to 13 B.C.E. locates the Kibotos harbor "in Delta" (*BGU* 1151, lines 40–41), "Delta" must have been in the W part of the city. It would therefore have been one of the *two* predominantly Jewish quarters mentioned by Philo (Adriani 1966: 239; Pearson 1986: 147).

The neighborhood E of Lochias was probably Alexandria's oldest and most important Jewish section. Here was probably located the greatest of Alexandria's many synagogues (see Philo *Gaium* 132–135; cf. *Flacc* 41), a double-colonnade basilica described in rabbinic sources as "the glory of Israel" (*t. Sukk.* 4.6; *j. Sukk.* 5.1; *b. Sukk.* 51b), and destroyed by Trajan during the revolt of 115–117. No archeological evidence for Jewish habitation in this area has been found, although synagogue inscriptions have been found in Hadra to the E, and in Gabbary, W of the ancient city. Jewish tombs were found in the E and W necropoleis in the early part of this century, but no trace of them remains today (see C below).

Topographical references in the legendary *Acts of Mark*, narrating the story of the founding of Christianity in Alexandria, correlate well with the two "Jewish" areas mentioned, "Delta" in the NW part of the city, and the main residential area in the NE, thus also reinforcing the supposition that the earliest Christians in Alexandria were Jews (cf. Pearson 1986: 151–54; see D below). For the early 3d century, a good case has been made for locating the "catechetical school" and the center of ecclesiastical Christianity in general in the main Greek area of the city, Bruchium (Andresen 1979: 428–52). By the 2d century, if not earlier, Christians would have been found among the Egyptians residing in Rhakotis. It may have been among these Christians that the apocryphal *Gospel of the Egyptians* first circulated (Pearson 1986: 150).

C. Jewish Papyri and Inscriptions

No papyri have survived the humid climate of Alexandria, but numerous papyri attesting to Jewish life in Alexandria have been found elsewhere in Egypt, and have been published in *CPJ* (Tcherikover et al. 1957–64; see index, vol. 3: 197–98).

The Jewish inscriptions from Egypt comprise nos. 1424–1539 of *CII* (Frey 1952), conveniently republished in *CPJ* 3: 138–66. Sixteen of these are from Alexandria (1424–39).

Nos. 1424–31 are tomb inscriptions from the early Ptolemaic necropolis of Ibrahimiya. The first three, presumably the oldest, are in Aramaic, the others in Greek. (On this Jewish necropolis see esp. Breccia 1907; cf. Goodenough 1953: 62–63, figs. 863–64.) No. 1434, very fragmentary, is possibly a dedication by Jews to the royal house, found in the necropolis of Kom al-Shuqafa. Nos. 1435–38 are votive inscriptions, 1439 an inscription of ownership (*Ioulianou*) on a plaster amphora, with menorah.

The most important of the inscriptions are nos. 1432 and 1433, both fragmentary synagogue inscriptions, neither found *in situ.* No. 1432, found in Gabbary (the W necropolis area in antiquity) records the building of the synagogue (*proseuchē*) by Alypos and its dedication to "the great God who listens to prayer" "on behalf of the queen and the king" (Cleopatra VII and Antony), 37 B.C.E. No. 1433, found in Hadra (part of the E complex of necropoleis in antiquity), was dedicated to "God Most High" (*theō hypsistō*), and probably dates from the 2d century B.C.E.

Of the other synagogue inscriptions found in Egypt, no. 1440 from Schedia (modern Kafr el-Dawar), not far from Alexandria, records the dedication of a *proseuche* built by "the Jews" in honor of "King Ptolemy (III Euergetes) and Queen Berenice his sister and wife and their children." This inscription, and one from Crocodilopolis with the same kind of dedication (1532A), are the oldest synagogue inscriptions in existence, dating from between 246–221 B.C.E.

Two other inscriptions from Egypt, provenience unknown, may be from Alexandria: no. 1446, a votive inscription, and 1447, a dedicatory inscription on a statue base.

Two inscriptions not included in the corpus are worth mentioning here. The first is a tombstone of uncertain provenience now in the Greco-Roman Museum in Alexandria, inscribed (in Greek) *Iouda* over a "solar" menorah, with shofar and palm-branch (cf. Goodenough 1953: 63, fig. 896). The other one is a partial Hebrew inscription (*brkm*) on a piece of an amphora dated to the 1st or 2d century C.E. and probably imported from Palestine. It was uncovered in the Polish excavations at Kom el-Dikka in downtown Alexandria (Fiema 1985).

D. Christian Evidence

1. Churches. The evidence for the existence of church buildings in Alexandria before the 4th century is very scanty. Church buildings certainly existed in Egypt before the 4th century, for Eusebius reports on the massive destruction of churches during the Diocletianic persecutions (*Hist. Eccl.* 8.2), and there is documentary evidence for church buildings in Egypt (with the use of the term "ekklesia" for such buildings) as early as the 3d century (Judge and Pickering 1977: 59–61, 69). Church buildings would have existed in Alexandria as well.

Epiphanius, writing in the late 4th century, lists the Alexandrian churches known to him (*Haer.* 69.2): (1) "Caesarea" (built on the site of the Caesareum under Archbishop Athanasius in 368); (2) "Of Dionysius" (location unknown, attested from the time of Athanasius but presumably connected in some way with Bishop Dionysius [246–64], replaced because of its inadequate size by the church of St. Athanasius [see (7) below]); (3) "Of Theonas" (see below); (4) "Of Pierius" (location unknown, presumably named for the 3d century Alexandrian presbyter mentioned by Eusebius [*Hist. Eccl.* 7.32.26–30]); (5) "Of Persaea" (unidentified); (6) "Of Dizya" (unidentified); (7) "Of Mendidion" (a church built by Athanasius near the temple called either "Bendidion" [for the god Bendis] or "Mendidion" [for the Egyptian god Mendes], and eventually converted into the Mosque of the Souq al-Attarin after the Arab conquest); (8) "Of Annianus" (location unknown, but possibly connected in local legend with the traditional successor of St. Mark, Annianus [68–83, but see below]); and (9) "Of Baukalis" (the memorial to St. Mark attested from the 4th century and located in an area then called *Boukolou,* earlier part of the ancient Jewish quarter E of Lochias.)

Epiphanius' list ends with the phrase "and others." One prominent church left unmentioned by Epiphanius should have been known to him: the church of St. Michael (or the church of Alexander), which Bishop Alexander (313–26) created from a temple previously dedicated to Saturn. This church was situated near the Paneum, E of the Caesarea church. Perhaps Epiphanius' reference to a church "of Annianus" (no. 8 above) is mistaken and should have read "of Alexander" instead.

For our purposes, the most important of these churches mentioned by Epiphanius are the "Baukalis" church (#9 above) and the church of St. Theonas (no. 3 above). The former is reputed to have been founded in the time of St. Mark as the first church in Alexandria (*Acts of Mark* 5). In the early 4th century it was a parish church served by the presbyter (and later heretic) Arius. No trace of it remains. The church of St. Theonas, named for the Alexandrian bishop (282–300), is the earliest church building for which we have adequate documentation. It was rededicated by Bishop Alexander to the Virgin Mary, and was eventually turned into the "Mosque of a Thousand Pillars." It was severely damaged by the French in 1798, and its remains were obliterated in 1829. (On the churches of Alexandria *see* esp. Leclercq *DACL* 1: 1107–25.)

2. Cemeteries. The earliest reference to Christian cemeteries in Alexandria is found in a letter of Bishop Dionysius (246–264) quoted by Eusebius (*Hist. Eccl.* 7.11.10; cf. 7.13.1). A cemetery located in the W suburbs is mentioned in the *Passio* of St. Peter I (Bishop of Alexandria, 300–311); it had been constructed by him and served as his own burial place (Viteau 1897: 83).

Christian tombs have been found in both the E and W necropoleis, but almost all have been obliterated during this century, many of them without adequate documentation. Most of them seem to have dated from the period after the Peace of the Church (313). (*See* esp. Leclercq, *DACL* 1:1125–54; Adriani 1966: 122–23, 183–86; plates 41, 102–104; Krause 1966: 105–107). By far the most important are the Wescher Catacomb discovered in 1858 in the Karmuz district, not far from Pompey's Pillar, and the famous catacomb complex of Kom al-Shuqafa. The latter was discovered in 1900 and is still a tourist attraction (Adriani 1966: 172–180; plates 96–101). The Wescher Catacomb (Leclercq, *DACL* 1: 1125–45; Adriani 1966: 184–86; plates 103–104) was an elaborate tomb complex with rich decoration. Two staircases led down to an open chamber with an apse in the W wall. To the E was a gallery of 32 loculi on two levels, and to the N a chamber with three arcosolia. The main chamber contained a baptistry, and was evidently also used for *refrigeria* (memorial meals) and other Christian services. The paintings and frescoes representing Christ, saints, and prophets are now thought to have dated from the end of the 4th to the 7th centuries (Krause 1966: 107). Of this important Christian monument nothing remains.

3. Papyri and Inscriptions. No papyri have been found in Alexandria itself, and very little papyrus documentation exists for Alexandrian Christianity prior to Constantine. One very important piece of evidence does exist, however, a papyrus from the Fayyum in the Amherst collection (P. Amh. I [1900] 3a; see Judge and Pickering 1977: 48, 54–55; Snyder 1985: 152–53). This papyrus, dating from 264–282, is a fragmentary letter from a Roman Christian to Christian brethren in Arsinoe (presumably a church). In it the Alexandrian church, under the leadership of "Maximus the Papa" (Bishop 264–282), is understood to be performing banking functions as a financial intermediary for Christians. Other Alexandrians named in the letter include Theonas, presumably then serving as a financial secretary to Maximus, who eventually succeeded Maximus as Bishop (282–300).

A corpus of Christian Greek inscriptions from Egypt was published early in this century but is now unfortunately out of date (Lefebvre 1907). Of the inscriptions published in this corpus, nos. 1–56 are from Alexandria. A few of these, all tomb inscriptions, are dated by Lefebvre to the period before Constantine. Nos. 21 and 22 are from Gabbary (W necropolis), and no. 47 is from Hadra (E necropolis). No. 33 is a group of inscriptions from the Wescher Catacomb; Lefebvre's dating (3d or 4th century) is probably too early. Nos. 34 and 35 are inscriptions from the "Tomb of Rufinus" in Karmuz (cf. Leclercq *DACL* 1: 1149–50) and are dated to the Antonine period (2d century). No. 54, from Mafrouza, is dated to 148. Nos. 34, 35, and 54 may not be Christian; they have only the formula *eupsychei*, "farewell," a formula widely used both by pagans and Christians.

To conclude, it must be acknowledged that the documentary evidence provides a very incomplete picture of the social life of Christians in Alexandria before the time of Constantine.

ALEXANDRINUS. See CODEX ALEXANDRINUS.

ALGEBRA. See MATHEMATICS, ALGEBRA, AND GEOMETRY.

‹**ALI, TELL** (M.R. 202234). A Neolithic/Chalcolithic site on the W bank of the Jordan River, one mile S of the Sea of Galilee, on a terrace 10–15 m above an important junction, E–W from the Yarmuk Valley (Sha'ar Hagolan) to the Mediterranean coast, and N–S from the Huleh (Beisamoun) to Munhata and Jericho. The site was blessed with copious springs and drainage into the Jordan (Prausnitz 1959).

Four seasons of excavations (1955–1957, 1959) undertaken by the Israel Department of Antiquities (Prausnitz 1970) revealed four superimposed strata beginning with IV^{a-b} to $I^{(a)-b-c}$, ranging chronologically from Pre-Pottery Neolithic B (PPNB) and Pottery Neolithic (PN), to the Early Chalcolithic.

The architecture of stratum IV consisted of straight walls with rounded corners and round huts (?), whose pebble floors which had been sunk into the earth were characteristic of stratum $IV^{a,b}$. In stratum III a straight wall with a thin plaster floor was unearthed. Beneath the floor a crouched, decapitated skeleton was discovered. Stratum II revealed a large, irregular, built enclosure 13.60 × 8.80 m with what appears to be a row of two or three rooms, 2.50 × 3.50 m, placed inside the outer walls to face an inner court which is paved with pebbles. The buildings of the uppermost stratum, $I^{(a)-b-c}$, were rectangular houses 6 to 10 m long and about 4 m wide, set in clusters around a central area and adjacent to large tracts of arable land on the terrace (Vita-Finzi and Higgs 1970).

Flint and stone industries of stratum IV contain a number of microlithic blades and a crescent. According to recent terminology (Crowfoot-Payne 1983), stratum IV would thus belong to an incipient PPNB of the middle of the 7th millennium B.C. The double-ended (including naviform) cores typical of the PPNB, long blades, and "reaping knives" are common from strata IV to II. Pressure-flaked long blades and daggers come from stratum I^{c}. Among the arrowheads found at the site were the Jericho point,

with marked, notched tang and wings (represented from IV to I^c); the Byblos point, without wings (stratum III); and the Amuq point, leaf-shaped with a tang and the oval point (strata II–I^b). The latter two types of points are pressure-flaked and fluted.

Pottery vessels were first discovered in stratum II, although an animal figurine was found in IV (PPNB). Thick-walled, handmade, chaff-tempered clay hole-mouth jars with lug handles were the earliest local ceramics. Probably imported were bowls decorated by painted and burnished red bands around the rim and reserved unpainted areas, decorated by cuts and slabs, as well as incised straight and wavy lines. This pottery has exact parallels in the "Coastal Neolithic" at Hazorea (Anati 1973), at Ras Shamra V^{A-B} (de Contenson 1977), which places Tell ʿAli II to the middle/last quarter of the 6th millennium B.C. A third type of pottery had been decorated by glossy bands of creamy paint in dark to medium red. The paint had been allowed to trickle down the body in stripes. Stratum I^{b-c} produced fine monochrome burnished pottery in various shades of black to gray and dark brown to red. This pottery belongs to the dark-faced burnished ware, which at Hazorea is an upper part of the "Coastal Neolithic," at Munhata 2^A is called "wadi Rabah phase" (Perrot 1968), and is also known in the Amuq C-D. The upper stratum (I^a) at Tell ʿAli brought to light thumb-impressed and painted ware, which is well known all over N Palestine and dated to the Early Chalcolithic, the turn of the last quarter of the 5th millennium B.C.

At Tell ʿAli, from the PPNB to the Early Chalcolithic an archaeological, stratigraphic sequence was traced for the first time. Later work at Munhata and Hazorea proved the sequence for the whole of N Palestine. Links were established along the coast of the N Levant with Byblos and Ras Shamra and inland Ramad and Amuq (Mellaart *CAH*^{3} 1/1: 264–9).

M. W. PRAUSNITZ

ALIA AIRPORT (PLACE). A cemetery of the 2d–3d century A.D. discovered at the present Queen ʿAlia International Airport S of Amman, Jordan. In 1978, a number of tombs and an inscription were noticed during the construction of the maintenance hangar area. After further investigation, it was clear that the site consisted of a large cemetery below a series of hills on which some ruined structures were found. The tombs were covered by relatively level soil 1.5–2.0 m thick. The inscription, which is Thamudic, was one of the key finds for the interpretation of the site.

M. Ibrahim directed a rescue excavation of the cemetery. All soil from within the graves was sifted, and five burials were lifted entirely. These remains were then examined by B. Frohlich at the Smithsonian Institution. Apparently these were remains of an Arab tribe which lived just outside the border of the Roman Empire between the arable plateau and the arid land. The site lay some 6 km beyond permanent settlements and cultivation and was in an area of pastoral grazing. Although a few shards indicate activity during the early Islamic period, the cemetery belongs entirely to the Roman Imperial period. It occupies an area of 65 m square. Most of the families were buried in individual graves forming rows.

Among the burial goods, leather was quite prevalent. In addition to leather footwear and possibly folded clothing, large sheets of leather were buried. They were thin (0.2 cm.) and were originally quite supple. It seems most likely that these large sheets of leather were made to cover the backs of horses or camels. Square saddles are shown in numerous representations in the art of Palmyra and S Syria of the 3d century A.D. Other artifacts show a close relationship between this community and the Roman settlers. Women and children were adorned with jewelry, including earrings, necklaces, finger rings, bracelets, and

anklets—mostly of bronze. A few of the women were provided with gold earrings and additional toilet articles. Four seals were found in the graves. One was a scarab seal set in a pendant in a bronze band with a loop behind it. It shows a monkey and a griffin facing each other above a crocodile and winged uraei. Another seal is of a dark green stone and may have originated in Saudi Arabia. It is believed to have been held as an heirloom for at least 700 years before being deposited in the grave. Some 225 beads were found, some of precious stone such as carnelian, amethyst, agate, and coral. Fifteen rings of hollow gold beads were also found. Cosmetic items include spatulae and cosmetic spoons, kohl tubes, hairpins, a wooden comb, and a glass rod. The epigraphic evidence, burial practices, leather finds, and the location of the cemetery all support the attribution of these graves to the Arab population rather than to the Roman army.

MOAWIYAH M. IBRAHIM

ALIAH (PERSON) [Heb ʿ*alyâ* (עַלְיָה)]. See ALVAH (PERSON).

ʿ**ALLA, DEIR.** See DEIR, ʿALLA.

ALLAMMELECH (PLACE) [Heb ʾ*alammelek* (אַלַּמֶּלֶךְ)]. A town located in the inheritance of the tribe of Asher (Josh 19:26). The OT form can be translated as "oak of the king." However, the LXX has preserved variants, such as *alimelech,* which have led some scholars to suggest that the original Semitic form of the name was ʾ*ltmlk.* Scholars (*LBHG,* 160) have used this hypothesis to equate Allam-melech with town Number 45 (Eg *rtmrk*) in the conquest list of Thutmose III at Karnak. If this supposition is correct, the history of Allammelech can be extended into the Late Bronze Age.

Scholars have concluded that Allammelech was located in the southern part of the territory, in the Plain of Acco, from the position of Allammelech in the list of border towns. The Plain of Acco was densely settled in the Iron Age (*HGB,* 429), and several tells have been suggested as the location of Allammelech. The site most frequently mentioned (*GP,* 66) is Tell en-Nahal (M.R. 157245), which provides a general indication of the probable location of Allammelech, although the evidence in support of any identification is slight.

MELVIN HUNT

ALLOGENES (NHC XI,*3*). A Gnostic apocalypse, written in the form of an epistle, relating the secret revelations and extra-bodily visions of Allogenes to his son, Messos. The name and title "Allogenes" literally means "the stranger" or "the foreigner." It is, however, a pseudonym and tells us nothing about the historical identity of the author.

Allogenes clearly belongs to a tradition, reported by Epiphanius, which designates Seth as "Allogenes" and attributes various books to him (*Pan.* 39.1.5; 40.2.1–2; and 40.7.1–5). The text also shows close affinity with a group of other texts discovered near Nag Hammadi which are usually designated as "Sethian" (Schenke 1974; Turner 1986). *Allogenes* shares with these texts the following characteristics: self-designation of gnostics as "seed" (56,30); Allogenes-Seth as the Gnostic savior; the divine triad, Father-Mother-Son (the Invisible Spirit, Barbelo and Autogenes); and the salvific role of the "illuminators." There is a particularly close affinity with *The Three Steles of Seth, Marsanes,* and *Zostrianos;* all three of these texts depend heavily upon technical philosophical terminology. *Allogenes,* however, contains no specifically Jewish or Christian language of any kind, but does draw heavily upon technical philosophical terminology.

It is highly probable that Plotinus knew a Greek version of *Allogenes.* Porphyry writes that Plotinus was acquainted with revelations by Allogenes and Messos, among others, and attacked them in lectures and in his treatise *Against the Gnostics* (*Plot.* 16). Although Plotinus' work cannot be read solely as an attack on *Allogenes,* Allogenes does contain the type of philosophical language and conceptuality Plotinus may have felt deserved refutation. It draws heavily upon philosophical terms and concepts current in Middle

Platonism, especially with regard to the philosophical speculation on the rise of the soul and the divine hierarchy. The divine hierarchy of Plotinus, for example, is quite close to that of Allogenes. Compare:

Plotinus
One
Mind
Soul 1. directed toward intelligible realities
2. mediator
3. directed toward things of this world
Allogenes
One Invisible Spirit
Mind Barbelo
Logos (Son) 1. Kalyptos (the intelligible *logos*)
2. Protophanes (mind actualized)
3. Autogenes (savior, acts in particulars for their correction)

The author of *Allogenes* combines in a unique and coherent manner traditional Sethian materials (its basic mythological pattern, magical prayers, and the ritual of ascent) with contemporary philosophical speculation on the rise of the soul and the divine hierarchy. He does not reduce Sethian mythology to a philosophical system, nor does he allow either mythology or philosophical conceptuality to control the flow of logic in the text. But there is a clear shift away from a more typically Gnostic view of salvation as escape from this evil world toward a view of salvation as the experience of self-recognition and direct apprehension of God.

The narrative progression in *Allogenes* is found in the account of the character Allogenes' reaction to his experiences. This account provides the reader with a clear description of the progression of the soul toward salvation. Allogenes moves from fear, ignorance, and disturbance of soul to knowledge, stability, praise, silence, and finally joy. The main point of the text is to convey an understanding of the nature and process of salvation. Salvation itself is understood as knowledge of God and Self, achieved first through auditory, and then through visionary, revelation. The emphasis in the content of the auditory revelations is on epistemology and ontology, that is to say, on coming to knowledge of true Being. The visionary revelation describes the direct apprehension of Self and God in the extra-bodily ascent of the soul. *Allogenes* is most probably closely connected with the Sethian rite of ascension in that it provides mythological-philosophical reflection upon the necessity for an ascension, the content of the ascent (insofar as that can be communicated), and its ultimate significance (Schenke 1981: 601–2).

Discovered in 1945 near Nag Hammadi in Egypt, the text survives in only one manuscript dating to the first half of the 4th century. Though originally written in Greek, it survives only in Coptic translation (Sahidic).

The underlying Greek text may be dated to the first quarter of the 3d century since it is highly probable that a version was known to Plotinus. It should not be dated earlier since the philosophical treatment of epistemology and ontology reflects philosophical conceptuality current in the late 2d and early 3d centuries.

Although translation into Coptic cannot decisively lead to the conclusion that the original was composed in Egypt, nonetheless the particular combinations of mythological elements and philosophical speculation make Alexandria a distinct possibility.

KAREN L. KING

ALLON (PERSON) [Heb *ʾallôn* (אַלּוֹן)]. Descendant of Simeon. The only reference to him occurs in 1 Chr 4:37, where he is recorded as the grandfather of Ziza. The list of individuals in 1 Chr 4:34–37 were "princes in their families" (1 Chr 4:38). This certainly means that Meshobab, Jamlech, Joshah, Joel, Jehu, Elioenai, Jaakobah, Jeshohaiah, Asaiah, Adiel, Jesimiel, Benaiah, and Ziza were all princes of the tribe of Simeon in the days of the Judean King Hezekiah (late 8th century). While most scholars seem to assume that Allon is also a prince, the text is not at all clear that the antecedent of "these" (Heb *ʾēlleh*) also includes their ancestors when named. Allon is not mentioned in the Syr Peshitta version, since it omits entirely the list of Simeonite princes. In their place the Syr reads, "And they had a great name. And their dwellings were beautiful and quietness and peace was around them." This is an indication that there were variant traditions of this passage extant in ancient times (for discussion and bibliography see Williamson *Chronicles* NCBC). However, since the Peshitta is left with no antecedent for its reference in 4:38—"And these are the names of the princes who were there"—it is more likely that the Peshitta text represents an omission, rather than the original situation (although some scholars disagree). The word "*ʾallôn* " refers to some kind of vigorous tree, possibly an oak, and is probably derived from the root "*ʾwl*" meaning "be in front, strong" (KB, 19).
H. ELDON CLEM

ALLON-BACUTH (PLACE) [Heb *ʾallôn-bākût* (אַלּוֹן־בָּכוּת)]. A place in the vicinity of Bethel where Deborah, Rebekah's nurse, was buried (Gen 35:8). The name literally means "oak of weeping." In Judg 4:5 there is a reference to a "palm tree of Deborah" located between Ramah and Bethel in the hill country of Ephraim, but the context explicitly mentions a different type of tree and implies an association with a different Deborah (the prophetess/judge, not the nurse of Rebekah).
GARY A. HERION

ALMIGHTY [Heb *šadday* (שַׁדַּי), *ʾēl šadday* (אֵל שַׁדַּי); Gk *pantokrator* (παντοκρατορ)]. General name given to the patriarchal family god and later identified with Yahweh. "Almighty" translates the Hebrew *Shaddai* of the pre-Mosaic tradition (Gen 17:1; Cross *CMHE,* 13–75) and is identified with Yahweh in the Mosaic tradition (Exod 3:13–17; 6:2–3). See GOD, NAMES OF.

Albright (1935: 192–193) has shown that the name derives from northern Mesopotamian roots and came to Canaan with the ancestors of the Israelites as a patriarchal family god. Wright (1962: 51) sees the relationship of the clan to its deity as probable background for the later covenant relationship between God and Israel (Exod 6:4). Anderson (1986: 44) indicates points of similarity between Shaddai and the Canaanite god El, but notes that theological differences in the nature of Israel's God and the covenant relationship called for essentially different response in worship and morality. DeVaux (*AncIsr,* 294) points to enhanced qualities of Yahweh worship at cult sites formerly used for El worship.

The Greek of the Apocrypha and New Testament renders the Hebrew "Shaddai" by *pantokrator,* a compound of *pan* (all) and *krátos* (power, might). In the Intertestamental Period the living tradition is reflected in the prayer of Jonathan (2 Macc 1:24–29) recalling both divine attributes and covenant relationship. During events of Jewish history from 180 to 161 B.C.E. the people of Israel under the leadership of the Maccabees invoked God's almighty power in military confrontations (2 Macc 7:35; 8:11); and to strengthen their conviction of divine fidelity to their eternal covenant with the Lord (2 Macc 1:25; 3:22; 5:20; 6:26; 7:38). In the New Testament ten instances of *pantokrátor* are predominantly in

Revelation, with only one in 2 Cor 6:18. Thus the descriptive designation "Almighty" in connection with the name of the Lord God is consistent in biblical usage.

BETTY JANE LILLIE

ALMODAD (PERSON) [Heb *ʾalmôdād* (אַלְמוֹדָד)]. Firstborn son of Joktan and hence the name of a South Arabian tribe (Gen 10:26; 1 Chr 1:20), which, however, has neither been identified nor localized in a satisfactory way. Retaining the Masoretic vocalization, the first syllable could be conceived as Arabic *ʾāl,* "family, clan," the name of a specific clan could then be seen in the following part of the name, probably *ʾāl mawdad.* There are attestations of such a name in Old South Arabic; in Sabaean *mwddm* occurs as a proper name (*CIS* IV, 94,5), and in Qatabanian *mwddn* is to be found as a clan name (*RES* 3902, No. 98,2). The Hebrew form *-môdād* could very well be derived from an Old South Arabic *mwdd-n, mawdad-ān,* and in this case it cannot be excluded that the region where the tribe of *ʾalmôdād* lived has to be localized somewhere in the area of the ancient kingdom of Qatabān, the center of which was the capital Timnaʿ in the Wadi Bayḥān in present-day South Yemen. Qatabān is mentioned for the first time in the Old Sabaean text *RES* 3945; the earliest Qatabanian inscriptions, however, do not go back to the time in which the biblical table of nations originated.

Glaser (1890: 425) was inclined to recognize in *ʾalmôdād* the Minaean clan of Gabʾān, members of which are called "friends" of the king during the time concerned in the inscriptions (*ʾhl gbʾn mwddt* … "clan of Gabʾān, friends of …;" *RES* 2771,2; *RES* 2774,1; etc.). The interpretation of the first syllable of *ʾalmôdād* as the Arabic article *al-*, according to which the meaning of the name would be "the friend," is hardly acceptable and was already rejected by Gesenius-Kautzsch (GK, 118).

In case one gives preference to the vocalization of the LXX, *elmōdad,* the first syllable of the name could be conceived as the name of "God," Heb *ʾēl.* Reading the name in this way, *ʾelmôdād* could be interpreted as "God is loved" or "God is a friend"; cf. also Old Sabaean *mwd,* "friend," and the Heb proper name Medad, LXX *mōdad* (Num 11:26), the Aramaic *mwdd* inscribed on a clay-tablet from Niniveh (*CIS* 11, 43, R6), in cuneiform writing *mu-dadu,* Akkadian *mudādum,* all of which mean "friend, beloved." Hommel (*HAW* 3.1.1: 554–5), however, regarded the *m* in *ʾlmwdd* as an emphasizing enclitic particle, and wanted to read the name *ʾelī-mā-wadd,* " (my) God is truly Wadd," Wadd being an ancient Sabaean deity and the main god of the Minaeans.

Certainly erroneous is the connection, first proposed by Bochartus (1674: 112–13), of *ʾalmôdād* with the *alumaiōtai* in Ptolemaeus (*Geog.* 6.7.24), an otherwise unattested tribe at the NE coast of the Arabian peninsula.

W. W. MÜLLER

ALMON (PLACE) [Heb *ʿalmôn* (עַלְמוֹן)]. Var. ALEMETH. A city given to the descendents of Aaron the priest (Josh 21:18). BDB (p. 761) derived it from *ʿlam,* "conceal, hidden;" others suggest it means "sign" or "road mark." Albright thought the meaning of the name was obscure. It is spelled *Gamala* in LXX, *Almon* in LXX Codex Alexandrinus, *Amala* in LXX Codex Vaticanus, *Elmon* in LXX Lucian, and *Alemeth (Allemeth)* in 1 Chr 6:45 (—Eng 6: 45; *Galemeth* in LXX; *Alamoth* in LXX Lucian). Almon and Alemeth both come from the same root. Josh 21:1ff describes the allotment of 48 cities and their pasture lands (not cultivated lands) to the Levites according to the commandment of Moses in Num 35:1–8, since they did not get territorial allotments as such. Boling (*Joshua* AB, 492–494) dates the list to the mid-8th century on archaeological grounds: surface collection of potshards and other data show most of the sites

were occupied then, with ʿAlmon occupied in the 9th and 8th centuries. Myers, on the other hand, dates them to the reign of David on historical grounds—when the country was still divided among tribes and before Solomon separated it into administrative districts (*1 Chronicles* AB, 48).

Almon is one of 13 cities given to the priests (the sons of Aaron) and one of 4 cities in the tribal territory of Benjamin. The four in Josh 21:17–18 include Gibeon (el-Jib), Geba (Jaba'), Anathoth (Anata), and Almon, while 1 Chr 6:60 leaves out Gibeon (Geba is at times a short form of Gibeon and Gibeah [Tell el-Ful]), all NE of Jerusalem. ʿAlmon is ca. 5 mi. from Jerusalem. Neither ʿAlmon nor Anathoth is in the list of Benjaminite cities in Josh 18:21–28. ʿAlmon is identified with Kh. ʿAlmit (M.R. 176136), a tell between Geba and Anathoth, 1 mi. NE of Anata, on the road to Ain Farah which runs into the Wadi Qelt to Jericho. Albright (1924) suggested the modern ending shows the pointing is wrong in Chronicles and in turn, "the relation between *ʿAlmon* and *ʿAlmit* is dialectical, and is precisely like that between *tahton* and *tahfit*, the *ît* being the archaic feminine of the *nisbeh* in *î* …" Avi-Yonah (*EJ* 1: 666) notes that "Almon" is erroneously identified with Ailamon (Aijalon) on the Madeba map (6th century A.D.) based on a reference in Eus. (*Onomast.* 18: 14). In the Crusader period, Amieth (Alemeth) is mentioned along with Aneth (Anathoth) and Farafonte (Ayn Fara).

HENRY O. THOMPSON

ALMON-DIBLATHAIM (PLACE) [Heb *ʿalmōn dib-lātayim* (עַלְמֹן דִּבְלָתָיִם)]. One of Israel's wilderness wandering encampments located within the territory of Moab between Dibon-gad and the mountains of Abarim (Num 33:46, 47). It has been equated by some with Beth-diblathaim (mentioned in Jer 48:22 and in the Moabite stone, line 30), a site which has been tentatively identified with *Deleilat esh-Sherqiyeh* (M.R. 228116), a small town about halfway between Dibon and Medeba. Others have thought that Almon was a daughter settlement of Diblathaim, that is Beth-diblathaim, and have located the former at nearby *ʿAin ed Dib.* All of the suggestions are speculative at present.

ALOES. See PERFUMES AND SPICES; FLORA.

ALPHA. The first letter of the Greek alphabet.

ALPHA AND OMEGA. The first and last letters of the Greek alphabet. The phrase "the Alpha and the Omega" is used three times in the book of Revelation, twice as a self-designation of God (1:8; 21:6) and once as a self-designation of Christ (22:13). The meaning of "alpha and omega" is evident from the descriptive phrases used in conjunction with it. Rev 1:8 further describes God as the one "who is and who was and who is to come, the Almighty," whereas in 21:6 "the Alpha and the Omega" is supplemented by the phrase "the beginning and the end." Christ identifies himself as "the Alpha and the Omega, the first and the last, the beginning and the end" (22:13). The juxtaposition of the terms "alpha" and "omega" unites creation and eschatology. The God who brought the world into existence is the same one who will bring the world to completion. As the Alpha, God is the creator of all things; everything has its beginning in God (Rev 4:11). To refer to God as the Omega is to affirm that all of creation finds its purpose and meaning in God, for God will bring the universe to its final consummation. What God commenced "in the beginning" (Gen 1:1), God will direct to its conclusion.

Furthermore, all of history is under the control of God, not just its beginning and ending. In later rabbinic writings the first and last letters of the alphabet were used to denote something in its entirety. Abraham was said to have kept the law from *ʾalep* to *taw* (the first and last letters of the Hebrew alphabet), meaning that he obeyed the entire law. In a similar way, to describe God as the Alpha and the Omega is not a restriction of God to only the beginning and the end but is a declaration of the totality of God's power and control. God is "the Almighty," and as such all "salvation and glory and power belong

to our God" (Rev 19:1). Nothing is outside the purview of God. The claim that God is the one "who is and who was and who is to come" is a restatement of the same idea.

The author of Revelation, because of his exalted Christology, can apply the same phrases to Christ that he used for God. He too is the first and the last, the beginning and the end, the Alpha and the Omega. Elsewhere in the NT, Christ's role in creation is explicitly stated (John 1:3; Col 1:16). The idea of Christ as the Omega or the end is particularly appropriate in Revelation which depicts Christ as the means through which God's purposes are accomplished, not only as the slain lamb (5:9), but also as the victorious rider on the white horse (19:11–21).

The source for the author of Revelation's description of God as the first and the last was likely the Hebrew Bible, specifically Isa 41:4; 44:6; and 48:12, passages which emphasize the uniqueness of God. Although the symbolic use of the first and last letters of the alphabet is not found there, this practice can be documented in Hellenistic writings, in Josephus, and in rabbinic literature.

MITCHELL G. REDDISH

ALPHAEUS (PERSON) [Gk *halphaios* (ἁλφαιος)]. **1.** Father of Levi the tax-collector (Mark 2:14; Luke 5:27 [D]; *Gos. Pet.* 14:60).

2. Father of James the apostle, as distinguished from the apostle James the son of Zebedee (Matt 10:3; Mark 3:18; Luke 6:15; Acts 1:13).

Although nothing more is known for certain about either Alphaeus, it has been suggested that the two are actually the same person. Assuming that Levi is to be identified with Matthew the apostle, then another pair of brothers in addition to Peter, Andrew, James, and John would be among the twelve, i.e., James and Matthew. The manner in which Alphaeus is used in the lists of the apostles, however, strongly suggests two different individuals are intended. Alphaeus is used to distinguish this James from the son of Zebedee. Furthermore, since two sets of brothers among the twelve are identified (Matt 10:3), if there were a third set, they surely would also have been identified as such.

Several textual witnesses for Mark 2:14 read "James the son of Alphaeus" rather than "Levi the son of Alphaeus," thus eliminating one difficulty, but suggesting that another tax-collector, named James, was a follower of Jesus. The textual variation is likely an attempt to harmonize Mark 2:14 with Mark 3:18 and Matt 10:3=Luke 6:15. But it creates another difficulty when compared to its parallel, Luke 5:27, which reads "a tax-collector named Levi." The variant reading is unlikely original.

The second Alphaeus is sometimes identified with Clopas (John 19:25) or Cleopas (Luke 24:18). The identification with Clopas is based on the assumption that only three women at the cross are mentioned in John 19:25 (and not four) as in the parallel verses (Matt 27:56; Mark 15:40). Thus, Mary the sister of Jesus' mother is said to be the wife of Clopas, and is supposedly listed second in Matt 27:56 and Mark 15:40 as Mary the mother of James and Joseph (Joses in Mark). Consequently, James is the son of Alphaeus (Clopas) and Mary, thus making him a cousin of Jesus. This conclusion would suggest that five cousins of Jesus were among the twelve apostles. While such possibilities are interesting they are more speculative than provable.

Identifying Alphaeus with Clopas/Cleopas is based on the claim that they are variations of a common Aramaic original (e.g., Edersheim 1899,2: 603). Since the form of the original has not been established, such an argument offers little support for identifying Alphaeus with Clopas. Cleopas is an abbreviated form of the Greek name Cleopatros and should not be identified with Clopas. See also CLOPAS, CLEOPAS, JAMES (PERSON), LEVI, MARY (PERSON), MATTHEW.

FRANK E. WHEELER

ALTAR [Heb *mizbēaḥ* (מִזְבֵּחַ)*;* Gk *thysiastērion* (θυσιαστηριον)*, bōmos* (βωμος)]. Altars occur in a wide range of religions, both geographically and chronologically, often related to the concept of tables, hearths, thrones, or burial mounds. In the ancient world, any surface on which offerings were made or placed for a deity could be considered an altar. Altars could be portable or stationary, simple or elaborate (*EncRel* 1: 222–27).

A. Altars in the Hebrew Bible

While scholars speak of altars in connection with a variety of phenomena, the primary term for altar in the Hebrew Bible is *mizbēaḥ* (400x) which is derived from the root *zbḥ*, "to slaughter." Altars are distinguished from other cultic structures such as temples and high places. Although all temples had associated altars, it appears that not all altars were part of a temple complex. Altars were constructed at places which were considered to have a sacred character, points where contact between the human and the divine could occur. For a discussion of Heb *bāmâ,* see HIGH PLACE.

1. Construction. Throughout the period of the monarchy, it was the king who was held accountable for the construction and maintenance of altars and related structures (Ahlström 1982: 1–9). It is uncertain if altars were built by private persons. Although a variety of nonroyal figures from the Hebrew Bible are credited with the construction of altars (e.g., Noah, Abraham, Moses, etc.), it may be that these figures were given "royal" prerogatives in the tradition because of their status. While there are other clear cases of nonroyal figures constructing altars (e.g., Balaam in Numbers 23), these figures are acting on the authority of a royal patron.

It appears that "natural" rock altars were used for rituals in some cases (Judg 13:15–20), although the term *mizbēaḥ* is not always used in the description of this type of situation (1 Sam 6:14–15; 14:33–34). The terminology associated with altars in the Hebrew Bible indicates that altars were normally thought of as being constructed in some sense. The most common verbs used for the establishment of altars are "to build" (*bnh*) and "to make" (*ʿśh*). In some cases these are used interchangeably (cf. Gen 35:1–7) although *bnh* is not used with altars constructed with metal. Other terms associated with the construction of altars are "to establish" (*qūm*), "to set up" (*nṣb*), "to put/place" (*śîm*), "to arrange/set in order" (*ʿrk*), and "to found" (*kūn*). The terms used to describe the repair of altars include "to heal" (*rpʾ*), "to make new" (*ḥdš*), and "to purify" (*ṭhr*).

Within the Hebrew Bible are several accounts of religious "reforms" which include the decommissioning or destruction of altars. A variety of terms are used for this activity. Since these same terms are often used for the demolition of buildings and other manmade structures, it indicates that altars also were normally constructed. The most common verb for destruction is "to tear down" (*ntṣ*), occurring often in the Deuteronomic material. Other terms include "to cause to depart/decommission" (*śîr*), "to throw down" (*hrs*), "to tear apart" (*qrʿ*), "to smash" (*šbr*), "to be waste" (*ḥrb*), "to be desolate" (*šmm*), and "to break" (*ʿrp*).

Although very often single altars are assumed in the Hebrew Bible, it is clear that multiple altars were known. This is indicated by the occurrence of the plural (*mizbĕḥôt*) and from the fact that it was necessary to distinguish certain altars (e.g., the altar of burnt offering). The story of Balaam's construction of seven altars (Numbers 23), while not necessarily reflecting historical reality, also indicates knowledge of the use of multiple altars.

One feature of the design of Israelite altars was the presence of "horns" (*qĕrānôt*). As can be seen in numerous examples of smaller incense altars and from the larger altar found at Beer-sheba (see below), these "horns" were projections from the corners. The precise significance of the horns is not known. One theory is that the original function of the horns was to aid in binding a victim to the altar. This may be given some support in Ps 118:27. Also, owing to the special sanctity of the altar, a person accused of a murder could "grasp" the horns of the altar to receive a measure of protection (but cf. Exod 21:14; 1 Kgs 2:28–34; Milgrom 1980). Jer 17:1 seems to indicate that the horns could be engraved, but the text is possibly corrupt. The cutting off of the horns is used as a symbol of the destruction in Amos 3:14. Horned altars are not unique to Israel. They are found in Canaanite contexts (Stendebach 1976: 190–92), in

excavations at temples in Cyprus (cf. Karageorghis 1981; Ionas 1985), and other locations throughout the ancient Near East (cf. Yavis 1949: 165–66).

Altars associated with the tabernacle were considered portable, being equipped with rings through which poles could be inserted for transport. While portable altars are known from nomadic contexts, there is no evidence that the altars constructed during the period of the Israelite or Judahite monarchies were normally moved. The historical evaluation of the portable altars of the tabernacle is dependent on the larger historical questions surrounding the tabernacle itself.

2. Materials. The Hebrew Bible mentions a variety of materials used for the construction of altars. It would appear that the ideology concerning the materials of the altar changed over time and/or from place to place. In the introductory material to the Covenant Code (Exod 20:24–25), an initial command is given that an "altar of earth" (*mizbēaḥ ʾădāmâ*) be constructed. The precise meaning of this unique term is uncertain. Robertson (1948) thinks it means simply an altar of "natural" materials. Galling (IDB 1: 97) states that it refers to an altar constructed as a "low cube of clods of clay." The existence of mudbrick altars in this region would make it more likely that some type of earthen brick is intended (cf. Isa 65:3).

In Exodus 20, however, the possibility of construction of a stone altar is admitted. As might be expected in Israel, stone is the assumed building material for altars. In Exod 20:25, Josh 8:31, and Deut 27:5–7, where altars of stone (*mizbēaḥ ʾăbānîm*) are specified, it is commanded that these stones be unworked by iron. This command may reflect the idea that the unworked stone contained something of the "natural" presence of the deity which would be dissipated through the working with iron (Galling IDB 1: 97). Most scholars believe that Exod 20:25 is the earliest of the three passages, reflecting an attempt at cultic reform prior to the Deuteronomist. This prescription was not universally followed since altars constructed of hewn stone were constructed in Judah (cf. Beer-sheba below). It would appear that altars which included horns could not be either of "earth" or "unworked stone" (cf. Wiener 1927: 2–3).

Exod 20:26 gives an impression of the size of an altar by commanding that the altar not be mounted by means of steps in order that the "nakedness" of the priest not be exposed. This command implies that steps were part of the normal construction of the altar. Altars with steps are known from early times in Canaan (cf. Megiddo below), but steps are not conspicuous in the description of altars from the period of the Israelite and Judahite monarchies (cf. Beer-sheba below however). It would appear that the problem of exposure was solved differently in Exod 28:42–43, which commands the wearing of "pants" by Aaron and the officiating priests (cf. Lev 6:3—Eng6:10).

Several types of altars constructed with metal are also prominent. Two different bronze altars are mentioned as being located in the forecourt of the tabernacle/temple. (Note the mention of bronze altars also in Phoenician *KAI* I:2 #10.4 and Punic *KAI* I:14 #66.1.) The altar associated with the tabernacle (Exod 27:1–8; 38:1–7) is described as constructed of acacia wood (5 by 5 by 3 cubits) and overlaid (*ṣph*) with bronze. While it is clear that the description of this altar does not derive from a "nomadic" past, the source of the description is unclear. Some scholars believe that the description of the tabernacle derives from the Davidic period but is based on a premonarchic model (Cross 1984). Others date it to Solomonic (Haran 1978: 189–204) or even later periods. The altar in the forecourt at which the regular sacrifices were conducted was called the "altar of burnt offering" (*āh mizbēaḥ hāʿôlāh*) in the Priestly source and in Chronicles (but cf. Gadegaard 1978).

The Chronicler believed that Solomon also constructed a bronze altar (20 by 20 by 10 cubits) in the forecourt of his temple (2 Chr 4:1). It should be noted, however, that the construction of this altar is omitted from the parallel description in 1 Kings 7 although the presence of a bronze altar is assumed in 1 Kgs 8:64, 2 Kgs 16:14–15, and Ezek 9:2. Some scholars believe that the notice of construction has been displaced from its original location in 1 Kings to Chronicles. It is possible that this altar should be differentiated from an altar of stone (note the use of *bnh*) built by Solomon mentioned in 1 Kgs 9:25. This stone altar may also be implied in the wording of 2 Kgs 16:14. (Additional support for the existence of two altars can be found in Gadegaard 1978: 40–41 although his interpretation of "high place" may be questioned.) This stone altar constructed by Solomon may be the one which is replaced (2 Kgs 16:10–16) with a "great altar" (*hammizbēaḥ haggādôl*) modeled after an altar seen by Ahaz in Damascus. At that

time the bronze altar was moved and reserved for inquiries by the king himself. The regular sacrifices of the nation and king were conducted on the new "great altar."

Another noteworthy altar is that described in some detail in Ezek 43:13–17. At the center of the reconstructed land, Ezekiel envisions a three-tiered altar mounted by steps (12 by 12 cubits on the top tier and 16 by 16 cubits on the lowest tier). This idea may be based on a Babylonian model (Albright 1920: 139–41) or even on Ahaz's "great altar" (*IDB* 1: 98; Haran 1978: 194).

The normal placement of sacrificial altars in the Hebrew Bible was in the courtyard in front of the temple, although altars on the roof were also known (cf. 2 Kgs 23:12, Judg 6:26). (Note may also be made of the Ugaritic text *UT* Krt:73–80, which speaks of the hero offering sacrifices on a wall // tower // roof.)

There is no evidence of the use of sacrificial altars in the interior of the tabernacle or temple. In fact, sacrificial rituals are specifically excluded from the temple itself in Exod 30:9. The normal activities associated with a sacrificial altar are also indicated in Josh 22:28–29 where the trans-Jordanian tribes claim that their "altar" is in fact a "memorial" (see below). They claim their "memorial" is not intended for the normal activities of "burnt offering, cereal offering, or for sacrifice" (v 29). Even types of offerings which might be associated with a "presentation" altar are burned (Exod 29:25). Vessels and offerings were placed "before" (*lipnê*) the altar, not upon it (cf. Deut 26:4; Zech 14:20). It is also possible that images of gods were placed near the altar (cf. 1 Sam 6:15; Ezek 6:13).

Within the interior of the tabernacle/temple were "altars" connected to the use of incense. Exod 30:1–10 and 37:25 describe an "altar" of acacia wood overlaid with gold (1 by 1 by 2 cubits) within the tabernacle. Most scholars think that this "altar" was not part of the original description since its presence is not noted in Exodus 25 or 26:33–37 as expected. This altar is paralleled by the description of an altar of cedar overlaid with gold constructed by Solomon (1 Kgs 6:20, 22). For further discussion of these altars, see INCENSE ALTARS where the "altar of incense" (*mizbēaḥ haqqĕṭōret*) and "incense altars" (*ḥammānîm*) are treated. Ezekiel also mentions an "altar of wood" (*hammizbēaḥ ʿēṣ;* Ezek 41:22) found within the temple, but goes on to describe this rather as a "table" (*haššulhān*).

3. Activities Associated with Altars. The most common activities associated with altars in the Hebrew Bible are the burning of sacrifices upon the altar. Some passages (e.g., Gen 22:9–10) might indicate that the offering was actually slain upon the altar (cf. Gadegaard 1978: 35–36). The usual practice reflected in the text, however, is the slaying of the victim beside (*ʿl*) or in front of (*lipnê*) the altar in order that blood could be collected for other ritual purposes.

Several verbs are used to describe the actions of cultic personnel in connection with the altar. The most common terms refer to the offering of sacrifices, "to cause a sacrifice to ascend" (*ʿlh*) and "to burn offerings" (*qṭr*). In addition to the obvious role of the altar in the burning of offerings to the god, the altar (especially the foundation [*yĕsôd*] and the horns) was the recipient of blood from the sacrificial victims. A wide range of terms is used to describe the application of blood to the altar, including (prominently) "to toss, throw" (*zrq*). While blood and oil were applied to the altar, the altar did not function as a libation table as found in earlier Canaanite practice (cf. Megiddo below).

The significance of the preposition (*ʿl*) used with these verbs is unclear. In some instances it seems to indicate that the action takes places "upon," i.e., on top of, the altar (e.g., 1 Kgs 9:25). In other cases, it denotes proximity (e.g., 2 Chr 1:6). The clear picture seems to be that wood was placed on the top of the altar. The sacrifice was then placed upon the wood. The precise function of a bronze grating mentioned in connection with the tabernacle altar (cf. Exod 27:4) is not known. As discussed earlier, the altar is assumed to be large enough and high enough to need steps. The verb "to descend" is used when Aaron leaves the altar in Lev 9:22. (Note might be taken of the similar Ugaritic use of *mdbḥt* with the verb *yrd,* "to go down," in *UT* 1.20.)

Although the tabernacle altar is described as hollow (*nĕbūb*), in no case are actions described which indicate that the sacrifice was burned within the altar. It may be that the altar was filled with earth in order to dissipate the heat generated in the burning of sacrifices. Several examples of altars constructed with a fill of ash or earth/rubble are noted by Yavis (1949: 62–63, 84, 97, 100, 111, 115, 129, 154, 169, 175–76, 178–80, 204, 207–13). This method of construction might answer the principal objection to the use of

these altars as burnt-offering altars made by Gadegaard (1978). This method was suggested earlier by the rabbis but rejected by Robertson (1948: 17–18).

In several cases it appears that the normal usage of *mizbēaḥ* has been extended. The only apparent reference to a "presentation altar" is in Ezek 41:22 where an "altar of wood" (2 by 2 by 3 cubits) is described as "a table which is before Yahweh." It also seems that the altar located within the tabernacle/temple was used only for the burning of incense, not other sacrifices (see above). It is more likely that the understanding of the term "altar" has expanded to include these cases rather than an otherwise unknown ancient use of the term having been preserved.

The term *mizbēaḥ* is also used for another type of construction which serves primarily as a "memorial" within the Hebrew Bible. Several "altars" are given names, often in connection with some unusual event (cf. Gen 33:20; 35:7; Exod 17:15; Josh 22:10–34; and Judg 6:24). In none of these cases are sacrifices actually offered upon these "altars." Whether these constructions were memorials which the author calls "altars" or whether they were altars which later authors attempted to legitimize by assigning an acceptable function is not clear (cf. Snaith 1978; Van Seters 1980: 232). A similar case of a rock being designated as a named "memorial" is found in 1 Sam 7:12, but without the term *mizbēaḥ* being used.

Altars did have other functions. Altars were built to mark the territory associated with the deity (cf. 1 Kgs 18:17–40; 2 Kgs 5:17) although altars in foreign territories were also known (e.g., Elephantine, cf. Wiener 1927: 8–9). As noted above, within Israel the altar also served as a place of asylum.

There are differences among the various "authors" of the Hebrew Bible in their portrayal of altars. The Yahwist assumes Levitical distinctions for the altars even in the pre-Mosaic period. The Priestly author does not allow Levitical distinctions before Sinai. He assumes the existence of only one altar since Sinai but in some senses has reduced its sanctity compared to earlier ideas (e.g., it no longer provides asylum; Milgrom 1980). The Deuteronomist (Deut 12:15–24) loosens the connection between the altar and the slaughter of animals prescribed in earlier writings (Lev 17:1–7).

B. Archaeological Evidence

A survey of the literature would seem to indicate that the archaeological evidence for altars is quite extensive. In fact, from an archaeological perspective, there is little agreement on the type of installation to which the term "altar" is applied. It is used for everything from large platforms to somewhat smaller installations with evidence of burning in courtyards of temples to numerous types of flat surfaces with "cup marks" found in a wide variety of contexts (cf. Kittel 1908: 98–146). These later examples are extremely difficult to evaluate archaeologically since they often occur outside of obvious cultic contexts and are impossible to date with any confidence. It may even be questioned whether their function is cultic rather than practical. It is clear that cultic activities took place within the context of wine and olive pressing and threshing floors (cf. Ahlström 1982: 25 n 89). It is doubtful, however, that these installations should be termed "altars" on the basis of the usage of the term in the literature of the Hebrew Bible.

An example of these difficulties can be seen with an "altar" found at Ṣarʿa west of Jerusalem. There is found a large, stepped stone block (2.16 by 2.16 by 1.3m) on which is a series of channels and cup marks (Kittel 1908: 104–8; *IDB* 1: 100). Many scholars have related this installation to the offering of Manoah reported in Judges 13. It must be noted, however, that the date of this installation is unknown, and also that the term "altar" is only indirectly applied to the rock upon which the offerings were made in the Judges account. Whether there is, in fact, any connection between these two pieces of evidence is unknown.

1. Early Altars in Canaan. There existed in Canaan a long tradition of altar construction prior to the Israelite period. Already in the Chalcolithic period there is evidence that altars were in use. In a broadroom sanctuary at Ein Gedi, directly opposite the entry, a horseshoe-shaped altar composed of large stones was found. Bones and broken clay figurines were found within the ashes of the altar (Ussishkin 1971: 29).

The tradition of broadroom temples with raised platforms opposite the entry may be carried on into the Early Bronze Age (cf. Megiddo XIX Temple 4050 and Megiddo XV Temples 5192 and 4040, although no evidence of sacrifice is present). One of the most impressive altars discovered in Canaan was

unearthed at the site of Megiddo (Structure 4017). Located in an area surrounded by temples, this large, nearly circular stone altar (8 m diameter) stands 1.4m high and was mounted by a flight of steps. The altar and surrounding enclosure was in existence through at least four phases during EB III–IV. The surrounding area was littered with bone and pottery fragments and the top had indications of burning (Loud 1948: 61–64, 70–84). (Concerning the Early Bronze Age "temples" and associated altars claimed for Ai [et-Tell], cf. Ottosson 1980: 128–30 n.2.)

Structures similar to the circular altar at Megiddo have also been found at a temple dated to MB II B–C at Nahariyah. A three-phase circular stone structure (14 m diameter) with two steps was found in the courtyard of the temple. Among the stones of this structure was organic material which may have been the remains of offerings. About 4 m distance from the circular structure the excavators discovered a small stone installation they described as an altar. However, they give no evidence of its use. Finds from the courtyard include ash, bones, figurines, and pottery associated with cultic activity. Ottosson's conclusion that the circular structure may have functioned as an altar is more likely than the smaller installation indicated by the excavators (Ottosson 1980: 99–101; Dothan 1974: 14–25). Cf. also the circular structures dated to MB IIB–LB I at Tell Kittan (Eisenberg 1977: 77–81).

A later level (VIII) at Megiddo also reveals evidence of a small (1.10 by 1.10 by.55m), lime-plastered mudbrick "altar" or "table" in court 5020. Although no evidence connects this building to cultic activity, its similarities to the Acropolis Temple at Lachish might be noted. If this connection is valid, the strong Egyptian influence at Lachish would make identification as a "table" or "presentation altar" more likely since blood sacrifice was apparently not part of the Egyptian ritual at that time. No direct evidence of burning or sacrifice is mentioned on or near the structure (Loud 1948: 113–14).

Galling has related this structure to others found at Tell ʿAjjul and Shechem (*IDB* 1: 99). It would seem, however, that these latter examples are altars in courtyards in front of the temple while the example from Megiddo is differently located within an internal court. The altar from Shechem may have been founded in the courtyard of the *migdal*-type Temple Ib and was prominent in its position directly in front of the entrance of Temple 2. It is constructed of mudbrick and stone (2.2 by 1.65 by.35 m?).

Late Bronze Age Hazor also has an example in Area H of a centrally located altar in front of a temple which was used through several levels. In the forecourt of the temple of Stratum 2 (LB I) containing ash and bone remains, a large (3.5 by 2 by.3 m?) altar (2534) and nearby a smaller one (2554) were found. In the course of time the courtyard was enclosed (but remained unroofed?). It seems likely that the installation (2218) in a similar position in front of the later Temple IA (LB III) is the remains of an altar carrying on the same tradition.

In the main room (2113) of this same temple, several "libation" and "offering" tables were found. Other finds also imply that liquid offerings were important in this sanctuary (cf. Ottosson 1980: 32). This is also evident in the placement of a "libation altar" in the passageway just outside the forecourt of the Stratum IB temple. Also during Stratum I in Area F, a large stone block (2.4 by.85 by 1.2 m) with two depressions was found. Although there were finds of pottery and bones around this "altar," it differs from the other "altars" in that there is no clearly related temple. If this was an altar, it is not evident what type of offerings were associated with it. The prominence of libation installations in Area H might indicate that this "altar" also functioned as a libation table (cf. Yadin 1972: 100–1 and fig. 25). A similar large stone was found at the MB II–LB "High Place" at Gezer in front of the monoliths. Its function is also unknown.

A recent study of the mudbrick "altars" from the Beth Shan IX has found little support for their designation as altars (Ottosson 1980: 63–66). The "altar" associated with the Fosse Temple at Lachish may better be termed a dais since this building was clearly roofed and the installation would not have functioned for burning sacrifices.

2. Altars from the Israelite Period. A series of Philistine temples from Iron Age I have been excavated at Tel Qasile. In the courtyard (111) of the Stratum X temple, a low (1.3 by 1.5 by.1 m) stone foundation for an altar was discovered. The floor of the courtyard contained sherds, animal bones, and ash. A less well preserved altar (108) may be found in the following Stratum IX courtyard (Mazar 1980: 40–41, 51).

Also dated to the early Iron Age is an installation located on Mt. Ebal near ancient Shechem (Zertal 1985, 1988). This installation has been connected to the altar described in Josh 8:30–35 by the excavator. Others have claimed that the ruins are a house/watchtower (Kempinski 1986). The main structure is approximately 9 by 7 m and is preserved to a height of 3.27 m. It contains a fill of pottery, ash, and bones. According to the excavator, the structure is approached by ramps, one of which is 1.2 m wide. The structure is surrounded by an inner courtyard which contains numerous "installations" with ash, animal bones, or clay vessels. The entire area is surrounded by an enclosure wall (250 by 52 m). The "altar" complex was preceded by a circular stone structure (2 m diameter) also filled with ash and bones.

Within the Judahite fortress at Tel Arad, a shrine was discovered including an altar which continued in use over several periods. It is reported by the excavator that near a square stone altar in an open area of the lowest level were pits with burned bones. During the following periods, the sanctuary was constructed with a square earth and field-stone altar (5 cubits^2) centrally located in the courtyard. A large flint slab was found on top of this altar. In later strata the altar was rebuilt in the same location, but an addition of a wall to the north of the courtyard meant that it was no longer centrally located. According to the excavator, the altar was not in use in the final temple complex, a fact which is attributed to the "reforms" of Hezekiah (Aharoni 1968: 2–32). Problems with the stratigraphy and reporting of the evidence from Arad make these historical conclusions difficult to verify. It is likely that the altar(s) of this shrine should be dated to the 7th century B.C.E. (cf. Ussishkin 1988: 142–57).

Similar controversy surrounds the discovery of a large (1.57 m high) horned altar at Tel Beer-sheba. This altar, made up of a number of dressed stones, was found reused in the walls of a storehouse from Stratum II just east of the gate. The excavators believe it was part of a now destroyed sanctuary of an earlier level (Aharoni 1974: 2–6). Yadin has argued that it belongs to a sanctuary of Stratum II (reconstructed in Building 430 to the west of the gate). He believes that the steps of this room originally led to the top of the altar (Yadin 1976: 5–14). Since there is no evidence of burning on the stones of the altar, its actual function is unclear. Because its form is similar to that of numerous smaller incense altars, it may be that it was used for incense rather than burnt offerings.

Generally, the conclusions from the archaeological evidence confirm those reached from textual evidence. Altars for burnt offerings stood in the forecourt of the temple. Only incense altars were found within the interior. (cf. Ottosson 1980: 117, 119 n.14). Altars were constructed primarily of stone, although mudbrick and stone-and-earth constructions were also known. As would be expected, no altars constructed with precious metals have survived.

C. Altars in the NT

The LXX and NT generally distinguish between legitimate (*thusiastērion*) and illegitimate (*bōmos*) altars. The latter term is the common word for altar in classical Greek. For study of the archaeological evidence for Greek altars, cf. Yavis (1949).

The term *bōmos* is found only once in the NT in Paul's speech in Athens (Acts 17:23). The basis for his speech is the observation of an altar dedicated to "The Unknown God." There is evidence both from archaeology and from ancient authors to indicate that this type of altar may have been known in Athens. This evidence includes an inscribed altar from 2d century C. E. Pergamum probably reading "to unknown gods" (*IDBSup*, 19).

A number of references in the NT refer back to altars (*thusiastērion*) within the accounts of the Hebrew Bible (cf. Matt 23:35, Luke 11:51, Rom 11:3, Jas 2:21). Another group (Matt 23:18–20, 1 Cor 9:13, etc.) refer to the contemporary altar in the temple of Herod. This altar is described by Josephus (*JW* 5.5.225) as large (50 by 50 by 15 cubits) with a ramp approach. These measurements are somewhat larger than indicated in the Mishnah (30 by 30 by 5 cubits; *Mid.* 3:1).

The reference in Luke 1:11 speaks of Zechariah's service at the altar of incense within the temple. A group of passages in Revelation also imply the existence of a golden horned altar (probably for incense) within the heavenly temple (cf. Rev 9:13).

The only direct reference to a Christian altar is in the metaphor found in Heb 13:10, and its significance is disputed. Some think that the reference is to the cross, others to the communion table, etc. (cf. *IDBSup,* 19–20; *TDNT* 3:183). For a survey of the ideology of later Christian altars, cf. *EncRel* 1: 225–26.

ROBERT D. HAAK

ALTAR OF WITNESS. See WITNESS, ALTAR OF (PLACE).

ALTARS, INCENSE. See INCENSE ALTARS.

ALUSH (PLACE) [Heb *ʾālûš* (אָלוּשׁ)]. A place in the desert where the Israelites camped after leaving Egypt (Num 33:13). It is listed between Dophkah and Rephidim, and is located somewhere in the area between the Wilderness of Sin and that of Sinai. It may possibly be identified with Wadi el-'Eshsh (cf. *Numbers* WBC, 355). The Sam. Pent. reads "Alish."

GARY A. HERION

ALVAH (PERSON) [Heb *ʿalwâ* (עַלְוָה)]. Var. ALIAH. One of the tribal chiefs of Edom/Esau, according to the list of the chiefs in Gen 36:40–43 (= 1 Chr 1:51b–54). The two variant forms of this name (*ʿalwâ* in Gen 36:40; *ʿalyâ* in 1 Chr 1:51 [but note Qere *ʿlwh*!]), along with the two variant forms of the name of the first son of Shobal (Alvan/Alyan; Heb *ʿalwān/ʿalyān;* Gen 36:23=1 Chr 1:40), all refer to

the same Seiritic-Horitic clan belonging to the tribe of Shobal. See ALVAN (PERSON). The derivation of the name from Hurrian (Feiler 1939; Ginsberg and Maisler 1934) cannot be verified. Rather, it seems to be derived from a Semitic root: *ʿ*lw* (Arabic) or *ʿ*ly* (NW Semitic), meaning "to be high/lofty/elevated" (cf. Arabic ʿ*lw*n;* Sabaean, Liḥyanite, Safaitic ʿ*lyn*). Alvah/Alvan probably represents the Edomite form of the name (while Aliah/Alian conveys the "Hebraized" form), formed according to **Pa*ʿ*l* with "Bildungs suffixe" -*ā* and -*an* (Weippert 1971: 244, 260).

ULRICH HÜBNER

ALVAN (PERSON) [Heb ʿ*alwān* (עַלְוָן)] Var. ALIAN. A clan name mentioned in the genealogy of Seir the Horite in Gen 36:23. These clans, not to be confused with Hurrian groups in Mesopotamia, are mentioned as the original "inhabitants of the land" of Edom (perhaps as cave dwellers). Alvan is listed as one of the five sons of Shobal and he is thus the grandson of Seir. The name in this form only appears in Genesis 36, but an alternate form, Alian, does appear in the matching genealogical clan list in 1 Chr 1:40. This variant may be due to the confusion between *waw* and *yod.* (But see discussion in ALVAH.) See Deut 2:12–22 for mention of the dispossession of the Horite clans in the region of Seir (Edom) by the encroaching "sons of Esau." This conquest is paired in the text with the conquest by the Israelite tribes of Canaan.

VICTOR H. MATTHEWS

AM HAʾAREZ. A Hebrew term (sing. ʿ*ăm hāʾārĕṣ;* pl. ʿ*ămmê hāʾāreṣ,* ʿ*ămmê hāʾărāṣôt*) literally meaning "people of the land." The term occurs 73 times in the OT (51 times in sing. forms and 22 times in pl. forms). The LXX translates the term *tò laòs tēs gēs,* though in Lev 20:2 and Dan 9:6 it is translated *to ethnos to epi tēs gēs* and in Lev 20:4 *hoi autochthones tēs gēs.*

Because of its frequency the term has generated a variety of opinions as to its exact meaning. The term ʿ*ăm* is contrasted with the term *gôy* (Rost 1934: 147). The latter is taken to refer to people in general, while ʿ*ăm* is thought to refer to the specific population of a territory. There is also a general consensus that ʾ*ārĕṣ* is interchangeable with certain other terms, e.g., ʿ*ăm yĕhûdāh* (2 Kgs 14:21). ʿ*ăm* likewise is said to be coterminal with the term ʾ*ănšê,* as in ʾ*ănšê yĕhûdāh* (2 Sam 2:4) (Würthwein 1936: 15).

The debate over the term centers around its use as a *terminus technicus.* The most extreme point of view on its technical sense is represented in the classic work of Mayer Sulzberger (1909). Sulzberger argues that in ancient Israel there existed a national assembly (Edah) composed of two houses (Nesiim and Zekenim). The Nesiim was the smaller of the two chambers (12 members) and the Zekenim the larger (70 members). The Zekenim were elected representatives from the 11 tribes exclusive of Levi (Sulzberger 1909: 8–13). Sulzberger notes that the Edah was dissolved upon the death of Joshua. He then attempts to identify an entity which carried on those functions between the death of Joshua and the clear emergence of a political body in the Gerusia of the Hellenistic period. In his view, the ʿ*ăm hāʾārĕṣ* was this entity, and he cites a number of passages to support this (Gen 23:7, 12, 13; Lev 4:27; 20:2, 4). Chiefly, however, it is in the events surrounding the downfall of Athaliah and the critical role that the ʿ*ăm hāʾārĕṣ* played in that episode (2 Kings 11, esp. vv 14, 18–20) that Sulzberger sees the clear evidence of the political function of the group.

Sulzberger's views, however, were generally considered to be too extreme, too tendentious, and too heavily dependent on textual interpretations that failed to take into account the complex nature of the use of the term and the contexts in which it occurred.

The prevalent position on the term was elaborated by Ernst Würthwein (1936). He argues that the term indicates the cadre of fully enfranchised male citizens (1936: 18). This group represents a sort of power elite, the band of those who form the solid core of the nation. Würthwein argues that this group not only formed a distinct social group but that they represented, in effect, a powerful class whose economic, social, and military power combined to make them a critical faction in the functioning of the state (1936: 15–18).

He traces the development of this group from the earliest period of the monarchy, identifying the *ʿăm hāʾārěṣ* with the *ʾănšê yĕhûdāh* of 2 Sam 2:4. The power of the group was most prevalent in the early period of the Davidic-Solomonic monarchy when the interests of the various "tribal" groups had to be carefully manipulated to achieve consensus on the monarchy and on the specific choice of kings. This sense of independence from the monarch was stronger certainly in N Israel than in S Judah, where the symbiosis of royal and group interests had been largely accomplished through the political skills exercised by David in his acquisition of power. In Judah the interests of the monarch had become, in effect, the interests of the people. But at the earliest stages there were still vestiges of this independent power. The power was certainly based in tradition, but the real power of the group rested on its military capacity as a militia.

In response to this old ideology of a militia, both David and Solomon were able to develop significant independent military power by gathering a personal bodyguard and armed force whose loyalty was to the king and not to the nation as a whole (Würthwein 1936: 20).

But despite this older sense of a body of freeholders, the most significant development of the concept of the *ʿăm hāʾārěṣ* came after the breakup of the two kingdoms, and specifically in Judah in the period between Athaliah (842–837 B.C.E.) and the Exile (589 B.C.E.). During this period, according to Würthwein, we can clearly see the term being used to designate a specific, identifiable class. The cases cited are first the role of the *ʿăm hāʾārěṣ* in the overthrow of Athaliah and the selection of Joash (2 Kings 11; 2 Chronicles 23). In that instance the *ʿăm hāʾārěṣ* are associated with other clearly designated groups (priests, palace officials, military leaders) in the revolution and enthronement of the new king. There is also a note in 1 Kgs 11:18 which associates the *ʿăm hāʾārěṣ* with the military group who destroyed the temple of Ba'al (though this reference is omitted in 2 Chronicles 23). A second case is 2 Kgs 21:25 (= 2 Chr 33:25), where the "people of the land" slay the assassins of Amon (642–640 B.C.E.) and participate in the election and enthronement of Josiah (640–609 B.C.E.). A third instance is 2 Kgs 23:30 (= 2 Chr 26:1), which associates the "people of the land" with the enthronement of Jehoahaz.

More evidence of a class of "people of the land" is found in 2 Kgs 23:35, where the "people of the land" are taxed to raise tribute for Pharaoh Neco. There is a regular association of the *ʿăm hāʾārěṣ* with recognized social classes in other areas as well. In Jer 1:15; 34:19; 37:2; 44:21, they are associated with princes and priests, eunuchs, servants of the king, and the king himself, all of which would seem to indicate some sense of a distinct group at this period.

While acknowledging the work that Würthwein has done, Nicholson examines the term outside the Kings-Chronicles-Jerusalem complex (i.e., royal establishment) and argues that in these other instances (Gen 23:7, 12, 13; 42:6; Exod 5:5; Leviticus 20) the term is ambiguous at best and in many ways nearly generic (1965: 60–62). He further considers the main texts from Kings, and in each of these he raises doubts about the specific uses of the term. Stretching further into Ezekiel (12:19; 33:2; 39:13; 45:22; 46:3, 9), he makes the case for a contextually based interpretation of the term.

Nicholson's arguments parallel in some sense the position taken by de Vaux (*AncIsr*, 70–72). De Vaux sees the term as simply designating the "body of free men, enjoying civic rights in a given territory" (p. 70). He considers the term's use in three periods. First, in the preexilic period, it is associated with specific groups: the king or the prince, the king and his servants, priests and chiefs, the chiefs, the priests, and the prophets, and with no others. But he argues that it designates simply the "whole body of citizens" (p. 71). De Vaux is at pains to show that in 2 Kgs 11:20, where a distinction apparently is made between "the people of the land" and the inhabitants of Jerusalem, the distinction is not based on "class" differences but simply on residency (those inside and outside the city). Second, at the time of the return

from Exile, the term at first has this old meaning, but in Ezra and Nehemiah it begins to change. Finally, in the rabbinic literature, it becomes a pejorative term.

Halpern (1981) considers the evidence and argues that the term *ʿam* is the consanguineous unit, the corporation of Israel, and the people (*ʿăm-*) of the land are the people who have the land in common (1981: 196–98). He argues against any connection between the people of the land and military units, and generally supports a contextual interpretation.

There is no question that the term changes meaning dramatically after the exile. De Vaux and others show that in Haggai (2:4) and Ezekiel (7:27; 12:19; 22:19; 22:29; 33:2; 39:13; 45:16; 45:22; 46:3; 46:9) the term retains its preexilic sense. This may also be the case in Dan 9:6. But in Ezra and Nehemiah the term begins to take on a different meaning. On the one hand, Ezra 2:2 and Neh 7:7 seem to designate the men/people of Israel and the men/people of the land much as in the preexilic period. But, on the other hand, Ezra 4:4 contrasts the "people of the land" and the "people of Judah" in a way that indicates a conflict of interests.

Most significantly, the term is used in the plural in the postexilic period; it is used either to indicate the group which opposed the restoration of the temple state or to refer to the heterogeneous population which the returnees found in the land. This population is characteristically viewed with disdain (Ezra 9:1, 2; 10:2, 11; Neh 10:20–31).

In a recent study of this late development in the use of the term, Gunneweg has proposed that the term *gôlâ* takes on a revised and enriched meaning. The *bĕnê hāggôlâ* are the true congregation in contradistinction to all the inhabitants of the land, the *ʿămmê hāʾărāṣôt.* Thus the terms intend a theological meaning for what were once sociological groups. Gunneweg designates this a "semantic revolution" (1983: 437–40). The rabbinic use then picks up on this late development and the term eventually comes to have a pejorative meaning. It refers to the ignorant, the impious, the nonobservant, etc.

From this general review it is clear that there is little evidence to support extreme interpretations of the term. But there is sufficient evidence in various periods to indicate that within a carefully defined context the term may have specific senses. Our growing knowledge of the social construction of early Israel may help clarify the specific contextual situations that justify one or another use of the term.

AMAD (PLACE) [Heb *ʿamʿād* (עַמְעָד)]. A town in the inheritance of Asher (Josh 19:26). From the position of Amad in the list of border cities, its general location should be sought in the S portion of the tribal territory. Evidence is not sufficient to determine an identification with any site.

MELVIN HUNT

AMAL (PERSON) [Heb *ʿāmāl* (עָמָל)]. A descendant of Asher, whose name appears in an abbreviated genealogy in 1 Chr 7:30–40, which lists the "men of Asher" who were "heads of fathers' houses, approved, mighty warriors, chief of the princes." One third of the names given in Asher's genealogy are found nowhere else in Scripture; such is the case with the name Amal. Little is known of him, except that

his name means "heavy labor," "vexation," or "trouble," that his father's name is Helem, and that Zophah, Imna, and Shelesh are listed as his brothers.

J. RANDALL O'BRIEN

AMALEK (PERSON) [Heb *ʿămālēq* (עֲמָלֵק)]. AMALEKITE. One of the six sons of Eliphaz and a grandson of Esau, whose mother was Timna, Eliphaz's concubine (Gen 36:11, 12; cf. 1 Chr 1:36). Amalek was one of the "chiefs of Eliphaz in the land of Edom" (Gen 36:15,16). In the biblical tradition, the terms "Amalek," "Amalekite," and "Amalekites" are used to designate the descendants of Eliphaz who, like Esau, are linked with the land of Edom. The Amalekites were a nomadic or seminomadic people, descendants of Esau and one of Israel's traditional enemies. They are not mentioned by name in any extra-biblical source, so the OT provides the only written evidence on this relatively obscure people.

A. Origin

Gen 14:7 says that Chedorlaomer and the coalition of eastern kings "subdued all the country of the Amalekites" at a place called Enmishpat, i.e., Kadesh (Khirbet el-Qudeirat in N Sinai?). Various explanations have been given for the apparent contradiction this verse seems to raise: how a "country of the Amalekites" could be attached to an episode that antedated Esau, Eliphaz, and Amalek. Some scholars regard this reference as a blatant anachronism, while others say it is simply an editorial insertion, an updating of the text by a later editor who knew that the Amalekites occupied the region mentioned in Gen 14:7 during his lifetime or sometime before. It would have been perfectly normal to link Kadesh with the Amalekites through much of Israel's history. Still others suggest that the descendants of Esau intermarried with related but earlier nomadic groups, became dominant, and the designation was used retroactively.

In one of his oracles, Balaam referred to Amalek as "the first of the nations" (Num 24:20). This verse, too, has been the focus of a wide range of interpretation, but it is possible that the diviner was alluding to Amalek's status as one of the most ancient peoples. By whichever argument one explains the problem with Gen 14:7, it should be noted that the use of the term "Amalekites" in a patriarchal narrative is not completely incongruous with Amalek's genealogy in Gen 36:9–12.

B. Territory

As reported in Gen 36:16, Amalek was associated initially with Edom. The highly mobile—nomadic or semi-nomadic—lifestyle of the Amalekites, as described in all biblical passages that mention their name, should prepare the reader to understand Edom as a homeland from which later generations ranged far and wide. Throughout their entire history, as far as it is known, Amalekite social and economic institutions were shaped by two major factors. First, most of the Amalekites seem to have occupied the less desirable fringe areas adjacent to land capable of supporting more sedentary populations. Their seasonal migrations or raiding expeditions did take them as far north as the hill country of Ephraim (Judg 12:15) and as far west as the Philistine territory around Ziklag (1 Sam 30:1–2). Most episodes involving the Amalekites take place along the transitional zone of S Canaan or Judah, where desert and sown come together.

Second, the Amalekites were scattered across a vast territory. Num 13:29 notes that "the Amalekites dwell in the land of the Negeb," but this verse does not reflect the whole picture; it simply isolates this people from other peoples who lived in the same proximity at a point in time. The full scope of the Amalekites' wanderings, at least in the time of Saul, is described in 1 Sam 15:7: "And Saul defeated the Amalekites, from Havilah as far as Shur, which is east of Egypt." Thus, Amalekite tribes inhabited the wilderness between W Sinai and the Arabah of Arabia, depending on the meaning of Havilah in this verse. In fact, the Amalekite way of life is better understood when it is observed that the Ishmaelites ranged over a similarly defined territory (Gen 25:18). Though some scholars regard these statements as "geographical hyperbole," it can be reasonably assumed that the various Amalekite tribes indeed needed such a large area in which to live given its limited sources of water and food. It should be remembered that for at least part of their history the Amalekites used camels for transportation in times of war and peace (cf. Judg 6:5; 7:12).

C. History

Because of Amalek's occupation on the border of Palestine, in Sinai and the Negeb, these tribes were in conflict with the Hebrews from the time of their wilderness wanderings until the early monarchy. Indeed, every encounter between Amalek and Israel recorded in the OT is marked by hostility. It is likely that the other sedentary peoples near ancient Israel (e.g., Egypt, Edom, Moab) had similar problems with the Amalekites, but information on these other lands is unavailable.

The hostilities between Amalek and Israel began during the Hebrew sojourn in the Sinai. Exod 17:8–13 describes this first encounter, an apparently unprovoked attack upon Israel at Rephidim. It is possible that the Amalekites feared the Israelite incursion into the region of Kadesh (cf. Gen 14:7, where this place is linked with Amalek). Perhaps the Amalekites thought the Hebrews represented competition for water or would interfere with their trade routes. At any rate, Deut 25:17–18 says that the Amalekite attacks were merciless; this harassment led to great enmity between Israel and Amalek. The Amalekites were defeated (Exod 17:13), and they were placed under a permanent ban (17:14–16; Deut 25:17–19). Memory of Amalek's opposition to Israel was still alive in the days of Samuel and Saul (1 Sam 15:2–3).

With the defeat of the Amalekites, Israel controlled Kadesh-barnea (cf. Num 10:11–21:3). When the Hebrew spies returned to Kadesh (13:26), they reported that the Amalekites, among other peoples, blocked Israel's ambition to enter and occupy Canaan (13:29). According to Num 14:25, the Lord warned Israel to avoid contact with Amalek and take a more circuitous route to the promised land. This warning was not heeded, the Hebrews attempted to enter the hill country of southern Canaan, and they were repelled by the Amalekites and Canaanites (14:44–45; Deut 1:44). The Israelites were pursued all the way to Hormah (Tel Masos?), a settlement that was probably in Amalekite hands during other periods. One of the most interesting references to the Amalekites from the period of the Israelite wilderness wanderings is found in Num 24:20, where Balaam makes what could be interpreted as the only positive statement about this people in the whole Bible. Also important is the fact that Balaam "looked on Amalek," presumably from "the top of Peor, that overlooks the desert" (23:28), perhaps localizing the Amalekites to the S Jordan Valley.

Several significant references to Amalek come from the book of Judges, which deals with the Israelites after they had assumed a more sedentary existence within what they regarded as their own territory. According to Judg 3:12–14, Eglon, the king of Moab, allied himself with or hired as mercenaries the Ammonites and Amalekites to attack Israel. This Transjordanian confederacy defeated the Hebrews and captured "the city of palms," almost certainly the environs of Jericho. While this passage seems to locate an Amalekite center in Transjordan, Judg 12:15 mentions the existence of a similar enclave in the territory of Ephraim at Pirathon, which the text identifies as "the hill country of the Amalekites." Once again, this reference highlights the wide geographical range of Amalek.

In a similar raid from across the Jordan, the Amalekites are named as one of the peoples who invaded the regions west of the Jordan, including "the neighborhood of Gaza" (Judg 6:3–5) and the valley of Jezreel (6:33). Both of these episodes link Amalek with the Midianites and the people of the East (Qedemites), and both raids were made with the use of camels (6:5; 7:12). Although Judges says that Gideon defeated these nomadic invaders, they continued to threaten the security of Israel's settled communities on other occasions.

The most detailed and most decisive encounters between Amalek and Israel are found in the Samuel narratives on Saul. Soon after he became king of Israel, this great warrior resumed the traditional warfare with the Amalekites (1 Sam 15:2–3). From the town of Telaim, whose exact location is unknown, Saul moved against the Amalekite frontier to the south of Judah and attacked "the city of Amalek" (15:4–5). This is the first recorded instance in which Israel invaded Amalekite territory, actually striking what must have been the tribal center at that time. While it is not necessary to take the word "city" literally in this instance, since it is likely that "the city of Amalek" was more of a fortified camp, some scholars (e.g., Herzog 1983: 43, 47) have identified this ancient place with Tel Masos (M.R. 146069), located 7 miles east-southeast of Beer-sheba (cf. Edelman 1986: 82). Others locate the Amalekite center in N Sinai, somewhere in the vicinity of Kadesh-barnea.

In 1 Sam 15:6 intriguing reference is made to the presence of the Kenites among Amalek. Because his war was with the traditional foe of Israel, the Amalekites, Saul allowed the Kenites to depart. Saul's military victory is noted in 15:7, but his failure to execute the ban against Amalek constituted a spiritual failure. Saul's retaliation was not complete, since he took booty and a prisoner, Agag, the king of Amalek, who was later killed by Samuel (cf. 15:8–9, 20, 32–33). Agag was a traditional name or title for Amalekite kings (cf. Num 24:7), who were undoubtedly tribal chiefs like the "kings" of Midian and other nomadic groups (cf. Num 31:8, etc.). Most important is the fact that the name (or title) Agag is the only known Amalekite proper name. See AGAG; AGAGITE.

After David was given Ziklag by Achish, the Philistine, he continued the Hebrew offensive on Amalek's territory (1 Sam 27:8–9). While David's small army was away, the Amalekites carried out a retaliatory raid against David's Negeb base, burning Ziklag and taking prisoners (30:1–2). With the help of an Egyptian who had been a slave of the Amalekites, David located their camp beyond the Besor (Wadi Ghazzeh), defeated them in a pitched battle, and recovered all spoil (30:11–20). In fact, David looted the Amalekite encampment while 400 of their young men fled on camels (30:17, 20).

According to 2 Sam 1:1–10, David learned that Saul had been killed by an Amalekite, probably a mercenary in the Philistine army (cf. 1 Sam 31:1–6; 2 Sam 4:9–10). Most important are the statements that summarize David's military activities and name the Amalekites among those subdued (2 Sam 8:12; 1 Chr 18:11). David's victories seem to have brought an end to the threat that the Amalekites posed to the communities of Israel, for these enemies are no longer named as serious opponents after the days of Saul and David (cf. Ps 83:5–11 for a list of Israel's enemies in an unknown context, including Amalek in v 7).

Eph'al (1982: 63) observes that the names Hagarites, Ishmaelites, Midianites, and Amalekites are not mentioned in biblical accounts that narrate events after the mid-10th century B.C. (with the exception of 1 Chr 4:43). Instead, the collective term Arab(s) appears, along with a number of other names (e.g., Buz, Dedan, Qedar, Sheba). Not surprising is the fact that the vague designation, "people of the East," occurs in passages on both sides of the mid-10th century. So the specific name, Amalekites, seems to disappear from the historical memory of the biblical writers, but the people themselves merged with other groups, took on new names, or were identified by the generic term Arab.

As noted above, the only reference to Amalekites after David's era is found in 1 Chr 4:43. This verse observes that only a "remnant of the Amalekites" was left in the time of Hezekiah (late 8th century B.C.), and this group was defeated by the Simeonites in Mt. Seir. Landes (*IDB* 1: 102) suggests that Amalekite history ended where it had begun, in Edom. Eph'al (1982: 66, 80) says that Seir could refer to both sides of the Arabah in this instance. If so, this verse provides the only datum on the Negeb's inhabitants in the 9th–8th centuries B.C.

D. Archaeological Remains

Landes (*IDB* 1:102) and other scholars state that archaeological research has thrown no light on the Amalekites. Though some progress has been made in associating specific groups of nomads with archaeological evidence (cf. Parr 1982; Sawyer and Clines 1983; Rosen 1988), no recovered data are attributed to Amalek with any degree of certainty. Intensive surveys make it possible to say that the Negeb had very little occupation in the Late Bronze Age and that its resettlement began in the early Iron Age, especially in the 11th–early 10th centuries B.C. As Rothenberg (1967: 92–97) suggested, some of the small fortified settlements in the Negeb highlands can be linked to the Amalekites. Certain scholars (e.g., Herzog 1983: 43, 47) have identified Tel Masos with the place called "the city of Amalek" in 1 Sam 15:5. Of course, more data must be recovered before such conjectures can be verified.

AMAM (PLACE) [Heb *ʾămām* (אֲמָם)]. A town in the Negeb district of the tribal inheritance of Judah (Josh 15:26). Although its site has not been definitively located, it lay in the area E and S of Beer-sheba (Josh 15:21; Cross and Wright 1956: 212). Abel (*GP* 2: 242) proposed placing Amam on the Wadi eṣ-Ṣīni on the basis of the variant *sēn* in LXX^{B}. Recently Naʾaman (1980: 146) has advocated locating Amam at the site of Beʾer Nevatim (Bir el-Hamam) on the Nahal Beʾer-Sheva (Wadi Meshash). Amam may be mentioned in the longer form of its name as Beth-amam ("House of Amam") in one of the ostraca from Beer-sheba (Aharoni 1973: 71–72).

AMANA (PLACE) [Heb *ʾămānâ* (אֲמָנָה)]. A mountain cited along with Lebanon, Senir, and Hermon (Cant 4:8). Probably one of the mountains near the source of the Amana River comprising the Anti-Lebanon range. Solomon bids the Shulammite maiden (Cant 6:13) to leave these beautiful mountain peaks of her northern country land.
RAY LEE ROTH

AMANUENSIS. This term, taken from Latin ("of the hand"), denotes one who writes what another dictates, or copies what another has written, and thus means a secretary or scribe. A person performing this function is designated in the Hebrew Bible as a *sōpēr,* and in the Greek NT as a *grammateus.* In both cases, however, it is necessary to distinguish between the scribe as a person skilled in writing who works as a secretary, and the scribe as a member of a professional class devoted to the study and interpretation of the Torah of Moses. Most of the biblical references to scribes have the latter meaning in view and occur in post-exilic biblical literature. This article, however, will treat only the former sense, i.e., a secretary skilled in the art of writing or copying manuscripts.

Allusions to *sōpēr* as "secretary" are frequent in the Hebrew Bible. The scribe was a traditional and necessary functionary of the royal court; specific mention is made of the secretaries of David (2 Sam 20:25, 2 Kgs 12:10), Hezekiah (2 Kgs 18:18, 37; 19:2), Josiah (2 Kgs 22:3–12, 2 Chr 34:15–20), Joash (2 Chr 24:11), and Jehoiakim (Jer 36:12, 20). The activities of royal secretaries included, among other things, record-keeping and the drafting of royal letters and decrees; in some cases, the secretary also served as a counselor in matters of state, since the scribe, by reason of training and experience, was not only skilled in writing but was also often "a man of understanding" (cf. 1 Chr 27:32). Military commanders regularly relied on secretaries to maintain rolls and records, and to draft orders and communiqués (2 Kgs 25:19, 2 Chr 26:11, Jer 52:25). Even a prophet could employ an amanuensis if circumstances warranted. The signal instance of this is Jeremiah's reliance on Baruch to transcribe the prophet's oracles from dictation and read them in the temple precincts, a place where Jeremiah himself had been forbidden to appear (Jer 36).

The Greek term *grammateus* occurs only once in the NT in its normal sense of "clerk" or "secretary" (Acts 19:35), yet here the term designates not a "secretary," in the simple sense, but a high civic official whose duties included the drafting of decrees of the citizenry, administering civic funds, and transacting affairs of the city. (The frequent translation "town clerk" is not quite apposite.) Still, the activity of secretaries is elsewhere intimated in the NT, especially in the letters of Paul. It was apparently Paul's custom to dictate his letters to a secretary. The "oral style" of the letters is only one indication of this. In Rom 16:22, one Tertius expressly designates himself as the transcriber of the letter. Paul's practice in

other letters of adding greetings (1 Cor 16:21, 2 Thess 3:17, Col 4:18), an asseveration (Phlm 19), and a summary statement (Gal 6:11–18) in his own handwriting implies that the letters themselves were written at the hands of amanuenses who transcribed at Paul's dictation. Indeed, 2 Thess 3:17 claims that Paul's appended greeting, written in his own hand, was a "sign" or "mark" employed in each of his letters. This practice suggests that these letters were normally in the handwriting of a secretary. A similar use of an amanuensis is also indicated by 1 Pet 5:12. In dictating his letters to a secretary, Paul was following a well-established practice in antiquity. Many papyrus letters preserved from the period were written in the hand of a secretary, with the final greeting or other closing matter written in the hand of the sender. In addition, classical literature often attests the use of a secretary. Cicero, a prolific letter writer, often dictated letters to his secretary, Tiro, and frequently alluded to this practice. Plutarch mentions it for Caesar (*Vit. Caes.* 17.3), Pliny the Younger mentions it for his uncle (*Ep.* 3.5, 9.36), and Quintilian objects to its widespread use (*Inst.* 10,3,19) (Bahr, 1966, concisely surveys the evidence).

The use of amanuenses by Paul has occasioned the development of various "secretary hypotheses," each of which seeks to explain why some letters attributed to Paul (e.g., Ephesians, Colossians, 1–2 Timothy, Titus) differ significantly in vocabulary, style, and conceptuality from the undoubtedly authentic letters. It is claimed that Paul did not dictate all his letters verbatim but sometimes provided only an outline or rough notes, leaving the actual composition to an amanuensis. While such theories might help to explain rather wide variations in vocabulary and style among letters attributed to Paul, they do not satisfactorily account for conceptual and situational differences. Nevertheless, Paul's use of amanuenses, together with the fact that he often names others as co-senders with himself (1 Cor 1:1; 2 Cor 1:1; Phil 1:1; Col 1:1; 1 Thess 1:1; 2 Thess 1:1; Phlm 1), suggests that the problem of the authorship of some Pauline letters may be even more complex than is usually assumed.

HARRY Y. GAMBLE

AMARIAH (PERSON) [Heb *ʾămaryâ* (אֲמַרְיָה); *ʾămaryāhû* (אֲמַרְיָהוּ)]. **1.** A Levitical high priest, the son of Meraioth and father of Ahitub and grandfather of Zadok (I) (1 Chr 5:33–34—Eng6:7–8; 1 Chr 6:37–38—Eng6:52–53). The name occurs in the most extensive and perhaps most recent of all the preexilic priestly genealogies in the OT (1 Chr 5:29–41—Eng6:3–15) and also in a comparable abbreviated high priestly list from the same chapter (1 Chr 6:35–38—Eng6:50–53). Unlike the longer list which traces the high priesthood from Aaron through Eleazar down to the Exile, this second comparable list traces the high priestly lineage from Aaron on through Eleazar only as far as Ahimaaz, the son of Zadok (I) (Williamson *Chronicles* NCB, 74).

2. A Levite of the Kohathite clan, the second of four sons of Hebron (1 Chr 23:19; 24:23). He is presented as a contemporary of David. His name is found in a supplemental list of Levites (1 Chr 24:20–31) which presupposes a still earlier Levitical list (1 Chr 23:6–23).

3. A Levitical high priest, the son of Azariah and father of Ahitub (II?) and grandfather of Zadok (II?) (1 Chr 5:37–38—Eng6:11–12; Ezra 7:2–3). Within the long high priestly list of 1 Chr 5:29–41—Eng6:3–15 the threefold pattern of Amariah-Ahitub-Zadok occurs twice (1 Chr 5:33–34, 37–38—Eng6:7–8, 11–12). The reliability of this list is undermined by the fact that in no other high priestly list of the OT does one find such repetition with respect to these names. Also, the names of known high priests for the period from the narratives of Kings and Chronicles do not always correlate with their supposed high priestly correspondents in this long list. (For the suggestion that the Chronicler's list included only those high priests who were known to have been Zakokites, see Katzenstein 1962: 382–84.) Still, the period between the Exodus and the Exile, from Aaron through Ezra, requires more names than the 14 (1 Esdr 8:1–2), 17

(Ezra 7:1–5), or even 20 (2 Esdr 1:1–3) given in the other lists. The 23 names (from Aaron to Jehozadak) given in the long list of 1 Chr 5:29–41—Eng6:3–15 are more salutory, even if they, too, seem to fall short (since 23 generations × 25 years per generation yields only 575 years for a period estimated to be closer to 700 years long). Accordingly, were the long list to be regarded as somewhat authentic, there would be no need to equate this Amariah with 1. above. Moreover, all three lists which cite Amariah as an ancestor of Ezra the priest (Ezra 7:1–5; 1 Esdr 8:1–2; 2 Esdr 1:1–3) list Zadok as the father of Shallum, and two of the three lists name Azariah as Amariah's father (Ezra 7:3; 2 Esdr 1:2), suggesting also that the Amariah intended here is Amariah II, not I. 1 Esdras 8 complicates the issue, though, in that while it knows Zadok as Shallum's father it cites Uzzi as Amariah's immediate predecessor, prompting linkage in this case with the upper half of the longer priestly list. Neh 11:11 and 1 Chr 9:11, on the other hand, appear to focus on the bottom end of the same long list, with Ahitub named as the father of Meraioth and Zadok (II?), but there is no mention of Amariah whatsoever. In 2 Esdr 1:1–3, Amariah's son, grandson, great-grandson, and great-great-grandson are purported to have been Eli, Phinehas, Ahitub, and Zadok (II?) respectively. The names Eli, Phinehas, and Ahitub, however, are not paralleled at this point in Ezra 7:3 (= 1 Esdr 8:2) or in any other high priestly list and are therefore most suspect.

4. A high priest in King Jehoshaphat's time (873–849 B.C.), placed in charge over all ecclesiastical and religious matters (2 Chr 19:11). His father is not named. He may be the same as 3. above (Schumacher *IDB* 1: 102–3).

5. A Levite, one of six persons appointed by King Hezekiah (787/86–715 B.C.) to assist in the distribution of the portions of the free-will offerings in the cities of the priests (2 Chr 31:15).

6. The son of Hezekiah and father of Gedaliah (Zeph 1:1). He is cited as a progenitor of the prophet Zephaniah ben Cushi, active during the reign of King Josiah (640–609 B.C.). In view of the unusual length of the opening prophetic genealogy, the ancestor intended may well be King Hezekiah (KJV Hizkiah) of Judah.

7. A Levitical priest (Neh 12:2). His name occurs on a list of priests and Levites who returned from Babylon with Zerubbabel and Jeshua (Neh 12:1, 7). His descendant, Jehohanan, represented one of the priestly courses active during the high priesthood of Joiakim, Jeshua's successor (Neh 12:13).

8. A priest, a contemporary of Nehemiah (Neh 10:4, 9—Eng10:3, 8). He is listed as one of the persons who set their seal to the covenant document reconstituting the postexilic community.

9. A Judahite, the son of Shephatiah, descendant of Perez (Neh 11:4). He is cited as an ancestor of the Judahite Athaiah [*ʿătāyâ*] ben Uzziah, one of the 10 percent of the people in the days of Nehemiah who volunteered to live in Jerusalem rather than with the majority in the country towns of Judah. In the otherwise parallel verse, 1 Chr 9:4, there is no mention of any Athaiah; instead Uthai [*ʿûtay*] ben Ammihud, descended from Perez, is named. The nearest 1 Chr 9:4 comes to Amariah [*ʾămaryâ*] is in the name "Imri" [*ʾimrî*] (Myers *Ezra-Nehemiah* AB, 185–86).

10. One of the sons of Binnui (RSV), and a contemporary of Ezra (Ezra 10:42). His name appears on a list of those who had married foreign women and who were induced by Ezra to send such wives away along with their children (Ezra 10:44 = 1 Esdr 9:36). The RSV has adopted the suggested reading of *BHS*, namely, "and of the sons of Binnui" (Ezra 10:38) [= *ûmibbĕnê binnûy* for MT's "and Bani and Binnui" = *ûbānî ûbinnûy*= KJV]; NEB supports the RSV with "of the family of Binnui." Cf. LXX "the sons of Banui = *hoi huioi banoui*. In the interest of consistency, the RSV's synoptic parallel (1 Esdr 9:34) has adopted the reading "Amariah" [= Gk *amaria*] for the present Greek text's "Zambris" [LXX *zambris; zambrei*], even though the father of this person is said to be "Ezora" [LXX *ezōra*].

A. Discovery and Publication

In the late autumn of 1887 a woman of the bedouin tribe of Beni ʿAmrān discovered a number of tablets in the ruins near the village of Hajji Qandil. The place where the tablets were found is located on the eastern bank of the Nile, ca. 300 km south of Cairo and was called by scholars el-Amarna, after the name of the bedouin tribe. The site of el-Amarna was known to be the seat of Akhetaten ("the Horizon of Aten"), the residence of the Egyptian king Akhenaten, and the tablets unearthed there were part of the royal archive of the Pharaoh.

The local bedouin excavated the site and sold the tablets to a local dealer. The tablets were then sent to Upper Egypt and sold to the representatives of European museums. The Berlin museum got the majority (201 tablets), the British Museum (82 tablets), and the local museum of Cairo (51 tablets) also obtained large collections, and other museums and private persons bought numerous tablets (*PWCJS* 9: 11–14). Overall, 336 tablets are known today from this illegal dig. A certain part of the tablets was totally destroyed at that time, though it is impossible to verify their number (Knudtzon, Weber, and Ebeling 1915: 1–15; Sayce 1917).

A few years after the discovery, in 1891–92, a systematic excavation was conducted at the site by Sir Flinders Petrie (1894). He dug where the tablets were found (House No. 19) and its neighborhood and discovered 21 additional tablet fragments. In later years, three other archaeological expeditions worked at the site of el-Amarna (in 1911–14, 1921–23, 1926–37) and a further 23 tablet fragments were discovered. The overall number of tablets published is now 380 (Moran 1987; *PWCJS* 9: 3–16).

Publication of the Amarna tablets began soon after their discovery (Winckler and Abel 1889–90; Bezold and Budge 1892; Winckler 1896). A decisive step was made by J. A. Knudtzon, who systematically collated all tablets discovered until 1907 and published a comprehensive text edition (EA Nos. 1–358), accompanied by extensive historical commentary by O. Weber and detailed indexes by E. Ebeling (Knudtzon, Weber, and Ebeling 1915). At the same time, Schroeder (1915) published a new facsimile of the largest collection of Amarna tablets, that of the Berlin museum.

Twenty-two additional tablets were uncovered and published in various publications between 1915 and 1970 and were collected and edited in one volume by A. F. Rainey (1970). A final tablet was published by Walker (1979). Recently, W. L. Moran (1987) has published a new edition of all the letters, in which were included many new readings, extensive philological discussions, and detailed indexes. Moran's edition considerably advances the understanding of the corpus and marks a new stage in the research of the archive.

B. The Archive and Its Chronology

The tablets were discovered in the "office-house of the letters of Pharaoh," which was the place where the cuneiform staff of the foreign department must have been located. Of the corpus of 380 tablets, only 32 were not letters. These tablets served for the study of the art of cuneiform writing and reading. Among them were lexical texts (EA 351–54, 373), a list of gods (EA 374), syllabaries (EA 348, 350, 379), and literary texts (EA 340–41, 356–59, 375) (*PWCJS* 9: 27–33). These texts are closely related to well-known lexical and literary ancient Near Eastern tablets. Among the literary compositions one may note the Myth of Adapa, the Myth of Nergal and Ereshkigal, and the text entitled "The King of the Battle." Notable also is an Egyptian-Akkadian dictionary (EA 368), in which the Egyptian words are written syllabically by cuneiform signs.

The corpus of letters can be divided into two distinct groups: a small group of 44 letters that were exchanged between Egypt and other great powers and a much larger group of over 300 tablets that were exchanged between Egypt and vassal kingdoms in Canaan and northern Syria.

Numerous tablets written by the pharaohs either to "great kings" (EA 1, 5, 14, 31) or to vassal rulers (EA 99, 162–63, 190, 367, 369–70) were discovered among the Amarna tablets and may be regarded as letters that—for unknown reasons—were not dispatched abroad (i.e., they are not copies of the original letters) (Moran 1987: 19–20).

The city of Akhetaten (el-Amarna) was founded on virgin soil by Amenhotep IV (Akhenaten) (ca. 1350–1334) in his 4th year and became his residency in his 7th year. It served as the capital city until his death and was abandoned by the royal court in the 3d year of Tutankhamen (ca. 1334–1325) (Hornung 1964: 79–94; Redford 1967: 156–62). However, the earlier tablets discovered in the archive were written in the last decade of Amenhotep III, Akhenaten's father. It is thus clear that many letters were brought from the previous capital (Thebes) to the new capital when the royal court moved there. These must have been those that were necessary for future correspondence. One may further assume that certain letters were taken from Akhetaten at the time of its abandonment. The number of letters transferred in both cases is unknown nor do we know how many tablets were destroyed when the archive was discovered and before the value of the tablets was recognized (Campbell 1964: 32–35). What was left at el-Amarna is a unique collection which is different in its assemblage from all other ancient Near Eastern archives (Riedel 1939; Campbell 1964: 35–36; Na›aman 1981a: 173–74).

The archive covers less than thirty years (from ca. the 30th year of Amenhotep III to Tutankhamen's 3d year). The exact time span depends on whether or not there was a coregency between Amenhotep III and Akhenaten, a problem still debated by scholars (e.g., Kitchen 1962; Campbell 1964; Redford 1967; Kühne 1973; Krauss 1978).

C. Script and Language

The Amarna letters were written in cuneiform signs on clay tablets. The cuneiform script was already known in northern Syria in the 2d half of the 3d millennium B.C. (at Ebla). The Canaanite cuneiform tradition is rooted in the north Mesopotamian and north Syrian traditions of the OB period (18th–17th centuries B.C.) (Anbar and Na›aman 1986–87). Almost all the letters in the Amarna archive are written in Akkadian, i.e., an East Semitic language. Thus, letters exchanged between the Egyptian pharaohs and their vassals in Canaan were written in a language that was foreign to both. Akkadian (i.e., Babylonian) had acquired in the 14th century B.C. the status of an international language (*lingua franca*), by which kings reigning all over the Near East were able to communicate.

The art of reading and writing cuneiform was known only to a relatively small group of experts who studied this craft for a period of many years. The diffusion of the Amarna letters all over Canaan and the many local variants show that expert scribes were situated in all of the important kingdoms. Since all diplomatic correspondence was in their hands, they attained a high social position and had certain influence on the direction of foreign affairs. A number of letters (EA 286:61–64; 287:64–70; 286:62–66; 289:47–51; 316:16–20) illustrate how important it was at that time to find ways to flatter and patronize the Egyptian royal scribes.

A small number of letters to "great kings" were written in their local language, i.e., Assyrian (EA 15), Hurrian (EA 24), and Hittite (EA 31–32), while the rest were written in Akkadian, although the dialect of these letters is sometimes regarded as "peripheral." That is because the language of these letters has retained certain archaic features, such as sign forms, logograms, vocabulary, and grammar, which were considered "classical" in earlier periods but have already disappeared from the cuneiform tradition of Mesopotamia and have been preserved only in the western periphery (Moran 1987: 22–24).

Two cuneiform traditions may be detected in the Canaanite and north Syrian letters. The one is Hurro-Akkadian, which is typical of tablets emanating from the north, that is, Hurrian-speaking kingdoms that were governed and influenced by Mitanni (Wilhelm 1970; Izre‹el 1985; Moran 1987: 24–27). The other tradition is widespread in all areas of Canaan and was strongly influenced by the current West Semitic language. The grammar of these documents was so deeply transformed by the local language and dialects

that the letters may be regarded as being "West Semitized" (Rainey 1975: 395). The Canaanite Amarna letters (with the exception of the letters from Jerusalem and Tyre: see Moran 1975a; Grave 1980: 216–18; 1982: 178–79) may be regarded as eastern in their vocabulary and as western in their grammar (Moran 1987: 27). It goes without saying that they constitute a very important source for the study of the dialects current in Canaan in the 14th century B.C. (Moran 1950; 1960; 1965; Rainey 1971; 1973; 1975; 1978; Izreʿel 1978).

D. The International Correspondence

The relations between Egypt and the other great powers of the ancient Near East occupy a central place in the correspondence. The latter powers were Babylon (EA 1–14), Assyria (EA 15–16), Mitanni (EA 17, 19–30), Arzawa (EA 31–32), Alashia (EA 33–40), and Hatti (EA 41–44). Their kings called each other by proper names (Alashia is an exception) and expressed their equal political status by the addressing formula (e.g., "Say to PN, king of GN … thus says PN^2, king of GN^2 …"), by the denomination "brother" (i.e., a king of equal rank), and by employing the same words for greeting. Moreover, only they were entitled to be called "great king," that is a king who was a suzerain of vassal states and was equal in his political status to the other great powers (Moran 1987: 62).

The "great kings" exchanged messengers who traveled between the capital cities and transmitted letters, verbal messages, and gifts from one court to another. These gifts had symbolic as well as economic value (Liverani 1972; Zaccagnini 1973). Bringing a gift was an inseparable element of the international correspondence; but gifts were also supposed to be of equal value and there are many complaints in the letters about the inferior quality and the poor value of received gifts. Egypt was the source of gold for all other countries and there are many requests in the letters for Egyptian gold (Edzard 1960). The correlation between good relations and expensive gifts is illustrated by the words of a Babylonian king who described a reaction to a previous rich shipment of gold by the words (EA 11 rev. 21–23): "The gold [is abundant. Among] the kings there are brotherhood, friendliness, peace and [good] relations. [He is] rich with precious stones, rich with silver, rich with [gold]."

Exchanging gifts was sometimes regarded as a kind of indirect commerce, but there were also direct commercial relations, both by land and at sea, between the great powers, and as a rule every king was responsible for the safety of the foreign merchants who stayed in the territories under his authority. Thus, when his merchants were robbed and murdered at Ḫannathon, the king of Babylon wrote to the king of Egypt (EA 8:25–33): "Canaan is your land and its kings are your servants. It was in your land that I have been robbed. Investigate them and repay the money that they took. Execute the men who slew my servants and avenge their blood. But if you do not slay these men, they will do it again and attack either one of my caravans or even your messengers and relations will be cut off between us."

Diplomatic marriage between a "great king" and the daughter of another is well attested in the letters (Pintore 1978). It was always the Pharaoh, however, who married foreign princesses and brought them to his harem. Egyptian kings refused to marry their daughters to other kings and to send them abroad (EA 4:6–7): "From old, the daughter of an Egyptian king has not been given in marriage to anyone") (Pintore 1978: 78–79; Schulman 1979). Thus, Amenhotep III, who enjoyed a long reign of 38 years, married two Babylonian princesses, two Mitannian princesses, and one from Arzawa (Schulman 1979: 183–84). Marriages between kings were negotiated by the two courts and the marriage gifts were an important (though delicate) element within the negotiation. Indeed, the richest lists of gifts known from the Amarna archive were recorded on such occasions (EA 14, 22). The foreign princesses did not attain the position of "great wife of the king" (i.e., queen) in the Egyptian harem but remained wives of second rank (Schulman 1979: 183).

The Amarna archive is our earliest witness for the international character of the Late Bronze Age. These relations were first established in the 15th century and lasted (though with considerable changes) until the end of the 13th century, encompassing all major civilizations of western Asia. The great powers divided among themselves the entire civilized world, each dominating its vassals, and established a set of strict rules for international correspondence (Kestemont 1974).

Impressive as it is, one should not be dazzled by the polite tone and the external gestures that find expression in the international correspondence. Much more important than all these were the *realpolitik* and the actual struggle for power and for dominion, and indeed, these struggles dominated international relations in the late stages of the Amarna period.

Since the 15th century B.C., the kingdom of Mitanni had been a strong power whose vassal's border in Syria reached the northern boundary of the land of Canaan. In the course of the Amarna period, Šuppiluliumas, the Hittite king, conducted several campaigns against Mitanni and conquered the former Mitannian vassal kingdoms in northern Syria, thus reviving the Hittite's old claims over these areas. Aššur-uballiṭ, king of Assyria, took advantage of the situation and attacked the crumbling kingdom of Mitanni in order to expand the Assyrian territories. At the same time he tried to be recognized as a "great king" by the other western Asiatic great powers and to establish with them diplomatic relations (EA 15–16) (Artzi 1978).

The immediate result of the Hittite expansion to northern Syria was the deterioration of Hittite-Egyptian relations. Both kingdoms claimed domination over Amurru and Kadesh (Qidshu) and the armed struggle between the two powers is mentioned in the latest letters of the archive and would last for several decades (Kitchen 1962; Helck 1971: 168–214; Krauss 1978; Murnane 1985).

E. The Vassal Letters

The majority of the letters in the archive were sent by the vassals in Canaan and in northern Syria. The latter's tablets were probably sent at a relatively late stage when Mitanni, their overlord, was defeated by the Hittites and they addressed Egypt for help (Redford 1967: 216–25; Na›aman 1975: 15–17, 210–14, 229–30). There are also seven letters (EA 99, 162–63, 190, 367, 369–70) that were addressed by the Pharaoh to his vassals in Canaan (see above). One may easily compare the ways in which one side addressed the other.

The humiliated tone of the vassal letters as against the commanding words of the letters of the pharaohs is the most conspicuous formal trait of the correspondence. In spite of regional variations, the vassal letters closely resemble each other in their words. "Speak to the king, my lord …; thus says PN, your servant …" is typical of the addresses to letters in which the lord-vassal relations are deliberately emphasized. The Pharaoh is only called by the title "king" (with the exception of the two northern letters from Qatna, EA 53:1 and 55:1). Greeting formulas are quite rare, the main exception being the letters of Byblos (e.g., "Rib-Addi speaks to his lord, king of all countries, the great king, king of the battle. May the Lady of Byblos give strength to the king, my lord."). In place of greetings in the introductions to most of the letters one finds expressions of humiliation emphasizing the inferior status of the vassal as against his lord. To illustrate the introduction of a vassal letter we shall translate a typical south Canaanite letter (EA 328:1–16):

> To the king, my lord, my god, my Sun, the Sun from heaven; thus says Yabni-ilu, the ruler of Lachish, your servant, the dust under your feet, the groom of your horses. At the feet of the king, my lord, my god, my Sun, the Sun from heaven, I have fallen seven and seven times, on the belly and on the back.

The king, on the other hand, addressed his vassals by short words: "To PN, ruler of GN, speak! Thus [says] the king." There is no greeting and the tenor of the letters is a combination of commands and threats.

However, the commanding tone of the royal letters and the humiliated expressions of the vassals should not obscure the historical reality. When examining the letters, it becomes clear that the vassals enjoyed much more freedom than one may deduce from the formal analysis of the letters and often they operated on their own behalf, contrary to the obvious Egyptian interests in the land of Canaan.

The major events occurring within the land of Canaan during the Amarna period were the foundation of the strong kingdom of Amurru in the north and the expansion of Lab›ayu of Shechem and his sons in central Palestine. The first episode is directly linked with the armed struggle between Mitanni and Hatti over the domination of Syria. The rulers of Amurru took advantage of the situation and greatly expanded their territory along the coast and the middle Orontes Valley. During the last stages of the archive, ‹Aziru of Amurru was still an Egyptian vassal, but soon afterward he had signed a vassal treaty with the Hittites,

thus transgressing his oath to the Pharaoh and joining his enemies (Klengel 1969: 178–208, 245–99; Altman 1973).

The offensive of Lab›ayu of Shechem and his sons was motivated by the desire to expand their territory and become the strongest and most influential power in the country and by their hatred of the newly established Egyptian centers of government, in particular that of Beth-shean (Campbell 1965; Na›aman 1975: 27–46; Spalinger 1983: 96). They formed a powerful coalition that included Gezer in the south and Gath-Carmel in the north. A countercoalition, headed by the kings of Megiddo and Acco and supported by the Egyptian authorities, was formed in reaction and succeeded in bringing the Shechemite offensive to an end.

When examining the Amarna letters it is clear that the ambitions of local rulers, the power of the nonurban elements in local affairs, and the readiness of Egypt to interfere and operate in local disputes were the principal factors that influenced internal affairs in Canaan. Egypt was strong enough to quell all rebellions and to bring to an end all inner struggles, save possibly for the northern-most area, where its vassals bordered on another imperial power.

The Amarna archive is our main (and sometimes only) source for the study of many aspects of Canaan in the Late Bronze Age prior to the Israelite settlement in the land. Some of these aspects will be examined in the following paragraphs (Helck 1971: 246–55, 474–91; *CAH*^{3} 2/2: 98–116; Frandsen 1979; Na›aman 1982: 195–241; Groll 1983).

F. Egyptian Government in Canaan

Soon after the conquest of Canaan by Thutmose III (1482 or 1457), the Egyptians tried to organize it as a province. The main source of information for the measures undertaken at that time are the Amarna tablets, written ca. 100 years after the foundation of the Egyptian province in Asia.

The Egyptians left the array of Canaanite kingdoms which they conquered and established a network of six garrison cities to administer and rule the land. Four were situated along the coast: Gaza and Joppa in the south and Ullasa and Ṣumur in the north. Two other centers of government were established on the main crossroads: Beth-shean in northern Palestine and Kumidi in the south of the Beqa‹ Valley of Lebanon (Helck 1971: 251–52; Na›aman 1981a: 177–78). The garrison cities also controlled considerable surrounding farmlands. For example, the fields west of the city of Beth-shean were annexed by Thutmose III and administered by the Egyptians (Na›aman 1981b). The cities themselves served as centers for the Egyptian personnel in Canaan and for the garrison troops stationed in the land. They were also the gathering places for the tributes and gifts of the vassals. The latter were required to guard the cities and the special installations therein and to cultivate and harvest their territories.

The number of Egyptian troops stationed in Canaan was relatively small. They included only the garrison troops (*ṣābē maṣṣarti*) installed either in the garrison cities or in certain strategic or vulnerable city-states (e.g., Jerusalem, Megiddo, Acco, Byblos). These troops are mentioned many times in the vassal letters; their number vary from less than fifty soldiers to three hundred (Pintore 1972; 101–6). The regular troops (*ṣābē piṭāti,* "archers") were stationed in Egypt and embarked on campaigns when the situation demanded their presence. On such occasions they were accompanied by chariot troops and usually returned to Egypt after completing their mission (Pintore 1972; 1973).

The territory in Asia under Egyptian rule was apparently divided into subunits; their number, however, is debated among scholars. According to the common view, it was separated into three districts: Palestine with its seat at Gaza, the coast of Lebanon with its center at Sumur, and south Syria with its seat at Kumidi (Helck 1971: 248–52; *LBHG*, 146–53; De Vaux 1968: 25–28). According to another view, it was divided into two subunits: Palestine plus the Phoenician coast and south Syria (including the Bashan and the kingdom of Hazor). This twofold division was the outcome of the historical situation of the Middle Bronze Age ((Na›aman 1975: 166–72, 227; 1981a: 183–84). The assumption that the garrison city of Beth-shean was the seat of another (fourth) district (Hachmann 1982a: 44–47) is not very likely.

At the head of the Egyptian hierarchy in Canaan were the governors, possibly one in each province. Their Egyptian title was "messenger of the king to every foreign land" (Edel 1953: 55–63; Singer 1983: 18–21). Other officials were of various Egyptian ranks and titles, but the Canaanite scribes usually

employed one and the same title, *rābiṣu* ("commissary"), to denote all ranks and titles of Egyptian functionaries serving in Canaan. It is impossible therefore to be precise concerning the Egyptian titles (unless they can be identified with well-known Egyptian officials) and exact analysis of the Amarna correspondence might only reveal the relative status of the various functionaries mentioned therein. The situation is even more complicated since some of the officials arrived on special missions from Egypt and were not part of the bureaucratic apparatus in the land.

A set of prohibitions was imposed upon the vassals and the Egyptian officers were responsible for their fulfillment. Examination of the letters reveals that the Egyptian apparatus was often rather flexible in what was permissible or prohibited to the vassal, not to mention those cases in which two Egyptian commissioners supported different sides of a conflict.

The vassals were obliged to pay tribute and send gifts, though only a small part of these were recorded in the letters. They served in the Egyptian garrison cities, cultivated their territories, and secured the caravan routes traversing their kingdoms. They provided armed forces for Egyptian campaigns and served as a supply network for armies that moved in Canaan and along the coast. It is evident that the Canaanite city-states were an important support for the Egyptian government abroad, enabling her to control, with the help of only a few officials and a relatively small number of troops, its Asiatic province. The various military, strategic, and economic advantages that Egypt gained in the Amarna period from the occupation of Canaan was bought for a relatively low price (see Na›aman 1981a). It was only at a later time that conditions changed, obliging Egypt to alter its policy and to intensify its involvement in the land (Weinstein 1981: 17–23; Na›aman 1982: 241–51; Singer 1988).

G. The Network of Canaanite City-States

The land of Canaan was divided into a network of kingdoms of various sizes and strengths. Since only the rulers of these political units were allowed to correspond with the Pharaoh, the Amarna letters are our main source for composing the list of city-states. The gaps of information may be filled by the Egyptian topographical lists and particularly by the Egyptian royal inscriptions. The relative strength of the kingdoms may be deduced from analysis of these sources.

The three most important kingdoms in Palestine in the 14th century B.C. were Gezer in the northern Shephelah, Shechem in the central hill country, and Hazor in the north. Other important city-states in the south were Ashkelon, Lachish, and Gath (?) (Tell es-Ṣāfi); Jerusalem (and Debir, according to archaeological excavations) dominated the southern part of the hill country, Gath-padalla was the strongest kingdom in the Sharon region, while Rehob, Megiddo, Shim‹on, Acco, and Akhshaph were the most important kingdoms in the northern plains. Shechem and Hazor may be regarded as the only territorial kingdoms, the others may be characterized as city-states (Na›aman 1988).

The coast of Lebanon was divided among several kingdoms of equal strength (Tyre, Sidon, Byblos), and Amurru in the north emerged as an important territorial kingdom in the course of the Amarna period (see above). Damascus was the most influential kingdom in south Syria; its ruler enjoyed an outstanding high status and prestige and functioned as the main supporter of the Egyptian governor of Kumidi (Hachmann 1970; 1982b). Many other kingdoms were located in the area of the Beqa‹ of Lebanon (e.g., Ḫashabu, Tushulti, Ḫasi, Ṭubiḫu, Enishazi), in the Bashan (Ashtaroth, Buṣruna, Ḫalunnu) and east of Mount Lebanon (Ruḫizzi, Lapana). Their relative strength in the Amarna period cannot be established, owing to the paucity of documentary evidence (Klengel 1970: 4–29, 56–70, 96–112; Hachmann 1970: 84–88; Ahituv 1984).

North of the land of Canaan was the strong kingdom of Kadesh (Qidshu), which dominated the land of Takhshi. It was a vassal of Mitanni, but when that kingdom fell, it tried to expand its territory and conquer parts of the land of ‹Amqi (the Beqa‹ of Lebanon), thus attacking the vassals of Egypt situated there (EA 140, 170, 174–76, 363) (Klengel 1969: 139–71; Krauss 1978: 63–70).

The network of Canaanite units was composed of kingdoms of higher and lesser rank. The chain of events was determined primarily by the former while the latter cooperated with them, either willingly or not. The strong kingdoms were able to dictate the policy of the lesser kingdoms and even to intervene in their inner affairs.

At the head of each kingdom stood the local ruler. In his relations with the Pharaoh he was regarded as a city ruler (*ḫazannu*), like any other Egyptian mayor (*ḥ›ty-‹*). The title was intended to emphasize the fact that he occupied his position with the approval of the Egyptian overlord. However, only in exceptional cases did the Pharaoh actually intervene in matters of succession, enforcing his own candidate (always of the local dynasty) as city ruler. In internal relations within Canaan and in contacts with his subjects, the local ruler was considered a king who ascended the throne through the dynastic principle and, in turn, left his throne to his heir after him (see EA 8:25, 30:1, 70:20, 88:46, 92:32–34, 109:46, 139:14–15, 140:10–12, 147:67, 148:40–41, 197:14–15, 41–42, 227:3, 256:7–8, 306:24).

Not enough details of the internal structure of the kingdoms are reported in the letters since they mainly reflect foreign affairs, that is, relations with Egypt and with neighboring kingdoms. We do know that the capital city was the focus of each unit, and usually it was either its sole or its principal urban center. The king's palace was the center of government for the kingdom and the bureaucratic apparatus operated either in the palace or in its vicinity. Around the capital city were tracts of agricultural fields cultivated by its inhabitants and in the peripheral areas were numerous villages and hamlets with their own fields and pasture land.

The actual power of the king in his city and territory varied from place to place and from period to period. It was dependent upon external factors and upon the power of the civil instititions. Several episodes are described in the letters in which a king was deposed and removed from his town (i.e., Rib-Addi of Byblos and Yashdata of Taanach) or even killed (Aduna of Irqata, Zimredda of Lachish, and the rulers of Ammiya and Ardata). The power in certain cases (i.e., Byblos, Taanach, Irqata, Ammiya, and also Tunip) was in the hands of the citizenry, although such an oligarchical rule in a city-state was only temporary and apparently did not last long. The only exception is that of Arwada, a small island near the coast of Lebanon, in which the power was (as far as we know) permanently in the hands of the council of elders.

H. The Nonurban Elements (‹Apiru and Sutu)

During the 16th century B.C. the urban culture of Canaan suffered a heavy blow. Many fortified cities were destroyed and some were deserted for a long period of time. It has been estimated that the total occupied area in Palestine decreased in the Late Bronze Age I to a third of that of the Middle Bronze Age II and that the number of settlements was only ca. 30–40 percent (Gonen 1981: 63–69) of what it had been. The destruction was particularly severe in the hill country, the lower Jordan Valley, and the Negeb. The decline of urban life brought about an immediate increase of the pastoral and brigand elements and resulted in the growing insecurity of the land.

It is against this background that the frequent mention of the ‹Apiru (and the Sutu as well) in the Amarna letters should be evaluated. In the ancient Near Eastern documentation, ‹Apiru is a designation for people who were uprooted from their original political and social frameworks and forced to adapt to a new environment and way of life. The ‹Apiru are known from many western Asiatic societies in the 2d millennium B.C. Their different traits and social behavior in each area were the outcome of this adaptation to new circumstances. The Amarna tablets are the largest single group of documents in which the term ‹Apiru is mentioned. According to the letters, they were scattered all over Canaan and had an important effect on events which took place in the land (Bottéro 1954; Greenberg 1955; Loretz 1984).

However, the Amarna letters show a unique development in the meaning of the appellation ‹Apiru. On many occasions, the term became a derogatory designation for rebels against Egyptian authority (Mendenhall 1973; Na›aman 1986a: 275–78). In the letters of Byblos, for example, the term ‹Apiru was frequently applied to ‹Abdi-Ashirta of Amurru and his son ‹Aziru. Also the expression "to become ‹Apiru", which is repeated in many letters from all areas of Canaan, implies desertion from the Pharaoh and his supporters, the city-states' rulers, and defection to the side of his opponents, who were thus regarded as outlaws (Liverani 1979). The extension of the term ‹Apiru in order to denigrate these elements that opposed the authors of the letters is the result of the political nature of the Amarna correspondence, in which every ruler tried to justify his deeds before the Pharaoh and to slander his

opponents. This must be taken into consideration when trying to determine the role of the authentic bands, brigands, and mercenaries in the Amarna period.

Even after the elimination of those letters which, directly or indirectly, refer in general terms to city-states' rulers and their supporters, it is evident that the nonurban elements played an important role in Canaan in the 14th century B.C. They appear in letters either as bands or as individuals who were recruited and served as mercenaries in the army. As bands, they operated on their own behalf or took advantage of the conflicts between rulers and cooperated with one side or another (e.g., the conflicts between Amurru and Byblos or between Shechem and its neighbors). Alongside the ʿApiru appear also the Sutu (EA 195:24–29; 246 r. 6–7; 318:10–14), which was the Akkadian appellation for the pastoral nomadic elements.

As an illustration of the historical role of the ʿApiru one may present a group of letters from south Canaan, in all of which city-states' rulers bitterly complained of distress and serious difficulties in their kingdoms, and indeed, soon afterward they all disappeared from the historical arena and were replaced by others (Naʾaman 1975: 145–53; 1979: 676–82). The reason for the short period of unrest and rebellion, of which the ʿApiru are accused, was probably the temporary strengthening of the nonurban elements in these areas. In another case, a band of ʿApiru stayed in the city of Tushulti under the patronage of its ruler, raided the neighboring cities, and set them on fire, until they were attacked by Tushulti's neighboring rulers and forced to leave their shelter in the city (EA 185–86).

The existence of large groups of nomads and refugees may well explain the power of kingdoms situated in the hill country (e.g., Shechem, Hazor, and Amurru). Located near the nomadic enclaves, they were able either to hire soldiers from their members or to cooperate with their leaders (e.g., EA 71:20–22; 87:21–24; 148:41–43; 195:24–32; 246:5–10; 254:31–37).

I. The Amarna Letters and the Bible

Numerous details that appear in biblical descriptions of pre-Israelite Canaan fit nicely into the picture constructed from the Amarna tablets. These are the division of the land into many entities, each ruled by a king; the description of certain entities as being composed of a major city and its surrounding villages (compare EA 74:19–24; 228:13–17, 238:4–8 to Josh 15:45–47; 17:11, 16: Judg 1:27); the coalition of kingdoms as a means to gain power (compare EA 366 to Joshua 10–11); and the chariots (though anachronistically described as built of iron) as the main basis of Canaanite military power.

However, other details do not fit nicely into the picture described by the Amarna letters. Many sites that appear as Canaanite in biblical descriptions are not mentioned in the Amarna archive and, according to archaeological excavations, were either small villages or entirely uninhabited in the Late Bronze Age (e.g., Jericho, Ai, Jarmuth, Hebron, Beer-sheba, Arad). Most prominent is the city of Hebron, which, according to biblical tradition, was an important center in the time of the Patriarchs and in the conquest period, whereas the city is not mentioned in any source of the Late Bronze Age and the site of ancient Hebron (Tell er-Rumeideh) was uninhabited in this period. Also, the king of Jerusalem appears at the head of a coalition of kingdoms located in the hill country and the Shephelah (Joshua 10). The territory and the political standing of the king of Jerusalem, according to the Amarna tablets, seem to have been relatively modest and one would hardly assume that its king was able to head a coalition in which remote cities like Lachish and Eglon took part (Naʾaman 1975: 104–15; 1986b: 470–72).

There is no indication in the Amarna tablets of a diversity of ethnic groups in the land of Canaan; the inhabitants of the land were all considered to be Canaanites (De Vaux 1968). The biblical tradition, however, mentions groups of variegated ethnic origin in different parts of the land (e.g., Philistines, Hivvites, Hittites, Jebusites, Girgashites, Perizzites), which hardly fits the perceived reality of the Amarna period. It rather reflects the Iron Age, when biblical descriptions of the land and its inhabitants were first recorded (Mendenhall 1973: 142–63; Mazar 1981).

The description of the city of Shechem in the days of Abimelech (Judges 9) is closely related to that of the Canaanite cities in the Amarna tablets. The institution of the lords (*baʿalê*) of Shechem is the same as the *bēlē āli* of the Amarna letters (EA 102:22; 138:49). The role of Zebul as a magistrate (*śar hāʿiyr*) who administered the city for the ruler (Abimelech) is parallel to that of the *ḫazannu* ("mayor") in ancient Near

Eastern societies. However, the general situation drastically changed: Shechem was subjugated by the tribe of Manasseh and the tribal leader, Abimelech, resided within his clan and had nominated a mayor as his representative in the city. The city council tried to regain power by hiring a band of ʿApiru under the leadership of Gaal, just as Canaanite rulers in the Amarna period would do to attain the same goal, or as the lords (*baʿalê*) of Keilah did when they hired David and his band to protect the city against the Philistine raids (1 Sam 21:1–13). Abimelech's immediate attack on the city of Shechem and the expulsion of the band of Gaal (Judg 9:34–41) finds an exact parallel in the above cited case of the ruler of Tushulti, who, under pressure by his neighboring rulers, was forced to drive the band of ʿApiru out of his city (EA 185–86).

The description of "the justice (*mišpāṭ*) of the king" in 1 Sam 8:10–18 has sometimes been compared with Canaanite and north Syrian societies of the Late Bronze Age (Mendelsohn 1956). However, the distorted outlines of the institution of kingship in Samuel's antimonarchical polemical speech hardly fit any ancient Near Eastern kingship either in the 2d or the 1st millennium B.C. Isolated kings may well have treated their subjects in such an arbitrary and vicious manner, but despotism of the kind portrayed in the speech was not typical of well-established kingdoms, including the Canaanite city-states of the 2d millennium B.C. It has been alternatively suggested that the "king's justice" was originally a disguised polemical composition written against the despotic institution of kingship established in Israel by King Solomon (Crüsemann 1978: 66–73), but the discourse was probably composed at a much later time, either in the 7th or the 6th century, when the failure of the Israelite kingdom to provide security for its subjects became historical reality.

Overall, the image of Canaanite civilization as reflected in the Bible is far from accurate. Only certain outlines are precise, whereas other details reflect the reality of the time in which they were written, that is, the 1st millennium B.C. The history of the land of Canaan and its civilization must be studied from external sources and particularly from the Amarna letters. The authenticity of biblical data should always be examined against this background.

NADAV NA‹AMAN

AMARNA, TELL EL- (27°38′ N; 30°52′ E). The site of the premier city and residence of the Egyptian Pharaoh Amenophis (Amenhotep) IV (alias Akhenaten ca. 1377–1360 B.C.); located on the east bank of the Nile in the 15th nome (township) of Upper Egypt, ca. 180 miles S of modern Cairo. The Pharaoh named his new city Akhetaten (Eg *€ ḫt-itn* "the horizon of the Sun-disc").

Although the area had been frequented in earlier periods by mining expeditions to neighboring Hatnub, the decision to found a city must have been taken no later than Akhenaten's 4th year. By year 6, the king's family was in residence, and the greater city and environs (on both banks) delimited by a series of boundary stelae.

Chosen perhaps because the eastern cliffs resembled the hieroglyphic sign *€ ḫt* "horizon," the city became the center of worship of the king's sole god, the Sun-disc. Two major temples to the god occupied

its central area, the "Mansion of the Sun-disc" (Eg *ḥwt-itn*), and the *Gm-ʿitn* ("The Sun-disc is found") with ancilliary shrines in the N and S suburbs.

The settlement constituted a "planned" city, arranged along a broad N–S avenue, connecting the king's residence on the N with the central city and the "Viewing Place of the Disc" on the N. The city housed a formal palace, administrative blocks and granaries, residences for the immediate members of the royal family, and well-planned villas for the state officers and courtiers. The necropolis on the E was divided into a N and S cemetery, flanking the E wadi wherein the royal tomb was located.

In the 3d year of Tutankhamen (ca. 357 B.C.), after approximately 16 years of residence, the royal family left the city for Memphis, and the court and general populace soon thereafter moved out. Under Horemheb (ca. 1347–1318 B.C.) the temples and public buildings were systematically demolished, and the masonry shipped to other sites (especially Hermopolis) for reuse. There is some evidence of very limited building activity under the Ramessides.

The site is also famous for the discovery in 1888–89 of the cache of tablets known as the "Tell el-Amarna Letters"—the "dead files" of international state correspondence from the reigns of Amenophis III, Akhenaten, and Tutankhamen. See also AMARNA LETTERS; AKHENATEN.

DONALD B. REDFORD

AMASA (PERSON) [Heb *ʿămāśā* (עֲמָשָׂא)]. **1.** Kinsman of David (2 Sam 19:14—Eng19:13) whom Absalom appointed to replace Joab as commander of the army during his rebellion against David (2 Sam 17:25), a post Amasa retained after David's return to power, only to be murdered by Joab in the early stages of the suppression of Sheba's rebellion. According to 2 Sam 17:25, his father was Ithra, the Israelite, (according to 1 Chr 2:17, Jether the Ishmaelite) and his mother Abigail the daughter of Nahash. However, this latter name may be a textual corruption from 2 Sam 17:27, because Abigail is also identified as the sister of Joab's mother Zeruiah. According to 1 Chr 1:16–17, both these women were sisters of David and presumably daughters of Jesse. It has been alternately suggested that Abigail was David's half-sister and not Jesse's daughter. The wording of 2 Sam 17:25 suggests that there was something unusual or irregular about Abigail's marital relationship with Ithra.

Although it remains a matter of dispute whether the tribe of Judah joined the northern tribes in rebellion against David or remained neutral, Amasa's support of Absalom indicates that high-ranking Judahites were active in opposing David. Although the professional troops of David commanded by Joab defeated the national militia led by Amasa, David's position was still tenuous enough to require special overtures to Judah for a quick return to the throne. The appointment of Amasa was one factor in David's successful appeal to his fellow Judahites (2 Sam 19:12–15—Eng19:11–14). David's tilt to Judah seems to have precipitated Sheba's subsequent rebellion.

Amasa failed to carry out David's orders to muster the militia of Judah in three days to meet the Sheba crisis (2 Sam 20:4–5). Perhaps he simply did not have enough time, or perhaps he felt it would be personally inexpedient to attack Israel with the militia of Judah. David's professional troops set out alone, among them Joab (vv 6–7). Amasa encountered them at Gibeon and was treacherously stabbed by Joab, who immediately took back effective control of the army (vv 8–11). The details of this murder are obscure but imply premeditation and trickery. The sight of Amasa's body was not permitted to hinder the army's progress (vv 12–13). Amasa's murder would later help justify the liquidation of Joab upon Solomon's accession (1 Kgs 2:5, 32). From a literary standpoint, the biblical author seems to treat David's

offer to Amasa as one of several errors in personal and political judgment (for other examples, see 2 Sam 13:21; 18:5; 19:2–4—Eng19:1–3; 19:42–44—Eng 41–43; 1 Kgs 1:6).

Amasa has sometimes been identified with Amasai (Heb *ʿămāśay*), the chief of the "Thirty" (1 Chr 12:19—Eng12:18), who pledged loyalty and peace to David when Saul was hunting for him (See DAVID'S CHAMPIONS). There is no solid evidence either for or against this proposal.

2. Son of Hadlai, one of four chiefs of Emphraim who supported the prophet Oded in opposing a proposal to take captives from Judah into Samaria, cared for them instead, and returned them south (2 Chr 28:12–15). Luke's parable of the Good Samaritan reflects this narrative (compare v 15 with Luke 10:34).

RICHARD D. NELSON

AMASAI (PERSON) [Heb *ʿămāśay* (עֲמָשַׂי)]. A name found throughout Chronicles in the Hebrew Bible.

1. A Levite from the clan of Kohath, a descendant of Elkanah and relative of Ahimoth (1 Chr 6:10—Eng6:25). He is also mentioned as the father of Mahath and as a Levitical musician in the genealogy of Heman (1 Chr 6:20—Eng6:35). Both contexts appear concerned to trace the lineage of Samuel the prophet, to whom the Chronicler assigns Levitical ancestry (1 Chr 6:13, 18—Eng6:28, 33; cf. 1 Sam 1:1); this reflects the Chronicler's pervasive interest in the prophetic function of the Levitical musicians (1 Chr 25:1–8; 2 Chr 20:14; 29:25; 34:30; 35:15). Since Mahath is mentioned in 1 Chr 6:20—Eng6:35; (cf. 2 Chr 29:12), some correct Ahimoth to *ʾăḥîw maḥat,* "his brother Mahath" (cf. *BHS*).

2. One of the priests appointed by David to blow the trumpets before the ark during its transfer from the house of Obed-edom to Jerusalem (1 Chr 15:24).

3. The father of Mahath, a Kohathite at the time of Hezekiah (2 Chr 29:12). Since #1 and #3 both involve an Amasai, father of Mahath, some have equated these figures, though they were presumably separated by centuries. More probably the recurrence of the names reflects the practice of papponymy (naming sons for grandfathers) or some other naming convention.

4. Chief of the "Thirty," a group of David's military elite (1 Chr 12:19—Eng12:18). The only other person known to have held this title, according to the MT, was Jashobeam (1 Chr 11:11, though he is chief of the "Three" in some LXX mss). This Amasai is occasionally equated with either (1) Abishai the brother of Joab, chief of the "Three" (2 Sam 23:18, MT; but "Thirty" in two Hebrew mss and Syr), or (2) Amasa, another prominent military figure (2 Sam 17:25; 20:4–13). Assessing this Amasai is complicated by debate regarding the identification of the "Three" and the "Thirty" (see DAVID'S CHAMPIONS). The Chronicler in this context is concerned to show growing support for David among those formerly loyal to Saul (1 Chr 12:1–8, 17—Eng12:1–7, 16).

RAYMOND B. DILLARD

AMASHSAI (PERSON) [Heb *ʿămašsa (y)* (עֲמַשְׁסַי)]. Var. MAASAI. A Levitical priest, the son of Azarel and grandson of Ahzai (Neh 11:13). His name calls to mind one of the important priestly families listed as resident and active in Jerusalem at the time of Nehemiah, ca. 444 B.C. In the parallel verse in 1 Chr 9:12 his name occurs as Maasai [Heb *maʿśa (y)* or *maʿăśa (y)*] ben Adiel ben Jahzerah. The textual apparatus of *BHS* itself posits his name as more originally either AMASAI [Heb *ʿămāśa (y)*] or Amasai [Heb *ʿămāsa (y)*]. Such a name is common elsewhere in Chronicles: 1 Chr 6:10—Eng6:25; 6:20—Eng6:35; 12:19—Eng12:18; 15:24; 2 Chr 29:12. Both 1 Chronicles and Nehemiah trace his lineage back to Immer, a Levitical priest descended from Aaron through his son Eleazar (1 Chr 24:14). Amashsai and his brethren are said to have numbered 128 men.

ROGER W. UITTI

AMASIAH (PERSON) [Heb *ʿămasyâ* (עֲמַסְיָה)]. Amasiah (meaning "Yahweh carried or supported"), son of Zichri, was from the tribe of Judah and a lieutenant of Adnah, commander of Jehoshaphat's standing army (2 Chr 17:16). He stands out in this list of military commanders for his piety and altruistic motives for service. His volunteering for Yahweh's service is perhaps in contrast to the other commanders who possibly, along with the rest of the army, were conscripts (*AncIsr* 1: 231). He is said to have commanded 200,000 men. Meyers (*2 Chronicles* AB, 78, 98) suggested that these numbers are best explained by translating the Heb *ʾelep* as " (military) unit" of unknown strength rather than "thousand." Amasiah would have then commanded 200 "units."

KIRK E. LOWERY

AMAW (PLACE) [Heb *ʿammô* (עַמּוֹ)]. According to the RSV, the land "near the River" in which was located Pethor, the city from which Balaam traveled to curse the Israelites (Num 22:5). The KJV and the AV follow the MT and LXX, which read "the land of the sons of his people (*ʿammo*)" while the Syriac, Vulgate, and Samaritan versions have "the land of the Ammonites (*bene-ʿammon*)." Gray (*Numbers,* ICC, 325) suggested that MT lost the final nun and thus changed Ammon to *ʿammo.* "The River" has been taken to mean the Euphrates River. Pethor has been identified with Pitru, near Carchemish, 400 miles and 20 days' journey by camel to the N of Moab and hence a minimum of 80 days for the two round trips described in 22:7–36. Ammon, on the other hand, is easily a donkey's journey from Moab. While the Ammonites did not live by the Jordan River, it is not impossible that here "the River" is the Jordan.

Excavations in 1967 at Tell Deir ʿAlla (biblical Succoth?) in the Jordan Valley discovered a series of texts written in ink on plaster. They record the vision and interpretation of Balaam the son of Beor. While the texts date from centuries later, their contents could be from an earlier time, but in any case they reveal a Jordan Valley tradition about a diviner named Balaam. The story recorded in Numbers 22–24 may refer to the same prophet or a different one. But the Deir ʿAlla texts strengthen the translation which has Balaam coming from the Ammonite area.

Amaw, however, still has support. Deut 23:4 records Balaam as coming from Pethor in Mesopotamia. Albright (1950: 15–16 n. 13; 20) translated ʿAmau on a statue of King Idrimi excavated in 1939 by Sir Leonard Woolley at Atchana, ancient Alalakh, in Syria, near Antioch on the Orontes. The statue is dated ca. 1450 B.C. by Albright and 1375 B.C. by Woolley and Sidney Smith. The translation in *ANET* spells it Amaʾe (p. 557). Idrimi lived in the city of Emar and later ruled Halab (Aleppo), Mukishkhi, Niʾ, and Amaʾe (or Amaw). Pitru in Amaw was actually not on the Euphrates itself but on the Sajur River, a few miles from its juncture with the Euphrates. The Sajur is a tributary from the W. It is a sizable stream whose lower stretch flows between two ranges of low chalk hills. Amaw or Amau is in the valley of the Sajur, between Aleppo and the Euphrates. Pethor or Pitru is mentioned by Shalmaneser III (860–825 B.C.). Pethor as *Pe-d-rui* appears in the lists of Thutmose III (1504–1450 B.C.) who conquered Amaw. The country is also mentioned in the tomb of Qen-Amun, an Egyptian officer of Amenhotep II (1450–1425 B.C.), the son of Thutmose III. Egyptian *ʿmw* means Asiatic or Syrian. This may influence the interpretation of these Egyptian references. Similarly, some find a reference to Amaw in Exod 15:14 where RSV has "the peoples" in parallel with Philistia, Edom, Moab, and Canaan; i.e., Amaw may be listed here as another land like these others.

HENRY O. THOMPSON

AMAZIAH (PERSON) [Heb *ʾămaṣyāhû* (אֲמַצְיָהוּ)]. The name held by four persons in the Hebrew Bible. The name means "Yahu is strong" (*TPNAH* 75: 163).

1. The 9th ruler of the southern kingdom of Judah (ca. 800–783 B.C.), the son of Joash, king of Judah (ca. 837–800 B.C.).

The accounts of Amaziah's reign in Kings and Chronicles (2 Kings 14=2 Chronicles 25) are in substantial agreement, with the exception of material in Chronicles which explains Amaziah's disastrous motivation for his war with Israel and his subsequent fall (see 2 Chr 25:5–10). Scholars are in disagreement concerning the historical reliability of this material, which is unique to Chronicles.

2 Kings 14 gives Amaziah's age as twenty-five when he was made king following the assassination of his father. The length of his reign is given as 29 years with the additional synchronism in 2 Kgs 14:17 that he lived fifteen years beyond the death of Jehoahaz, king of Israel, i.e. to ca. 769 B.C. The unusual length of the reign of his son and successor Azariah (Uzziah), 52 years, has led to the suggestion that he had his son rule with him as coregent, a practice known also in Israel (Gray *Kings* OTL, 65–68; Barnes, fc., 197 n. l, m).

His father, Joash, was murdered by two of his retainers (2 Kgs 12:20–21). As soon as Amaziah's rule was secure, he had these men, who were still in royal service, executed (2 Kgs 14:5=2 Chr 25:3–4). The sources do not explain what Amaziah had to do in order to consolidate his power.

The first major recorded event of his reign which our sources report is his war against Edom. He is said to have slain 10,000 in the otherwise unknown Valley of Salt (Heb *gayĕʾ hamelaḥ*), the location of which is uncertain. The Arabah just S of the Dead Sea has been proposed (*LBHG*, 313), as has the *Wadi Milh* E of Beer-sheba (Gray *Kings* OTL, 605).

Amaziah then took Sela and renamed it Joktheel. The identification of Sela with the later site of Petra was first given in LXX and later accepted by Eusebius (*Onomast.* 36.13; 142.7; 144.7). This identification has been accepted by many scholars (Avi-Yonah *EAEHL*, 943) although contested by Haram (1968: 201–12). Aharoni has proposed *es-Sela* (*LBHG*, 37).

In addition to the 10,000 slain in the Valley of Salt, 2 Chr 25:37 adds that Amaziah slew an additional 10,000 by throwing them from the cliffs above the valley. This detail is repeated by Josephus (*Ant* 9 §191).

Following his successful clash with Edom, nothing more is recorded of any Judean expansion to the S or E. The consolidation of Judean control of the S end of the King's Highway as far as Elath had to wait until the reign of Amaziah's son and successor Azariah (2 Kgs 14:22).

For reasons which are unclear, Amaziah challenged Jehoash, king of Israel, to battle. They met at Beth-shemesh in Judah, E of Jerusalem, where the Judean army was routed and Amaziah taken prisoner. He was taken to Jerusalem, where Jehoash broke down a portion of the N wall and plundered both the palace and the temple. Jehoash returned to the N, taking with him hostages to ensure Amaziah's good behavior.

While the origin of this dispute is not given in the account in 2 Kings 25, 2 Chronicles 14 adds that mercenaries from Israel hired by Amaziah for his war with Edom, but then released prior to the battle, vented their anger at being denied the chance for plunder by plundering some Judean villages on their way home. Amaziah, angered by this, then declared war on Israel. Another possibility is that the conflict began as a border dispute, or that it began over control of the W terminus of the trade routes leading to the Gulf of Aqaba. A combination of the latter two possibilities seems likely (Gray *Kings* OTL, 608).

Amaziah, like his father, fell victim to an assassination plot. Our sources record that, although he fled from Jerusalem to Lachish in order to escape, he was handed over to the conspirators and killed. His body was brought up to Jerusalem on a horse, an act of disrespect, where he was buried with his ancestors in the city of David.

2. The priest at the N, royal sanctuary of Bethel during the reign of Jeroboam II (ca. 786–746 B.C.). He attempted to expel the prophet Amos from the temple there, forbidding him to prophesy in the N kingdom and reporting his pessimistic oracles, which were weakening the land, to the king (Amos 7:10–17).

3. The son of Hilkiah and father of Hashabiah, a descendant of Merari son of Levi. 1 Chr 6:31–47 is a text which is concerned with presenting the legitimacy of the office and descent of the Levitical singers. The appointment of temple singers is here traced back to the reign of David after he brought the ark to Jerusalem.

4. Father of Joshah, and a descendant of Simeon mentioned in 1 Chr 4:34.

RUSSELL FULLER

AMEN [Heb *ʾāmēn* (אָמֵן)]. Within the Hebrew Bible, "Amen" typically appears at the close of commands, blessings, curses, doxologies, and prayers. Fundamentally, it is used to confirm what has been said before, by way of response (Num 5:22; Deut 27:15–26; 1 Kgs 1:36; Jer 11:5; 28:6; 1 Chr 16:36; Neh 5:13; 8:6). That it acquired the status of a formal response at an early period is shown clearly by Jer 28:6, where the prophet appears to confirm that Hananiah has said, by a conventional usage of "Amen," and then proceeds to contradict it. The majority of usages already cited appear in public, often liturgical contexts, so that the responsive usage in Psalms comes as no surprise (Pss 41:13; 72:19; 89:52; 106:48). The last usage is—together with 1 Chr 16:36; Neh 5:13; 8:6—especially instructive, as "the people" are explicitly instructed to say "Amen" (and "Hallelujah," rendered "Praise the Lord" in the RSV). In function and formal usage, "Amen" serves to confirm what has gone before, usually—but not exclusively—in public, liturgical contexts of divine praise. The usage of 1 Kgs 1:36 (cf. also Isa 65:16) establishes the idiomatic, nonliturgical origins of the usage.

The translation of the word has proved problematic, although its function is straightforward. The verbal *ʾmn* is associated with several meanings in its various forms, from "support," "be faithful" (*Qal*) through "sure," "established" (*Nipʿal*), to "stand firm," "believe" (*Hipʿil*). A meaning such as "truly," "surely," or "so be it," seems clear, although none of those renderings entirely captures the nuance of the Hebrew. Within the manuscripts of the LXX, there is a notable variety of renderings of Heb *ʾāmēn.* Predominantly, "so be it" (*genoito*) is the preferred rendering (Num 5:22; Deut 27:15–26; Jer 11:5). But "truly" (*alēthôs*) is also possible (Jer 35:6 LXX), and there are several occasions (1 Chr 16:36; Neh 5:13; 8:6 [the latter two being 2 Esdr 15:13 and 8:6 in the LXX]) when Heb *ʾāmēn* is simply transliterated as *amēn.* 1 Esdr 9:47 and Tob 8:8 demonstrate that the transliteration had gained some currency in the Greek-speaking circles for which the Septuagint was intended; the latter passage also shows the propriety of "Amen" within private prayer. Just as the development of a generic affirmation into a public, often liturgical, response is attested in the Hebrew Bible, the LXX reveals a tendency for the word to be used in other religious contexts. Notably, there is even support among some manuscripts of the LXX to close books with a solemn "Amen" (Tobit, *3* and *4 Maccabees*).

Generally speaking, the use of "Amen" within the NT is predictable, once the evidence of the Hebrew Bible and the LXX is taken into account. Pauline habits in this regard are representative, as he uses "Amen" to round off blessings and doxologies (Rom 1:25; 9:5; 11:36; 15:33; Gal 1:5; Phil 4:20). He also uses it to confirm his own prayers by way of closing his letters, although some of the usages (in 1 and 2 Corinthians and Romans) are probably scribal additions. But in both the range of its usage and the variety of its manuscripts, the Pauline corpus stands within the precedents of the LXX, although Pauline usage is both more frequent and more consistent than is the LXX. Paul also gives some hint of the reason for this greater frequency and consistency when he refers to "Amen" as a liturgical response of the church in Corinth (1 Cor 14:16; cf. 2 Cor 1:20).

Pauline usage is also consistent with that of the deutero-Pauline corpus, as well as of the Pastorals (Eph 3:21; 1 Tim 1:17; 6:16; 2 Tim 4:18; Heb 13:21). The ubiquity of "Amen" was by no means limited to the Pauline circle, as much the same usage can be encountered in 1 Pet 4:11; 5:11; Jude 25, and such passages could be augmented by means of reference to variant readings. Revelation might particularly be noted, however, as evidencing a liturgical, responsorial usage in early Christian worship (1:6, 7; 5:14; 7:12;

19:4; 22:20); indeed, Jesus Christ can here be known as "the Amen," because his witness is sure (3:14). Such a development is innovative, but in line with the liturgical and christological tendency of the document.

Curiously, the only oddity of usage within the NT (as judged in comparison with the Hebrew Bible and the LXX) is attributed to Jesus himself. Instead of a responsive, liturgical usage, Jesus presents "Amen" as introductory and asseverative, in the form "Amen, I say to you …" (Matt 5:18 plus 73x in the gospels). The agreement among the gospels in respect of this diction becomes all the more striking when certain deviations in Luke and John are explained. Luke's relative infrequency is mitigated by his use of "truly" (*alēthôs*) and "in truth" (*ep› alētheias*) as a virtual equivalent of *›āmēn* (4:25; 9:27; 12:44; 21:3). The LXX is commonly appealed to by way of precedent for Luke's procedure, and "truly" clearly conveys the sense of "Amen," but the translation is syntactically sensitive. The introductory position of *›āmēn* makes the natural equivalent in Greek (*genoito*) impracticable, with the result that Lukan style is at this point scarcely Septuagintal. The Johannine doubling *Amēn amēn* (John 1:51, etc.) is normally said to be liturgical, and in this instance the usage of the Hebrew Bible and the LXX does appear to be antecedent.

The mystery remains: why should an unusual, introductory, and asseverative usage be ascribed to Jesus, when the normal usage of "Amen," even within the NT, is responsive? A straightforward answer to that question was provided by Joachim Jeremias, who argued that Jesus himself employed well-known language in a radically fresh way, in order to assert in advance the authority of his pronouncements. As is frequently the case in his work, Jeremias proceeds by comparing dominical diction with rabbinic conventions (Jeremias 1971: 35–36) and concludes that deviations of the former from the latter are hallmarks of Jesus' own message.

Such an approach remains widely represented and particularly serves the interests of those who argue that Christianity in some sense transcends Judaism. In this particular case, Jeremias' argument has encountered two obstacles. First, it has been suggested that there is some precedent, prior to Jesus, for introductory "Amen" (Strugnell 1974). Indeed, some of the uses within the Hebrew Bible may be so described (1 Kgs 1:36; Jer 28:6) and may be among the best examples of the usage with its basic meaning. Even in such cases, however, although the usage is introductory within dialogue, it is in fact responsive to a previously established statement. It is the proleptically asseverative function of Jesus' use of "Amen" which makes it appear unusual. To that extent, Jeremias' argument may be justified, although it also must be refined somewhat. The second challenge of Jeremias' position is far more radical. K. Berger has attacked the consensus that "Amen" is essentially a locution of Hebrew-speaking Judaism. He urges the view that, on the turf of Hellenistic Judaism, Hebrew "Amen" was used with the introductory function of *ē mēn* in Greek. This usage, he argues, was taken up within Christian communities to mark the faithful transmission of tradition (Berger 1970: 72, 93, 147, 151, 159–63).

The evidential basis of Berger's case is slender. Chiefly, he relies upon the introduction, "Amen, I say to you," in the *T. Ab.* 8:7 (Berger 1970: 15). What is crucial for Berger is that the introduction precedes a quotation of Gen 22:17, which commences with *ē mēn* in the LXX. Such evidence falls far short of constituting an analogy to the ubiquity of asseverative "Amen" in the gospels, but it does at least establish that the idiom is meaningful within the context of Hellenistic Judaism. In any case, as Berger admits (1972: 47–50), the usage in the *T. Ab.* is certainly not to be seen as an antecedent of dominical usage in the gospels. Neither the date nor the tradition history of the document admits of such a conclusion (Sanders *APOT* 1: 871–81). But Berger successfully explodes any confidence that introductory "Amen" must be seen as an instance of Semitism, and he raises the possibility that the idiom is at home within Hellenistic, Greek-speaking Judaism.

A mediating point of view has been articulated by B. D. Chilton, on the basis of the Old Syriac gospels and Targumic diction (Chilton 1978). The Syriac versions are of interest, in view of the relatively close relationship between that language and the Aramaic of 1st-century Palestine. Curiously, the Old Syriac gospels simply read *›myn* where *amēn* appears in the Greek, but there are occasions when the term is omitted. That would tend to support Berger's contention, in that it makes "Amen" appear more natural in Greek than in Syriac. On the other hand, the Syriac versions also suggest that another introductory

asseveration analogous to *amēn* in the Greek gospels survived from Aramaic. The locution in question is "in truth" (Syr *bqwšṭ*), an unusual usage in the Syriac gospels but a common expression in Aramaic. It appears, for example, at Gen 3:1; 17:19; 18:13; 20:12; 42:21 in *Targum Onqelos*, corresponding to a variety of introductions in the Hebrew and Greek texts; similarly, it occurs at *T. Isa.* 37:18; 45:14, 15. *T. Isa.* 37:18 is of special interest, because *mnm* (which is closely related to "Amen") is the corresponding term in Hebrew, while "in truth" (*epi alētheias*) appears in Greek (cf. also Gen 18:13; 20:12 LXX). The clear possibility emerges that "Amen" in the gospels represents "in truth" in the Aramaic tradition of Jesus' words, as Luke's presentation at 4:25; 9:27; 12:44; 21:3 would also suggest.

Introductory and asseverative "Amen" in the gospels may therefore represent dominical usage, but not in the direct manner Jeremias suggested. The Aramaic assurance, "in truth," was transformed within Hellenistic circles steeped in the language of Judaism and became "Amen." That added weight to the authority and liturgical impact of Jesus' sayings, and conveyed the theological conviction that the one who spoke was sufficiently credible as to be called "the Amen" (Rev 3:14).

BRUCE CHILTON

AMERICAN SCHOOLS OF ORIENTAL RESEARCH, HISTORY OF THE.

A. Beginnings: 1900–18

During the 19th century only a handful of Americans were engaged in archaeological research centering on the ancient Near East; most notable among them was Edward Robinson, explorer-biblical scholar, whose travels in the Holy Land signaled a new era in the topographical study of that part of the world. It was only at the turn of the century that Americans became involved in a concerted way; the year 1900 marked the establishment in Jerusalem of the American School for Oriental Study and Research, shortened later to the American Schools of Oriental Research; it is even better known today by the acronym ASOR.

Sponsored by three similar professional organizations—the American Oriental Society, the Archaeological Institute of America, and the Society of Biblical Literature—ASOR came into being; but the individual most responsible for the establishment of ASOR was J. Henry Thayer, professor of NT at Harvard. As president of the Society of Biblical Literature, he advocated strongly that such action be taken and worked tirelessly to make it happen.

According to ASOR's original constitution, "The main object of said School shall be to enable properly qualified persons to prosecute Biblical, linguistic, archaeological, historical, and other kindred studies and researches under more favorable conditions than can be secured at a distance from the Holy Land."

In the summer of 1900, Charles C. Torrey of Yale went to Jerusalem to set up ASOR's first overseas institute; he also served as its director during that academic year. ASOR's original quarters in Jerusalem consisted of only one large room in the Grand New Hotel (today, the New Imperial Hotel), in the vicinity of the Jaffa Gate. Torrey's first objective, shared by all his successors, was to build a research library for the School.

From 1900 to the beginning of World War I the School was managed by annual directors, who were scholars in one or another aspect of Near Eastern studies, including the Bible. However, they had no firsthand contact with the Near East. Thus, they spent most of their time familiarizing themselves with the land and visiting historical sites, and consequently had little opportunity to develop a coherent academic program for the School. Nonetheless their presence during those early years marked an important beginning for the School.

When David G. Lyon of Harvard was director of the School in 1906, he secured permission from the Ottoman government to excavate the site of ancient Samaria, situated near the modern village of Sebastiyeh. This Harvard-sponsored project was the first American dig conducted in Palestine. George A. Reisner, prominent Egyptologist, played a leading role in this undertaking; at the same time he set the standards for archaeological method and recording in Palestine, thereby influencing all future archaeologists.

James A. Montgomery of the University of Pennsylvania, director of the School immediately before the outbreak of World War I, was forced to leave Jerusalem after only three months. The activities of the School in Jerusalem were at a standstill for the remainder of the war. Montgomery continued to exercise great influence on the affairs of the School from Philadelphia, eventually being elected ASOR's first president (1921–34).

B. Between the Wars: 1919–45

The School in Jerusalem reopened in 1919. That same year saw the appearance of the *Bulletin of the American Schools of Oriental Research (BASOR),* today a leading journal in the field of Near Eastern archaeology, edited successively by Montgomery, William F. Albright, Delbert R. Hillers, David N. Freedman, William G. Dever, and Walter E. Rast. In 1921 when the American Schools of Oriental Research was legally incorporated, "Schools" was deliberately pluralized to make room for other institutes that might eventually be established in the Near East.

The most prominent name associated with the Jerusalem School in the 1920s, as well as with ASOR for the next five decades, was William F. Albright, who was director of the School from 1920 to 1929, again from 1933 to 1936. When he completed his directorship in Jerusalem, Albright returned to America and became the W. W. Spence Professor of Semitic Languages at Johns Hopkins University.

Under Albright the Jerusalem School became an important research center, as well as a base for archaeological excavations. The field trips conducted by Albright have become legendary; during such trips the participants collected artifacts of all kinds, including pottery, and did limited surveys of selected sites. Albright brought to bear on these trips his extraordinary knowledge of philology, geography, pottery, and several other specialties, to the great benefit of his traveling companions.

Albright also conducted excavations, beginning at Tell el-Ful (Gibeah) in 1922. Between 1926 and 1932 Albright excavated at Tell Beit Mirsim, 12 miles SW of Hebron. Classifying the stylistic changes in potsherds at Tell Beit Mirsim, Albright constructed a ceramic typology, which he correlated with the stratigraphy of the tell. Through a combination of stratigraphy and typology, the two basic techniques of the archaeologist, Albright established the pottery chronology for Palestine. In 1927 and 1934 he directed the excavations at Bethel, one of the cities most frequently mentioned in the Bible.

Because many ASOR members had great professional interest in ancient Mesopotamia, Baghdad was chosen as the site of ASOR's second overseas institute. George A. Barton of the University of Pennsylvania was its first director, and Albert T. Clay of Yale the resident professor. Formally inaugurated in 1923, this School was the first American research institute in Baghdad. Because it lacked its own building, the American consulate provided office space for the Baghdad School. By 1925 the Jerusalem School was housed in permanent quarters, but the Baghdad School has never had its own residence.

Initially the Baghdad School conducted archaeological surveys, in addition to detailed study of all the excavated sites. Excavations were also undertaken by Americans at such well-known sites as Yorghan Tepe (Nuzi), Khorsabad, Tepe Gawra, and Tarkhalan.

Meanwhile the Jerusalem School continued to sponsor excavations at such sites as Tell en-Nasbeh (Mizpah), Gerasa (Jerash), Beth-zur, and Beth-shemesh.

The next long-term director of the School in Jerusalem, after Albright, was Nelson Glueck, who served in the 1930s and '40s, a period marked by serious political disturbances. While director of the Jerusalem School, Glueck inaugurated the *Newsletter,* an informal account of current projects; it has become an integral part of ASOR's publications program.

Glueck was a scholar-explorer in the tradition of Edward Robinson. Having learned excavation method and pottery chronology from Albright at Tell Beit Mirsim, he was well prepared for the monumental explorations he undertook in Transjordan and the Negeb; in all, he surveyed more than 1500 sites. Many of his conclusions have withstood the test of time, even though more sophisticated methods have been developed meanwhile.

Second only to Albright among the leading ASOR figures was G. Ernest Wright of Harvard. Although he was more prominent in ASOR after World War II, already in 1938 he launched the *Biblical Archaeologist (BA),* ASOR's popular quarterly. Never content to be an ivory-tower scholar, Wright was eager to communicate to the interested nonspecialist the results of scientific research. It is a special tribute to Wright that in 1987 the *Biblical Archaeologist* celebrated its golden jubilee. Subsequent editors, including Edward F. Campbell, H. Darrell Lance, David N. Freedman, and Eric M. Meyers, have maintained the high standards set by Wright.

C. A Decade of Development: 1945–55

In this postwar era archaeology continued to develop as a scientific discipline. Individual excavations were overshadowed, however, by the accidental discovery of the Dead Sea Scrolls, the most exciting event in the history of biblical archaeology. ASOR played its role in the identification and ongoing decipherment of these texts through the scholarly efforts of John C. Trever, Millar Burrows, William H. Brownlee, Frank M. Cross, and a host of other epigraphists, archaeologists, and biblical specialists.

After the inevitable disruptions caused by World War II in both Syria-Palestine and Iraq, the Baghdad School undertook a new phase of excavations at Nippur, which continued for 25 years. Albrecht Goetze of Yale directed the Baghdad School after the war and was responsible for founding in 1947 the *Journal of Cuneiform Studies (JCS),* a scholarly review of the literature, languages, and cultures of ancient Mesopotamia. The Baghdad School also participated in several surface surveys in Iraq, notably those under the supervision of Robert McC. Adams of the University of Chicago.

D. An Era of Expansion: 1956–67

The most significant American undertaking of this period was the Shechem excavations in central Palestine, under the direction of G. Ernest Wright, who combined stratigraphic digging and daily ceramic analysis with a detailed recording system. Shechem was the training ground for prospective American archaeologists; almost every later excavation, including Gezer, Hesi, Shema, Lahav, and Idalion (in Cyprus), reflected the influence of the Shechem expedition.

Another prominent ASOR figure was James B. Pritchard, associated with the University Museum of the University of Pennsylvania. In this era he excavated three important sites: el-Jib (Gibeon), Tell es-Saidiyeh (Zarethan), and Sarafand (Zarephath). Joseph A. Callaway of the Southern Baptist Theological Seminary excavated at et-Tell (biblical Ai) between 1964 and 1972. Apart from its merit as an exemplary field project, this dig demonstrated that archaeology and the biblical text are sometimes in conflict. The lack of artifactual evidence from the Late Bronze Age (1550–1200 B.C.) at this site makes it difficult to reconcile the traditional date of the "conquest" of Canaan, as recounted in the book of Joshua, with the archaeological record.

One of the most promising American archaeologists of this period was Paul Lapp, another long-term director of the Jerusalem School, whose career was cut short by a drowning accident in 1970. Before the tragedy he had already excavated at seven sites, including Araq el-Emir, Taanach, and Bab edh-Dhra. He has been accurately described as "the outstanding Palestinian archaeologist of his generation."

In 1964, G. Ernest Wright led a small expedition to Gezer in Israel but soon turned the project over to his students, William G. Dever and H. Darrell Lance. Applying what they had learned at Shechem, and at the same time introducing some new techniques, the Gezer staff fielded a quality dig. Hundreds of American volunteers were initiated into archaeology at the Gezer field school; several of them have become directors of their own excavations.

E. The Modern Period: 1967–85

In the aftermath of the 1967 Arab-Israeli War, ASOR established an institute in Amman to provide for American archaeology in Jordan. The newly erected international boundaries along the Jordan River

prevented the Jerusalem School from filling that role, as it had done in the past. In response to the political reality, the institutes in Jerusalem and Amman were separately incorporated; the Jerusalem School was renamed appropriately the W. F. Albright Institute of Archaeological Research (AIAR), while the Amman School was named the American Center of Oriental Research (ACOR). Among the fine directors of ACOR, James A. Sauer deserves to be singled out; more than any other, he shaped the destiny of this center. As a result, ACOR has become a leading research center in Jordan. Sauer also led surveys, advised the Department of Antiquities, and lectured regularly in the University of Jordan.

ACOR has sponsored several excavations in Jordan; among the more significant are the ongoing dig at Bab edh-Dhra directed by Walter E. Rast and R. Thomas Schaub, as well as the long-term project at Tell Hesban, under the direction of Siegfried H. Horn, and later Lawrence T. Geraty of Andrews University, with Roger S. Boraas as chief archaeologist. In conjunction with the excavation of this latter site, a regional survey was conducted. Incorporating new techniques, this project was a model of interdisciplinary research and environmental studies.

Beginning in 1971, William G. Dever became the fourth long-term director of the Albright Institute. Building on the achievements of his predecessors, he expanded the archaeological facilities and the academic program of AIAR. His long-term successor, Albert E. Glock, continued these programs, and the current director, Seymour Gitin, has further developed them.

In addition to sponsoring traditional excavations relating to the Bronze and Iron Ages, both AIAR and ACOR are expanding the temporal horizons by digging sites that fit in both early (e.g., prehistory) and late (e.g., early Judaism, the beginnings of Christianity, and Islam) on the archaeological time scale.

ASOR has also expanded its traditional geographical boundaries. Prevented by civil war from digging in Lebanon, ASOR pursued the Phoenicians at two of their principal colonies—Cyprus and Carthage. To facilitate excavation, ASOR established a temporary institute at Carthage and a permanent one in Nicosia, called the Cyprus American Archaeological Research Institute (CAARI). Anita Walker of the University of Connecticut was its first director, followed by Ian Todd of Brandeis, and Stuart Swiny.

Because the land of Syria and its cultural heritage are central to ASOR's interests, Damascus would be an ideal place to establish a research institute. Few countries in the Near East can match the archives at Mari, Ugarit, and Ebla, all in Syria. Efforts to have a center in Syria have thus far not been successful, but ASOR maintains a cordial relationship with Syrian archaeologists and has also conducted limited excavations and surveys in Syria.

After World War II archaeological field method, including the techniques of retrieval and recording, improved considerably; by 1970 the method became far more sophisticated. The most obvious development is in the composition of the dig staff; today, both natural and social scientists are present in the field alongside the archaeologists. In the past the primary concern was with events such as warfare and conquest, which constitute political history. Today's objective is to recover every aspect of the ancient people's daily life, including their social organization, economic structure, population expansion, and trade patterns. Natural and social scientists, especially anthropologists, are rendering invaluable assistance to archaeologists as they pursue this holistic approach.

To guarantee that ASOR-sponsored projects meet the standards set by the new technology, the Committee on Archaeological Policy was instituted to oversee all field work. As first chairman of this committee, Edward F. Campbell, with the able assistance of Michael D. Coogan, played a substantial role in raising the standards of ASOR's digs. As Campbell's successor, William G. Dever has continued to insist upon professionalism in all aspects of ASOR's archaeological projects.

On the occasion of ASOR's 85th birthday in 1985, its members rejoiced in the accomplishments of the organization; at the same time they were vitally aware of how much remains to be done. The achievements are the result of innumerable scholars, many of them anonymous (as in this article), working together. Only cooperative effort of this kind will insure the success of ASOR in the years ahead.

AMERICAN VERSIONS. See VERSIONS, ENGLISH (AMERICAN VERSIONS).

AMI (PERSON) [Heb *ʾămî* (אֲמִי)]. A variant form of "Amon" in Ezra 2:57, it is therefore also the RSV rendering of the Gk *Allōn* in 1 Esdr 5:34. For both, see AMON (PERSON).

AMITTAI (PERSON) [Heb *ʾămittay* (אֲמִתַּי)]. According to 2 Kgs 14:25 and Jonah 1:1, the father of the prophet Jonah. Noth (*IPN,* 162) suggested that the name is a shortened form of a nominal sentence using the Hebrew word for "truth" or "faithfulness" (*ʾemet*). Thus it means literally "my truth" or "my faithfulness," but that presumably stands for "God is my truth" or "God is my faithfulness."

RICHARD D. WEIS

AMMAH (PLACE) [Heb *ʾammâ* (אַמָּה)]. A hill E of Gibeon that lies "before Giah on the way of the wilderness of Gibeon" (2 Sam 2:24) that descends to the Jordan Valley. On the evening of the battle at Gibeon between the men of Israel and the servants of David, Joab (David's captain) and his brother Abishai came to this hill at sunset while pursuing Abner (Israel's captain). Abner and his men were fleeing toward the Jordan River and the city of Mahanaim. While the location of Ammah has not been conclusively identified, scholars have speculated about its location. This speculation is based on both linguistic analysis and practical geographic considerations. The Hebrew word *ʾammâ* may come from the Akk *ammatu,* cubit or foundation (Borée 1930: 35). In Rabbinic Hebrew, however, *ʾammâ* can mean a canal for water or a sewer (*m. Šabb.* 3:4; *Kil.* 3:2). Though the LXX transliterates the name of the hill as *Amman,* both Aquila and Theodotian translate the Hebrew word *ʾammâ* as *hydragōgos* (a water lead or channel). The Vulgate likewise provides *aqua ductus* as a translation. Since Giah (Heb *gîaḥ*) may indicate a spring (from the verb *gîaḥ,* to burst forth), one could conclude that the hill, Ammah, was a hill with a water channel related to the water source, Giah. The LXX, however, transliterates *gîaḥ* as the proper name *Gai,* a transliteration of the Hebrew word *gayʾ* (valley). Aquila and Theodotian translate it as *pharaggos* (chasm, ravine, or gully), and the Vulgate translates it as *vallis* (valley). This has led investigators to conclude that Giah is a valley and that Ammah stands at its side (*EncMiqr* 2: 419). Press (1951: 158) identified this valley as Sahel Geba, which is E of Gibeon and lies S of Wadi Suweinit, which separates Geba (modern Jebaʿ, M.R. 175140) from Michmash (modern Mukhmas, M.R. 176142). See also GEBA. Along the side of the valley there is a cave called Heb *maʿārat ʾl gāyâ.* According to Press, the earlier name of the valley continues in the name of this cave. It is true that Sahel Geba lies along a possible route that Abner may have taken to reach the Jordan Valley, but in order to accept it as an accurate identification one must assume that the common word for valley, *gayʾ,* was replaced, in the text, by the rare form *gîaḥ.* Scholars have, therefore, not agreed upon a place identification for Ammah. It is accepted that Ammah lies somewhere E of Gibeon on what the text calls "the way to the wilderness of Gibeon." Aharoni (*LBHG,* 60) identified "the way to the wilderness of Gibeon" as a branch of the "way of the wilderness" that ran more or less along the traditional boundaries between Benjamin and the House of Joseph (Josh 16:1–2; 18:12–13).

SUSAN E. MCGARRY

AMMAN (M.R. 238151). The capital city of the modern Hashemite kingdom of Jordan, situated in the Transjordan tableland E of the Jordan Rift Valley. Archaeological explorations in the environs of the city have revealed evidence of its character in biblical times. In OT times the city was known as "Rabbah of the Ammonites," while through the Hellenistic-Roman period it was known by the name "Philadelphia." Modern Amman thus overlies the classical Philadelphia, which in turn overlies OT Rabbah of the

Ammonites. Indeed, the springs that still provide water to Amman have made this place a site of habitation since Paleolithic times.

A. Description

During the last few decades, the city has grown out of all proportion, and an important part of downtown Amman has been built on the major ruins of the Roman city in an area less than 2 sq. km. Its well-preserved buildings and striking features of its Roman town plan show the various aspects of Roman art and engineering.

The old city consists of an upper and a lower section. See Fig. AMM.01. The former is built on a prominent hill and constitutes the acropolis (now the Citadel) of the city. This hill is a strategic natural L-shaped oblong plateau overlooking the forum area in the lower section to the S. It consists of two rectangles of unequal dimensions. Steep wadis surround the acropolis on all sides except on the N, where the acropolis was separated from the rest of the hill by an artificial depression. The acropolis area itself rises from E to W in three terraces. From very early times this hill had been a fortress of great importance. The lower city is associated with the wadi bed below and to the S of the acropolis; the *Seil Amman* divides this lower area into two long narrow strips of land. In Roman times, streets, public buildings, and a forum were built along this wadi bed.

B. The Ammonite Period

The Iron Age, or Ammonite period, is well represented throughout the city of Amman. These remains attest the Ammonite capital city of Rabbah, where David sent Uriah the Hittite, husband of Bathsheba, to die in battle (2 Sam 11:14–21). On the Citadel, building remains and artifacts were located on the upper and lower terraces. An early 9th-century Ammonite inscription in Aramaic was discovered outside the walls of the Citadel and is believed to have been a royal record of a magnificent building scheme which was undertaken at Rabbath Ammon (i.e., Amman). It is one of the most important stone inscriptions yet found in the area from a linguistic and paleographic view. Some scholars see in it a closer relationship between Ammonite and Hebrew than between Moabite and Hebrew prose in the 9th century B.C. (*BASOR* 193: 2f.; *BASOR* 198: 38f.). Another Ammonite inscription was found on a small bronze bottle discovered at Tell Siran near Amman. The inscription speaks of vineyards, gardens, and cisterns which belong to the time of two Amminadabs, kings of the Ammonites in the 7th century B.C. (*ADAJ* 18: 5; *BASOR* 212: 14; *Berytus* 22: 115f.; *BA* 37: 13f.).

Many Iron Age tombs discovered in the vicinity of Amman contained a good range of pottery objects, anthropoid coffins, figurines, various seals, jewelry, and mirrors (*QDAP* 11: 81; *ADAJ* 11: 41f.; *ADAJ* 20: 57f.; *ADAJ* 16: 91f.; *AUSS* 9: 179f.). Ammonite pottery, as all Iron Age pottery of E Jordan, shows a highly developed industry. Much of this pottery is covered with red or brown slip, highly polished, and often decorated with bands of dark brown paint and sometimes with bands of white paint between them (*AJA* 36: 295f.; *QDAP* 11: 67f.; *QDAP* 13: 92f.; *QDAP* 14: 44f.; *APEF* 48f.). In plastic art, the Ammonites show an advanced stage in this field. Historically important are a group of clay figurines which represent a horse-and-rider type and a small statue in limestone bearing the inscription in Aramaic, "Yarah‹azar, chief of the horse," which indicate the existence of Ammonite cavalry apparently modeled on Assyrian cavalry (*QDAP* 11: 67f.; *ADAJ* 1: 34f.).

C. The Classical Period

In the Hellenistic period the city was renamed Philadelphia to honor Ptolemy II Philadelphos, the Hellenistic ruler of Egypt (285–247 B.C.). In 218 B.C. it was captured by Antiochus III the Great, the Hellenistic ruler of Syria. For about a century before the Roman conquest of the Near East, Amman belonged to the Nabataeans. When Pompey conquered Syria and Palestine (ca. 63 B.C.), Philadelphia became the southernmost member of the Decapolis. In 106 A.D., it became a city in the Roman province of Arabia. Situated on the magnificent Via Nova Traiana which joined Bosra with the Red Sea, Philadelphia enjoyed a long period of prosperity during the 2d century A.D.

1. The Acropolis. On the acropolis close to the S wall was built a temple dedicated to Hercules. See Fig. AMM.02. Only part of its podium and the column bases of the *pronaos* remain *in situ.* Apparently the temple was *prostyle tetrastyle* with one column on either side of the portico. The antae, which were

made of half columns, terminate in rectangular pilasters set at the angles of the cella wall. The podium on which the temple was erected is a rectangle 8 m × 19 m. A fragmentary inscription discovered in the debris around the temple indicates that it was built during the reign of Marcus Aurelius (169–80 A.D.). Partial excavation near the temple shows that it was built on the site of a sacred rock which, as shown by pottery finds, has quite a long history, beginning in the EB Age (ca. 3000 B.C.).

Recognizing its strategic value for the region of Amman, the Romans rebuilt the ancient fortress on the acropolis and surrounded it with massive walls which rank among the finest of ancient fortifications. These walls consist of lower courses which incline inward in steps of heavy, well-jointed, rusticated stonework with drafted edges overlaid by a wall of smooth square stones of excellent quality.

2. The Lower City. Along the N bank of the *Seil Amman* ran the colonnaded street and on the E end was a monumental gateway. Another monumental gateway apparently led up to the temple on the hill. South of the *Seil* were situated the forum, the theater, the odeon, and the nymphaeum. See Fig. AMM.01.

The forum is bordered by porticos on three sides and closed on the N by the bend in the *Seil* and the colonnaded street beyond. The forum and porticos constitute an irregular ensemble in the form of a trapezoid rather than a rectangle. Including the colonnades, the forum measures 100m on the S side, 48 m on the W, and 50 m on the E side. See Fig. AMM.03. The total area of the forum is approximately 7620 sq. m. Thus, the forum at Amman ranks among the largest of Roman imperial fora.

The theater is located against a natural recess at the foot of a rocky hill to the S of the forum. The *cavea* was apparently at least partially hollowed from the hillside and the artificial portions were built upon masses of stonework and barrel vaults. The theater is semicircular in plan with three horizontal divisions of seats. The external diameter of the auditorium is 85 m and its internal diameter is 40 m. The height of the theater from the ground in front to the top of the back wall is about 25 m. Numismatic evidence indicates that the theater was built in the middle of the 2d century A.D.

The odeon is semicircular in plan with a stage building that is connected with an outer wall by a barrel-vaulted passage with a corner tower at each end. The *cavea* is oriented to the W and is built up entirely from ground level of well-dressed blocks of limestone sometimes bossed and drafted especially in the interior sections. The external diameter of the *cavea* is 38 m and its internal diameter is 22 m. Stratigraphic as well as stylistic evidence indicates that the odeon was built in the first quarter of the 2d century A.D.

The nymphaeum, which lies farther SW, is very close to the point where a small branch of the *Seil Amman* flowing from N to S empties into the main stream. Unfortunately, it is presently impossible to determine the actual extent and complexity of the building, since today the area is jammed with modern structures which have sadly encroached upon the ancient remains. The dimensions and architectural elements of the existing S wall indicate that the building was truly monumental. This wall is built in the form of a half octagon with three large apsidal recessions, each flanked by small niches. The center apse measures 8.5 m in width and each of the side apses is 5.5 m wide. The width of each of the small niches is 1.25v. The order of the colonnade which originally ran parallel to the four sides of the wall was Corinthian. The nymphaeum was built in the 2d century A.D.

ADNAN HADIDI

AMMIDIANS [Gk *Ammidioi* (Ἀμμιδιοι)]. A family returning from exile in Babylon with Zerubbabel (1 Esdr 5:20). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles. Omissions like this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and persons described in 1 Esdras have cast doubt on the historicity of the text. Heltzer (1977: 64–

65) has argued that the name of this family's progenitor was Heb *ʿmdyh.* (See also Myers *1–2 Esdras* AB.)

MICHAEL DAVID MCGEHEE

AMMIEL (PERSON) [Heb *ʿammîʾēl* (עַמִּיאֵל)]. Var. ELIAM. The name Ammiel is a compound of the Hebrew words *ʿam* ("people, relatives") and *ʾel* ("God"), thus signifying "My kinsman (relative?) is God." The name was given to four different OT individuals.

1. A son of GEMALLI, Ammiel represented the tribe of Dan among the twelve men Moses sent to spy out the land of Canaan (Num 13:12). Though not the head of the tribe of Dan (cf. 7:66), he was one of its leading members (13:2, 3) and was no doubt selected because of his suitability for the mission to be carried out.

2. The father of MACHIR, who hid MEPHIBOSHETH, the son of Jonathan, from David in his house at Lo-debar (2 Sam 9:4, 5), located east of the Jordan River somewhere near Mahanaim. The people in this exposed region, in constant peril of raids from the E and the N, appear to have been supportive of strong central governments which could provide protection and, therefore, were opposed to insurrections such as those of David and later Absalom. Thus Ammiel and his family were strong supporters of Saul and his son Ishbosheth, who set up his throne at Mahanaim. Machir became loyal to David after Ishbosheth's death, possibly because of his kindness toward Mephibosheth, and is listed as one of the three individuals who brought provisions to David in exile at Mahanaim during Absalom's rebellion (17:27). The fact that Ammiel is mentioned in 2 Samuel 17 is a clue that Machir's considerable wealth may have been inherited. Mauchline (*Samuel* NCBC, 243), infers that the family belonged to the tribe of Manasseh.

3. The father of BATHSHUA (a phonetic variation of BATHSHEBA), one of David's wives, and thus the grandfather of Solomon (1 Chr 3:5). In a parallel text, 2 Sam 11:3, the two parts of his name are transposed into Eliam, which means "My God is a kinsman." McCarter (*2 Samuel* 285) proposes that the mention of a married woman's father implies that Ammiel/Eliam (see ELIAM) was an important man. It is an unlikely possibility that the father of Bathshua and the father of Machir were the same person, which could explain Machir's change of heart toward David. If that is true, and Hertzberg (*Samuel* OTL, 309–10) is also correct that Ammiel/Eliam was the son of Ahithophel mentioned in 2 Sam 23:34, it would help explain some of the intrigues in David's court. For further discussion, see Smith *Samuel* ICC.

4. The sixth son of OBED-EDOM, a Levite, one of the doorkeepers who took care of the S gate of the temple complex and who also were in charge of the storehouse (1 Chr 26:5, 15). This appointment was made toward the end of David's lifetime (1 Chr 23:1).

JON PAULIEN

AMMIHUD (PERSON) [Heb *ʿammîhûd* (עַמִּיהוּד); *ʿammîḥûr*]. Five individuals mentioned in the Hebrew Bible bear this name. Ammihud is a theophoric name, comprised of the kinship term *ʿam* (kinsman) representing the divine, and the root *hwd*, "glory, exaltation," and may be translated as "The divine is exalted" (*EncMiqr* 6: 287). An alternate translation is "My kinsman is splendor" (*IDB* 1: 107). The name is similar in form and meaning to the names Abihud and Ahihud. Note that, in the Targum to 2 Sam 13:37, Ammihud appears instead of the MT Ammihur, and the LXX of Num 34:28 translates the entire gentilic *benamioud* (Heb *ben-ʿammîhûd*).

1. The father of Elishama, who was one of the leaders (Heb *nĕśîʾîm*) of the tribe of Ephraim during the journey through the Sinai wilderness (Num 1:10; 2:18; 7:48, 53; 10:22). According to 1 Chr 7:26, Ammihud was the great-grandfather of Joshua.

2. The father of Samuel, who was one of the leaders of the tribe of Simeon at the time of the allotment of the land of Canaan to the Israelites (Num 34:20).

3. The father of Pedahel, who was one of the leaders of the tribe of Naphtali at the time of the distribution of the land of Canaan to the Israelites (Num 34:28).

4. In 2 Sam 13:37, the MT is written *ʿammîḥûr*, but read *ʿammîhûd*. This person was the father of Talmai, the king of Gesher, uncle of Absalom. The latter had fled to Talmai after murdering Amnon, the half-brother of Absalom, and resided with him for three years.

5. The son of Omri, from the clan of Perez, who was the son of Judah and the father of Uthai. This Uthai was the head of the clan listed among the first postexilic settlers of Jerusalem (1 Chr 9:4).

RAPHAEL I. PANITZ

AMMINADAB (PERSON) [Heb *ʿammînādāb* (עַמִּינָדָב)]. The name of four individuals in the Hebrew Bible.

1. A Judean, a descendant of Perez and ancestor of David through Boaz (1 Chr 2:10; Ruth 4:19–20). He was the father of Nahshon, a prominent figure in the tribe of Judah (Num 1:7; 2:3; 7:12, 17; 10:14), and Elisheba, the wife of Aaron (Exod 6:23). He is also mentioned in the genealogy of Jesus (Matt 1:4; Luke 3:33; Gk *Aminadab*).

2. A son of Kohath and father of Korah (1 Chr 6:7—Eng6:22). Amminadab is not found in other lists of the sons of Kohath; in these other texts Izhar is found instead of Amminadab, and Korah is the son of Izhar (Exod 6:18, 21; cf. 1 Chr 5:28, 6:3—Eng6:2, 18; Num 3:19). LXX^{A,L} have Izhar in 1 Chr 6:7—Eng6:22, though this reading more probably developed as a correction. Williamson (*1 and 2 Chronicles* NCBC, 71) and Rudolph (*Chronikbücher* HAT, 54) both provide detailed and somewhat ingenious explanations of how this difficulty may have arisen. Within the context of 1 Chr 6:7–18—Eng6:22–33 the Chronicler appears to be concerned with the lineage of Samuel the prophet (1 Chr 6:13, 18—Eng6:28, 33), to whom he assigns Levitical ancestry (1 Sam 1:1). This reflects the Chronicler's pervasive interest in the prophetic function of the Levitical musicians (1 Chr 25:1–8; 2 Chr 20:14; 29:25; 34:30; 35:15).

3. A descendant of Kohath, leader of a family in the clan of Uzziel, who takes part in the transfer of the ark from the House of Obed-edom to Jerusalem (1 Chr 15:10–11).

4. The father of Esther according to the LXX of Esth 2:15; 9:29. MT identifies her father as Abihail.

RAYMOND B. DILLARD

AMMISHADDAI (PERSON) [Heb *ʿammîšaddāy* (עַמִּישַׁדָּי)]. The father of Ahiezer, who was a captain of Dan during the wilderness journey (Num 1:12; 2:25; 7:66, 71; 10:25). The name occurs only as a patronym of Ahiezer. Rather than the late, artificial "people of the Almighty," his name means "my kinsman is Shaddai," the theophoric element (Heb *šaddāy*) being common in the ancient Near East (see Fowler 1988: 53–54, 251).

Bibliography

Fowler, J. D. 1988. *Thophoric Personal Names in Ancient Hebrew.* JSOT Sup 49. Sheffield.

JOEL C. SLAYTON

AMMIZABAD (PERSON) [Heb *ʿammîzābād* (עַמִּיזָבָד)]. The son of Benaiah son of Jehoiada, commander of David's corps of champions.

The name itself is constructed from the theophoric element *ʿammî*, literally "the father's brother," or "uncle," and the verb, *zābād,* "to give (as a gift)." Here *ʿammî* is a familial particle used to refer to the family, clan, or tribal deity (cf. *IPN* 15, n.2; 47, 66–79, esp. 77).

Ammizabad is recorded in the Chronicles as having commanded Benaiah's division of the monthly levies of 24,000 troops (1 Chr 27:6), possibly while Benaiah was commander of David's champions, although this list is of dubious historical value (see DAVID'S CHAMPIONS; see also BENAIAH). The Heb has "his [Benaiah's] division was Ammizabad his son."

D. G. SCHLEY

AMMON (PERSON) [Heb *ʿammôn* (עַמּוֹן)]. AMMONITE. The son of Abraham's nephew Lot, who was the product of an incestuous union between Lot and one of his daughters (Gen 19:36–38). As such, Ammon serves as the eponymous ancestor of the Ammonites, a Transjordanian people whose kingdom

the Israelites encountered in their exodus march to the Promised Land (Num 21: 24–35; Deut 2:16–37). Later David waged war against the Ammonites (2 Samuel 11–12).

The history of Ammon is known from written sources only from the 8th century B.C., when it is mentioned in the Neo-Assyrian annals. The historical value of the biblical references to the Ammonite kingdom is hard to evaluate because of the partly legendary character of the sources relating to the Exodus and the relatively late date of the final redaction of the unit. Most recent research tends, in fact, to lower the date of the biblical redaction to almost the same period as the Neo-Assyrian annals. Therefore, nothing is scientifically certain about Ammon and the Ammonites before the 8th century. The Ammonites are not mentioned in Egyptian historical writings.

Happily, archaeology provides abundant proof of the existence of the Ammonites before the 8th century. The site of the capital, Rabbath-Ammon, was occupied from the EB Age, and became a powerful city-state in the MB II period (18th century B.C.). It is known that a decrease in population marks the LB Age (16th–13th centuries). Some traces testify to a new occupation in the Early Iron Age (but it is unlikely that Iron Age Rabbath-Ammon had a rampart before the 10th century). The region around Rabbath-Ammon also shows signs of occupation in the Early Iron Age; the transition from LB to Early Iron Age passed peacefully there. Archaeology can no longer cite as evidence the monuments popularly called the "Ammonite towers" in dating the occupation. These watchtowers of the region were used in successive periods from the 8th century B.C. and their foundation is spread over different periods.

A. The Biblical Traditions

The historical origin of the Ammonites is not specified in the OT; they were already present in Transjordan when the Hebrews arrived. A popular tradition derives the name from the incest of Lot (Gen 19:36–38); the Ammonites would thus be "Arameans" in the OT sense. It is possible that in another biblical tradition the Ammonites are considered "Amorites," as are their immediate neighbors, the Moabites (seen as a brother in Gen 19:36). But the OT designation "Amorites" does not have the precision frequently given it by modern historians. Nothing proves that the Ammonites were the fruit of an invasion, Aramean or Amorite, or that they must have settled down (Pitard 1987: 87). The archaeology of the capital city shows a continuous, if irregular, occupation. We still do not know precisely who the Bronze Age Ammonites were. Most probably, they were simply the native people of the country.

1. The Accounts of the Conquest. There is no biblical reference to the conquest of an Ammonite kingdom. Moses and his forces go around the region of Amman. According to the schema of Num 21:24–35, the Hebrews subdue the Amorite kingdom of Heshbon, then the town of Jazer, and finally, after a detour, that of Edrei in Bashan. In Deut 2:19 and 37, there is recounted an explicit order of God not to attack Ammon. The territories around Ammon are therefore divided between the tribes of Reuben, Gad, and the half-tribe of Manasseh. Gad is the closest to Ammon, with Jazer as its nearest neighboring city. This territory is the nucleus of Gilead, a geographic name which will have greater territorial expansion over the ages. It will extend N as far as the Yarmuk, country of Machir-Manasseh (cf. Num 32:39). However, it should be noted that Num 32:34–38 implies that Gad had a territory so vast as to encompass Reuben and approach Moab. These Hebrew neighbors of Ammon fought with one another and with Moab. They weakened with time (as Gad absorbed Reuben, and then it was absorbed by the Arameans of Damascus).

From the biblical schema of the conquest it is difficult to ascertain what historical factors can account for the fact that the "Amorite" kingdom of Sihon was fought and conquered (Num 21:21–31) while the kingdom of Ammon was not. Furthermore, there is no formal mention of the "kingdom" of Ammon in the accounts of the conquest. It is possible that, at the period in which these accounts are set, Ammon was only a mediocre political entity. But Ammon had been urbanized centuries before the time proposed for the arrival of the Hebrews. It certainly had a local "kingdom." More probably, the silence concerning Ammon reflects the period when these accounts were written, and a later political situation of the Aramean period, when no one could possibly imagine the Hebrews conquering such a powerful kingdom.

2. The Period of the Judges. Ammon is mentioned in connection with Israel's conflicts in the period of the Judges. The first incident is minor, connected with the struggle between the Benjaminites and Moab.

In Judg 3:13, it is mentioned that the Moabite king, Eglon, was allied with the Ammonites; but these latter play no part in the rest of the account. Judg 11:4, 12–33 refers to Gileadite resistance (led by Jephthah) against the Ammonites. Here for the first time there is reference to an unnamed "king" of the Ammonites. But the account of Jephthah vv 15–26 is untrustworthy: Ammon and Moab are confused, and the Moabite god, Chemosh, is attributed to the Ammonites.

3. The Period of Saul and David. The Ammonite king, Nahash, besieged Jabesh of Gilead, which was rescued by Saul in 1 Sam 11:1–11. Nahash was succeeded by his son Hanun, a contemporary of David. The conquest of the Ammonite capital, Rabbath-Ammon, by David (2 Samuel 10–12) marks the true entry of the Ammonites into history. At the time of the revolt of Absalom, "Shobi, son of Nahash, from Rabbah of the Ammonites" came to bring material aid to David, although he did not offer military assistance (2 Sam 17:27). This Shobi, if he really was the son of the king Nahash, would then be the brother of Hanun. He may have been enthroned by David in place of Hanun after the conquest of Rabbath-Ammon.

The OT has nothing more to say about the Ammonites during the time of David. Probably their history was independent of that of the Hebrews after the death of Solomon. The only significant point of contact is the mention of family links between Hebrews and Ammonites. Solomon had Ammonites among his foreign wives (1 Kgs 11:1). Naamah, mother of King Rehoboam, was an Ammonite.

4. The Preexilic Period. In the 9th century, during the reign of Jehoshaphat, Ammon, Moab, and Edom united in order to attack Judah; they were unsuccessful, probably because of dissension among the allies (2 Chr 20:1, 10, 22–23). A similar coalition took place during the reign of Jehoiakim, at the end of the 7th and beginning of the 6th centuries (2 Kgs 24:2). Before this, however, Uzziah of Judah and his son Jotham received tribute from Ammon in the 8th century (2 Chr 26:8; 27:5). Just before the fall of Jerusalem, there was an attempt to form an alliance between Judah and her neighbors, including the Ammonites (Jer 27:3). But this alliance was preceded by an attack by the "Chaldeans, Arameans, Moabites, and Ammonites" against Judah about 601 B.C. (2 Kgs 24:2). Ezek 21:25, 33 suggests that Nebuchadnezzar attacked Ammon.

5. Exilic and Postexilic Periods. After the destruction of Jerusalem, the assassin of Gedaliah took refuge with the Ammonites (Jer 41:10, 15). In the time of Nehemiah the Ammonites opposed the rebuilding of Jerusalem (Neh 4:1–2). The Ammonites are cited as adversaries one last time in the Maccabean wars (1 Macc 5:6–7).

6. The Prophetic Literature. Special mention must be made of the references to Ammon in the prophetic oracles. These are often outside the context of precise biblical chronology and belong to a stereotyped literary genre, where Ammon is found as the traditional enemy of Israel, generally associated with Moab and Edom. This is the case in Amos 1:13–15; Isa 11:14; Jer 9:25; 25:21; 49:1–6; Ezek 25:1–5; Dan 11:41; and Zeph 2:8–9. Other texts, which are not oracles, make the same association, e.g., Jer 27:3.

Apart from this prophetic literature, allusions to Ammon are found in Ps 83:7–9; Ezra 9:1; Neh 13:23; Jdt 5:2; 7:17–18. These are clearly late, and the precise historical context is difficult to determine.

B. The Extrabiblical Evidence

The evidence of biblical historiography must be compared with the extrabiblical historical evidence. The earliest document is Neo-Assyrian and dates from the time of Tiglath-pileser III. The author states that toward 733 B.C. the king Shanib (or Shanip) of Bit-Ammon paid tribute (*ANET,* 282a). The campaign of Tiglath-pileser probably had serious consequences, destabilizing the whole region (Oded 1970: 177) and leaving a relative vacuum which enabled incursions by desert nomads.

A letter from Nimrud mentions the tribute of the "sons of Ammon" under an Assyrian king who reigned between Tiglath-Pileser and Sargon II (Saggs 1955: 135, text XVI, line 35). The king Shanib was the grandfather of a certain Yarih-Ezer (who was probably not king), who is quoted in the inscription of a statue discovered at Amman in 1949. In 701 B.C. Sennacherib mentions a king of Ammon, Pudu-Ilu, or Buduili (*ANET,* 287b) who was still reigning at the time of Esarhaddon, about 677 (Borger 1956: 60, line 62). Assurbanipal mentions Pudu-Ilu's successor Amminadab, who about 667 paid tribute to the Assyrians (*ANET,* 294a). The names of these three kings are confirmed by local epigraphic documents, in

particular the seals of their ministers (Bordreuil 1986: 134, 137). Among these documents may be noted the Tell Siran bottle (Zayadine and Thompson 1973: 135), which ennumerates "Amminadab, king of the Ammonites, son of Hiṣṣal-El, king of the Ammonites, son of Amminadab, king of the Ammonites." Thus we discover that Amminadab I was succeeded by Hiṣṣal-El, who in turn was succeeded by Amminadab II, taking us down to about 600–590 B.C. Toward 587, the king Baalis (Jer 40:14) is attested by a seal of Tell Umeiri, which names him "Baal-Yasha" (Herr 1985: 170). This is the last Ammonite king whose name has been preserved. Josephus (*Ant* 10.181–82) states that Nebuchadnezzar defeated the Ammonites and the Moabites in 582–581 B.C. This marked the end of the Ammonites as a political force.

The Ammonite Kings

Nahash (ca. 1030–1000)	1 Sam 11:1–12; 12:12; 2 Sam 10:2
Hanun son of Nahash	2 Sam 10:1–4; 1 Chr 19:2–6
Shobi son of Nahash	2 Sam 17:27
Shanib (ca. 733)	*ANET*, 282 (Tiglath-pileser III)
Zakur son of Shanib	Ammonite Statue J.1656
Yarih-Ezer (?)	Ammonite Statue J.1656
Pudu-Ilu/Buduili (ca. 701–677)	Borger 1956: 60 (Sennacherib and Esarhaddon)
ʿAmminadab I (ca. 667)	*ANET*, 294 (Assurbanipal)
Hiṣṣal-El, son of Amminiadab	Tell Siran bottle
ʿAmminadab II, son of Hiṣṣal-El	Tell Siran bottle
Baʿalis/Baal-Yasha (ca. 587)	Jer 40:14; bulla of Tell ʿUmeiri

Under the Persian Empire, Ammon was a district of the fifth satrapy, "Beyond-the-River," under the authority of a *peḥa* or Governor. In Neh 2:9–10, Tobiah, "the Ammonite servant" (*ʿbd*), appears at the side of Sanballat the Horonite of Samaria and Geshem the Arab (Neh 2:19) to oppose the rebuilding of the walls and temple of Jerusalem. He was therefore a functionary of the king, as suggested by Neh 2:19.

In the Hellenistic period, the capital of the Ammonites kept the name of Rabbatamana, as attested by Polybius *Histories* V.71, who mentions it in connection with the siege of Antiochus III in 218 B.C. The Seleucid king conquered the city by gaining control of the water-supply system of the acropolis (the cistern and access tunnel to the N). Under Ptolemy Philadelphus II, about 250 B.C., the name of the city was changed to Philadelphia, in honor of the king's sister-wife Arsinoe Philadelphia. Nevertheless the Zenon papyrus, PSI 616, mentions Rabbatamana, and the papyrus PCZ 59009, which dates from April to May 259 B.C., is signed at Birtha of Ammanitis. In fact, in this document the cleruchies of Tobias appear.

In the Hasmonean period, the Bible suggests that Judas Maccabeus subdued the region W of Amman (i.e., the city of Jazer and its dependent towns) in 163 B.C., after defeating a certain Timothy, chief of the Ammonites (1 Macc. 5:6–7). This W section was called Peraea. There is very little information concerning its late history up to the Roman conquest.

AMMON (PLACE) [Heb *ʿammôn* (עַמּוֹן)]. See RABBAH (AMMON).

AMMONITE LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

AMNON (PERSON) [Heb *ʾamnōn* (אַמְנֹן)].

1. Firstborn son of David. His mother was Ahinoam of Jezreel (2 Sam 3:2; 2 Chr 3:1), whom David had taken as a wife at the same time as Abigail (1 Sam 25:42–43). He was one of six sons born to David at Hebron by six different wives.

Amnon otherwise is known only for an episode recounted in 2 Samuel 13, where he raped his half-sister Tamar. He is lovesick over his beautiful sister and is encouraged by a cousin, Jonadab, to gain access to her via a trick (2 Sam 13:1–5). When he does so, he first attempts to persuade her to lie with him, but she refuses to do so without their father's sanction (vv 6–13). He then forcibly rapes her and disgustedly casts her away (vv 14–19). Their brother Absalom hears of this and plots revenge, which is not accomplished for two years, when Amnon is killed, ironically, by a ruse on Absalom's part (vv 20–29).

The story is a masterpiece of drama, suspense, and irony. It is the first of several stories of David's troubles with his children following his own sin in 2 Sam 11–12, and it echoes that story (Fokkelmann 1981: 124–25; Gunn 1978: 98–100). Both David and Amnon, for example, see and desire a beautiful woman and conspire to get her. David attempts to cover his sin by a murder; Amnon ironically, David's son, is himself murdered.

Within the Amnon story the literary and dramatic climax is reached with the actual rape, in v 14 (Ridout 1974: 80–84; Fokkelmann 1981: 99–114). The climax is approached with a drawn-out, suspense-building account of the scene and the dialogue in Amnon's bedroom (vv 8–13). The shift from love (or lust) to hate and disgust after the rape is sudden, forceful, and dramatic (vv 15–17; cf. 22). Amnon's death is related in a matter-of-fact way (v 29), highlighting the emerging status of Absalom.

2. A son of Shimon, in the genealogy of descendants of Judah (2 Chr 4:20). Nothing further is known of father or son.

AMOK (PERSON) [Heb *ʿāmôq* (עָמוֹק)]. A priest mentioned in the list of Israelites who returned from exile to Jerusalem in the days of Zerubbabel (Neh 12:7). His name, along with some 14 others, is lacking in the major LXX manuscripts, but this probably represents a secondary scribal omission. Later in the same chapter (v 20), Amok is again part of a list in the MT, this time cited as the father of Eber, the head of a priestly family. Once again, many manuscripts of the LXX omit his name (as well as many of the other names of priestly households). As Myers (*Ezra-Nehemiah* AB, lxvi) has pointed out, such omissions in the Greek characterize quite a number of the lists of Nehemiah (especially in Codex Vaticanus); the majority of these omissions cannot simply be explained as mechanical errors such as homoioteleuton or homoioarkton.

Although the Heb *ʿāmôq* appears only twice in the MT as a proper name (both instances having already been noted), the essentially identical term *ʿāmōq* appears some 17 times as an adjective meaning "deep" or "unfathomable." R. A. Bowman (*IB* 3: 785) is probably correct in translating the priestly name Amok as metaphorical, "inscrutable" or "wise" (cf. also the Akkadian parallels which he cites). Very possibly the full priestly name was Amokiah ("Yah[weh] is wise/inscrutable") or Amokel ("El [God] is wise/inscrutable"), or the like.

Recently, Williamson (*Ezra, Nehemiah* WBC, 355–66) has argued persuasively for the relative primacy of the list of priestly families found in Neh 12:12–21, arguing that from this list a later editor has transcribed vv 1–7. As Williamson points out, it is less likely that someone invented the names of the added generation in vv 12–21, names which are not paralleled elsewhere, than that the names of the family heads were merely transferred from this list to the list found in vv 1–7. He further notes that the names found in vv 19–21 (as well as the analogous vv 6a–7a), namely Joiarib, Jedaiah, Sallai (Sallu), Amok, Hilkiah, and Jedaiah, probably represent a later expansion of the original list, attributable to the same or a later editor. Both the inclusion of the conjunction "and" in the MT before both lists (and used nowhere else in either list), as well as the observation that precisely these same six names are lacking from the list of priests in Neh 10:3–9 (—Eng 10:2–8), lend strong support to his proposed reconstruction. Thus, the original list underlying both lists of priests in Nehemiah 12 (as well as the one in Nehemiah 10) appears to have been considerably shorter; and more to the point, it probably did not include the name Amok at all (see also the comments of Bowman [*IB* 3: 784], and the references cited there). Presumably such an addition was made to align the lists with the actual priestly hierarchy in later times.
WILLIAM H. BARNES

AMON (DEITY) [Heb *ʾāmôn* (אָמוֹן)]. An Egyptian deity who was recognized as the "king of the gods" by the time of the New Kingdom. He was connected with the city of Thebes, an association remembered by some of the later biblical writers. In Egyptian his name means "hidden" or "invisible one" (Eg *Imn*). His name is found twice in the OT: in Nah 3:8, where the Egyptian city of Thebes is called *nō ʾāmôn,* and in Jer 46:25, where Jeremiah declares that Yahweh will punish Amon of Thebes (Heb *ʾāmôn minnôʾ*) through Nebuchadrezzar, king of Babylon.

In Egypt, Amon is often associated with the wind and air and even the "breath of life." He is usually portrayed in human shape with a crown of two tall upright plumes, although some representations also incorporate elements of his sacred animal, the ram, and his sacred bird, the goose. Herodotus tells an amusing story which was meant to explain Amon's association with the ram as well as why Egyptians refused to sacrifice the ram except once a year (Hdt 2.42; Armour 1986: 140). Amon, together with the vulture goddess Mut and the god Khons, formed the Theban triad of father, mother, and son. Amon is also identified with Min, the fertility god of Coptos and Akhmim. In these instances he bears the name Amon-Min and, like Min, he is represented in ithyphallic form.

Amon is first mentioned in the Unas Pyramid Texts (§446) as a primeval deity belonging to the Ogdoad of Hermopolis ("the City of the Eight Primeval Gods") where he is accompanied by his female

counterpart, Amaunet. He was worshiped at Thebes in the 11th Dynasty, but it was with the emergence of the powerful 12th Dynasty that he became prominent (cf. the personal name of the founder of the 12th Dynasty, Amenemhat, "Amon is Supreme").

Amon became state god of Egypt with the emergence of the 18th Dynasty and the foundation of the New Kingdom. Prior to this, the Hyksos (Dynasties 15 and 16) had established Avaris in the Delta as their capital and had elevated the importance of the god Seth. After Ahmose, founder of the 18th Dynasty, expelled the Hyksos he once again chose Thebes to be the capital city. As the empire expanded in the New Kingdom under such mighty pharaohs as Thuītmose III, so did the power of Amon, who was seen as being responsible for all of the military successes. Amon was especially credited with victories over foreigners, including the driving out of the Hyksos and the subsequent military excursions into Asia Minor. Having thus subjugated all of the foreign deities, he became "king of the gods." At the same time, the priesthood of Amon greatly increased their power and wealth, the wide influence of Amon's priesthood being reflected in the numerous and elaborate temples and shrines devoted to Amon which spread throughout Egypt, especially on the banks of the Nile.

As Amon rose to preeminence among the gods, he also took on characteristics of Re, the sun god. Amon, "the king of the gods," and Re, the creative power in the sun, were seen as one and the same and henceforth referred to as the supreme god, Amon-Re. Amon had gone from a local deity to a national war god and then to an omnipotent deity who absorbed the elaborate creation mythology surrounding Re. A new cosmogony was developed centering around the creative power of Amon and the city of Thebes as the place where creation had originated. Frankfort (*KG*, 160) has stressed that the fusion of Amon with Re was not a "trick of priestly syncretism intended to add glamour to the god of the capital of Thebes. In reality," Frankfort suggests, "it was a truly creative thought which realized the potentialities of a combination of the concept of the creator-sun with that of Amon, the 'breath of life,' 'the hidden one,' who, as one of the Eight of Hermopolis, was part of the uncreated chaos." Be that as it may, the priests of Amon were nevertheless the direct beneficiaries of their god's new elevated status.

The supremacy of Amon was interrupted for a brief period of time. Amenophis IV, better known as the heretic pharaoh Akhenaten (ca. 1377–1360 B.C.E.), broke with the cult of Amon and favored a solar monotheism which worshiped Aten, the Sun-disc. Akhenaten went to great lengths to extirpate the Amon cult, including expunging the god's name from monuments, destroying sacred images of Amon, and purging any mention of Amon in ritual or mythology. Yet Akhenaten's efforts ultimately proved unsuccessful. Shortly after his death, his religious beliefs in Aten as well as his capital Akhetaten were abandoned. The cult of Amon, which was never totally relinquished, started to resurge even in Akhenaten's last year and grew even stronger during the reign of Smenkhkare. Amon worship was fully restored by Tutankhamen with Thebes serving again as the capital. A famous text from Ramses III of the 20th Dynasty known as the Harris papyrus gives an inventory list of the great wealth of Amon's temples which included "5000 divine statues, 86,486 servants, 421,362 head of cattle, 433 gardens and orchards, 691,334 acres of land, 83 ships, 46 workshops, 65 cities and towns" as well as vast amounts of gold, silver, and incense (see *ANET*, 260–62).

Nahum 3:8 uses the sacking of Thebes (Heb *nō› ›āmôn*) in 663 B.C.E. by the Assyrians as a warning of divine judgment against the equally powerful city of Nineveh.

THEODORE J. LEWIS

AMON (PERSON) [Heb *ʾāmôn* (אָמוֹן)]. Var. AMI. **1.** The son of Manasseh, who ruled over Judah for two years, ca. 642–640 B.C.E. (2 Kgs 21:19–26=2 Chr 33:21–25). Amon came to the throne at the age of twenty-two, being one of Manasseh's youngest sons. His reign was cut short by an assassination plot carried out during a palace revolt by his courtiers. These conspirators were in turn killed by the "People of the Land" (Heb *ʿam hāʾāreṣ*), who then put Amon's eight-year-old son Josiah on the throne.

The silence of the biblical text with regard to the motive for the assassination has intrigued scholars, who have attempted to conjecture as to the underlying political and religious causes behind the coup d'état. Malamat (1953: 26–29) has argued that Amon was assassinated by those who objected to his pro-Assyrian policy. Such a hypothesis would fit well with what we know of the general uprising against Assurbanipal in 640 B.C.E. Perhaps owing to Egyptian incitement, the conspirators felt it was time to throw off the Assyrian yoke. Yet this view has recently been challenged by Cogan and Tadmor on chronological grounds (*2 Kings* 275–76).

Other scholars have suggested that the conspirators were religiously motivated. Both accounts by the Deuteronomist and the Chronicler state that Amon practiced the abominable ways of his father Manasseh. Thus it has been conjectured that Amon was assassinated by those who favored the religious reforms of Hezekiah. Nielsen (1967: 103–6), for example, notes the struggle going on between the Jerusalem priesthood and those who favored Manasseh's religious policies.

Finally, it has also been suggested (Cogan and Tadmor *2 Kings* 276) that perhaps Manasseh's older sons who were passed over for the throne may have been behind the assassination of their younger brother.

It is, of course, impossible to decide the extent to which Amon's assassination was politically or religiously motivated based on the data at hand. Our theological historians (the Deuteronomistic account followed by the Chronicler) are more interested in articulating the damning report that Amon "did what was displeasing to Yahweh just as Manasseh his father had done" with idolatry being singled out for special mention (2 Kgs 21:20–22=2 Chr 33:22). Some scholars have suggested that this may argue against the historicity of the Chronicler's description of Manasseh's repentance. In order to be consistent with his earlier description of Manasseh's repentance, the Chronicler departs from the Deuteronomistic account by pointing out that "Amon did not humble himself before Yahweh as had his father Manasseh" (2 Chr 33:23).

2. A governor (Heb *śar hāʿîr;* cf. Avigad 1976: 178–82) of Samaria during the days of Ahab (1 Kgs 22:26=2 Chr 18:25). Some scholars would rewrite his name *ʾmr* (cf. LXX's *sem (m)ēr/em (m)ēr*) instead of MT's *ʾmn* (cf. Stade 1885: 173–75). In this narrative Ahab charged Amon and Joash, "the son of the King," with keeping the prophet Micaiah under arrest and feeding him bread and water until Ahab returned "safely" from the fatal battle at Ramoth-gilead.

3. In a census list, Nehemiah 7:59 mentions the "children of Amon" as among those who returned from the exile under Zerubbabel and Jeshua's leadership. They are listed among the "children of Solomon's servants." In the parallel list in Ezra 2:57 they are called "children of Ami [Heb *ʾāmî*]."

THEODORE J. LEWIS

AMORA, AMORAIM. The traditional title for the Jewish rabbinic authorities ("rabbis") living from about 200 C.E. to around 500 C.E. (the "Amoraic period" of rabbinic Judaism). The term (Heb *ʾămôrʾa* [sing.], *ʾamôrʾaîm* [pl.]) comes from the root (*ʾmr*) which means "to speak" or "to interpret." The name stems from their activities in interpreting the Mishnah.

The location and importance of the rabbis changed during this period. Palestine comprised the Amoraim's first center, but after approximately 400 C.E., they disappeared from history. The Amoraim in

Babylonia were initially subordinate to the Palestinians, but after 400 they constituted the only rabbinic movement. As archaeological and literary evidence makes clear, however, in neither area did the Amoraim control the religious activities of the Jewish people early on. It was not until about 500 C.E. that the Babylonian Amoraim gained authority among the populace.

Each group of rabbis bears responsibility for a legal compilation called a TALMUD. The two Talmuds show similarities in form and goal. Each text is organized as a "commentary" on the Mishnah. The Amoraim thus reinterpret the Mishnah's focus on the temple cult as a way of life based on the synagogue and school—with emphasis on prayer, study, and right actions. This transformation also appears in Leviticus Rabbah—a "commentary" to Leviticus—which changes Leviticus' focus on temple worship to an interest in morality and prayer. Thus, the Amoraim played the pivotal role in transforming Judaism from a religion of sanctification through the temple cult to a religion of salvation through sanctification by ethical behavior, prayer, and study.

There is a second, rare, usage of the term *amora* found in the Talmuds. It is a technical term designating someone who interprets for teachers. In a school, the teacher would briefly make a point, usually in a low voice; the Amora would then repeat the point in a louder voice and in a simpler manner so that all could hear and understand.

PAUL V. M. FLESHER

AMORITES [Heb *ʾemōrî* (אֱמֹרִי)]. In biblical tradition, the designation of one of the seven to ten nations (Josh 7:10; Gen 15:19–21) that inhabited Canaan before the formation of the Israelite federation.

A. The Name

The term *amurru* first occurs in Old Akkadian sources as the general designation of "the West," referring to the W wind, and to the geographical area lying to the (N) W of Mesopotamia. The most frequent usage of the term refers to the population of that W region as an ethnic designation. Its semantic equivalent, Sumerian MAR.TU was used already in the mid-3d millennium B.C. even at Ebla in an ethnic or cultural sense, designating the population of the "West" that was recognized to be foreign to the population of Mesopotamia proper by culture as well as by language. It was also the name of a deity the characteristics of which are obscure. The meaning of the Sumerian term and how it came to designate the Amorites is unknown.

B. The Language

Amorite was a very important factor in the history of the Semitic languages, but information about it derives almost exclusively from personal names that can be identified as Amorite by grammatical and other contrasts to the standard onomastics of Akkadian. Nevertheless, considerable information concerning the language has been obtained from these names (Huffmon 1965). Some 6000 Amorite and other non-Akkadian personal names have been identified (Gelb 1980), and in addition some Amorite words appear in cuneiform sources, especially the archives of Mari.

Though early investigations of the language induced some scholars to term it "East-Canaanite" (Bauer 1926), it is clear that Amorite was an independent branch of Northwest Semitic, though it is far from clear to what extent it contrasted to the languages of the inland Syrian region to its W, and to the languages of the coastal region of Palestine and Lebanon (Mendenhall 1985; fc.c). Its West Semitic affiliation is guaranteed by the verbal system with prefixed and suffixed tenses, and preformatives with *ya-* instead of the East Semitic *i-*, as well as by a predominantly West Semitic lexical inventory (but see below).

C. The People and Culture

It has been a conventional scholarly opinion for decades that the Amorites were a nomadic population of the Syro-Arabian steppeland (Kupper 1957), who infiltrated into N Syria, gradually became sedentary, and then civilized enough to form states and empires. This view was based ultimately upon old 19th-

century romantic ideas about the nomadic origins of all Semitic populations (Kupper 1957: xiv), and probably more immediately on the Sumerian satire on the Amorites preserved in Sumerian literature of the OB period. In this famous satire the Amorites are described as not burying their dead, eating uncooked meat, not living in houses—in short, as uncivilized nomadic barbarians (Cooper 1983). Though the description is patently untrue, or perhaps only technically apposite, the scholarly world seems to have taken this urban Sumero-Akkadian scurrilous description of Amorite culture at face value because it fitted in with preconceived theories about successive waves of nomads from the Arabian desert as the origin of the Semitic-speaking populations.

In sharp contrast to traditional ideas, a much more productive and realistic approach to the problem of Amorite culture is based upon a recognition of the fact that this population complex had its homeland in the region from the Euphrates River to the upper Khabur and Balikh river valleys S of the Anatolian mountains (Luke 1965). The many hundreds of small unfortified village *tells* in this region (Mallowan 1947: 10–11; Meijer 1986), many of which were occupied already in the Chalcolithic period, identify the culture as basically a village farming culture from time immemorial, but characterized also by a constant contact with urban cultures that were themselves powerfully influenced by the Sumero-Akkadian urban civilization of Mesopotamia. This region also was traversed by the main trade routes between Mesopotamia, Syria, and Anatolia. It is entirely possible that in early 3d-millennium sources the entire region from the Euphrates to the Mediterranean Sea may have been included in what the Sumerians called MAR.TU (Haldar 1970), and that the term may already have been applied therefore to non-Semitic-speaking persons as well.

The N part of this region was characterized by adequate rainfall for agriculture and intensive utilization of arable land. The archaeological record of the dense population of this region inevitably meant that an increasing portion of the population was dependent upon large-scale animal husbandry as their economic base. This was in turn greatly facilitated by the enormous range of steppeland to the S, extending all the way from W Mesopotamia to the Arabian desert, and to the SW to the fringe area of E Syria through the oasis of Palmyra. This large-scale sheepherding in turn implied a symbiotic relationship with urban societies that utilized the wool for the production of, and international trade in, textiles that is already attested in the texts from Ebla (Matthiae 1980). The seasonal movements of village shepherds, especially those residing along the Euphrates Valley, with their flocks between these steppe regions to the S and what is termed the "Upper Country" in the Mari texts, probably led to a contrast designated by the Amorites themselves as the group called *Banu-Yamina* "Southerners," i.e., residents of the Euphrates Valley region who engaged in irrigation agriculture as well as pastoralism, and the *Banu-Sim*ʿ*al* "Northerners," of the rainfall agriculture region. This seasonal movement also has usually been confused by modern scholars with relatively recent nomadic cultural adaptations.

The economic base of the old Amorite society was thus a diversified one combining the high productivity of agricultural villages with the equally high productivity of animal husbandry. The bureaucratic archives of Mari in the 18th century B.C. give abundant evidence of this. The tax receipts of the palace indicate that persons with Amorite names made contributions of *agricultural* produce equally with such contributions made by persons who had Akkadian names. It is interesting, however, that tax payments of *animals* were made by persons who bore Amorite names only (Kerestes 1982). The evidence strongly suggests that, at least in the irrigation-based villages around Mari, the population engaged in agriculture was much more likely to become "Akkadianized" than were the shepherds. It is probable that the irrigation canals maintained by the king of Mari created a dependency and tendency toward assimilation to the Akkadian urban culture on the part of village farmers that was not characteristic of her much more independent shepherds.

Already at the dawn of history urban societies within the Amorite geographical region had been powerfully influenced by the urban cultures to the east (Matthiae 1980), but not until the Mari texts of the Old Babylonian period do we have some concrete evidence for the potential and actual friction between the urban society and the village/pastoral productive complex upon which it was dependent. The famous warning to the king of Mari not to ride upon a horse but upon a donkey because he was the king "not only

of the Akkadians, but also of the Khana" illustrates the contrast. Much more important, however, is the evidence for the nearly constant conflict between successive kings of Mari and a coalition of tribes called "Benjaminites." The conflict ultimately stemmed from the fact that two generations earlier a king of Mari had, through military conquest, extended his control over city/village complexes to the W, absorbing their territory and populations into his imperial domain (see Kupper 1957: 47–81, who completely misunderstood the historical situation).

The tribal organization of the Benjaminites as well as other social entities referred to in the Mari texts had nothing to do with nomadism; rather, such organization is a constant in village society, especially when solidarity among villages is necessary to counterbalance the increasing domination of a central government. See also BEDOUIN AND BEDOUIN STATES. Unfortunately, little is known of the internal social organization of Amorite populations: they had officials known as *rabi amurrim* ("chief of Amurru") and *ʾabi amurrim* ("father of Amurru") and Amorite towns and villages had officials appointed by the king. These village heads were called *sugagum* in Amorite but *šāpirum* in Akkadian, and had to pay large sums to the royal treasury for their appointment (*CAD s.v. sugagum*). Furthermore, some regions had kings (*šarrum*) such as those defeated by the grandfather of Zimri-Lim. Their territory became part of the Mari empire, and their cities (Abattum, Tuttul, and Terqa, as well as no doubt others) became seats of provincial governors.

D. Amorite History Reconstructed

Contrary to present accepted opinion, it is probable that the sedentary Amorite culture of NE Syria had a continuity from the Chalcolithic or even Neolithic period on to the end of the MB Age. Though earlier Assyriologists identified this region of high population density with the land of Subartu and a non-Semitic-speaking folk, all the evidence we have indicates persons of the region have perfectly good Amorite names. It is not until the end of the MB Age that there is evidence for a massive shift of population in the entire N Syrian region, with the establishment of the empire of Mitanni and its predominantly Hurrian and Indo-European population.

In the absence of usable written documents prior to the EB Age, there is no way of proving or disproving this thesis. What does appear to be certain is that the growth of population in this region resulted in increasing emigration to the E, and there is now no reason to believe that what was happening in the W was any different. By the end of the 3d millennium B.C. Amorites were already settled in fairly large numbers in the cities of Mesopotamia (Bucellati 1966). Before the end of the 3d Dynasty of Ur, the king had erected a long wall that was intended to stop the Amorite infiltration and incursions into his territory. According to ancient traditions, a coalition of Amorites and Elamites destroyed Ur (ca. 1960 B.C.), and within a century virtually all of the old cities of Mesopotamia were ruled by kings who bore Amorite names.

It is certain that a similar process was taking place in the W regions along the Mediterranean coastal plain (Mendenhall 1985), though the evidence is very meager compared with that available for Mesopotamia and provides little, if any, basis for a chronology of the process. Ugarit had an Amorite dynasty in control of the city by about 1900 B.C. that continued in power until the city was destroyed at the end of the LB period. Similarly, Byblos had kings with Amorite names by about 1800 B.C., and it is perhaps no coincidence that the first (known) Amorite king of Byblos, Shemu-Abu, had the same name as that of the founder of the 1st Dynasty of Babylon, Sumu-Abum. Whether or not the destruction or collapse of the city-states of Palestine and Lebanon at the end of the EB III period (about 2300 B.C.) had anything to do with Amorite infiltration is at present an unanswerable question. It would seem improbable, to judge from what is known of Mesopotamian history. Furthermore, the earliest evidence for Amorite political control of coastal city-states comes half a millennium after the EB III destructions, and therefore makes most implausible the theory that Amorite incursions were responsible.

The turbulent times that attended the transition from the MB to the LB Age (16th century B.C.) seem also to have seen the disintegration of the old Amorite culture in the N Syrian homeland. There can be little doubt that this was brought about by incursions of Anatolian populations from the N. It is possible that the process was already beginning in the earlier phases of the MB period, and may help account for

the Amorite migrations to the E and W. By the end of the 16th century the whole of N Syria was under the domination of the Hurrian empire of Mitanni; by the beginning of the 14th century many of the city-states of Syria, the coastal region, and Palestine (as far S as the Hebron area) were ruled by kings who bore Hurrian or Indo-European names. Alalakh in N Syria shows a significant population shift from very predominantly Semitic names to equally predominant Hurrian names between the 18th and 15th centuries. Ugarit on the coast had a population less than 40 percent Semitic, and in most of N Syria and the coastal region dynastic names shifted from Semitic, to Hurrian, and then to Luwian. By the Iron Age N Syria was known as *mat ḫatti,* "land of the Hittites."

During the LB Age, the Amorites had evidently become thoroughly assimilated into local populations both in the E and the W, as well as in the NE Syrian homeland, so that after that is no longer possible to identify a specific Amorite cultural/linguistic population group.

E. "Amorite" as a Political Designation

It was noted above that in native Amorite society there were already kings and other titles that designated political functions or offices. Following the diaspora of Amorites in the 20th to 19th centuries, there was evidently a multitude of political titles that made use of the term Amurru or the Sumerian MAR.TU. The term "father of the land of Amurru" was used at Larsa by an Elamite king, and subsequently by other kings including Hammurapi. The title became "king of the Amorites" by Hammurapi's 35th year and was a standard appellative of kings from then on, obviously devoid of any ethnic connotations. It was even included in standard lexicographical texts: LUGAL MAR.TU = *šar-ru a-mur-ri-i* (Kupper 1957: 174–77).

In the LB Age there was established a kingdom of Amurru in the upper Orontes Valley region of Syria. It is attested already in the Alalakh texts of the 15th century, and its history is well recorded in the Hittite and Amarna archives until its destruction at the beginning of the Iron Age. Abdu-Ashirta, a vassal of the Egyptians, established a dynasty in that kingdom that can be traced for six generations. His successor, Aziru, became a vassal of the Hittites as Egyptian power in the N began to wane, and we even have the text of the suzerainty treaty between him and the Hittites.

The next and last occurrence of the royal title "king of the Amorites" occurs in the biblical references to Sihon, who associated with Heshbon in Transjordan, and who was defeated in the earliest recorded battle of the newly established Israelite federation (Numbers 21). There can be little doubt of the historicity of the event, even though the present narratives are of course garbled by the overlay of later tradition and interpretations. His royal title must have derived from, and represented a continuation of, the political traditions of the old N Syrian principality of Amurru. Together with a number of other puzzling traditions (notably the Balaam narratives), this title strongly indicates a considerable influx of population into Transjordan and Palestine at the time when destructions in N Syria were leaving much of that region virtually depopulated. At the same time (i.e., the transition from LB to Early Iron Ages) the population of Transjordan saw a very sharp rise in density, and the only reasonable source for this rapid growth was the region to the N. Even the name Sihon (as well as Og of Bashan, who is also identified as an "Amorite" king) has no reasonable Semitic etymology. As was true also in Mesopotamia, the term "Amorite" no longer had any ethnic or linguistic significance and had simply become part of the traditional titulary of kings with N Syrian cultural connections. The conclusion is inescapable that Sihon and others were the remnants of N political entities that attempted to reestablish their old political regimes in another region—exactly as the neo-Hittite state of Carchemish successfully did for a time, after the destruction of the Hittite state and empire ca. 1200 B.C.

That Sihon and Og were not the only illustrations of such a process is indicated by the fact that the Amorites are also included in all of the various "Tables of Nations" scattered through the Pentateuch and Joshua. These lists designate political regimes and not merely "ethnic" groups. This is evident both from the fact that they are labeled *gōyîm* (which is probably best defined as "a politically organized military gang") and from the fact that some of them, such as the Jebusites of Jersualem, can definitely be identified with specific city-states. It has been established that the regime of Jerusalem already in the Amarna period derived from N Syria (Moran 1975). Its Amorite derivation is indicated not only by its name, *Yebus*

(which is Amorite *Yabusum*), but also by the bitter condemnation of the prophet Ezekiel (16:2–3), who accurately described its origin as a hybrid of Amorite and "Hittite" (i.e., N Syrian) forebears. Even the language of standard biblical prose, that of Jerusalem, betrays its Syro-Hittite heritage in its use of the verb *hyh,* "to become," that is attested elsewhere only in Amorite and at Zenjirli (and of course in the much later attested Aramaic), instead of the otherwise standard Phoenician-Arabic verb *kwn* that stems from the EB Old Coastal Dialect of Palestine.

F. The Amorite Cultural and Religious Legacy

To the E, the disappearance of the Old Akkadian language and its replacement by Old Babylonian and Old Assyrian is most probably the result of Amorite influence in Mesopotamian speech and eventually writing. A similar but not identical process took place in the W. The Old Coastal Semitic of the Byblos Syllabic texts was replaced by a complex of local dialects that have long been termed "Canaanite," but all of which exhibit a blend of the older dialect with very strong influence from Amorite that can be traced especially in proper names and vocabulary (Mendenhall 1985: chap. 10; fc.b). In contrast to the E, where the older Old Akkadian disappeared entirely, the basic structure of the older language, the Old Coastal Semitic, survived in various fringe areas from the Biqaʿ of Lebanon to the Sinai peninsula, and eventually became literate in the inscriptions of Old North Arabic and Old South Arabic.

Historically more important, however, is increasing evidence suggesting that venerable cultural and religious traits all over the ANE have Amorite origins. Long ago it was noted that the myth of cosmic conflict was probably Amorite in origin, and was adapted in the E in the Babylonian creation epic, and in the W in the Ugaritic myth of the conflict of Baʿal and Yamm. Accompanying the mythical motifs, the Amorite deities Dagan, Hadad, and ʿAnat became established in the W superimposed upon earlier deities of ʾAthirat and Yamm, ʾIl, ʾIlat (Baʿalat), and a Baʿal, whose proper name is unknown, but who is later identified with the Amorite storm god Hadad. The details of the process remain to be worked out, but the syncretistic process itself can hardly be questioned (Vine 1965).

Furthermore, it is now possible to trace, at least in theory, the reasons for the extremely close parallels between biblical and Old Babylonian literary works. It is virtually certain that such motifs as the flood story were mediated to the Palestinian region through N Syrian (Hurrian) versions of an old Amorite narrative. However, much more impressive is the earliest biblical law code of Exodus 21–23: its striking similarities to the Code of Hammurapi and other Mesopotamian law codes reflect their common derivation from Amorite traditions and customary law.

Probably the single most important Amorite contribution to the biblical tradition was the Abraham narrative in Genesis, which was in all probability a specifically Palestinian epic tradition (for the archaeological correlations, see Dever *IJH,* 70–120). In spite of the fact that it has been thoroughly reworked to fit the political concerns of a *much* later period (Mendenhall *AIR,* 337–56), the basic structure of the narrative fits entirely the nature of the historical process of Amorite migrations attested in the Bronze Age sources: from infiltration to political control legitimized through a divine gift of the land (though the latter stage is, of course, presented in the biblical narrative as realized only with King David).

Finally, it should be noted that some of the most important concepts in the theological vocabulary of the Hebrew Bible are either demonstrably or probably of Amorite origin. Foremost is the concept of divine deliverance that became the concept of "salvation" expressed in various forms of the root *yšʿ.* At least sixteen gods and divine epithets appear as subjects of the verb "to save" in the Amorite personal names. Other key theological terms that are probably Amorite are *ṣdq,* "righteous"; *nqm,* "vindication"; *yšr,* "upright" (there was probably a native Coastal Dialect cognate, but with a semantic contrast); *špṭ,* "to judge"; *ḥsd,* "faithful," and perhaps *zkr,* "remember" (Mendenhall fc.b).

In summary, from the MB Age on there was no region of the Levant that had not been influenced by the Amorite language and culture in various ways and various degrees. Their cultural and linguistic influence was a lasting one that is gradually coming to light, especially in the areas of religion and law. Past generations of scholars credited the Babylonians with these cultural achievements; however, it now appears that the Babylonians themselves were merely the recipients, in part the product, and to some degree the vectors of the ancient Amorite village heritage, until they succumbed to the perpetual

temptation of urban imperialism. It is equally clear that the Amorite populations were themselves drastically modified by the various cultures into which they became integrated in the later phases of the Bronze Age, so that eventually they ceased to exist as a distinct cultural group.

GEORGE E. MENDENHALL

AMOS (PERSON) [Heb *ʿāmôs* (עָמוֹס)]. **1.** See AMOS, BOOK OF.

2. The son of Manasseh and father of Josiah, according to Matthew's genealogy tying Joseph, the husband of Mary, to the House of David and Solomon (Matt 1:10). Amos is unknown as an ancestor of Jesus in any other biblical documents, except Luke's genealogy (see below), but there is a significant textual variant with Amon, Gk *amōn* (see ASAPH). The external evidence for Amos is strong (Sinaiticus B, C, [D^{Luke}], St. Gall, Tiflis, Leningrad, f^{1}, 33, $it^{c, d\ Luke, ff1, g1, k, q}$ $cop^{sa, bo, fay}$, arm, eth, geo), with Alexandrian and some Caesarean witnesses, as well as Eastern versions, in comparison with the weaker external evidence for Amon (K, L, W, Leningrad, f^{13}, *Byz Lect*^{m}, it^{a}, Vg, $syr^{c, s, p, h, pal}$). The UBS committee "was impressed by the weight of the external evidence" (*TCGNT* 2) for Amos, though it recognized opposing positions (cf. Borland 1982: 501–3). If Amos is adopted—as it is by only a few standard versions, including RSV and NAB (contra AV, NEB, NASB, NIV, JB)—the genealogy appears to be in error, possibly with insertion of the OT prophet Amos (Luz *Matthew 1–7* EKK, 90 n.14) for the more historically correct Amon, found in the king-list of 1 Chr 3:13–14 and in 2 Kgs 21:18. Gundry (1982: 16) believes Matthew may have chosen or coined the spelling "Amos" for a secondary allusion to the prophet, as he did with Asaph (RSV Asa) (1:7–8), but this is dubious (cf. Brown 1977: 60–61). Amon probably should be read instead, on the basis of the OT evidence, although, unlike the MT, the LXX on which Matthew may well depend illustrates a diversity of readings, including Amos and Amon.

3. The father of Mattathias and son of Nahum, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam (Luke 3:25). It falls within a list of seventeen otherwise unknown antecedents of Jesus (Fitzmyer *Luke 1–9* AB, 500), except for Matthew's genealogy (which appears in adapted form in Luke 3:23–31 in the codex Bezae) (see above). Whereas Amos may, according to Marshall (*Luke* NIGTC, 163), represent the king Amon (2 Kgs 21:18), Amoz the father of Isaiah (2 Kgs 19:2), or the prophet, the name here probably is not to be equated with any OT person bearing a similar name (cf. Hervey 1853: 136–37), even in light of Luke's theme of Jesus as prophet (see Johnson 1969: 240–52). Kuhn (1923: 211) must stretch the evidence to see a relation between Amos and Simeon (3:30) as a result of corrupt writing and placement.

STANLEY E. PORTER

AMOS, BOOK OF. Amos (Heb *ʿāmôs* (עָמוֹס)) was an 8th-century Hebrew prophet who was born in the S kingdom of Judah but whose ministry was directed mainly to the N kingdom of Israel. Prophesying probably shortly after 760 B.C.E., Amos is reckoned as the earliest of the so-called writing prophets. The book bearing his name contains both oracles by him and some biographical information about him. It is the sixth book in the prophetic section of the Hebrew Bible and the third book of the "minor Prophets" (in the LXX it is the second book, before Joel).

A. Biography

Our knowledge of Amos the man is restricted to the information provided in the book of Amos. He was from Tekoa (Amos 1:1), a small garrisoned fortress ca. 10 miles S of Jerusalem and slightly W of the wilderness of Judah, a barren and rocky wasteland that falls toward the Dead Sea. He was variously described as a *nōqēd,* "shepherd" (1:1), a *bôqēr,* "cattleman" (7:14), and a *bôlēs,* "gouger [of sycamore figs]" (7:14). Undoubtedly, then, he came from an agricultural background, but the exact natures of his duties are in doubt. Early scholarship assumed that Amos was a poor manual laborer, a shepherd and goatherd who, possibly in the off season, worked as a dresser of the sycamore trees that grew in the lowlands in the Jericho Valley. The latter work involved cutting the fruit while it was still on the tree so that it would ripen at the proper time. It was generally assumed that the figs were eaten by the poor, including Amos, who may also have cut figs in exchange for grazing rights.

These early interpretations arose not so much from an understanding of the words used to describe Amos' profession—*nōqēd* occurs in only one other place in the OT, and both *bôqēr* and *bôlēs* are *hapax legomena*—as from the thrust of Amos' message. Scholars assumed that, since Amos was a champion of the poor and a critic of the wealthy, he must have had a modest upbringing. For a number of reasons this conclusion must be rejected.

The one other OT occurrence of *nōqēd* is in a reference to Mesha, king of Moab (2 Kgs 3:4). Mesha was obviously the "owner of herds," a breeder on a large scale, not a poor shepherd. *nōqēd* also occurs at Ugarit in the colophon of a text that indicates a possible cultic significance to the term (*CTA* 6.6 = *UT* 62.55): *rb khnm/rb nqdm,* "Chief of Priests/Chief of (Temple)-herdsmen" (*ANET,* 141b). Both these references suggest that Amos was either a shepherd who owned his sheep or an official who tended the royal or temple herds.

The Ugaritic text creates the intriguing possibility that Amos worked as an official in the service of Uzziah (2 Chr 26:10) or the Jerusalem temple. This cannot be ruled out. However, it appears that the term *nōqēd* is not in and of itself a cultic or royal term but one that derives those connotations from the surrounding text (cf. *CTA* 71.71 = *UT* 113.71). Thus, we would argue that Amos was not a royal or cultic

figure but one of the *ʿăm-hāʾārēṣ*, the well-to-do class of citizens who owned cattle, sheep, and goats. The *ʿăm-hāʾārēṣ* maintained tribal authority and Yahwistic orthodoxy, two characteristics of Amos' message (see Soggin 1987: 10–11).

This interpretation of Amos' vocation clears up the problem of understanding *nōqēd* and *bôqēr* together. *nōqēd* has generally been interpreted as a herder or breeder of small animals (sheep and goats), while *bôqēr* has been reserved for one who breeds large animals (cattle) (cf. the Kilamuwa inscription from Zinjirli [*KAI* 24:12]). It has been argued that the terms are incongruous, that poor farmers did not have the resources to breed and tend both small and large domestic animals. This led to emendations of the text: since *nun* and *bet* are often confused in writing, as are *dalet* and *reš*, scholars sometimes emended the MT to read *bôqēr* for *nōqēd* or *nōqēd* for *bôqēr,* thereby eliminating the problem. Others suggested that the reference to "flock" in Amos 7:15 influences the reading of *bôqēr* (from large animals to small) (7:14). Neither proposal is necessary, however, when we accept that Amos was rich enough to own sheep, goats, and cattle.

Finally, although the poor did eat sycamore figs, the fruit was mostly used for cattle fodder. Thus, the description of Amos as a *bôlēs* may refer to his ownership of sycamore orchards as a feed crop rather than to the specific act of cutting the figs.

The information regarding Amos is scarce, so that which does exist is worked and reworked, interpreted and reinterpreted in an attempt to enhance our understanding of the prophet. Since we have no first-person account of Amos' call to prophesy—as we do, for example, with Jeremiah—intense attention has been paid to the biographical record of Amos' confrontation with Amaziah, the high priest of Bethel (7:10–17), for it is there that Amos proclaimed to Amaziah that Yahweh "took him from following the flock" and called him to "go and prophesy to my people Israel" (7:15). Amos also states: *lōʾ nābîʾ ʾānōkî, wĕlōʾ ben-nābîʾ ʾānōkî* "Not a prophet I, nor the son of a prophet I" (7:14).

Much has been written about this statement, and scholars uniformly agree only on one point: the term *ben-nābîʾ*, "son of a prophet," refers to a member of a prophetic guild (1 Kgs 20:35; 2 Kgs 2:3; 4:1, 38). As the monarchy developed, those who anointed kings and supposedly had a direct line to Yahweh established guilds to perpetuate their profession by recruiting and training future prophets. The guilds were undoubtedly supported from the royal treasury: in troubled times the royal family would need favorable predictions to secure the support of the populace, who would have looked to the prophets as messengers of Yahweh. By Amos' time there were probably few, if any, independent prophets. Part of the importance of Amos and his oracles lies in the fact that he was the first prominent independent prophet of the monarchy. His message is not that of the prophetic guilds; anyone can prophesy who hears Yahweh (Amos 3:8).

In Hebrew Amos 7:14 is a nominal verbless clause. In such instances, the tense of the implied verb "to be" is understood from context. Here, it can be either present tense (from the influence of v 13b) or past tense (from the influence of v 15). The reading "I *am* not a prophet nor the son of a prophet" would suggest that Amos had separated himself from the prophets of the palace, whom he considered corrupt and unable to speak for Yahweh. "Amos is bent on *contradicting* Amaziah's assumption that he is a professional prophet, not somehow *reinforcing* it" (Auld 1986: 26), as a reading in the past tense might suggest. Auld (pp. 26–27) also suggests that the present tense is to be read unless context dictates otherwise; that the three nominal clauses in v 14 (*lōʾ nābîʾ ʾānōkî / wĕlōʾ ben-nābîʾ ʾānōkî / kî bôqēr ʾānōkî ûbôlēs*) suggest a continuing present; and that the *lōʾ,* "not," is an emphatic negative, not the *lʾ* affirmative as in Ugaritic. He concludes that Amos was reinforcing his independence of the corrupt prophetic unions that announced only what their employer, the king, allowed.

The reading "I *was* not a prophet" would suggest that Amos was emphasizing that he was not a prophet at the time of his calling, that he had no prophetic training, and that he did not turn to prophecy for economic or other ulterior motives. Scholars (see, e.g., Mays, *Amos* OTL, 137–39) who argue for a past tense note that Amos referred to prophets (2:11; 3:7), spoke in oracles and sayings like other prophets, and interceded like other prophets (7:2, 5). Amaziah called what Amos was doing "prophesying" (*tinnābēʾ,* 7:12, 16), and Amos said that he was called and sent to "prophesy" (*hinnābēʾ,* 7:15). Soggin

(1987: 8) notes that "throughout the book the verb *nbʾ* and the noun *nābîʾ* (the verb six times, the noun four times) never have negative connotations." Amos also received visions like other prophets (7:1–9; 8:1–9:6) and was called a *ḥōzeh,* "seer" (7:12), a synonym for *nābîʾ* and a term usually appearing in the titles of prophetic books and the Chronicler's work—the term *rōʾeh,* "public seer," is not used and may be yet another way that Amos denied his connection to the paid religious profession. Based on this evidence, one could argue that Amos did not consider all prophets to be corrupt and thus was not denying that he was a prophet, although he might be denying that he was the son of a prophet.

It is possible to propose a new solution to the problem of tense in this passage. It may be that Amos 7:14b–15—that is, Amos' response to Amaziah—is part of the dialogue between Amos and Yahweh at the time of Amos' call. We have, in compressed form, Amos' excuse for not wanting to obey Yahweh and Yahweh's response. Just as Jeremiah (Jer 1:4–10, esp. vv 6–7) responded, "I do not know how to speak, for I am only a youth," so Amos responded, "I am not a prophet nor the son of a prophet, but just a cattleman and fig cutter." Yahweh's response to Jeremiah was, "Go to whom I send you; speak what I command," and Yahweh's response to Amos was, "Go, prophesy." Thus, the tense of the verbless clause is present, which satisfies the linguistic arguments, but it references a past situation, which allows for a better interpretation of Amos as a prophet. And in reiterating his call, or part of it, Amos responded to Amaziah's concerns. Zevit (1975) notes that Amaziah assumed that Amos earned his living as a prophet, usually spoke in Judah, and was on his own in Bethel (Amos 7:12). Amos countered that he did not earn a living as a prophet, had a divine mission to Israel, and was not on his own but was called by Yahweh (7:14–15). Amos supplied all of this information to Amaziah through a recollection of his call.

The sayings and oracles of Amos convince us that he was cognizant of the history of Judah, Israel, and their neighbors (1:3–2:16). He knew about the cultic and political centers of Israel and Judah and their practices (Jerusalem—2:5, 6:1; Samaria—3:9, 4:1, 6:1; Bethel—3:14, 4:4, 5:5–6, 7:13; Gilgal—4:4, 5:5, Beer-sheba—5:5, 8:14; Dan—8:14). Amos was also aware of the social hierarchy and power structures that existed. The variety of his literary structures and his heightened rhetoric convince us that he was a gifted orator (see E below). All these factors lend credence to the view that Amos was a very gifted, highly educated individual, not a poor shepherd. It is romantic but highly unreasonable to think that the lofty motifs and grand oration of the book of Amos came from an uneducated manual laborer. It has also been suggested that the bold and brash statements of Amos (4:1, 5:5, 6:12, etc.) show that Amos is young. Yet the problems depicted by Amos would lead even older men and women to decry the situation with boldness and sarcasm.

In summary, Amos was an economically independent landed aristocrat who, believing that he had been called by Yahweh, became a prophet to the N kingdom of Israel. After the events of 7:10–17, it is assumed that Amos returned to his ranch in Judah. There is a pseudepigraphic legend that Amos was tortured by Amaziah and then was killed by Amaziah's son (see *OTP,* 391), and another that he was killed by King Uzziah (Ginzberg 1937–66: vol. 4: 262; vol. 6: 357 [*Shalshelet ha-Kabbalah 97*]). We have no evidence that there is any truth to either story.

B. Historical Setting

Amos' ministry is dated to the reigns of Jeroboam II (786–746 B.C.E.), king of Israel, and Uzziah (783–742 B.C.E.), king of Judah, "two years before the earthquake" (1:1). The earthquake, remembered centuries later (Zech 14:4–5), was severe, and evidence of its occurrence appears in the remains of Stratum VI at Hazor (King 1988: 21, 38), which can be dated to the mid-8th century. Josephus (*Ant* 9.222–27) connects the earthquake with an act of impiety on Uzziah's part around 760 B.C.E. (see 2 Kgs 15:5; 2 Chr 26:16–20).

If we date the earthquake to around 760 B.C.E., this coincides with Jeroboam's reconquest of Transjordan (Amos 6:14; see 2 Kgs 14:23–29), which also occurred around 760 B.C.E., and with Uzziah's impiety and subsequent leprosy. Jotham, Uzziah's son, reigned as regent from 750 to 742 B.C.E., and then, after his father's death, as king from 742 to 735 B.C.E. (2 Kgs 15:6; 2 Chr 26:21). If Amos' ministry had fallen in the regency of Jotham (750 B.C.E. onward), then presumably Jotham would have been mentioned in the superscription to the book. Thus, we can date Amos shortly before 750 B.C.E., or around 760 B.C.E.

The extraordinary length of the reigns of Jeroboam and Uzziah gives some clue to the historical situation during the early to mid-8th century B.C.E. First, this was a period of peace and expansion for Israel and Judah. The wars that threatened the two kingdoms during the reigns of the predecessors of Jeroboam and Uzziah were over. Assyria to the NE and Egypt to the S were both on the decline and were no threat to the smaller nations of Syria-Palestine. Israel and Judah took the opportunity to expand their borders to those of the old and revered Davidic-Solomonic empire.

The most important annexation for Israel was Gilead and the Transjordanian cities of Lo-debar and Karnaim (6:13–14). The King's Highway, the major trade route from the Tigris-Euphrates river valley to the Gulf of Aqaba and Egypt, ran through Gilead and the Transjordan. Thus, Gilead had been continually contested by Israel and Aram (Syria). With the Assyrian destruction of Damascus, the capital of Aram, Aram went into a decline around 801 B.C.E., which allowed Israel to assume control. Jeroboam, the greatest king of the Jehu dynasty, annexed the area of Gilead and occupied the Transjordan and Judah. Israel thus controlled the major trade route in the area and thereby reaped great wealth.

This was therefore a period of great prosperity for Israel. The stability of the region allowed for the safe conduct of caravans down the King's Highway, which was in Israelite hands. Trading with Egypt and Arabia in the S and Byblos and Syria in the N greatly increased the wealth of Israel and Judah. Amos describes this wealth, which is also evidenced in the archaeological remains of the time. Samaria, located 42 miles N of Jerusalem on a hill about 300 feet above the valley, was established by Omri (876–869 B.C.E.) as the third capital of Israel after Shechem and Tirzah, and excavations there and elsewhere have confirmed the wealth of the rulers and leaders of Israel. Over 500 ivory fragments from the 9th and 8th centuries have been found at Samaria (cf. Amos 3:15). Finds from other cities include over 300 ivories from Megiddo, a bed of ivory from Salamis in Cyprus (6:4), and two palaces facing in opposite directions, from Zinjirli, possibly evidence of the winter and summer houses in Amos 3:15 (also 6:11; cf. 1 Kgs 21:1, 18; Jer 36:22; *KAI* 216.17–20). Houses of hewn stone, or ashlar masonry (Amos 5:11), are found at Samaria. (See King 1988 for descriptions of the archaeological excavations and their findings.)

Auld (1986: 13) argues that, by the time of Amos, Israel was not prosperous but in decline: "The disparity between rich and poor which Amos found so objectionable may have been the result, not of recent prosperity acquired by some under Jeroboam's long reign, but of a longer established decline which bore most heavily on the poor." Hayes (1988) agrees with this interpretation of the historical situation. Yet the archaeological evidence argues for prosperity, not depression, during the mid-8th century. Further evidence comes from Tirzah, the capital of Israel before it was moved to Samaria. Excavations at that city have revealed that in the 10th century B.C.E. houses were of uniform size throughout the city, but by the 8th century one section of the city contained large houses, evidence of prosperity, while the other section contained the small houses of the poor. Megiddo was also a prosperous city during Jeroboam's reign (King 1988: 39). And Amos' description of the elaborate *marzēaḥ* banquets held by the rich (6:4–7) and his reference to the rich women of Israel as the "cows of Bashan" (4:1), fattened on their wealth and security, do not suggest a long-established decline. Thus, we can assume that Israel's domination of Gilead and the King's Highway led to a prosperity that enveloped the royal family and prominent members of society but did not trickle down to the poor. It is this uneven distribution of wealth in the 8th century that set the atmosphere for the social crimes that Amos so violently abhorred.

C. Theological Ideas and Motifs

The Israelites were a religious people. Pilgrimages to Bethel, Gilgal, and Beer-sheba, the sacred precincts of Israel, were commonplace (4:4; 5:5). Freewill and thanksgiving offerings and tithes were performed regularly (4:4), and there were many religious assemblies and festivals (5:21–23). By all criteria, then, the Israelites assumed that they were performing the cultic and ritual requirements necessary to appease Yahweh. Furthermore, they considered their wealth and security as evidence that Yahweh was pleased. They assumed that their steadfast devotion to cultic ritual exempted them from the requirements of righteousness and social justice and from the consequences of wrongdoing. Through sacrifice they could guarantee divine favor and their own survival. The peace and prosperity the nation enjoyed must have, to many Israelites, validated their lives, values, and assumptions as the chosen people of God.

Yet the people had turned the official view around and were reasoning in reverse: their prosperity proved that they were righteous. The distinction, while a fine one, is nevertheless important: the obligation of the covenant was to pursue righteousness and justice; prosperity would follow as a by-product of God's pleasure. The pursuit of wealth rather than righteousness was an unacceptable short cut, and wholly abhorrent to Yahweh, according to the prophet. "Amos' severe judgment is a repudiation, not of the cult itself, but of the cult as it was practiced in the eighth century B.C.E. … One's conduct in the marketplace must always conform to one's attitude in the holy place" (King 1988: 89).

And Israel's did not. Amos decried the social injustice, the oppression of the poor, and the lack of any moral or ethical values on the part of the rich and powerful. According to Amos, the spokesman of Yahweh, Israel was a violent, oppressive, and exploitative society. The poor had to sell themselves into slavery to pay off trivial debts (2:6; 8:6). The rich falsified weights and measures (8:5) and traded dishonestly (8:6). Even the courts, the last bastion of hope for the poor, were corrupt. Judges were bribed to cheat the poor out of what little they had (2:7; 5:10, 12). In fact, Israel was no longer capable of acting with justice (3:10; cf. 5:7, 24; 6:12). Truth and honesty were now hated (5:10).

Huffmon (1983: 111–12) is correct in suggesting that, when these social crimes are placed in historical context, four ideological points in Amos' message can be discerned: (1) the socioeconomic lifestyle of the Israelites is opposed to traditional values; (2) socioeconomic reorganization without compassion is not acceptable; (3) the resulting oppression of the poor cannot be tolerated; and (4) participation in the cultus gives a false sense of confidence.

Israel had profaned the true tradition upon which the nation was founded, the Book of the Covenant. The ancient prohibitions against sexual abuse (Exod 21:7–9), debt slavery (22:24), charging interest to the poor (22:25), the misappropriation of collateral (22:26–27), the corruption of the legal process (23:6–8), and fraudulent weights and measures (Deut 25:13–16) were ignored (Amos 2:7; 2:6; 5:11; 2:8; 5:10, 12; and 8:5, respectively) in the greedy race for more wealth. Partial corroboration of these practices comes from the Meṣad Ḥashavyahu ostracon (ca. 625 B.C.E.), whereon a reaper complains that his garment (*beged*) had been impounded and asks the military governor to intervene and retrieve it (King 1988: 24–25).

In the wake of these social crimes, Amos cried: "Let justice (*mišpāṭ*) roll down like waters, and righteousness (*ṣĕdāqāh*) like an overflowing stream" (5:24). In the ancient Near East deities were uniformly considered the source of water. Amos noted that it is justice and righteousness, not cultic ritual alone, that bring forth the divine salvific waters.

Given the peace and prosperity that existed, Amos undoubtedly knew that he had an uphill battle to convince the nation of the truth of his message. He thus took every opportunity to show that his message was Yahweh's message. In his confrontation with Amaziah (7:10–17) Amos denied any relationship to the prophetic unions and claimed that his ministry and message were the direct result of a call from Yahweh (see A above). Were it not for Yahweh's call, he would be tending to his agricultural business. Amos also emphasized the importance of his message through exaggerated and sarcastic rhetoric (see E below). But more importantly, Amos switched the meaning of common, traditional religious ideas, such as the election of Israel, "the day of Yahweh," and salvation history.

Israel viewed themselves as the elect of God, chosen by Yahweh to be His people, His nation; and they considered that election as an occasion of privilege and prosperity. Yet, for Amos, the people had turned the doctrine of election upside down. Election meant, first and foremost, special responsibility and obligation, which Israel could discharge only through the proper treatment of their fellow human beings. Amos measured the moral health of Israel and found the country fatally ill. Amid the peace, prosperity, and religious enthusiasm there was no fundamental loyalty to God, social justice, and ethical standards. Amos declared that Yahweh had thus rejected Israel's corrupt cult (5:21–24), which had produced a false sense of security and encouraged moral depravity. Amos cried out: "You only have I known of all the families of the earth. Therefore, I will punish you for all your iniquities" (Amos 3:2).

The concept of election included not only the assurance that Yahweh would preserve them as a people, but also the anticipation that the "day of Yahweh" would come, a day of salvation when all Israel's

enemies would be destroyed and Israel would stand before the world as a testimony to God's power and authority. With the expansion of the kingdom and with the peace that existed, many Israelites must have thought that "the day" had come and that Jeroboam was the "messiah." Amos, however, reversed the popular interpretation of the "day of Yahweh." It became a day of destruction, not salvation; of darkness, not light; of punishment, not prosperity (4:12; 5:18–20; 8:9–10).

So salvation history became judgment history. In a beautiful parody of the salvation story of Israel's deliverance from Egypt and entrance into the land of Canaan (Pss 105; 136:10–22), Amos turned the plagues of Egypt upon Israel (4:6–13). Unlike the Egyptians, however, Israel did not respond. The God of the conquest was now the God of destruction (2:9–16); the God of the Exodus was now the God of all nations, and the specialness of His relationship with Israel was now destruction, not election. Just as He will destroy the nations surrounding Israel and Judah, so will He destroy Israel and Judah.

With no evidence of a remorseful Israel, Amos had no choice but to become, and thus to forever be known as, a prophet of doom, whose images are those of war (3:11; 6:14; 7:17), defeat (5:3), deportation (4:2–3; 6:7; 7:11, 17), and death (5:2–3, 16; 6:9; 7:11, 17; 8:3; 9:10). He predicted the destruction of Israel (3:12, 15; 5:2, 17; 7:9, 11; 9:8), the razing of the capital Samaria (6:8), the captivity of the Israelites by the Assyrians (5:27; 6:7; 7:11), and the destruction of Damascus, Philistia, Tyre, Edom, Ammon, Moab, and Judah (1:3–2:5). All of this began to take place in 734 B.C.E. when Tiglath-pileser III (745–727 B.C.E.), king of Assyria, mounted his first campaign to the W, conquering the coastal areas of Palestine. Hazor, Megiddo, Galilee, and Gilead were captured in 733 B.C.E., and Damascus and Syria in 732 B.C.E. By 727 B.C.E. the small nations of Syria and Palestine, including Israel and Judah, were vassals of Assyria. In 722 B.C.E., after a brief revolt, Samaria was razed, the leaders of Israel were exiled, and Israel became a province of Assyria.

The question has always existed in Amos studies: Did Amos hold out any hope of redemption and renewal? "Many of Amos's words are very bleak: their surface meaning can be read no other way. But is their intent simply at worst to jeer at those on their way to deserved perdition, or at best to annotate their record and arraign them before capital sentence is carried out? Or is the purpose of Amos's sharp criticism to shock his people into self-understanding *and a commitment to amelioration?* He refuses to commit his God to a positive response, but he does leave the door open" (Auld 1986: 65). Auld and others assume that every prophet brought a message of both doom and hope, that every prophet presented a futuristic picture of hope no matter what the crimes and the punishment. It could be argued, however, that Amos' original message did not contain even a shred of hope for Israel. (For a discussion of the oracle of hope and restoration in 9:11–15, as well as the doxologies, see F below.)

According to the prophet, the Israelites were beyond redemption (3:10; 5:10) and ready for the punishment that Amos must have sensed was on the horizon. Why would he have projected hope if he knew it was a matter of time before Assyria turned its attention to the west? It is important to note that, unlike other prophets who held out great promise for a remnant that would survive, Amos assumed that there would be no remnant (4:2b; 6:10), or at least that that remnant was in jeopardy. One could also argue that, even if Amos had wanted to present some hope, to do so to such a self-righteous audience enjoying peace and prosperity would have softened the message and led them to turn a deaf ear.

D. Structure and Content

Scholars have divided the book of Amos in a number of ways. Koch and others (1976), for instance, divide the book into four parts (chaps. 1–2, chaps. 3–4, 5:1–9:6, and 9:7–15). Van der Wal and Talstra (1984), criticizing Koch's four-part structure, divide the book into two parts (chaps. 1–6 and 7–9). They argue that the superscription implies that two books, one of "words" and one of "visions," were joined together. Most recently, Limburg (1987) has proposed a sevenfold division of the book, each division further subdivided into seven parts. He would propose a three-part structure. Chaps. 1–2 are clearly a unit. Whether chaps. 3–6 should be subdivided into any smaller units is debatable, but it seems clear that this section should be separated from the visions at the end of the book (chaps. 7–9), the third section.

1. Chapters 1–2. The book of Amos begins with a classical prophetic superscription (1:1, cf. Hos 1:1; Isa 1:1; Jer 1:1). It contains chronological and geographical information on the prophet's ministry and

identifies his profession; it also provides a description of the contents of the book—"the words of Amos … which he saw." The patronym of the prophet, another feature of the standard superscription, is here missing. The awkwardness of the two dependent clauses has led Mays (*Amos* OTL), Soggin (1987), and others to suggest that the original superscription was as follows: "The words of Amos of Tekoa which he saw concerning Israel two years before the earthquake." The rest they consider the work of a Deuteronomic redactor during Josiah's reform or the Exile. Whether or not this is true, it is important to note that the original superscription is a late addition to the book and not original with Amos. This is not unusual and in fact is the case with all of the prophetic superscriptions of the OT.

After a detached oracle (1:2), there is a series of indictments and sentences against various nations who were adjacent to and had contact with Israel throughout its history (1:3–2:5). (1) *Damascus,* the capital of the Aramaean kingdom to the NE of Israel, was accused of ruthless warfare (1:3–5). It had "threshed Gilead with iron threshing sledges," perhaps a reference to King Hazael's conquest of Gilead (2 Kgs 10:32–33). (2) Yahweh indicted the *Philistines,* Israel's rival for possession of the land of Canaan, because of their exile of a people to Edom (1:6–8). This was possibly a reference to the practice of trading captured prisoners to Edom as slaves to be used in the copper mines located there. (3) *Tyre,* the ancient trading center along the Mediterranean, was convicted of the same practice as the Philistines, as well as for broken agreements (1:9–10). (4) *Edom,* which lay SE of Judah, was the target of the fourth oracle (1:11–12). With the exception of Judah, Edom was the most closely associated with Israel: the nation descended from Esau, Jacob's brother (Genesis 36). Edom had "pursued his brother [Israel] with a sword," a reference to the hostility between the two brothers that was symbolic of the animosity between the two nations throughout their existence. (5) *Ammon* was the next nation to be indicted by Yahweh (1:13–15). The nation, which lay E of the Jordan bordering the Israelite territory of Gilead, was accused of a brutal aggression against Israel, one that included "ripping open" pregnant women. (6) *Moab,* which lay E of the Dead Sea and whose S border joined Edom's N limits, was accused of desecrating the dead, defiling the bones of the king of Edom (2:1–3). (7) *Judah,* the sister kingdom of Israel, was convicted of "rejecting the law of Yahweh" (2:4–5). Except for the latter oracle against Judah, all of the others refer to crimes against humans. This, and the use of Deuteronomic language (*tôrāh* and *šāmar*), has led some scholars to regard the oracle against Judah as a secondary addition, but its exclusion would destroy the formal structure of the whole, as we shall see.

The condemnation and judgment upon each nation began, "For three transgressions … and for four …," a poetic technique that provided a formal structure to the whole (this technique of X, X+1 was common in the wisdom literature of the ancient Near East; see Prov 6:16; 30:15; *Ahiqar* vi.92 [*ANET,* 428b]; *UT* 51.iii.17–18 [*ANET,* 132b]). Thus, there are seven indictments against seven nations, that is, the sum of three plus four. And certainly not lost on the audience was the fact that, when Israel conquered Canaan, it displaced seven nations whom Yahweh condemned and removed from the land because of their inhumanity to humans. Seven nations are now again subject to removal. Yet the climax comes with the addition of one more nation, *Israel* itself—the seventh plus one, the last, separate from the others. Israel, charged with social injustice, had proven to be no better than the Amorites, whom they displaced when they entered the land of Canaan (2:6–11). Just as Israel's seven neighbors were to be punished for various breaches of international law and morality—a sentence that Israel would have applauded—so Israel was to be punished for its lack of justice and compassion to fellow human beings.

When Amos finished his oracle on Judah, the seventh, the audience must have thought he was finished. How shocking it must have been to hear him continue, and to condemn them. "Amos [here was] original in asserting that social injustices and transgressions of the moral code in Israelite society (perhaps equated with 'the law') have the same moral status as transgressions of the much more 'self-evident' laws of international conduct and of the practice of war" (Barton 1980: 49). And, as we have noted, Amos was unique in turning the doctrine of election upside down with his belief that "Israel was not indemnified against punishment but was all the more accountable in view of her election" (Barton 1980: 49).

2. Chapters 3–6. This section contains oracles against Israel and predictions of its destruction, and the vast majority of scholars consider this section of the book to contain the actual words of Amos. This

section begins with Amos' new interpretation of what election means to Israel: "You only have I known of all the families of the earth; therefore I will punish you for all your iniquities" (3:2). This sets the tone and provides the main theme for this section.

Amos then fortifies his position as a prophet, and his message as one that comes from Yahweh, with a series of rhetorical questions (3:3–8). Here Amos uses exaggeration to point out the obvious. The questions, all demanding a "No" answer, lead the audience to anticipate the confirmation of Amos as a prophet, who is speaking only because Yahweh has spoken to him.

After confirming his role as the messenger of God, Amos delivers a series of oracles against Samaria and Bethel. The arrangement is an A, B, A´, B´ pattern: first those who dwell in Samaria are condemned (3:9–12), then those at the sanctuary of Bethel (3:13–15), then the women of Samaria (4:1–3), and then those at the sanctuaries of Bethel and Gilgal (4:4–5). Amos addresses both the political and cultic centers in his denunciation of Israel's corrupt social practices.

As we noted above (C), 4:6–13 contains a parody of the salvation history of Israel. This parody is arranged in a 2+2+1 pattern (see Gese 1981), with a doxology (v 13) at the end. As we will see, this is the same pattern that appears with the visions (7:1–9; 8:1–3; 9:6) (see Gese 1981: 75–78). There are two pairs of visions, plus a fifth, with a doxology (9:5–6) at the end of the section.

Amos' references to Israel's past would have been familiar to all Israelites. Yet Amos reinterpreted their significance. Just as Yahweh plagued Egypt in order to exact the deliverance of His people, so Yahweh plagued His people Israel to exact their return to Him. Just as He destroyed Sodom and Gomorrah, so He destroyed part of Israel. These calamities were brought upon the nation by God to effect its repentance and return to righteousness. But each attempt at reconciliation ended in failure: " 'Yet you did not return to me,' says Yahweh." When they did not respond, Amos taunted, "Prepare to meet your God, O Israel!" (4:12). A meeting that Israel could only have imagined as a pleasant experience now becomes an occasion for the wrath of God to rain down upon those who are present.

Lest Israel think that Amos is happy about the destruction to come, a lamentation over the fallen house of Israel immediately follows (5:1–2). In the classic *qinah* meter of a lament, Amos communicates Yahweh's sorrow over the near complete devastation of Israel—only 10 percent of the population will survive.

The lament in 5:1–2 begins a lengthy section that utilizes a chiastic pattern (A, B, B´, A´) to organize the material. Scholars have argued until recently tht 5:1–17 contains fragments of various sayings given by Amos at different times. That now appears not to be the case. De Waard (1977) demonstrated that 5:1–17 was a palistrophe with the following sections: A—elegy (vv 1–3); B—"seek and live" (4–6); C—complaint (7); D—doxology (8–9); C´—complaint (10–13); B´—"seek good, not evil" (14–15); and A´—mourning (16–17). Lust (1981), expanding on De Waard's structure, considers the entire section from 4:1 to 6:7 to be a chiasm. Again, the doxology at 5:8–9 is the turning point for the structure.

A note about the doxologies is in order. There are three doxologies in the book of Amos (4:13; 5:8–9; and 9:5–6), each significantly placed as an integral part of its respective literary pattern. They underscore Yahweh's power throughout history, emphasizing the point that, if He chooses, He can do *against* Israel what He has previously done *for* Israel. Although most scholars consider the doxologies late editions to the book of Amos (see F below), the fact that they are inherent in the literary structures suggests either that they are original or that both they and the structure are late. The former seems preferable, and it is best to regard the structures and the sayings as original.

A series of woes appears from 5:18 to 6:14. Subjects include "the day of Yahweh" (5:18–20), the cult (5:21–27), the military security of the nation (6:1–3), the *marzēaḥ* feast (6:4–7), and the destruction to come (6:8–14). Amos' description of the *marzēaḥ* feast is particularly intriguing. The feast, attested from the 14th century B.C.E. to Roman times, had either a religious or a funerary significance. It lasted for several days, during which time meat and wine were served to banqueters who were prostrate on couches. There was much eating, anointing with oil, and music (*nebel* is a lyre, not "harp" as RSV [see King 1988: 154]). Amos seems to address the practice of the feast both to show the injustice of such luxurious

feasting while the poor are in such misery and to suggest that, if the feast is a funerary feast, then the participants should mourn for the poor and for the destruction that is soon to take place.

3. Chapters 7–9. This unit contains five visions which are broken by a biographical narrative (7:10–17, see A above) and a series of condemnations against Israel (8:4–14). Through these five visions Amos demonstrated the meaning of "prophet" as "seer." He saw events or objects, whether in visions or in everyday life, which he interpreted or which were interpreted for him with respect to the religious situation in Israel. The visions are grouped in pairs in which the imagery is different but the message and its meaning are the same. Within each pair the imagery intensifies, becoming more cataclysmic.

The first pair of visions was a locust plague destroying crops before they were harvested (7:1–3) and a cosmic fire that devoured both the land and the great deep (7:4–6). Although the visions were different, the message was the same: destruction had been decreed against Yahweh's people. When the prophet interceded with Yahweh on behalf of the threatened people, Yahweh agreed and spared the people, or at least postponed the punishment. In both visions, the Lord repented, saying, "It shall not be."

The second pair of visions likewise differed in content and imagery, but the message communicated by them was the same: Yahweh will no longer relent or forgive; the time for mercy is past, and destructive judgment is now certain. The prophet no longer intercedes. In the third vision, Amos saw Yahweh standing beside a wall, with a plumb line in His hand (7:7–9). Much as a mason or a carpenter plumbs a wall to determine if it is straight, so Yahweh plumbed His people, measuring them against His standard of justice and righteousness. Israel failed the test, and this time Yahweh would not spare them. God declared that the land would be made desolate, that Israel would be laid waste, and that He would "rise against the house of Jeroboam with the sword." The fourth vision contains a play on words. Amos saw a basket of summer fruit (*qayiṣ*), and Yahweh interpreted it for him as the end (*qēṣ*) of His people (8:1–3). As in the third vision, so here, Yahweh will not spare those who would make a mockery of His moral teachings. As one gathers in the summer fruit, so Yahweh will gather His people for destruction.

Sandwiched between the third and fourth visions is a narrative about the prophet and his dramatic confrontation with Amaziah, the high priest at the Bethel sanctuary (7:10–17). The words of Amos were unpopular with the religious and political leaders of Israel and posed a threat to Amaziah's authority and control over the cult. Whether Amos threatened Jeroboam—which would have been treason—or whether Amaziah distorted Amos' words for his own gain is difficult to determine and has been the subject of much scholarly debate, but the text shows that Amaziah went to King Jeroboam and reported that Amos had threatened the king's life (vv 10–11). With this report, Amaziah undoubtedly received royal permission to escort Amos across the border. Amaziah thus ordered Amos to go back to Judah, to prophesy in his own land, and never to prophesy at Bethel again (vv 12–13). Amos recounted his call from Yahweh to be a prophet to Israel and indicated that it was his duty to prophesy and preach against Israel (vv 14–16). He then gave Amaziah a personal message concerning his destiny: Amaziah was to be carried away to be executed in an alien country after witnessing his wife's prostitution and his family's death (v 17).

The reason that this narrative is sandwiched between the third and fourth visions is to explain why Yahweh's decision to destroy Israel is irreversible. The behavior of the high priest—in rejecting the message of Amos with its divine warning and in going further by effectively denying the prophet's right and necessity to speak—closes off the last chance Israel has to hear the truth and repent. Thus, Yahweh cannot rescue and spare Israel now that the opportunity for repentance is gone for good.

After an interlude of oracles, including one likening the "day of the Lord" to a solar eclipse (8:9–10), two of which Amos could have witnessed (784 and 763 B.C.E.), the fifth vision points beyond the destruction of the nation and the exile of the people to the obliteration of the leadership, the final act in the drama of judgment. Yahweh stood beside the altar of the temple and ordered its destruction and the elimination of all the people (9:1–6). Not only will Yahweh destroy the land and its inhabitants, but He will raze the sacred precinct where He was worshiped and kill all those who maintained His cult. No one will escape the wrath of Yahweh, no matter where they may hide. Yahweh, the God of hosts, the creator and sustainer of the world, will perform His judgment upon Israel.

The visions are followed by two oracles that close the book. The first (9:7–10) is a prophecy of terrible destruction on the nation Israel. The imagery is vivid: no one shall escape the evil destruction, not even those who think they can hide in foreign countries, for Yahweh will scoop up and shake the nations through His sieve, and not one Israelite shall fall through. All Israel shall be caught in the coming destruction.

This vivid oracle of destruction is followed by a vision of the last days when the land and its fruitfulness will be restored and renewed and a new age of reconciliation and restoration will begin. The vision describes the restoration of the Davidic kingdom, prosperity, and security (9:11–15). Scholarly consensus is that this last promise of renewal is a 6th-century exilic addition. Eighth-century prophetic oracles were often revised and reapplied to the similar 6th-century experience of Judah (e.g., Micah), and consequently 8th-century materials were often interlaced with those of the sixth. That appears to be the case here. First, v14b contradicts 5:11b. Second, there is a discordant tension between the severe oracle of destruction in the preceding verses (7–10) and the glorious hope of renewal here. Third, as we have noticed above, nowhere else in Amos is his judgment and condemnation of Israel mitigated. Fourth, the phrase "unsteady booth of David" most likely refers to the imminent destruction of Judah in 587/6 B.C.E., over a century and a half later than Amos. The phrase "restore the fortunes" is clearly later terminology (see Isa 63:9; Micah 7:14). Fifth, the "remnant of Edom" probably refers to those left after Edom's destruction by the Babylonians, also in the 6th century (Ezek 25:12–14). For these reasons, it seems likely that 9:11–15 is a late addition to Amos (see F below for a discussion of other late additions).

E. Literary and Rhetorical Features

The language is rich and the literary features abundant in the book of Amos. In addition to the literary structures (chiasm, alternation) pointed out in the previous section, Amos uses a number of other features to formulate his message. The use of divine appellatives, the alternation between first and third person, and between second and third person with reference to addressees, and the creation of sound patterns all aid in knitting together the larger structure of 4:1–6:7 (Tromp 1984). Amos is fond of progressive numerical formulas, using them to structure at least three sections of the book: the X+1 pattern of 1:3–2:14 and the 2+2+1 quinary patterns of 4:6–13 and chaps. 7–9.

Amos employs a variety of types of literature. The messenger formula typical of diplomatic correspondence in the ancient Near East (2 Kgs 19:10–19) is used abundantly by prophets, including Amos. The introductory formula "thus Yahweh has said/says" and its variations ("Yahweh has sworn," "an oracle of Yahweh") is used approximately twenty times throughout the book. Amos presents visions, as we have noticed, testimony ("Hear this word," 3:1; 4:1; 5:1), woes ("Woe to," 5:18; 6:1; 6:4), proverbs (3:3–6), wisdom (5:13), laments (in 3/2 *qinah* meter, 5:1–2), and doxologies (4:13; 5:8–9; 9:5–6). Judgments in the form of reproaches and oracles of doom of course appear throughout the book.

Amos' use of rhetorical features include exaggeration (2:6–8; 3:9–11; 4:1–3; 5:21; 6:12–13), word play (5:5b; 8:1–2), antithesis (2:13; 5:4–5, 24), verbless sentences (5:18; 6:1–3, 6, 8, 14), taunts (4:4–5), riddles (6:12), comparisons (2:9; 5:2, 7, 19), and metaphors (1:3; 2:13; 3:12; 9:9).

F. Text and Canon

The book of Amos for the most part contains the words of Amos, the 8th-century prophet. There are, however, sections that everyone agrees are not written by Amos: the superscription (1:1) and the biographical account of the prophet's confrontation with Amaziah (7:10–17). It is generally assumed that the disciples of Amos supplied these sections when they preserved Amos' words in writing, either during or shortly after his ministry. His disciples also may have organized Amos' oracles into the present patterns that we have. For instance, the oracles to the foreign nations in 1:3–2:5 may have been separate oracles that were brought together by those who followed Amos.

The general consensus is that the social matters are the true words of Amos. Although Koch and others (1976; 1982/3) argue that the doxologies (4:13; 5:8–9; 9:5–6) are late, de Waard (1977) and Tromp (1984) have shown that they are an integral part of the structure present in their respective sections (see the discussion in D above). To consider them late, then, is to consider the structuring of these sections a late editorial function. Since the doxologies reaffirm the power of Yahweh to act as the prophet has said

he would and do not go against the grain of any sections that are considered original with Amos, it seems best to attribute the doxologies to Amos and/or his disciples.

Lust (1981) has suggested that 5:4–6 and 5:14–15 are part of the Deuteronomic redaction since they mimic Deut 12:5 and 30:15, respectively. But which work influenced the other? It is possible that the "seek X, not Y" phrase and its variations such as "seek X and live" were common examples of the rhetoric of the monarchy. Amos could easily have been the first to record them. Amos 1:2 is sometimes rejected as late on the basis of its similarity with Joel 3:16 and Jer 25:30–31, but again, Joel and Jeremiah could have been copying Amos.

Some scholars also reject the originality of the oracles against the nations of Tyre (1:9–10), Edom (1:11–12), and Judah (2:4–5; see D above). It has been argued that the oracle against Tyre should be dated post-604 B.C.E. to the time of Nebuchadnezzar II (cf. Ezek 26:1–28:19). Ezekiel's proclamation against Edom (25:12–14) has led some to regard Amos' oracle against that nation as similarly emanating from the exilic period. As we have noted, the Deuteronomic language in the oracle against Judah suggests a 7th- or 6th-century date (see Barton 1980: 24). Yet all of the smaller nations of Syria-Palestine were alternately strong independent states and then vassal provinces numerous times from the 8th century until the conquest of the Near East by Cyrus the Persian. There were ample occasions to condemn each of the above, and the prophecies of Ezekiel almost two centuries later should not deter us from assuming that the prophets of Yahweh also had problems with these nations in the 8th century. Furthermore, an elimination of these oracles from the set destroys the entire structure of chaps. 1–2 and eliminates the movement toward the ultimate climax of the series, the oracle against Israel. As noted above, there can be little doubt that 9:11–15 is a later addition to the book.

Scholars disagree on what other sections can be attributed to Amos or his disciples and on the development of the text of the book. Hammershaimb (1970), for instance, considers the entire book to be the genuine sayings of Amos that were put together by his disciples. Gordis (1971) and, more recently, Limburg (1987) assume that the book is substantially the unified work of Amos. Hayes (1988) believes that the book is the result of later redactors pulling together short snippets of the genuine speeches of Amos. Mays (*Amos* OTL) considers 1:3–6:14 to be from Amos, with the rest the result of redactions that reached down into the exilic period. Rudolf (*Joel, Amos, Obadjah, Jona* KAT) reduces the material original to Amos to 1:3–2:16. He assumes that Amos' disciples developed the rest of the book, except for 9:11–15, which Rudolf argues is late.

Wolff (*Joel and Amos* Hermeneia) believes that chaps. 3–6 are from Amos and that the rest has been developed in six layers: (1) chaps. 1 and 2 and (2) the five-part series of oracles and visions from Amos himself (cf. Gese 1981); (3) the Amos school (disciples); (4) the Bethel interpretation during the period of the Josianic reform (3:14b; 5:5b; 9:1–4); (5) the Deuteronomic redaction; and (6) the postexilic salvation eschatology. Coote (1981), adapting Wolff's work, assigns the book to a three-stage process of growth: (1) "the words of Amos"; (2) "Justice and the Scribe," the message reactualized in the 7th century; and (3) "Exile and Beyond." More than likely there were three stages in the development of the book of Amos: (1) the original words of Amos, including the sayings (1:3–6:14; 8:4–14; 9:7–10) and the first-person narratives ("visions," 7:1–9; 8:1–3; 9:1–6); (2) the work of the disciples, including the superscription (1:1) and the third-person narrative (7:10–17); and (3) a later editing that appended the oracle of hope to the end of the book (9:11–15).

The book of Amos, in its present form except for 9:11–15, was undoubtedly part of the first edition of the Hebrew Bible. That edition, compiled between 560 and 540 B.C.E. by the Jewish community in exile, included the Primary History (Genesis–2 Kings) and the prophetic corpus associated with that history (1 Isaiah, Jeremiah, Ezekiel, and the first 9 books of the minor prophets). The last date recorded in this material is 561 B.C.E., the 37th year of the exile of Jehoiachin and the 1st year of the reign of Awil-Marduk, king of Babylon. This may refer to the actual date and place of publication. Amos 9:11–15 was probably added to the book after Jewish hopes were aroused by the decree of Cyrus in 538 B.C.E. By the dedication of the second temple in 515 B.C.E., the book of Amos was in its present form.

As far as the text is concerned, "in the main the ancient versions of Amos attest the same text of the book as the familiar Hebrew" (Auld 1986: 57). The LXX lacks "the oracle of Yahweh, God of Hosts" in 6:8 and 6:14, and some Gk versions lack 3:10, but otherwise the LXX and the other versions represent a text similar to the MT; there are no important variations. Furthermore, the MT is in good condition. The text is difficult in places (2:7; 3:12; 5:6, 26; 7:2; and 8:1) where some scholars recommend emending the MT, but in general problems with interpretation of the text arise from our lack of understanding, not the corruption of the text itself.

AMOZ (PERSON) [Heb *ʾāmôṣ* (אָמוֹץ)]. The father of the prophet Isaiah (Isa 1:1). Other than his name, the Hebrew Bible gives us no information about Amoz. Furthermore, this name is the only direct information we have about Isaiah's origins. See ISAIAH. The name occurs thirteen times in the Hebrew Bible and is always part of the phrase "Isaiah the son of Amoz" (Isa 1:1; 2:1; 13:1; 20:2; 37:2, 21 [=2 Kgs 19:2, 20; cf. 2 Chr 32:20]; 38:1 [=2 Kgs 20:1]; 2 Chr 26:22; 32:32). According to Jewish tradition, Amoz was the brother of King Amaziah, the father of King Uzziah (*Meg.* 10b; *Soṭa* 10b). Hence, Isaiah would have been in the line of David. While there are a number of other indications that Isaiah possessed a close connection to the court, it is impossible to confirm this late tradition. The name Amoz is the short form of the name Amaziah, Heb *ʾămaṣyāhû* ("YHWH is strong"). This type of name is at home in the world of cult poetry in which one recognizes that YHWH is the source of strength for his adherents. In addition to Amaziah, the names of the other Judean kings of the 8th century B.C.E. are formed in a similar manner: Uzziah ("YHWH is my strength"), Jotham ("YHWH is upright"), Ahaz (short form of Joahaz="YHWH has seized"), Hezekiah ("YHWH is my strength") (Wildberger *1–12* BKAT, 5; *IPN,* 190). The name *ʾāmôṣ* also appears on a seal of unknown provenance. Although Anderson (1960: 57–58) has argued that this seal belonged to a professional scribe who was none other than the father of Isaiah, it is highly unlikely that this seal ever belonged to the biblical Amoz (Kaiser *Isaiah 1–12* OTL, 2; Wildberger *Isaiah 1–12* BKAT, 5).

AMPHICTYONY. That premonarchic Israel had a structure analogous to that of the classical amphictyony is a theory which enjoyed wide acceptance over half a century. The success of the theory resulted from its explanatory power: it not only provided a credible and illuminating account of an early obscure period, but it also supplied a context within which to locate the formative stages of the Pentateuch and the origins of distinctively Israelite institutions and traditions which could not be explained within the frame of reference of Israel as a monarchic state. Recent criticism of the theory, while not necessarily leading to its absolute rejection, has at least made such comprehensive use of the analogy inappropriate.

———

A. The Classical Amphictyony

"Amphictyony," probably originally the proper name of a tribe rather than a compound expression meaning "to dwell around," was the term applied by Demosthenes in the 4th century B.C.E. to a sacred league which, from the beginning of the 6th century B.C.E., had its center at the shrine of Apollo at Delphi. It is to this league that the term originally belongs, and only by analogy is it later applied to other leagues. Thus, Strabo (9.2.33) refers to the amphictyony at Onchestos, and also (8.6.14) to the 7-member amphictyony at Calauria, both centered on sanctuaries of Poseidon. The Delphi league, the institution

about which most information exists (though deriving from a relatively late date in its history) and the league to which the term "amphictyony" properly applied, is, therefore, the model against which the appropriateness of any analogous use of the term is to be tested.

The Delphi amphictyony was a sacred league of 12 peoples; their number remained constant, though political events sometimes led to changes in the identity of the members. It was originally based on the sanctuary of Demeter at Thermopylae, but later came to take the sanctuary of Apollo at Delphi also under its protection. The chief functions of the league related to the sanctuary, which the amphictyonic members undertook to maintain and defend. This task was organized by the *hieromnemones*, the chosen delegates of the amphictyonic members (perhaps together with the *pylagoroi*, apparently either the original delegates of the league when it was based on Pylae, or delegates charged with particular functions). The *hieromnemones* met regularly in assembly at the sanctuary for festivals, to administer the finances of the amphictyony, and to keep the sanctuary and its access roads in good repair. Although the cultic focus is essential—a characteristic reflected also in the manifest lack of political unity among the members, between whom internecine warfare was not unknown—the purpose of the amphictyony was not wholly cultic. The members undertook not to destroy any of the towns of the league and not to cut off their water supplies, within the framework of attempting to preserve a state of political equilibrium between the members. Thus, it was not simply for the purpose of maintaining a sanctuary that the amphictyony came into existence, but rather in order to give cultic expression to an agreed state of mutual relations which had already been achieved.

B. The Theory of an Israelite Amphictyony

Amphictyonic structures have been proposed for the Philistines (by Rahtjen) and the Sumerians (by Hallo), but it is with reference to Israel that the analogy has been most extensively developed outside the classical world. The term "amphictyony" had already been long introduced into the Israelite context (by, for example, Alt 1929: 438–39; see further Bächli 1977: 17–20) when Noth published his highly influential study *Das System der zwölf Stämme Israels* in 1930. Here the analogy was convincingly expounded in full detail. Further studies by Noth of the pentateuchal laws, the history of the pentateuchal traditions, and the "judge of Israel," culminating in his *The History of Israel*, elaborated his primary study and developed its consequences for associated areas of OT study. Through the use of this analogy, Noth was able to give institutional form to a premonarchic Israel which he, under the strong influence of Weber, conceived of as a religious entity, the covenant people of Yahweh.

Noth (1930: 3–39) based his study on the OT tribal lists. These lists describe Israel, in common with other non-Israelite peoples, as a community of twelve tribes, descended from the twelve sons of Jacob. The lists may be, as in Genesis 29–30, of the sons of Jacob, or, as in Numbers 26, of the tribes of Israel; but the number twelve is consistently maintained. Even when there is variation in the constituent elements of the lists the total number remains fixed. The main discrepancy between the lists and the one which divides them into two basic categories is that some lists include the tribe of Levi while others do not: Genesis 49 is taken as the basic form of the former group, and Numbers 26 of the latter. The sons of Jacob appear in Genesis 49 in the following order: Reuben, Simeon, Levi, Judah, Zebulun, Issachar, Dan, Gad, Asher, Naphtali, Joseph, and Benjamin. The birth story of Genesis 29–30 shows that the first six are sons of Jacob by his wife Leah, the next four by the handmaids Bilhah and Zilpah, and the last two by his second wife Rachel. The tribes of Israel are listed in Numbers 26 in the following order: Reuben, Simeon, Gad, Judah, Issachar, Zebulun, Manasseh, Ephraim, Benjamin, Dan, Asher, and Naphtali.

The chief variation between these lists, the presence or absence of Levi, is important in that it allows a chronological ordering of the lists, for the type which includes Levi is probably older than that which does not. The reason is that it is easier to explain how Levi should have been secondarily omitted from the list than to explain its secondary inclusion. Levi's inclusion in Genesis 49 among the other brothers presupposes that, as in Genesis 34, it is a "secular" tribe. Otherwise, however, and historically, Levi is known only as a priestly tribe separate from its fellow tribes and having no land possession; it is this later status of Levi which is reflected in its omission from the list of Numbers 26. Both lists, in terms of their absolute date, must reflect conditions of the premonarchic period. The later of them, Numbers 26,

supports this conclusion since it assigns to the tribes families which may be identified as city-states of the mountain territories of Palestine (Shechem, Tirzah, and Hepher), but none which may be identified as city-states of the plains. These presupposed conditions would antedate Israelite expansion into the plains, especially in the time of David.

Other variations between the lists, following on the omission of Levi, include the substitution of Manasseh and Ephraim for the single Joseph, and the transfer of the tribe of Gad from a position near the end of the Genesis 49 list to a new position among the Leah group of tribes formerly occupied by Levi. Both changes are significant, the one reflecting a concern to maintain the total of twelve, and the other intending to preserve a total of six for those tribes reckoned as descended from the sons of Leah. It is this concern for consistency which suggests that there is a historical reality behind the lists in the actual life and constitution of Israel in the period of the judges from which these lists derive.

It is at this point that Noth (1930: 39–60) introduced the analogy of the classical amphictyony through which the reality of premonarchic Israelite life might be clarified. The number twelve of the tribes of Israel is an institutional necessity to be understood within the framework of a tribal federation analogous to the later Greek amphictyony at Delphi. In both cases the number is related to the months of the year and the need to maintain the central sanctuary on a rota basis. As in Greece, so in Israel, that number remained constant while the constituent elements of the total were open to variation. In the Israelite context the concern for the number six of the Leah group of tribes should be given a similar explanation. This group represents an older amphictyonic organization of six tribes, only secondarily extended to twelve (Noth 1930: 75–80). Historically, this presupposes that the Leah tribes were the older inhabitants of the land; their organization was extended to a membership of twelve through the inclusion of the handmaid tribes (Dan, Gad, Asher, Naphtali) on the occasion of the entry into the land of the Rachel tribes (Joseph and Benjamin) under the leadership of Joshua. This older six-tribe Leah amphictyony was superseded by the twelve-tribe amphictyony, but alongside the latter there coexisted a six-tribe amphictyony comprising the southern tribes living on the mountains of Judah: Judah, Caleb, Othniel, Cain, Jerahmeel, and Simeon. Thus, Judah and Simeon effectively belonged to two amphictyonies: the larger one was centered on Shechem, to which Joshua summoned the tribes at the conclusion of the entry of the Rachel tribes (Joshua 24), and the smaller one was centered on Hebron and formed the base of David's later elevation to kingship. These were the cult centers which the tribes undertook to maintain; it was here that they, in their representatives, the *nĕśî᾽îm* (a list of whom appears in Num 1:5–15), met to conduct the business of the amphictyony and to participate in the common worship of their amphictyonic God, Yahweh. Shechem, the first center of the twelve-tribe amphictyony, was where the ark was kept; following the movements of the ark, it may then be conjectured that the amphictyonic central sanctuary was subsequently to be found at Bethel, Gilgal, and, finally, Shiloh (*NHI,* 94–95). Through its common cult the amphictyony expressed its essential character as a sacral union. Joshua 24, which records the foundation of the twelve-tribe amphictyony, also reflects the form by which these tribes worshiped Yahweh: it was a covenant form, in which the tribes regularly affirmed their acceptance of the conditions of the covenant proclaimed to them as the law of Yahweh. The amphictyony was, therefore, the institution through which the people of Yahweh came into existence.

Noth's reconstruction was highly influential for a number of reasons. As Sasson (1981: 8–9) has noted, it reflected contemporary German historiographic interest, rooted in recent German history, in the rise of the nation-state, and thus integrated Israel's early history directly and meaningfully into more general historical experience. Moreover, it supplied a framework of historical explanation which was credible for Israelite traditions and institutions of the premonarchic period and beyond. Thus, in general terms, it provided a theory of the nature of an Israel distinct from the monarchic state and presupposed by the monarchic state and also indeed by pentateuchal tradition in general: the monarchy was an institution founded on an already existing Israel; the pentateuchal tradition has its focus on an Israel of the type of the amphictyony rather than the monarchy. It is to such an Israel that the laws of the Pentateuch are addressed, rather than to a monarchic state (Noth 1966: 20–36), and it is within such an Israel that the "minor judges" (Judg 10:1–5; 12:7–15) should be understood to have functioned (Noth 1950: 404–17).

The war between the tribe of Benjamin and the rest of the tribes of Israel (Judges 19–21) was an amphictyonic war with a direct parallel in the Greek context (Noth 1930: 100–6). The traditions behind Deuteronomy and the covenant faith which was found to be reflected in both psalms and prophets could all be seen as rooted in amphictyonic Israel of the premonarchic period (Nicholson 1967: 37–57). Thus, the explanatory power of the amphictyony model together with its conformity to contemporary historiographic interests and values ensured the more or less general acceptance of the theory in OT scholarship.

C. Reception of the Theory

The theory of an Israelite amphictyony received its definitive formulation in the work of Noth; it is, therefore, to Noth's presentation that criticism has, especially in the last two decades, been directed. The historical and geographical distance which separates premonarchic Israel from the classical amphictyony, together with the lack of any Hebrew term which might be a possible counterpart to the Greek "amphictyony," have been considered by, for example, Fohrer (1966: 801–16) general points of weakness in the analogy (though, it should be emphasized, issues such as influence or dependence of one culture on another do not arise in the context of an analogy); but it is in three major areas that the appropriateness of the analogy has been substantively questioned.

1. The Tribal Lists. Noth's fundamental dependence on the OT tribal lists is problematic for at least two reasons. In the first place, the essential characteristic of the amphictyony was its central sanctuary; but the primary evidence for the presence of an analogous institution in Israel is the consistency of the number twelve of the Israelite tribes. In the classical context, however, associations with varying numbers of members could be termed amphictyonies, the number of members being a secondary or even irrelevant matter. Even when the number twelve is found in the Greek context it is doubtful that it is to be related to the amphictyonic duties of the members. These duties were probably not discharged by the members on a regular monthly rota, but rather by the council of the amphictyonic representatives gathered at the central sanctuary. The number twelve, as De Vaux (EHI: 702–3; see also Mayes 1974: 117 n.57) has recognized, expresses totality (as in 1 Kgs 7:44; 10:20; 19:19) and need not be related to practical concerns. Its presence or absence in any context is, therefore, generally irrelevant to the issue of the existence of an amphictyonic institution.

Secondly, Noth's treatment of the relationship and dating of the tribal lists is generally questionable. The argument that there is a chronological relationship between them begs the question of their purpose, for it is apparent that the very different types of list which are being compared (genealogical, tribal, territorial) need have no direct relationship: thus, Genesis 49 could be older or later than Numbers 26. That any of them belong to the premonarchic period is also doubtful. The order of tribes which Numbers 26 offers can be adequately explained only in the late context of the priestly writing (Hoftijzer 1959: 241–63; Mayes 1974: 16–34), which, in a series of lists (Num 1:20–43; 2:3–31; 26), is describing the layout of the Israelite camp in four companies, each company consisting of three tribes: the effect of the priestly ordering is that Judah, the favored tribe, is the leading tribe of its company encamped on the eastward side. The priestly background of this list effectively removes it from consideration for an institutional structure of Israel in the premonarchic period. The list of the type of Genesis 49 is no more closely related to that time. That the entity Joseph, which appears there, is the original entity which later split into Ephraim and Manasseh (and Ephraim appears in the early Judges 5), is in fact unlikely. The earliest and original use appears to have been "House of Joseph" and this expression came into existence in the monarchic period as a collective designation for a northern group, parallel to the designation "House of Judah." "Joseph" is, in other words, a secondary formation which presupposes the existence of Ephraim and Manasseh and also the stabilization of very complex tribal movements and relationships which were still in progress throughout the whole of the premonarchic period and beyond. In the case of neither Numbers 26 nor Genesis 49 can a premonarchic background credibly be claimed, and thus the view that these lists are to be explained within the framework of an Israelite amphictyony must come under serious question.

2. The Central Sanctuary. The amphictyonic central sanctuary was, by definition, integral to that organization. In the Israelite context, however, the information on such a sanctuary is sparse, and this aspect of the theory in fact played a secondary role in Noth's presentation. It was only on the basis of having already, through consideration of the tribal lists, established the existence of an Israelite amphictyony, that Noth then addressed the question of its central sanctuary. Here, in a concrete expression of their common allegiance to Yahweh, the tribes of Israel were supposed regularly to have celebrated a covenant festival. The focal point of the Israelite amphictyony was its sacred ark, and, as reflected in its movements through the period of the judges, the central sanctuary was established first of all at Shechem, and then subsequently at Bethel, Gilgal, and Shiloh, the last-mentioned being the sanctuary of the ark at the end of the premonarchic period.

The criteria proposed to determine whether or not a particular sanctuary was an amphictyonic central sanctuary are largely circumstantial. This in itself is not a decisive weakness, but it must be of some significance that the laws of the OT, and in particular the book of the covenant (Exod 20:23–23:33), which has been identified as amphictyonic law, make no reference to obligations laid on the Israelite tribes to maintain and protect a central sanctuary (and in fact the Book of the Covenant surely envisages a number of local sanctuaries); nor does this law identify the Israelite *nĕśî᾽îm* as tribal representatives gathered at such a sanctuary (Exod 22:27—Eng 28). In the absence of such direct evidence two specific criteria (the presence of the ark and the celebration of the covenant festival), together with one general criterion (acknowledgment as supreme by all the tribes of Israel), are taken to determine the existence of a central sanctuary (Irwin 1965: 161–84).

It must be said, however, that even granted the sufficiency of these criteria they provide no certain evidence of the central status of any premonarchic Israelite sanctuary (Mayes 1974: 34–55). The celebration of a covenant festival at any sanctuary in pre-Deuteronomic times is increasingly a matter of doubt; the ark was certainly to be found at Gilgal and Shiloh (and perhaps also at Bethel, Judg 20:27), though its connection with Shechem (Josh 8:30–35) is attested only in what is certainly a Deuteronomistic passage. These may not, however, be considered particularly pressing issues, derived as they are from OT rather than classical contexts. Yet on the question of the general acknowledgment of a sanctuary as central by all the members of amphictyonic Israel, the result is no clearer. The summoning of all the tribes to Shechem (Joshua 24) is related only in a post-Deuteronomistic story of highly dubious historical value (Mayes 1983: 49–51). Gilgal and Shiloh were sanctuaries of clearly quite distinct Yahwistic traditions, the first of which formed the eventual background for Saul's kingship while the second provided the theological basis for David's kingship. These cannot be treated in any respect as central sanctuaries of a unified Israelite cult. The evidence relating to Bethel is also unclear: the story of the rape and murder of the Levite's concubine in Judges 19–21, which Noth treated as an authentic amphictyonic tradition, forms the context for the statement that "the people of Israel arose and went up to Bethel, and enquired of God" (Judg 20:18), but Shiloh is also mentioned here as the sanctuary of a yearly feast of Yahweh (21:16–21), while in the same story (20:1) it is at Mizpah that "the congregation assembled as one man to the Lord." Although it is certainly conceivable that secondary expansion of the story has overlaid an original reference to just one sanctuary, it is also more than probable that any critical procedure undertaken to recover that older story will also remove its "all-Israel" (and so its "amphictyonic") frame of reference. It appears, therefore, that with regard to this, the fundamental aspect of the amphictyonic organization, there is no unequivocal support for an analogous structure in premonarchic Israel.

3. The Function of the Amphictyony. It is possible that the classical amphictyony could still be claimed as an analogy of some heuristic value for premonarchic Israel even in the face of the weaknesses already noted. This would require, however, a form of theory rather different than that originally proposed by Noth and elaborated by himself and others later. As Gottwald (1979: 376–86) has noted, in the classical context the amphictyony was a cultic organization; it did not provide the framework within which a social and political entity was founded, but rather presupposed those historical, social, and political developments which led to the existence of a people; it was by a people, already united in

military and other leagues, that an amphictyonic structure was adopted for the purpose of maintaining the balance of political and social power which had already been achieved.

Within the Israelite context, however, the amphictyony has been made to serve a much more comprehensive function. It is here not only a cultic organization, but also social, political, ethnic, and perhaps also military. Even if (with Smend 1970) the practice of holy war is to be seen as an activity of a military league quite independent of the amphictyonic institution, the latter still has a range of functions which sets it apart from the classical organization. It is within the amphictyony that Israelite political, social, and ethnic consciousness is held to have been formed. Not only did her tribal representatives meet at the central sanctuary, but here also her judges functioned, while it was within that framework that there gradually evolved the normative account of Israelite ethnic origins which eventually found its deposit in the Pentateuch. Moreover, this Israelite amphictyony is held to have been so integral to Israelite identity that it survived the introduction of the monarchy and lived on alongside the monarchic institution as that essential Israel addressed by prophecy and law. The analogy cannot possibly bear the weight of theory with which it is here elaborated.

It is clear that Noth was by no means unaware of this problem, for he himself pointed to the artificial and schematic character of the tribal lists as well as the inconsistency between the particular tribes which they include on the one hand, and the historical role (or lack of it) of these same tribes, on the other. He argued (1930: 40–41), however, that this artificiality did not in itself invalidate the historical reality of the institution, for the latter is an administrative organization created from already existing raw material: just as Solomon, for the maintenance of his royal court, established twelve districts in his kingdom, districts which did not reflect any natural divisions of Israelite tribal territories, so also the amphictyony was an artificial but nevertheless historical institution erected on given social and political realities. The implication of this argument was, as Noth (1930: 55–56) acknowledged, that it was not in fact through the amphictyony that the tribes of Israel first came together. Rather, through the accidents of history, such as common invasion of a new land and common opposition to outside forces, the unity of Israel was first established, a unity which the amphictyony was then designed to preserve. In the elaboration of the theory of an Israelite amphictyony, this significant aspect of its background and context has been generally overlooked.

D. Alternative Models for Premonarchic Israel

In recent study of the premonarchic period attention has shifted away from the issue of an Israelite amphictyony both toward other possible analogies for understanding the totality “Israel” and toward the study of the basic social units of which any possible Israelite federation was composed. In the latter context the significance of the family and clan, over against the tribe, as the basic social and economic units has been stressed, especially by Gottwald (1979: 239–92); and as a framework within which they may have been comprehended, the possibility of using the segmentary lineage system, known among African tribes, has been explored, by Crüsemann (1978: 201–8) and Frick (1985: 51–69). Either as an alternative or as a supplement to the analogy of the segmentary society, Israel has also been described as an association of chiefdoms (Flanagan 1981: 47–73; Frick 1985: 71–97; Rogerson 1986: 17–26), the chiefdom analogy being particularly appropriate for the rule of Saul, though perhaps also suitable for the earlier premonarchic period.

None of these more recent developments is in fact incompatible with the theory of an amphictyony in premonarchic Israel, at least insofar as the functions of the latter are restricted to what is suggested by the classical model. Thus, while it must be admitted that, for the present, the evidence in favor of such an organization in Israel is not convincing, the possibility is still open that, within an Israel organized as a segmentary society or an association of chiefdoms, amphictyonic relationships existed between larger or smaller groups of tribes or other social units already united on other grounds. It might be through such relationships that the complex and still uncertain history of the development of Yahwism within Israel will be better understood; but it is unlikely that the analogy will become reestablished as a form by which the nature of the totality of Israel, at any period, is to be expressed. See also Noth, *HPT*.

A. D. H. MAYES

AMPHIPOLIS (PLACE) [Gk *Amphipolis* (Ἀμφιπολις)]. An ancient city of Macedonia located on a terraced hill on the E bank of the Strymon River just S of Lake Cercinitis and about 4 km N of the estuary of the river and the harbor city of Eion. On his second missionary journey, Paul with Silas passed through this city while traveling on the Via Egnatia from Philippi (approximately 50 km to the E) to Thessalonica (Acts 17:1). The city was set on a hill surrounded by the river on three sides and protected by a wall on the E side. This geographical situation of Amphipolis and its prominent position provides the rationale for its name, which means "around the city" (Thuc. 4.102).

The Thracian founders of the city originally called it *Ennea Hodoi* or "Nine Ways," which indicates its early importance as a commercial and military center. Athenian attempts to colonize the city failed in 497, 476, and 465 B.C. but succeeded in 436 B.C. under the leadership of Hagnon. Amphipolis came under

Spartan control in 424 B.C. when Brasidas conquered the city. The efforts of Thucydides, general over Thrace, only succeeded in saving the harbor city of Eion. Despite the efforts of the Athenians to regain control of Amphipolis it remained a free city until Philip the Great of Macedonia conquered it in 357 B.C. After the Romans conquered the region at the Battle of Pydna in 168 B.C. they divided Macedonia into four districts, designating Amphipolis as a free city and the chief city of the first district (Livy 45.17–18, 29–30).

The city, which lies in a fertile river valley, was noted for its wine, oil, and wood. Silver and gold were mined in the adjacent hills and fine woolen textiles were manufactured in this region. During the Roman period the city commanded a strategic position along the Via Egnatia, the bridge across the Strymon River.

Excavations at the city have revealed several tombs from the classical and Hellenistic periods. Four early Byzantine basilicas have been uncovered and they house beautiful mosaic floors. Several coins and inscriptions have been discovered at the city.

JOHN D. WINELAND

AMPLIATUS (PERSON) [Gk *ampliatos* (ἀμπλιατος)]. A Roman Christian who received greetings from Paul in Rom 16:8 as "my beloved in the Lord." Since he was known personally by Paul, who had not yet been in Rome, Ampliatus must have lived in the E of the Roman Empire for a while before he came to Rome. His name, a typical slave name, shows that he probably was a slave or freedman (see the epigraphical material in Lampe *StadtrChr*, 144, 152–53). A connection to Flavia Domitilla and the Ampliatus-Cubiculum in the Roman catacomb "Domitilla" (Cranfield *Romans* ICC, 790) does not exist (Lampe *StadtrChr*, 20–21).

PETER LAMPE

AMRAM (PERSON) [Heb *ʿamrām* (עַמְרָם)]. Var. AMBRAM (LXX). The name of two men in the OT.

1. A second-generation Levite, the son of Kohath, and the father of Moses, Aaron, and Miriam (1 Chr 5:24–29—Eng. 6:2–3). Amram is a biblical figure without a narrative; he appears only in late genealogical lists. The earliest attestation of Amram appears in Exod 6:18. Amram's presence in the genealogy of Exod 6:14–25 most likely resulted from the priestly writer's unification of three or four authentic genealogical sources (Möhlenbrink 1934: 187–90). Once Amram entered the pentateuchal tradition, the priestly writer utilized the name in order to establish a distinct levitical family with specific roles for the conquest of the land (Num 3:19, 27). The appearance of Amram follows a similar pattern in Chronicles. The Chronicler, probably drawing upon the levitical lists in Exodus 6 and Numbers 2–3, included Amram as an individual (1 Chr 5:29—Eng6:3) and as the name for a levitical family (e.g., 1 Chr 26:23).

2. A son of Bani who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:34). Amram was one of many Judeans who had married non-Judean wives. He consented to divorce his wife during the reforms of Ezra under the threat of complete ostracism from the Jerusalem temple-state.

JOHN W. WRIGHT

AMRAPHEL (PERSON) [Heb *ʾamrāpel* (אַמְרָפֶל)]. King of Shinar (Gen 14:1, 9), one of the allies of Chedorlaomer. Shinar is an alternate name of Babylonia in the OT and in some Egyptian and cuneiform records of the 2d millennium (1QapGen 21:23 and the Targums render it by *bbl* "Babel"). Amraphel was identified with Hammurapi by Schrader (*SPAW* 1887: 600–5), who assumed that the biblical form of the name arose from a miswritten Hebrew rendering of a variant of the cuneiform name.

This identification, once widely accepted, was later virtually abandoned, mainly because Hammurapi was never active in the W.

If one proceeds from the premise that the four eastern kings of Genesis 14 were modeled on the four kings of the "Chedorlaomer texts" (see CHEDORLAOMER), one must look among them for the one who is attested as a king of Babylonia. This is ^{m}*I-bil-*^{d}*Tu-tu* (Spartoli 158+962: rev. 27) who, according to his characteristic there (rev. 24–29) and in Spartoli III,2: 3–9 (where the name is broken off), clearly corresponds to Marduk-apal-iddina II (Merodach-baladan), chief of the Chaldean tribe of Bīt-Yakin in the Sea Land, who twice seized the throne of Babylon from Assyria (722–710 and 703 B.C.). He was viewed as an alien usurper by the Babylonian priesthood and patriciate and especially hated because of his removal of divine statues from Babylon and other cultic centers of Babylonia when he twice retreated to the Sea Land. In extant versions of the Chedorlaomer text, the form *I-bil-Tu-tu* represents a pseudonym or cryptogram of the common ideographic spelling of the name Marduk-apal-iddina, which was AMAR.UTU.IBILA.SUM^{na}. The IBILA element was simply moved to the initial position and rendered phonetically as *i-bil*, while the AMAR.UTU (Akk "Marduk") element was replaced by another common name for that god, Tutu. The author of Genesis 14, however, seems to have had at his disposal a version in which the correct ideographic spelling was preserved: he simply read the first element (AMAR.UTU) phonetically as *ʾamar,* and gave the second element (IBILA) its regular Akkadian value *apal* (commonly pronounced *pal* in composite names). The result would hence have been **ʾamarpal* (cf. LXX *amarphal;* Astour 1966: 94–99).

AMULET. See MAGIC (ANE).

AMUQ PLAIN. A small plain in S Turkey located on the curve of the Orontes, a river which runs S–N to this point, where it then flows S–W to empty into the Mediterranean. It forms a meeting point, or crossroads, of the following: the Ghab Valley through which the Orontes flows; the N road which runs along the E border of the Amanus; and the road which goes E to Aleppo and to the Euphrates. Thanks to this last section of the Orontes River, this area is directly linked to the coastal region. This situation explains why, in spite of its marshy and unhealthy conditions, this plain has been inhabited by man almost continuously since the Neolithic period.

Two different expeditions have helped to uncover the history of the region. The first was under the auspices of the Oriental Institute of Chicago. It excavated the sites of Chatal Hüyük, Tell Jdeide, and Tell Tayinat between 1933 and 1937 under the direction of C. W. McEwan and R. J. Braidwood. Information gathered pertained mainly to the Neolithic period as well as the 3d and 1st millennia. The second expedition was led by Sir Leonard Woolley to Tell Atchana; its first stage was from 1937 to 1939, and its second stage from 1946 to 1949. It very satisfactorily completed the sequence thanks to the discovery of Alalakh, a city that existed in the 2d millennium.

Occupation of the region seems to have begun in the 6th millennium. The Neolithic era was then well under way: agriculture and the rearing of livestock were the basic activities, and ceramics had already been introduced. Through an in-depth study of ceramics and of its association with the various categories of lithic materials found at Chatal Hüyük and especially at Tell Jdeide, R. J. Braidwood and his team divided the period which extends from 6000 to 2000 B.C. into ten clearly defined phases which they designated from A to J. These letters mark high points of the evolution of N Syria and the progressive transformation of lifestyles during the Neolithic period and the growth of the villages (phases A–E from 6000 to 3500 B.C.), the chalcolithic period, and the still very gradual introduction of the use of metal (phase F, 3500–3000), and finally the Bronze Age which, in the 3d millennium (phases G–J), saw the progressive spread of tools and metal armaments, the building of the first cities, and the birth of writing.

During almost the whole of this long period, N Syria appears to have been culturally dependent on Mesopotamia, and it seems that its development was largely the result of the exceptional dynamism of the civilization of the Region of the Two Rivers. Nevertheless, as Ebla reveals, the power of the Syrian economy grew rapidly in the 3d millennium, allowing real originality to soar to great heights. Evidence of this is a group of little bronze statues found at Tell Jdeide which is perhaps one of the most ancient expressions of a type of statue for which the Syrians became particularly renowned throughout ancient times.

Nevertheless, it is the rise of the city of Alalakh about 2000 B.C. that prompts the observation that this region was involved in the profound changes that affected Syria. Indeed, this city looks like a small regional capital within the kingdom of Aleppo, or the kingdom of Yamhad, and at the same time it reflects the life of N Syria during the 2d millennium. The excavations brought to light the existence of seventeen levels (not all of which correspond to a real historical phase). Woolley dated their development between 3200 and 1200 B.C. In reality, the beginnings of the city certainly do not go back further than 2000, and the first important period seems to have been a level 7, which must be dated to the 18th century. The site is famous for having yielded clay tablets which illustrate various areas of public and private life. The architectural documentation consists of a sanctuary, the center of political power, the city gate, and some houses.

One can follow the transformations of the temple throughout the millennium thanks to the seven phases which have been discovered and which show that the basic plan was always respected, even if some modifications gave each one its own particular appearance. The different levels were very simply organized: starting with a large room which was approximately a square with a porch on its SE side overlooking a small courtyard, these levels do not, in most cases, have characteristic furnishings for worship, since these were certainly to be found at a higher level; thus it is generally thought that the temple was shaped like a tower and belonged to a typical Levantine series of which the most famous examples have been found at Ugarit. The palace on level 7, or the palace of Yarim-Lim, a contemporary of Hammurapi of Babylon (18th century), which unfortunately is incomplete, extended immediately E from the temple. Evidently it had a floor where royal apartments were probably located, and large reception rooms, while the servants' quarters were located on the ground floor. The quality of the construction in dressed stone for the door jambs and certain sections of the walls and an armature of wooden beams filled with unbaked bricks on the upper levels clearly show that this building belonged to the E Mediterranean world. This is also confirmed by the presence of mural paintings in which one can recognize strong Minoan features.

The palace on level 4 or the palace of Niqmepas (late 15th to early 14th centuries) followed a totally different concept, for there one finds many elements belonging to the architectural style called *Hilani.* This style, which was highly favored at the beginning of the 1st millennium, emphasizes the existence of a southern influence undoubtedly linked to the development of the prestigious Hittite empire. Elements of the fortification system and the gigantic gate give some idea of the protection of the city, and the house designs, which were unfortunately all too often reduced to just the foundations, depict certain aspects of daily life.

Evidence of the artistic life of the city has come to light thanks to the discovery of statues and fragments of statues, among which one can mention the superb head in diorite found on the floor of the temple at level 7. Woolley thought the head represented the king Yarim-Lim who was described in various written texts, but he had not the slightest proof for that identification. The quality of this portrait, unique in Alalakh, is so remarkable that it seems highly improbable that it came from a local workshop. On the other hand, the statue of King Idrimi is dated about 1400 B.C.—it portrays him in a sitting position on a slightly raised throne that has been poorly separated from the original block of white magnesite. This statue shows unskilled workmanship: its poorly traced features and complete lack of artistic quality indicate that it could very well have been made in a local workshop that was little prepared for such a great endeavor. Concerning the inscription, the text engraved on the statue also holds some surprises which seem to indicate a lack of experience more easily attributable to the stonecutter than to the scribe.

The hundreds of cuneiform tablets discovered mainly on levels 7 and 4 show that people had a perfect grasp of writing in the city of Alalakh in the 18th century. This fact should not be surprising, for even if the city did not play a regional political role, its position on the busy commercial route implied habitual use of this technique. Thanks to these tablets, valuable information has been gathered on the Syrian situation pertaining to the 18th as well as to the 14th centuries; they have even contributed to calling into question the chronology accepted until the Second World War regarding the 1st Babylonian Dynasty.

Alalakh is important to us for providing information on a small city in N Syria, and also for partially filling in the gaps left by the absence of findings in Aleppo, the true capital of the kingdom of Yamhad in the Middle Bronze Age.

During the 1st millennium, the Orontes River maintained its importance. The port of El-Mina and the city of Antioch clearly show this. But one must take particular note here of the site of Tell Tayinat, which was excavated by the team from the Oriental Institute of Chicago. This site revealed levels of the Iron Age where many of the famous *Hilani*-style buildings were discovered.

Secondly, and perhaps more importantly, there are remains of a temple in elongated shape, exactly like a megaron which appears to be characteristic of N Syria and which provided the model of the famous temple of Solomon in Jerusalem.

TRANS. PAUL SAGER

AMZI (PERSON) [Heb *ʾamṣî* (אַמְצִי)]. **1.** A Levite, the son of Bani, the father of Hilkiah, and the grandfather of Amaziah (1 Chr 6:30–31—Eng6:45–46). His name occurs in a list of twelve descendants of Merari, Levi's son, which legitimizes Ethan ben Kishi as one of three levitical singers appointed by King David. The Ethanites were to stand at the left side (1 Chr 6:29—Eng6:44) of Heman, the more prominent levitical musician.

2. A levitical priest, the son of Zechariah and the father of Pelatiah (Neh 11:12). He is cited as a progenitor of Adaiah, one of the priests living in Jerusalem at the time of Nehemiah. Unfortunately, Amzi is not mentioned in the abbreviated list of Adaiah's ancestors in 1 Chr 9:12.

ROGER W. UITTI

ANAB (PLACE) [Heb *ʿanāb* (עֲנָב)]. A city in the southernmost part of the hill country of Judah (Josh 15:48–50). It is about three miles west of Debir (Dahariyeh). The Egyptian texts of the 19th Dynasty refer to it as *Qrt ʿnb,* hence its original name is likely to have been *Kiriat-ʿanab.* Its modern Arab name is *Khirbet ʿUnnâb eṣ-Ṣeghîreh,* but is called Tel Rekhesh in modern Hebrew. The remains of an Iron Age city have been found at the site.

The book of Joshua mentions it as one of the cities inhabited by the Anakim (Josh 11:21). When Joshua launched his attack, the Anakim, though mighty, could not stand before him. Joshua and his armies took Anab and it was allotted to the tribe of Judah (Josh 15:20, 50).

PAUL BENJAMIN

ANAEL (PERSON) [Gk *Anaēl* (Ἀναηλ)]. The brother of Tobit (Tob 1:21). Tobit claimed that Anael was the father of Ahikar, whom Esarhaddon (Assyrian ruler from 681 to 669 B.C.) appointed accountant and chief administrator over his whole empire. See AHIKAR. No name better demonstrates the fictional nature of the book of Tobit and its characters than Anael, through whom the well-known figure of Ahikar was made not only Jewish but a relative of Tobit; indeed, one who interceded with Esarhaddon to have

Tobit pardoned for past "crimes" against the state (e.g., burying the bodies of faithful Jews left exposed) and allowed to return to Nineveh from hiding.

PAUL L. REDDITT

ANAFA, TEL (M.R. 210286). A Hellenistic and Roman site in the Huleh Basin.

A. Identification and Location

Tel Anafa is situated in the upper Galilee at the base of the Golan Heights. The site lies near the crossroads of the N–S trade route through the Jordan and Massyas valleys with the E–W road from Damascus to Tyre which in the Late Hellenistic and Roman eras constituted one of the major outlets of the immensely profitable trans-desert trade route to the W. The tel is small, about 160 m long and 110 m wide, and rises some 10 m above the surrounding Huleh Basin. Although excavations have shown that the mound was occupied almost continuously from the EB Age through the 1st century C.E., the best-preserved and most impressive remains belong to the Late Hellenistic era when the occupants appear to have profited greatly from their location near the trade routes. At that time the tel served as the acropolis of a larger town, the walls of which were revealed in the fish-pond construction of the early 1970s but which are now covered by the surrounding cotton fields. After ten years of excavation there is still no evidence for the ancient name of the town in Hellenistic times; the presence of several other Hellenistic settlements nearby in the Huleh Basin make it impossible to identify the tel confidently with any particular Hellenistic settlement mentioned in texts or inscriptions.

B. Excavations

Ten seasons of field work have been carried out in two series of excavations at Tel Anafa. The first series, under the directorship of S. Weinberg, was in the field for five seasons between 1968 and 1973. The second series fielded five summer campaigns between 1978 and 1986, under the codirectorship of S. Weinberg and S. Herbert.

In the ten seasons of excavations approximately 1000 m^2 of the tel were dug to depths of as much as 6 m, although the average depth of penetration was ca. 2.5 m. The earliest habitation levels reached in the deeper probes belong to the MB period, but pottery found in terrace fills and other secondary deposits bears witness to the occupation of the site in the latter part of the EB Age. Nowhere on the tel was sterile soil or bedrock reached. When, in the early years of the excavation, it became clear that there were over 3 m of Hellenistic accumulation, well stratified into several major architectural phases, the decision was taken to concentrate on the Hellenistic remains, opening large areas to clarify the extent and plan of the Hellenistic buildings.

C. Hellenistic and Roman Era Buildings

The N half of the tel is dominated by the substantial remains of a large Hellenistic building (the LHSB) ca. 38 m square. The walls of this building are a mixture of cut limestone ashlar blocks and basalt fieldstones and are preserved in a few instances to a height of over 2 m. The mixed ashlar/rubble construction technique is characteristic of Phoenician settlements from the Iron Age through Hellenistic eras. The use in some of the walls of the Greek dry masonry elements, such as swallowtail clamps and rectangular dowels sealed with lead, points to a mixed Greco-Phoenician tradition. Also indicative of Greek building tradition was the decorative stucco which faced many of the walls. The painted and gilded stucco imitated drafted blocks, egg-and-dart moldings, and Ionic and Corinthian column capitals. The plan of the building can be restored as suites of rooms on four sides opening onto a central courtyard measuring 9 × 12 m. There is a major paved entrance to the NW. A bath complex along the E side of the court bears witness to the luxurious standard of living of the inhabitants. The bath complex consists of three rooms, the southernmost the working area for heating the water, the middle and northern rooms for bathing and dressing. The bathing room contains a large plaster basin for the heated water and a decorated mosaic floor. The mosaic measures 3.5 × 2.3 m. It is the earliest decorated mosiac pavement yet found in Syro-Palestine. The mosaic is made up of black diorite and white marble tesserae between 1 and 1.5 cm square. The design includes a black border around the edges of the mosaic; the interior is divided into three panels of unequal size by black bands running N to S. The westernmost panel contains a clear

checkerboard design, the other two panels are decorated with nonrepresentational curvilinear motifs in the manner of Hellenistic irregular mosaics. Excavation under the mosaic and plaster basin revealed a primitive hypocaust system of mudbrick pillars separated by heating channels which ran underground from a stone firing pit in the S room. Such elaborate bathing suites are not common in Greek houses or palaces in the Hellenistic era and the presence of such a complex in the LHSB at Tel Anafa is another indication of the mixed cultural background of the Hellenistic inhabitants of the tel.

The evidence of the numerous coins and stamped amphora handles found at Tel Anafa points to a date late in the third quarter or early in the fourth quarter of the 2d century B.C.E. for the original construction of the LHSB. A coin of Alexander Zebina (128–125 B.C.E.) found in the construction fill of the S room of the bath is the latest find under any of the original floors of the building. Also present under these floors were small amounts of Eastern Sigillata A wares. A massive leveling and terracing operation took place with the construction of the LHSB, obliterating earlier architectural remains. In only a few spots are earlier Hellenistic structures preserved. These take the form of boulder walls with pebble floors and are tentatively dated to the 3d century B.C.E. and are associated with the coins of Ptolemy II and III found on the site. Hellenistic black slipped wares and "Parthian" green glazed pottery were found in the Early Hellenistic fills.

In the first quarter of the 1st century B.C.E. the LSHB underwent substantial alterations in which it was divided into a number of separate units. First a large building with thick rubble walls was built over its NE corner. Shortly thereafter the North Building was built up against the W wall of the Northeast Building. At the time of the construction of the North Building, the paved entrance at the NW was blocked and the W rooms of the LHSB were realigned; in addition, the floor levels of the W rooms and central court were raised ca. 0.5 m and paved with basalt. The bath remained in use throughout the remodeling. Coins of independent Tyre and Sidon, and Rhodian stamped amphora handles of period VI (108–80 B.C.E.) date the alterations to the first quarter of the 1st century B.C.E.

Although the area as remodeled in the 1st century B.C.E. is less grandiose in plan, both the architecture and the finds show that this was still a period of prosperity and Greek influence. Both the North and Northeast buildings are relatively large and spacious structures; the North Building is decorated with painted stucco, albeit simpler than on the LHSB; imported luxury products such as the Late Hellenistic redwares and molded glass bowls are still abundant at these levels; stamped amphora handles of period VI (108–80 B.C.E.) are common; Hellenized coins of 1st century B.C.E. independent Sidon are the largest single issue present at the site. There are no signs that this period of prosperity was brought to an end by military conquest or violence of any sort. Although there are some signs of fire in the houses on the S slope there is no general layer of conflagration on the site. The archaeological record instead shows a picture of abandonment and gradual decay of the Hellenistic buildings. The evidence of the coins and the stamped amphora handles suggests strongly that this abandonment took place early in the second quarter of the 1st century B.C.E. Of 319 coins found at Tel Anafa, only one must be dated between 75 B.C.E. and the early years of the 1st-century C.E.; none of the 122 stamped amphora handles found in the excavations need be dated after 80 B.C.E.

The site was resettled early in the 1st century C.E., probably under the impetus of Herod Philip, whose coins appear in and under the walls of this phase. The buildings of this period are much smaller and simpler than their Hellenistic predecessors, the most common plan being long and narrow 2-room structures built of undecorated rubble. The walls of this phase are sometimes founded directly on the preceding Hellenistic structures and often use blocks robbed from these earlier walls. In addition to the Herod Philip coins, Early Roman lamps with molded discus and sigillata wares in Early Roman shapes date this occupation phase to the 1st century C.E. By the end of the 1st or early 2d century C.E. the site is again abandoned and never reoccupied in any major way.

D. Summary and History

The results of ten seasons of excavation show the site of Tel Anafa to have been occupied almost continuously from the EB Age through the 1st century C.E. The large and deeply founded buildings of the Late Hellenistic era have disturbed and largely obscured the remains of the earlier habitations, but give us

a vivid picture of a rich Hellenized settlement of Late Seleucid times. The evidence of the coins and stamped amphora handles together with the architectural remains of the Hellenistic levels indicates that there was a minor Ptolemaic settlement on the site in the 3d century B.C.E. This was succeeded in the second half of the 2d century B.C.E. by a prosperous Seleucid settlement which took an active part in the trade of the Late Seleucid Empire and flourished through the first quarter of the 1st century B.C.E. The chaotic conditions surrounding the disintegration of the Seleucid Empire probably led to the site's abandonment sometime shortly after 75 B.C.E. The tel was reoccupied in the early years of the 1st century C.E. as part of the reorganization of the Galilee under Herod Philip, whose capital was at nearby Caesarea Philippi (modern Banias). It was again abandoned toward the end of the century and not reoccupied in antiquity.

S. C. HERBERT

ANAH (PERSON) [Heb *ʿănâ* (עֲנָה)]. One of the sons of Zibeon, and the father of Esau's wife Oholibamah (Gen 36:2, 14, 18, 25; 1 Chr 1:40). MT Gen 36:2, 14 *bat* ("daughter") is to be corrected to *ben* ("son") according to Gen 36:24; 1 Chr 1:38, 40. According to the tribal system of the Edomites, Anah was considered to be a Seiritic-Horitic clan of the tribe of Zibeon (Weippert 1971: 439–51).

Anah is also identified as the one "who found the 'water' [MT *hapax legomenon hayyēmim*] in the wilderness as he pastured the asses of Zibeon his father" (Gen 36:24), and this passage has been the subject of some debate (cf. Yellin 1933; Glaser 1933). Beeston (1974) translated Heb *yēmim* according to the LXX as "lakes"; Anah fell victim to a mirage—says Beeston—and acquired a nickname: "the one who found lakes in the desert." Driver (1975) derived Heb *yēmim* from a supposed Heb **ym* "[a kind of] fish, living in lakes and marshes" (cf. Syr *ymmʾ*, Ar *yamm*). Speiser (*Genesis* AB, 279–80) and Grill (1967) suppose a metathesis of *y* and *m* in *hayyēmim,* and reads *hammayim* "water" (cf. Vg *aquas calidas*).

The interpretation of the name Anah is uncertain. Earlier it was frequently derived from Arabic *ʿāna* ("wild donkey"). The derivations from Hurrian (Feiler 1939; Ginsberg and Maisler 1934) are open to doubt. Anah is most likely the shortened form of a name constructed with **ʿny* "to answer" (Weippert 1971: 245).

ULRICH HÜBNER

ANAHARATH (PLACE) [Heb *ʾănāḥărāt* (אֲנָחֲרָת)]. The sixth place listed in the description of the territory of Issachar (Josh 19:19). The name also appears in the topographical list of Thutmose III (no. 52: *i-n-h-r-t;* Simons 1937: 117). Amenhotep II captured Anaharath in his second campaign to Asia. The list of booty included 17 *maryanu,* six children of princes, 68 "Asiatics," and seven chariots of silver and gold. Anaharath was the northernmost place mentioned, and from there Amenhotep II apparently returned to Megiddo (*ANET,* 247; Edel 1953: 134–35, 157; Aharoni 1960: 181–83).

The biblical references and the position of the town in Thutmose's list show that Anaharath was located in the hill country of Issachar. It was suggested that the ancient name had survived in that of the village Nʾaurah (de Saulcy 1877: 22–23; Albright 1926: 229). Another identification put forward was that of Tell el-ʿAjjul (M.R. 093097), a site overlooking the main N–S route, the so-called "Via maris" (*EncMiqr* 1: 451). Aharoni (1967) has shown, however, that the only true tel in the region with suitable LB finds is Tell el-Mukharkhash (Tel Rekes; M.R. 194228), 7 km SE of Mt. Tabor. Recent surveys (Zori 1977: 116–20; Gal 1980: 33–40) and excavations (Gal 1981) have confirmed this identification.

ANAIAH (PERSON) [Heb *ʿanāyâ* (עַנָיָה)]. One of the men standing at Ezra's right hand when Ezra stood before the Water Gate and read from the Book of the Law of Moses (Neh 8:4). He is also listed as one of the brethren who set their seal to the covenant (Neh 10:23—Eng10:22). The name Anaiah means "The Lord has answered one's prayer." This form is found frequently in hymns of thanksgiving (Pss 69:14, 17, 18; 143:1, 7).
GARY C. AUGUSTIN

ANAK (PERSON) [Heb *ʿănāq* (עֲנָק)]. ANAKIM. A people who occupied Canaan before the arrival of Israel and traced their ancestry back to Anak. Apparently, *anaq* was originally a common noun whose meaning was "neck" or "necklace," and gradually Anakim became the name of a tribe, with the possible meaning "long necked" (=giant).

Anak was the son of Arba (Josh 15:13; 21:11), the founder of Kiriath-arba (i.e., Hebron; Josh 21:11). Though his son's name gave rise to the gentilic, Arba was regarded as "the greatest man among the Anakim" (Josh 14:15).

All of the biblical references agree that the descendants of Anak were tall, of gigantic size (Deut 2:10, 21; 9:2). When the Hebrew spies returned from their mission in Canaan, they warned Israel about the Amalekites, Hittites, Jebusites, Amorites, and Canaanites (cf. Num 13:29), but the spies were especially concerned about the Anakim. In Num 13:28 it is recorded that the spies made general comments about the strong people who lived in the land, in large and fortified towns, but then they added, "and besides, we saw the descendants of Anak there" (cf. Deut 1:28). Num 13:33 connects the Anakim with the infamous Nephilim: "the sons of Anak, who come from the Nephilim" (cf. Gen 6:4). Deut 2:10, 20–21, and 9:2

identify the Anakim with the Emim, Zamzummim, and Rephaim. So it is not surprising that the hearts of the grasshopper-sized Hebrew spies melted at the sight of these giants, and this report had the same result on the Israelites who heard it. But Moses predicted that the Lord would give the Israelites victory over the Anakim, "a people great and tall" (Deut 9:2–3).

While most biblical references locate the Anakim in S Canaan, more specifically in the environs of Hebron (Num 13:22; Josh 14:12–15), there is a single passage that says the Anakim originally inhabited a much wider territory. This passage, Josh 11:21–22, reports that Anakim used to occupy the hill country of Judah (at Hebron, Debir, and Anab specifically) *and* the hill country of Israel. More importantly, it reports that this dreaded enemy was virtually wiped out by Joshua (with Caleb being responsible for the expulsion of the Anakim from Hebron; cf. Josh 14:12–15; 15:13–14; Judg 1:10), with the only survivors remaining in the Philistine cities of Gaza, Gath, and Ashdod. Incidentally, the RSV rendering of Jer 47:5 follows this tradition and places the Anakim in a Philistine context as well. It is most probable that Goliath of Gath and the other giants of 2 Sam 21:16–22 (cf. 1 Chr 20:4–8) were regarded as descendants of the Anakim remnant in Philistia.

In the Egyptian Execration Texts (*ANET,* 328–29), there are references to several princes with Semitic names who are identified as rulers of *Iy-ʿanaq.* Many scholars regard this as a tribal name related to the Anakim, but this connection is not certain (cf. Albright 1928). Apart from these texts, which date to the 19–18th centuries B.C., there are no other extrabiblical references that shed light on the Anakim.

GERALD L. MATTINGLY

ANAMIM [Heb *ʿănāmîm* (עֲנָמִים)]. The third "offspring" of Egypt (Gen 10:13). On the basis of the plural suffix marker, *-îm,* this figure seems to be the name of an ethnic group, the identification of which remains uncertain. Albright (1920–21: 191–92) attempted to find this name in a Neo-Assyrian text (KAV no. 92 line 41), occurring beside the place name of Caphtor. He equated the latter with Crete and the former (*a-na-mi*) with Cyrene. Later studies of this text have read this name as *a-na-kù,* eliminating the possibility of a reference to the Anamim (Albright 1925: 236–37; Weidner 1952–53: 22).

A second suggestion (Skinner *Genesis* ICC, 212) is to emend the text, following LXX *ʾenemetiem,* and to read *knmtym,* identifying the place with Egyptian *knmt* in the Libyan desert. A third option, following targum Pseudo-Jonathan and some of the fragmentary targums, is to interpret Anamim as referring to *mrywtʾy,* a place identified as W of Alexandria (Cassuto et al. *EncBib* 6: 309). While the other "offspring" of Egypt appear to reflect place names or people who lived in or near Egypt, there remains uncertainty as to the identification of a number of them (cf. LUD and NAPHTUHIM), including Anamim. The order of the names appear to be according to the number of consonants in the root, beginning with two (Lud) and proceeding to four (Naphtuhim and all the names of v 14), thus the order is probably not intended to follow a geographical sequence (Wenham *Genesis 1–15* WBC, 224).

RICHARD S. HESS

ANAMMELECH (DEITY) [Heb *ʿănammelek* (עֲנַמֶּלֶךְ)]. A god or goddess to whom, along with Adrammelech, the former inhabitants of Sepharvaim offered child sacrifice (2 Kgs 17:31). Sargon II had settled the Sepharvites in Samaria after deporting much of the local populace.

The interpretation of this otherwise unknown god-name depends in some part on the understanding of the name Adrammelech. Some who follow Albright (*ARI,* 163) in assuming that *ʿadra (m)-* conceals an incorrectly written form of Hadad would find in *ʿana (m)-* the name of the goddess Anat. Thus NAB translates "King Hadad and his consort Anath," and Gese (Gese et al. 1970: 110), "Hadad König, ʿAnat

des Königs." The very existence of such a god as Hadad-milki or the like has been called into question, however (see Kaufman 1978). An alternate interpretation (Albright *ARI,* 163; Cogan and Tadmor *2 Kings* AB, 212) suggests a reflex of the name of the Sumerian sky god Anu in Anammelech. In fact, neither of these explanations is completely satisfactory.

The reference to child sacrifice with this divinity might indicate that the *-melek* element of the name does not have to do with the word for king, but with the much-discussed word (from a root *y/hlk*?) for sacrifice which also appears in the name Molech or Moloch (see Gibson *TSSI* 3: 74–75; and, specifically with the name Anammelech, Green 1975: 179–87).

Kaufman (1978: 102–3) argues from both literary and linguistic considerations that Sepharvaim was a city in Phoenicia, not in Syria, Babylonia, or even Elam as many assume.

WILLIAM J. FULCO

ANAN (PERSON) [Heb *ʿānān* (עָנָן)]. A signatory to the code of Nehemiah and a lay leader of the people (Neh 10:26). The name comes from the Heb root *ʿnn* = "appear." Along with Anani, who is mentioned in 1 Chr 3:24, the name may be an abbreviated form of the name Ananiah, who is a lay leader mentioned in Neh 3:23 (Brockington *Ezra, Nehemiah, Esther* NCBC, 142).

FREDERICK W. SCHMIDT

ANANI (PERSON) [Heb *ʿănānî* (עֲנָנִי)]. The last recorded descendant of Jehoiachin, the last king of the S kingdom of Judah. In 1 Chr 3:24 he is listed as the seventh and final son of Elioenai. He *may* be mentioned in a letter written in Aramaic from the Jewish mercenaries settled on the island of Elephantine in Egypt to Bogoas, the Persian governor of Judah ca. 413 B.C.E. The letter is a petition for permission to rebuild their temple dedicated to "Yahu the God of Heaven" (*ANET,* 491–92). If the reconstruction by Cross (1975) of the Judean restoration is correct and the Anani mentioned in the Elephantine letter is indeed the same as the Anani of 1 Chr 3:24, then he would have been the contemporary of the Jerusalem High Priests Johanan II and Jaddua II. For a contrasting view of the period, see Widengren (1977: 489–538). The name may mean " (Yahweh) has revealed himself" (*ISBE* 1: 120).

RUSSELL FULLER

ANANIAH (PERSON) [Heb *ʿănanyâ* (עֲנַנְיָה)]. Father of Maaseiah, whose son, Azariah, was involved in the repair and reconstruction of Jerusalem's walls under the direction of Nehemiah (Neh 3:23). He is identified by some scholars with Anan, who is mentioned in Neh 10:26, and with Anani, who is mentioned in 1 Chr 3:24, both of which may be abbreviated forms of Ananiah (Brockington *Ezra, Nehemiah, Esther* NCBC, 142). The name is comprised of two elements: the Heb root *ʿnn,* "appear," and the theophoric name *yah* = "Yaweh." The normal translation for the name is "Yahweh has appeared" (Fowler 1988: 103).

Bibliography

Fowler, J. D. 1988. *Theophoric Personal Names in Ancient Hebrew. JSOTSup* 49. Sheffield.

FREDERICK W. SCHMIDT

ANANIAH (PLACE) (Heb *ʿănanyâ* (עֲנַנְיָה)). One of the villages in the territory of Benjamin where the children of Benjamin lived after the return from exile in Babylon (Neh 11:32). Though the verse that lists Ananiah among the Benjaminite towns is missing from the LXX, it appears as Gk *Anania* in the

Codex Sinaiticus and the recension Luciani. Some scholars identify Ananiah as modern Bêt Hannîna (Press 1955: 742–73) 4 km NNW of Jerusalem. Others (Albright 1923: 9) would dispute this identification because the three towns listed in this verse, Anathoth, Nob, and Ananiah, move from N to S geographically. Beth Hannina is NW of them all while Ananiah should be found S of the others and E of Jerusalem. There are two villages here, Bahurim (Râs el-Tumein, M.R. 174133) and Bethany (el-ʿAzarîyeh, M.R. 174131). Albright (1923: 9) identified Ananiah with Bethany. Citing parallel examples from the Bible, he argued that Beth ʿAnaniah (after the founder Ananiah) and ʿAnnaiah were interchangeable and the slight difference between Beth ʿAnaniah and Beth ʿAniah is due to syllabic haplology. Early claims that Bethany lay not in Benjamin but in Judah (Press 1955: 43) were answered first by the explanation that the old borders of Judah may have been altered in the days of Nehemiah (Kallai 1960: 86). Later identifications of several places whose names appear in the boundary descriptions between Judah and Benjamin (Josh 15: 7; 18: 16–17) affirm the possibility that the border passed just S of Bethany (*EncMiqr* 6: 311). En-shemesh, for instance, has been identified with ʿAin Ḥoḍ (M.R. 175131) and En-rogel with Bir Alyub (M.R. 172130). Thus Bethany lies near the S border of Benjamin and could be this Persian-period village. During the excavations of the old city W of the present town of Bethany, a number of objects from the Persian period were found (Saller 1957: 374), giving additional support to the theory that this is the site of the postexilic village of Ananiah. See also BETHANY.

ANANIAS (PERSON) [Gk *Hananias* (Ἁνανιας)]. Probably a transcription of the not uncommon Hebrew name *ḥănaněyāh,* "God is merciful," with a Greek ending. Here we are concerned with five individuals who bore this name.

1. The angel Raphael claims that he is Tobit's kinsman Azariah, the son of the great and noble Hananiah, i.e., "God helps, son of God is merciful" (Tob 5:13). Given the edifying nature of the book of Tobit, there is probably a play on the meaning of the names (Zimmermann 1958: 75).

2. An Ananias is named in the genealogy of Judith (8:1). Since this book likewise is an edifying story, any serious treatment of the genealogy is wasted effort (Enslin 1972: 110). Rather, the genealogy stresses the purity of the heroine's descent from Israel, and some of its fictitious names may have been borrowed from Numbers (1:6, 8; 26:8, 57) and from Nehemiah (12:12–21; Craven 1983: 84–85).

3. Ananias, a Christian of Jerusalem, appears in a story of a rule miracle of punishment (very similar to divine judgment) paralleled by that of his wife, SAPPHIRA (Acts 5:1–11). Luke portrays women as men to suggest equality (O'Toole 1984: 118–26).

Although they were free to do as they wished with their property, both before and after the sale, Ananias and Sapphira agreed to deceive the apostles and the community about the price of a field, and so Ananias places only a part of the proceeds at Peter's feet. But Peter asks Ananias, "Why has Satan filled your heart to lie to the Holy Spirit?" and further describes his crime as lying to God, not to human beings. The victory of the Spirit and God, represented by Peter and the community, over Satan in Ananias and Sapphira is complete. When reproved by Peter, Ananias says nothing. Rather he falls down and dies, and others wrap him up, carry him out, and bury him. The resultant effect is that great fear comes on all who hear of the event.

What originally happened cannot now be deciphered. The names, Ananias and Sapphira, and the analogous story in 1 Cor 5:1–8 show the possibility of a historical kernel for Acts 5:1–11 (Lüdemann 1987: 71). Luke surely contrasts Ananias (Sapphira) and Barnabas of the preceding pericope (Acts 4:36–

37); also the parallels to Judas, the condemnation of Simon (Acts 8:20–23), and the blinding of Elymas (Acts 13:6–11) come to the fore.

4. In Damascus, a Jewish Christian, Ananias (Acts 9:10–7; 22:12–6), who is a devout observer of the law and well spoken of by all the Jews, has a vision of Christ, who sends him to lay hands on Paul and cure his blindness, to baptize him so that he may wash away his sins and be filled with the Holy Spirit. Ananias protests because of Paul's reputation and the harm he has done to the Christians. In the meantime, Paul has received a vision about Ananias' coming. When Ananias arrives, he performs his assignment and likewise tells Paul that God appointed him to know his will and to see the Just One whose witness he must be and for whom he will suffer.

This portrayal of Ananias is largely due to Luke. Ananias is not mentioned in the conversation story of Paul in Acts 26, and what is said in Acts 22 would not be completely intelligible, if one had not already read chap. 9. Moreover, the particular vision genre is found in the NT only in Luke (Acts 9:4–6, 10–16; 10:3–6; 22:7–10; 26:14–18; Lohfink 1965: 53–60). Lüdemann (1987: 119–20) argues that it is hardly possible to make a well-grounded historical judgment about the person of Ananias and his part in the conversion/call of Saul, but there remains the problem of the name which Luke surely would not have otherwise introduced (cf. Acts 5:1–11; 23:1–5; 24:1). Stählin (*Acts* NTD, 136) concludes that Ananias was from Palestine, which may well be an indication of an independent, probably chronologically prior to the persecution of the Christian Hellenists, spread of the gospel and community beyond Palestine. To be sure, Acts 22:14–16 are more Jewish in tone. Ananias' protest represents a traditional motif which stresses either the significance and unprecedented nature of the command (cf. Exod 3:11; Jer 1:6; Luke 1:18–20) and/or the remarkable nature of the conversion (Roloff *Acts* NTD, 106, 323). According to Hengel (1979: 84), Ananias was probably an important intermediary between the Christians and Damascus and Paul.

5. Ananias, the son of Nedebaeus, was high priest under Claudius and Nero ca. 47–58 C.E. Paul appears before him claiming innocence (Acts 23:1–10), and Ananias orders one of the attendants to strike him on the mouth (cf. John 18:22–23). Paul retorts with the prophetical (Haenchen *Acts* Meyerk, 637) statement, "God shall strike you, you whitewashed wall," and points out that such an action is contrary to the law according to which Paul is supposedly being judged. When informed that he is speaking against the high priest, Paul apologizes with a scriptural citation (Exod 22:28). Later (Acts 24:1), Ananias leads the Jewish accusers of Paul before Felix.

Lüdemann (1987: 252–53, 258) sees Paul's presentation before the high priest whom he insulted and the names of Ananias and the lawyer Tertullus in Acts 24:1 as historical, because there was no good reason for creating such a tradition. The presence of Ananias in Acts 24:1 reveals for Luke the weight that the Jewish officials attached to Paul's case. Finally, it is hard to see how Paul could have been ignorant of Ananias' office. Did he not know who gave the command to strike him or was Paul being ironical: one would not expect a high priest to transgress the law (Munck *Acts* AB, 223)?

Josephus provides further information. Ananias was assigned the high priestly office by Herod, king of Chalcis (*Ant* 20 §103). After an outbreak of violence between the Jews and Samaritans, the governor of Syria, Quadratus, sent Ananias and others off in chains to Caesar (*JW* 2 §243; *Ant* 20 §131), but they were rescued through the influence of Agrippa II. Ananias may have enjoyed something of a reputation among the people; he certainly used his wealth to bribe individuals and to pay court to the procurator, Albinus, and the high priest who succeeded him. Through the capture of his son and other household members, the Sicarii forced Ananias to convince Albinus to release many of their followers. On the other hand, Ananias' slaves went to the threshing floors and took by force the tithes of the priests. They beat those who refused to yield. As a result, some poor priests died from starvation (*Ant* 20 §205–13). During the Jewish War, Ananias was seen as a friend of the Romans and his house was burned. Although he managed to flee to the palace of Herod the Great, he and his brother, Ezechias, were later caught and killed by Zealots (*JW* 2 §426, 429, 441–42).

ROBERT F. O'TOOLE

ANANIEL (PERSON) [Gk *Ananiēl* (Ἀνανιηλ)]. The grandfather of Tobit (Tob 1:1). In Codex Sinaiticus the name Ananiel appears also in 1:8, which reads in part: "as Deborah, the wife of Ananiel my father, commanded." This verse designates Ananiel as the father, rather than the grandfather, of Tobit. It contradicts Alexandrinus and Vaticanus, as well as Tob 1:1 in Sinaiticus itself, in all three of which Ananiel is listed as Tobit's grandfather. Zimmermann (1958: 49) suggests that the problem is due to the error of a copyist, whose eye strayed to the name Anna in v 9, causing him to insert the similar name Ananiel in v 8. Without the name Ananiel, the phrase in Sinaiticus would read identically with the phrase in Alexandrinus and Vaticanus.

The Hebrew form of the name (*ḥănî·ēl*) is a compound of the noun *ḥănînâ* (favor) and the noun *·el* (God), meaning "favor of God" or "God is merciful." The name appears twice in the OT, designating a prince of the tribe of Manasseh (Num 34:23) and a chief of the tribe of Asher (1 Chr 7:39).

ANASIB (PERSON) [Gk *Anasib* (Ἀνασιβ)]. Ancestor of a priestly family who returned from exile in Babylon with Zerubbabel (1 Esdr 5:24). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:36; Neh 7:39). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Moreover, problems associated with dating events and persons described in 1 Esdras have cast doubt on the historicity of the text. Identification of Anasib is further complicated by numerous textual variants. The most significant of these variants listed in Hanhart (1974) are: Lat *Eliasib* in the Vg, Gk *sanabeis* in Codex Vaticanus, and Gk *sanaseib* or *sanasēb* in various minuscules.

MICHAEL DAVID MCGEHEE

ANATH (DEITY) [Heb *·ănāt* (עֲנָת)]. An ANE goddess.

A. Anath According to Nonbiblical Sources

Anath apparently was worshiped by the Amorites already in the 3rd millennium B.C. Her cult is attested in records from the Amorite kingdom at Mari during the reign of Zimri-lim (ca. 1780–1758 B.C.). The goddess was closely associated with the city Ḫanat (about 75 miles SE of Mari), which may have been a cult center of Anath.

Literature from Ugarit is the most important source for an understanding of the goddess. In a passage in the Baal Epic, Anath is depicted as a fierce, invincible warrior, slaughtering people, tying their heads and hands to her person, wading knee deep in the blood and gore of those she has slain, reveling in fighting and destruction. Sated with battling, Anath calmly wipes her victims' blood from her house and washes herself. Later in the epic Anath is Baal's ally in his quest for El's permission to build a palace. She presents Baal's petition before El in a most disrespectful manner, threatening him with physical violence. Because El does not give the desired response, Baal and Anath next persuade Asherah to intercede on Baal's behalf. When El finally issues his permission, Anath is the one who announces the good news to Baal. After his palace is built, Baal comes under the power of Mot ("Death"). Anath finds Baal, buries him, and, in mourning for him, makes incisions on her body, besides sacrificing many animals. Her heart

yearning for Baal "like the heart of a cow for her calf, like the heart of a ewe for her lamb," Anath seizes Mot and destroys him. With this victory of Anath, Baal revives and returns to his throne.

In the story of Aqhat, Anath desires a bow and arrows, made by the craftsman of the gods, which are possessed by Aqhat. She offers the hero gold and even immortality. Refusing Anath's proposal, Aqhat not only accuses the goddess of lying, but also insults her by implying that she is unable to use the bow. Furious, Anath appears before El, addressing him in the same disrespectful way she does when presenting Baal's petition before El in the Baal Epic. After El acquiesces to her plan for revenge, Anath plots with her servant Yatpan, who evidently takes on the form of a bird. Hovering above Aqhat in the midst of a flock of birds, Anath releases Yatpan, who swoops down and fatally strikes Aqhat. Anath weeps for Aqhat; further, she fails to acquire his bow, which somehow falls into the water and is broken.

The dominant characterization of Anath presented by the extant Ugaritic texts is that of a warlike, bloodthirsty, violent goddess. Insolent, impetuous, relentless, she is the outstanding goddess of these texts (as compared to Asherah and Ashtoreth), due not to her position or rank, but to the force of her personality. Anath, having an intense love for Baal, is usually paired with him as his consort and ally (one exception being the story of Aqhat). See also BAAL (DEITY). In fact, victories over certain enemies which are ascribed to Baal in some Ugaritic passages are attributed to Anath in others. This may be a case of variants, or it may be due to the fact that both Baal and Anath fighting as a pair achieved these triumphs; perhaps the battles of one deity had become blended together with those of the other in the people's minds. There are allusions to the beauty and fertility of Anath, but no preserved text clearly depicts her as giving birth to offspring. However, Anath can be viewed as a fertility goddess in this sense: she is Baal's partner, zealous for his cause, aiding him, and by her defeat of Mot, enabling Baal to come back to life. Moreover, in the Kirta Epic, Kirta is promised that his firstborn son will be suckled by Anath. Finally, Anath is portrayed a number of times as a winged goddess.

Epithets of Anath seen in the Ugaritic literature include "Mistress of Royalty," "Mistress of Dominion," "Mistress of the Highest Heavens," "Lady," and "Maiden." She is referred to as the sister of Baal, probably not in the literal sense, but because of their close companionship. Her title "Virgin" is not to be understood literally, since texts picture her as having intercourse with Baal. Among proposals of scholars are that "Virgin" indicates Anath's perpetual youth, beauty, and nubility; her never bringing forth offspring; her ability to restore her own virginity; her cultic chastity; or her inaccessibility (as an unconquerable martial divinity). Another title of the goddess, Ug *ybmt lʾimm,* remains enigmatic. Both words have received various translations: the first, for example, "Sister-in-Law," "Progenitress," "Nubile Widow"; the second, "People(s)," "Nations," "Rulers," "Mighty One."

Anath was also worshipped in Egypt, particularly during the 19th Dynasty. Rameses II seems to have had a special preference for the goddess. Statues have been found depicting the pharaoh with Anath. A few preserved steles with identifying inscriptions portray Anath being petitioned. One, dating to the reign of Rameses III, was found outside Egypt: it belonged to an Egyptian official in Beth-shan. In a short offering prayer the dedicator asks for "life, welfare and health." The Egyptian representations show Anath clothed, wearing a crown, sitting or standing (Beth-shan), and either armed or unarmed. On the Beth-shan stele she holds a scepter and sign of life. In the magical texts Anath repulses angry demons in battle. The Egyptians closely associated Anath with Ashtoreth (an association evidenced in Ugaritic passages). Both are mentioned in a magical text (13th century B.C.) as the "great goddesses who conceive but cannot bring forth." See ASHTORETH.

There is less evidence concerning Anath from the 1st millennium B.C. Personal names with "Anath" (or some variant) as a theophoric element appear in upper Mesopotamia, and as far W as Carthage and Hadrumetum. Inscriptions mentioning the goddess come primarily from Cyprus. One of these, from Lapethos, is a 4th-century Phoenician-Greek bilingual, which identifies Anath (named in the Phoenician section) with Athena (named in the Greek section). Anath is called the "refuge of the living." In the lore of Sakkuniathon, Anath is probably to be identified with "Athena."

Texts from the 5th-century Jewish colony at Elephantine indicate the worship of Yahweh, but also of Anath-bethel and Anath-yahu. Basically two proposals for understanding these names have been

presented by scholars. The first is that the names demonstrate the worship of Anath at Elephantine; she was regarded as Yahweh's consort. The second, more likely to be correct, is that "Anath" in these names is a hypostatized aspect or quality of Yahweh: it is an Aramaic noun meaning "Providence," "Sign," or "Time." Thus, "Anath-bethel" is "Providence/Sign of the House of God," "Anath-yahu" is "Providence/Sign of Yahweh."

It is probable that at least the memory of Anath continued as late as the 3rd century A.D. Evidence from Palmyra (specifically, theophorous names) points to this conclusion. Also, in the opinion of most scholars, Anath is one of the goddesses included in the composite deity Atargatis, the Syrian goddess whose worship eventually spread throughout the entire Mediterranean world.

B. Anath in the OT

There are only indirect and very limited traces of the cult of Anath in the OT. Of the three great Canaanite goddesses (Asherah, Anath, Ashtoreth), Anath is the least attested. Three place names—Anathoth (e.g., Josh 21:18; Jer 1:1), Beth-anath (Josh 19:38; Judg 1:33), and Beth-anoth (Josh 15:59)—have usually been explained as involving the name of the goddess. Since "Anathoth" may be a shortened form of "Beth-anathoth," it is conceivable that the three had the same general meaning, "House of Anath." The names would then indicate that at one time Anath was worshiped in these locations.

Shamgar, a mighty fighter in Judges (3:31; 5:6), is designated *ben ʿănāt,* "the son of Anath." The name "Shamgar" is non-Israelite (best seen as Hurrian in origin). Scholarly opinion varies as to understanding "the son of Anath." For example, this designation is seen as indicating Shamgar's community; Shamgar was from Beth-anath (*IDB* 4: 306). Another interpretation, seeing in the designation mention of the war divinity Anath, is that it is a military title or epithet (Craigie 1972: 239–40). However, Cross (1980: 7) thinks that *ben ʿănāt* may be a simple personal name. After comparing inscriptions on two arrowheads dating to the late 12th and late 11th centuries B.C., he suggests that the designation be understood as "the (son of) Son of Anath." Ben Anath ("Son of Anath") was Shamgar's father, who was named after the goddess. Extrabiblical onomastic data indicate that personal names often consisted of "Son of" plus the name of a deity. Since Ben Anath was named after the warrior goddess Anath it is quite possible that he came from a military family.

WALTER A. MAIER III

ANATH (PERSON) [Heb *ʿănāt* (עֲנָת)]. Ostensibly the father of Shamgar, a judge of Israel (Judg 3:31), his identity and even reality have been questioned. Albright (*ARI,* 111) first suggested that the phrase *ben-ʿănāt* actually should be read *bêt-ʿănāt* ("house or temple of Anath"), a city in Galilee. Shamgar then becomes a (the chief?) citizen of that town which Israel was unable to conquer (Judg 1:33). Others identified the city as Anathoth, the birthplace of the prophet Jeremiah (Gray 1957: 127–29). Craigie (1972: 239) interprets *ben-ʿănāt* as a military name or title. Anath was the Ugaritic goddess not only of fertility but of war as well, appearing in Egyptian and Mari texts in a martial role. Further, the name *bn.ʿnt* appears in two lists of personal names from Ugarit (*PRU* 2/43: 12; 61: 6). In this case, the translation of the phrase might very well be "mercenary." If Anath was an actual person, it is unlikely that he was an Israelite or a convert to Yahweh, for we would not expect him to hold the name of a competing deity during a period when Israel is contending with the Canaanites for the land.

KIRK E. LOWERY

ANATHOTH (PLACE) [Heb *ʿănātôt* (עֲנָתוֹת)]. A priestly city in the tribal territory of Benjamin, first mentioned in the Bible as the home of Abiezer and Jehu, two of David's bodyguards (2 Sam 23:27; 1 Chr 11:28; 12:3; 27:12). This important town is not mentioned in any of the early narratives dealing with events such as the conquest or the allotment of cities to the tribes.

Abiathar, the last chief priest of Eli's family, was exiled to his estate in Anathoth because he had supported Solomon's rival, Adonijah. Solomon said that Abiathar deserved death, but because he had carried the ark of the Lord before David, Solomon instead deposed him from the priesthood and exiled him to Anathoth (1 Kgs 2:26). Anathoth is mentioned by Isaiah (10:30) as one of the places on the Assyrian route, but the city was spared destruction.

The prophet Jeremiah was born in Anathoth (Jer 1:1). It was here that he began to prophesy and here that the people of Anathoth rebuked him because he had accused them of breaking the covenant and had prophesied that evil would come upon them. Later, Jeremiah purchased the field of Hanamel in Anathoth as a symbol of God's promise that life someday would return to normal (32:7–9). Jeremiah's last reference to Anathoth appears in a letter from the exiles in Babylon to the religious authorities in Jerusalem (29:27). After the Exile, 128 men of Anathoth returned with Zerubbabel to their town (Ezra 2:23; Neh 7:27) and Anathoth was resettled by the Benjaminites (Neh 11:32).

The debate over Anathoth's location is whether it lies on the high mound (Ras el-Kharrubeh) immediately S of the village of Anata or in the valley next to Anata (M.R. 175135). Anata is situated on a broad ridge composed of three hills connected by saddles. To the S of Anata is a low plateau, and then the N slope of Ras el-Kharrubeh.

Ras el-Kharrubeh is a hill 4.5 km NE of Jerusalem. A low valley and several small hills lie between Ras el-Khar-rubeh and the ridge which the Mount of Olives occupies. Wadi Farah with its steep, rocky sides is the nearest water supply to Ras el-Kharrubeh. Neither Ras el-Kharrubeh nor Anata lies on a major highway, but they are within 3 km of the main road from Jerusalem to Shechem and near the junction of the "Way of Beth Horons."

The early historians who identified biblical Anathoth all associated the site with Anata. Josephus (*Ant* 10 §114) identified Anathoth as the home of Jeremiah "which is twenty stades distant from Jerusalem." Eusebius (*Onomast.* 26.27–29) placed Anathoth 3 miles N of Jerusalem in the tribe of Benjamin.

Many pilgrims—including Burchard of Mt. Zion, Marino Santo, John Poloner, and Brother Felix—visited biblical Anathoth during the time of the Crusades. Following the Crusades, the site is not mentioned again until the last century, when E. Robinson also identified ancient Anathoth with Anata. The French geographer M. V. Guérin (1869: 76–79) was the first person to record a visit to Ras el-Kharrubeh.

The most important archaeological work at Anata and Ras el-Kharrubeh was done over fifty years ago by E. P. Blair and A. Bergman (Biran). This work was initiated because Alt had earlier suggested that OT Anathoth was initially at Ras el-Kharrubeh but was moved to Anata after the exile. Blair was given the responsibility of conducting soundings at Anata. As he walked the surface, he was convinced there was not enough debris to indicate that an ancient settlement had occupied this site. His five probes supported that observation, yielding only Arabic, Byzantine, Hellenistic, and Roman deposits (Blair 1936). Because there were no pre-Hellenistic remains, Blair concluded that Alt's views were correct.

Biran's survey at Ras el-Kharrubeh identified pottery from Iron I to Byzantine (Bergman 1936). Out of two probes a few sherds were found from the end of Iron I, some from Iron II, and a few more from the Persian-Hellenistic and Roman periods. Biran concluded that the site was occupied from about the 9th century to Byzantine times. The settlement reached its peak in Iron II (between 800 and 600 B.C.), although it continued to exist in Persian-Hellenistic times, finally coming to an end in the Byzantine period. As a result of the work done by Blair and Biran, the identification of Ras el-Kharrubeh with Anathoth is universally accepted among Israeli, European, and American archaeologists.

There was no subsequent archaeological work at either Anata or Ras el-Kharrubeh until the Levitical City survey team visited the two sites in 1971. At Anata, all the sherds found were Arab and Byzantine (as Blair had observed), with the exception of one possible Iron II sherd. At Ras el-Kharrubeh there was an abundance of pottery dating from Iron II as well as Hellenistic, Roman, and Byzantine periods. The earliest sherd from Iron II was from the 9th century, and the 8th century had the most impressive amount.

The Levitical City survey work at Ras-Kharrubeh and Anata supports the original claims of Alt (Peterson 1977: 409–26). At these two sites we have another example of an Iron Age/Persian city shifting locations during the Hellenistic and Roman periods. During the Iron Age the biblical city of Anathoth was located at Ras el-Kharrubeh, but during the Hellenistic-Roman periods it was relocated down the valley to the village that today bears its name.

JOHN L. PETERSON

ANATOLIA. The Asian portion of the modern republic of Turkey. The area shows a great deal of topographic variation; some of the main features include a central plateau, a mountainous region in the east, and a fertile plain in the southern region around Adana. See Fig. ANA.01. Because it was one of the crossroads of the ancient Mediterranean world, it has a rich and diverse history, including numerous historical and cultural contacts with Syro-Palestine and its people. This entry will survey the prehistory and history of Anatolia, and will summarize some of the broad features of Anatolian mythology, especially that preserved by the Hittites. See also the entry on HITTITES.

PREHISTORY OF ANATOLIA

The prehistoric period in Anatolia runs from the Lower Paleolithic (ca. 400,000 B.P.) to the end of the EB III period (ca. 2000 B.C.). The beginning of the historic era is marked by the emergence of the Hittites.

A. Paleolithic

Finds from the Paleolithic period are relatively few. Although they occur in both open-air and cave sites, the data are uneven owing to a lack of concerted systematic surveys. The Karain cave near Antalya currently offers the best continuous chronological sequence for prehistoric Anatolia (Mellaart 1975: 93), showing evidence of occupation from the Lower (ca. 400,000 B.P.) to the Upper Paleolithic periods (ca. 30,000–13,000 B.C.). Of special interest is the final undisturbed Upper Paleolithic level (II) which yielded the remains of both *Homo neanderthalensis* and *sapiens* (Esin and Benedict 1963: 340). A final Neolithic phase from Karain can be roughly correllated with the Cilician Neolithic periods (cf. Mellink 1965: 105–6). New excavation is currently being carried on by Turkish and American excavators at Yarimburgaz cave, near Istanbul, where the earliest evidence of human habitation in Turkey is being uncovered Stone tools and fossilized faunal remains unearthed in the cave date to at least 700,000 B.C. Other late-Paleolithic-period sites have been found at Macun Çay near Ankara and Tekköy on the Black Sea coast (Esin and Benedict 1963). Sites such as these indicate that early food-gathering and -collecting communities existed somewhat N of the regions traditionally associated with Anatolia's earliest human habitation.

B. Epipaleolithic

The Epipaleolithic period (ca. 13,000 B.C. to 8,500 B.C.) was a time of intense experimentation. While true agriculture was still unknown, the subsistence pattern of the previous era was gradually supplemented by what has been termed "incipient agriculture." Preadaptive technologies associated with this strategy allowed for a greater exploitation of available food resources. The chipped-stone industry underwent a marked development which is especially apparent in the microlithic tools. Sites attributed to this period are concentrated in a series of caves located on the lower elevations of the once heavily forested Taurus

range, overlooking both the Lycian plain and the Mediterranean (Mellaart 1975: 34–35, 92–94). Two such sites are Belbaşı (ca. 13,000 B.C.) and Bildibi (ca. 9,000 B.C.), both of which display hunter-gatherer economies. While Bildibi C showed some evidence of experimentation with grains, the environment proved unsuitable for the adaptation of agriculture and the region was bypassed in succeeding periods in favor of arable lands farther north.

C. Neolithic

The earliest evidence of settled life in Anatolia dates to the Neolithic age (Mellaart 1975; Todd 1980). At the outset of the period (8500–5500 B.C.), man was already experimenting with the plants and animals living around him, and soon began to realize the possibility of manipulating the environment for his own benefit (Reed 1977; Wright 1971). The "incipient agriculture" of the preceding period gave way to a primitive form of true agriculture and the development of village-farming sites across the "fertile crescent." The SE stretch of Anatolia formed the N arc of this crescent and sites such as Çayönü served as bases from which agriculture expanded into W Anatolia.

The Anatolian Neolithic is commonly divided into two phases, the aceramic and the ceramic (Mellaart 1975; but cf. Todd 1980). During the aceramic phase (8500–6500 B.C.) settled communities first appear in conjunction with domesticated plants and animals. The results of archaeological exploration suggest that regional differences already existed during the earliest phase of the Neolithic. Data are uneven, however, as the pertinent sites are few and scattered. The ceramic phase (6500–5500 B.C.), as its name suggests, is characterized by the first appearance of pottery. The economies of both Neolithic phases were similar. Dry-farming communities predominated and were located in areas with arable lands. Such sites were also near local sources of water and scattered examples of irrigation are known. Animal husbandry was introduced early but became more prevalent during the later stages of the Neolithic. Faunal remains show that wild game was also heavily exploited, especially in the period's early phase. Some communities supplemented this base economy by using local resources (i.e., obsidian) as a means of trade. At present, most of the information concerning the Neolithic derives from sites located in the S reaches of the peninsula. Recent salvage excavations along the Euphrates, however, have provided important new information at sites such as Hayar Höyük, Gritille, and Cafer Höyük.

Çayönü is currently the earliest settled site known in Anatolia. Evidence suggests that it was occupied as early as 8000 B.C. and provides fascinating information about the shift from a hunting and gathering to a village-farming economy (cf. Braidwood et al. 1981). The site covered about 30,000 m^2 and housed several hundred people. Handworked obsidian and flint tools were found in abundance at Çayönü, as were grinding stones and other materials for food processing. Bone and antler tools also appeared, as did small beads, pendants, and figurines. Copper artifacts were more abundant than expected for such an early date. True pottery was completely absent from the site, but white plaster vessels (*vaisselles blanches*) occur in the upper levels. While botanical remains suggest the appearance of domesticated grains by 7000 B.C., evidence of domesticated animals does not appear, with the exception of the dog (ca. 7000 B.C.), until somewhat later. This situation is not unlike that of other transitional Anatolian Neolithic sites such as Aşikli Höyük, Suberde, and Hacilar (V).

Çatal Höyük (East) is the best known of the Neolithic sites in Anatolia and best represents the developments which were taking place during the later part of the period (Mellaart 1967). The site was well planned and carefully constructed, made up of contiguous mudbrick houses with entryways through the roof. The walls and floors were plastered and burnished as in contemporary Jericho. Pottery was found in all thirteen excavated levels, though aceramic levels undoubtedly lie farther below. While the pottery appears to be strictly utilitarian in nature, other arts and crafts attest to a nonutilitarian aspect in the culture. Although no altars were found, the discovery of shrines with bucrania, wall paintings, plaster reliefs, and cult figurines suggests a strong religious orientation. Taken together, these materials provide evidence for a sophistication not previously suspected in central Anatolia.

The chipped-stone industry of Çatal Höyük is particularly significant. The people who inhabited Çatal Höyük made almost exclusive use of obsidian from nearby volcanic flows for their tools and weapons. The fact that local Anatolian obsidian was found at Jericho, among other places in the Levant, suggests

that the inhabitants of Çatal Höyük were involved in some form of long-distance trade (Renfrew, Dixon, and Cann 1966). While one need not understand the term "trade" in an exaggerated sense, some sort of exchange must be hypothesized in order to account for the movement of Konya obsidian so far abroad. The occurrence of Mediterranean shells, metal ores, and pigments not found locally also point to the existence of such trade. The economy of Çatal Höyük, however, continued to be based on agriculture, and irrigation appears at Çatal Höyük around 6000 B.C. The diet of Çatal Höyük remains one of the most varied yet discovered in the Neolithic. Although no definite proof was found of domesticated animals, animal husbandry probably played a significant role in the town's economy. Weapons, wall paintings portraying hunt scenes, and the bones of wild animals, however, indicate that hunting was still important. Çatal Höyük comes to an end around 5400 B.C., although after a short interval a new settlement is founded across the river. This later settlement belongs to the Early Chalcolithic period.

D. The Chalcolithic Period

The three phases of the succeeding Chalcolithic period last from about 5500 to 3000 B.C. and seem to have gradually developed out of the Neolithic period with no clear signs of cultural upheaval. The Early Chalcolithic period (5500–4500 B.C.) is best known from sites localized S of the Kizil Irmak. This initial phase is sometimes called the "late Neolithic" because its economy shows little change from the preceding Neolithic, remaining agriculturally based. Faunal studies are incomplete, but animal husbandry probably existed at Hacilar, much as at contemporary sites such as Erbaba and Can Hasan where sheep, goats, cattle, and perhaps pigs were kept. Botanical remains indicate that foodstuffs were much like those at Çatal Höyük with einkorn, emmer, as well as 2- and 6-rowed barley being mainstays along with peas, lentils, chick-peas, acorns, and hackberries. The distinguishing characteristic of the period is the development of painted pottery, the earliest examples of which apparently come from Mersin. The principal Anatolian site of the Early Chalcolithic is Hacilar, where the red-on-creme pottery attained a high degree of development (Mellaart 1975: 111). The examples from levels V–II are considered the hallmark of the period. Two distinct phases of fine clay figurines are found at Hacilar, the first (levels IX–VI) which displays the statuary at its unrivaled best, and the second (levels V–II) which lacks much of the creativity and charisma of the earlier examples. Nonetheless, the statuary, as a whole, is unmatched by anything else of its time. Early levels were unfortified, but security is enhanced in period II, with the addition of an outer defense wall formed by employing a line of contiguous structures on the perimeter of the site as a defensive measure. The site was destroyed and abandoned about 4800 B.C., leaving no apparent links to succeeding cultures.

Subsequent phases of the Chalcolithic are not well documented, especially in central Anatolia. The Middle Chalcolithic period (4500–3500 B.C.) is most evident along the Euphrates River where Late Ubaid cultural remains indicate a Mesopotamian intervention. This interlude represents the beginning of a persistent pattern of Mesopotamian riverine expansion which continues through the Middle Bronze Age (Marfoe 1987). Ubaid pottery at sites along the land route to the Ergani-Maden copper mines near Diyarbakir seems to confirm the motivation behind this expansion, and Ubaid pottery from Fraktin suggests that Mesopotamian influence may have also extended into central Anatolia at this time. The Late Chalcolithic (3500–3000 B.C.) is imprecisely understood in both western and central Anatolia (Yakar 1985, cf. chart 107). In the east, the Uruk culture succeeded the Ubaid and, like its predecessor, followed the main river routes north. Uruk expansion into Anatolia is documented in a series of enclaves which included sites such as Tepe Gawra, Tell Brak, Tarsus, Carchemish, Habuba Kabira, Kurban Höyük, and Norşuntepe before its sudden collapse around 3000 B.C. (Algaze 1987).

The legacy of early Anatolian prehistory is one of innovation, growth, and preparation. Important changes occurred inside Anatolia related to the development of greater food production and sedentism. The Early Bronze Age (3000–2000 B.C.) ushered man into a new age. Rapid developments in metallurgy, a greater accumulation of wealth and property, larger cities, and increased social organization all occur. Trade and military ventures bring Anatolia increasingly into contact with the outside world. In spite of its "internationalism," however, small villages with an agriculturally based economy remain the backbone of the country. The Early Bronze Age of Anatolia is conveniently divided into three periods.

E. The EB I Period

The initial phase of the Early Bronze in Anatolia (3000–2800 B.C.) displays a proto-urban village character marked by the first appearance of distinct, though parochial, cultural regions. EB I is represented in the NW by the pre-Troy I cultures of the Troad and related island sites off the coast such as Poliochni (on Lemnos), Thermi (on Lesbos), and Emporio (on Chios). The exact placement of the pre-Troy I sequence is not completely understood, but on the basis of comparative ceramics it appears to antedate Troy I with Kumtepe Ic coming near the end of EB I (Yakar 1985; Mellink 1986). The small and later fortified town of Troy I can only begin then near the end of the EB I period (ca. 2800 B.C.; cf. Yakar 1985: 116). It should be noted, however, that attempts to interpret the evidence from Troy have led to serious disagreement over Anatolian chronology which stems, in part, from differences in the chronological systems currently in use. While some scholars would put more reliance on European and Aegean sequences established on the basis of comprehensive radiocarbon dates (Easton 1976), others feel that it is more productive to link Troy to the Aegean only after it is securely tied to central Anatolia and, through historical synchronisms, to the better-established Near Eastern chronologies (cf. Yakar 1985: 111).

The EB I is not easily demarcated in central Anatolia. It may be part of a cultural complex that is not totally indigenous to the region, perhaps including parts of Thrace, the Troad, and the Pontic regions. Evidence is found in the ceramics of Alişar, Kültepe, and Alaca Höyük, but details are unclear because of a lack of clear ties to more secure chronologies. EB I levels are dated primarily on the basis of affinities in the material culture to the preceding Chalcolithic period and the lack of foreign imports prevalent in the succeeding EB II (cf. Mellink 1965: 110–13). Because its upper chronological limit is sometimes thought to overlap with the Chalcolithic, the complex is often referred to as "Late Chalcolithic." Other north-central sites tied to this horizon include Büyük Güllücek, Horoztepe, and Maşat Höyük. The EB I is also represented at Bağbaşi in Elmalı plain, and Beycesultan (XX–XL) near Denizli.

Eastern Anatolia became the theater of the Early Trans-Caucasian movement (ETC) about this same time (Kelly-Buccelati 1974). Also known as the Khirbet Kerak, Kura-Araxes, or Karaz culture (in reference to other areas where it has been isolated), the ETC movement is defined by the distinctive red-black polished ware with fluted and grooved decoration found in its wake. The movement begins in the Araxes Valley situated between the Black and Caspian seas during the 4th millennium, and then spreads E into Iran. It has been suggested that the impetus of this movement originated, as it so often does in Anatolia's history, in the desire to obtain raw materials in the form of native copper and copper ores (Kelly-Buccelati 1974: 353). The first elements of the ETC arrive in eastern Anatolia around 2800 B.C.

F. EB II

The EB II sequence (ca. 2800–2400 B.C.) is composed of roughly contemporary cultures whose contemporaneity is based on clear synchronisms in the following period. Among these are middle and late Troy I (including Troy IIa) in the NW, the "Copper Age" cultures of central Anatolia, and the Cilician EB II. Urbanism is on the rise and imposing walls begin to appear at regional centers like Troy, Alaca Höyük, Kültepe, Norşuntepe, and Arslantepe. Fortified cities such as these suggest aggressive kingdoms vying for power. The number of metal weapons such as battle-axes, swords, and spears found at these sites provide further evidence of militarism and the need for defense. The reason behind this urban growth and apparent aggressiveness is debated. Much of it, especially in the eastern and central regions, may be a response to the Mesopotamian movement into the region in search of raw materials. As Anatolian metals such as copper, lead, gold, silver, and electrum were among the most highly coveted of these resources, those who controlled the access to them must have reaped startling wealth, not to mention jealous competitors.

In the northwest, Troy I survives until about 2600 B.C. and is followed by a hiatus in occupation before the EB II concludes with the complete rebuilding of the Troy IIa citadel around 2500 B.C. (cf. Mellink 1986: 149, pl. 16; Yakar 1985), an event which is approximately contemporary with the last phase of the Early Dynastic III period in Mesopotamia (cf. Yakar 1976: 56). Inland, its influence is felt as far away as Beycesultan (XIX–XVII).

The EB II of central Anatolia is represented by "Copper Age" levels at Alişar Höyük, Acemhöyük, and Kültepe. The development of small settlements into large fortified cities suggests an increasingly urban orientation. Alaca Höyük is of particular importance for this period. Among the discoveries at Alaca are the royal tombs (Yakar 1985: 185). These rectangular shaft tombs must have been the final resting places for several generations of the city's royal house. The men were buried with weapons and the women with domestic articles and jewelry. Also among the contents of these tombs are the enigmatic "standards" and the metal remains of furniture. The numerous metal remains found in the tombs reveal the same advanced technological skills as found at Troy.

The origins of the Alaca culture are disputed. Unfortunately, the royal tombs cannot be stratigraphically dated, but on the basis of "Copper Age" pottery found in the tomb, they were tentatively placed at the end of the EB II or early in the EB IIIa, though some tombs seem to date a little later (cf. Yakar 1985: 176, 177–79, 185). While some have tried to link the Alaca culture to the Kurgan cultures of the north, and the Black Sea coast site of Maikop in particular (Yakar 1985: 185), there is no clearly definable means of tracing its origins.

Meanwhile, eastern Anatolia continued to bear the brunt of the Early Trans-Caucasian movement which reached the area of the Keban dam and Malatya around 2800 B.C., later finding its way to the Amuq around 2600 B.C. ETC influence is also felt at this same time in central Anatolian "Copper Age" sites such as Kültepe and Alaca Höyük (Kelly-Buccelati 1974: 301–33). Farther south, the seizure and occupation of the town of Purušḫanda (perhaps located at Acemhöyük) by Sargon I (ca. 2400 B.C.) renewed the Mesopotamian presence in the region and suggests that this part of Anatolia was well known to Mesopotamians as early as the 24th century B.C.

G. EB III Period

The last phase of the Early Bronze Age (ca. 2400–2000 B.C.) witnessed major developments taking place throughout Anatolia. The upper limit of subphase EB IIIA is determined by the inauguration of the Cilicio-Troadic connection and the introduction of wheel–made pottery to Troy IIb. These events provide clear chronological synchronisms between Troy IIb–g and the Cilician EB IIIA. In the case of Tarsus, the evidence is strong enough to postulate an intrusive settlement of West Anatolians (Mellink 1986: 149–51). This intrusion may have been brought about by seafaring warriors and merchants who followed the coast, much like the "Sea Peoples" of the later 13th–early 12th centuries.

The EB IIIA in central Anatolia is characterized by a continuity that goes back to the EB II (Yakar 1985: 183). The region, however, was not isolated from the larger events of the period. Depatas and one-handled cups found at such sites as Alişar, Kültepe, and Acemhöyük indicate that the region was intimate with the affairs of the EB IIIA (Özgüç 1986; Mellink 1986). The similarity of jewelry from Troy, Alaca, and Eskiyapar provides another indication of strong relations between Troy and her central Anatolian counterparts (Mellink 1986: 142).

In the E, a middle phase of the ETC movement begins about 2400 B.C., but its energy is apparently spent by 2100 B.C. In fact, a pattern of cultural fragmentation has already developed in the E in which numerous local cultures flourish during the last part of the 3d millennium. This patchwork of small polities is characterized by large walled towns and many local ceramic traditions which actually begin in the middle of the 3d millennium and continue into the 2d (Marfoe 1987: 34).

The EB IIIA period came to an end around 2300 B.C. when Troy II was overrun and the Cilicio-Troadic connections were severed by a force of uncertain origin (cf. Mellink 1986: 151). The EB IIIB is marked by the erection of Troy III–V, which were roughly contemporary with the later central Anatolian EB III. Along the coastal areas of W and SW Anatolia the Minoans became the dominant seafarers, supplanting the native West Anatolians, while the inland areas of W and S Anatolia are thought to have provided the backdrop for the movement of the Indo-European-speaking peoples into Anatolia (cf. Yakar 1976).

The areas N of the Kizil Irmak do not seem to have been affected by the aggressive action which brought an end to Troy II (above) and many of the principalities to the S (Yakar 1985: 183). Important EB III settlements maintained themselves at Alaca Höyük, Maşat, Kültepe, Acemhöyük, Karahöyük-Konya, and Alişar Höyük. It may be that in the cities of this area, especially those farther N, are to be found the

"indigenous" Hattians who preceded the Hittites and bequeathed to them so many of their cultural trappings.

Although it was not uncommon for these EB III settlements to be overthrown from time to time, occupation is quickly resumed with no signs of cultural collapse. Signs point to internal or internecine conflict rather than external force, a point which is confirmed in the cultural continuity seen between the EB III and succeeding MB/LB cultures, as well as the expanding foreign contacts. Kül-tepe-Kaneš, in anticipation of its role as the nexus of the Old Assyrian trade network in the Middle Bronze Age, shows signs of increasing prosperity from its foreign trade (Özgüç 1986). Other towns also grow, either in response to similar economic catalysts or as places of refuge from the internecine struggles convulsing the region. Near the end of the period the Mesopotamian link is again apparent in the form of traders from Ur (III) and Assyria who successively followed the long-established trade routes to central Anatolia. As a result of such external influences, the cultural horizon of central Anatolia was considerably broadened in advance of the political shift which was to turn the focus of the ancient world to Anatolia for much of the 2d millennium. When the EB III came to an end around 2000 B.C., the stage was already set for the emergence of the Hittites.

HISTORY OF ANCIENT ANATOLIA

Both archaeological and textual source material is abundant for ancient Anatolia. Many sites have been excavated and have yielded a wealth of evidence about architecture, city planning, pottery, metallurgy, and material culture in general for all periods of Anatolian history. Textual remains from a number of sites have provided philologists and historians with material for the history of early Asia Minor. The many different languages, scripts, and writing media reflect the diversity of the area's history. The cuneiform system of writing is represented by clay tablets written in at least two dialects of Akkadian, Hittite, and Urartian, as well as Urartian monumental inscriptions in stone. From the Hittite kingdom and many Neo-Hittite cities, steles and monuments written in the Luwian hieroglyphic script are extant. Phrygians and Lydians left inscriptions in their own languages and distinctive scripts based on Phoenician

or Greek alphabets. There is a wealth of inscriptional material in Greek and Latin from the later periods, as well as information in some Greek and Roman writers.

A. Old Assyrian Merchants

History begins in Anatolia with the tablets of the Old Assyrian merchants. These merchants, based in Aššur, came into Anatolia near the beginning of the 2d millennium B.C. and established trading colonies (Old Assyrian *kārum*) to facilitate regular trade between Aššur and Anatolia. The most important of these colonies was at the city of Kaneš, modern Kültepe. In the upper levels of the *kārum* were discovered a number of tablets, primarily economic documents, written in cuneiform in the Old Assyrian script and dialect. Formal trade agreements were drawn up with local Anatolian rulers, who offered the merchants protection but also exacted taxes on their commerce. Indo-European names occur in some of the documents, indicating that the Hittites were already present in Anatolia in this period, although not as a recognizable political entity. Also found in the *kārum* district were a number of cylinder seals, a distinctively Mesopotamian type of seal which was rolled across a wet clay bulla or tablet as a signature. The seals show Mesopotamian and Syrian as well as native Anatolian motifs.

On the site of the city itself a palace has been identified. Tablets in Old Assyrian were also found in this building; the local ruler apparently employed scribes from the *kārum.* One of the most interesting is a letter from another Anatolian ruler to the king of Kaneš. In another building was found a dagger or spearhead inscribed "the palace of Anitta the king." Opinion is divided as to whether this indicates that Anitta was king at Kaneš or that he sacked the city and the dagger was lost there.

The advent of the Assyrian traders begins the historical period in Anatolia; those merchants brought with them among other things the concept of writing and the use of cylinder seals. Later Hittite texts refer to a city called Neša (Kaneš) as their city of origin, which accords well with the evidence of the Hittite names in the Kaneš tablets. Thus the Hittites were exposed to the cultural influence of the foreign merchants from Aššur, some elements of which are discernible in the Hittite cultural tradition.

B. Hittites

The main textual source for Hittite history is the large corpus of cuneiform texts discovered at the Hittite capital of Ḫattuša, modern Boğazköy, in central Turkey. Most of the texts are in Hittite, the earliest attested Indo-European language. Archaeological evidence for the Hittites is extensive; major sites include Boğazköy, Maşat, Alaca Höyük, and Alişar.

The first recorded king of the Hittites was Anitta, very probably the same king whose dagger was found at Kültepe. The one major text attributable to him lists the cities which he conquered. One of these was Ḫattuša, which was resettled and made the capital by the Hittites under Ḫattusilis I ca. 1650 B.C. Perhaps the most important document for this king's reign in his "Political Testament," in which he addresses the assembled nobles on the subject of his adoption of a new heir after the treachery of his own son. His adopted successor, Muršili I, expanded Ḫattusilis' empire and even made a raid deep into Mesopotamia, conquering Babylon and ending the OB dynasty of Hammurapi ca. 1595. However, Muršili on his return was murdered in the first of a long series of dynastic disputes. The Old Hittite period ends with the king Telepinu, who promulgated an edict defining rules for dynastic succession designed to end the intrigues which had crippled the kingdom since Muršili's assassination.

After a Middle Hittite period of somewhat meager documentation, the New Hittite period begins with the reign of Šuppiluliumas I, who embarked on an ambitious program of empire building. Later kings maintained and increased the conquered lands, administering an empire extending in all directions from Ḫattuša. Important texts in this period include the annals of Muršili II, in which are detailed year by year the campaigns of the king, a treaty between Ḫattusilis III and Rameses II which is famous because it is extent in copies both from Ḫattuša and from Egypt, and the "Apology" of Ḫattusilis III, an early piece of political justification in which the king defends his usurpation of the throne from his nephew. The reign of Ḫattusilis' successor, Tudḫaliya IV, is characterized by his religious reforms. Shortly after that king's reign the capital was captured and burned and the empire collapsed. Scholars have yet to penetrate the mystery of who it was that so dramatically brought to an end one of the great empires of the Near East. See also HITTITES.

C. Neo-Hittite States

Although the collapse of the capital at Ḫattuša signaled the end of the Hittite empire, many of the cities throughout the empire retained their Hittite character for centuries after the imperial structure had vanished. The culture of these Neo-Hittite cities shows a mixture of Hittite and Aramean elements. An important source for their political history are the annals of the kings of Assyria, who eventually incorporated all of these cities one at a time into their empire. The archaeological record from this period includes excellent architectural remains and wonderful examples of sculpture, both relief and in the round. There are also a number of inscriptions in hieroglyphic Luwian, although there is no corpus of nonmonumental documentation analogous to the Hittite archives at Ḫattuša.

Karkamiș, on the modern Syria-Turkey border, was a provincial capital during the Hittite empire and became one of the most important Neo-Hittite cities. Much of the 1st-millennium city has been excavated, revealing the truly magnificent series of orthostats (stone slabs, carved in low relief, used to decorate the walls of public buildings). Many of these orthostats may now be seen in the Ankara museum. The art of Karkamiș influenced all of the surrounding states and was probably transmitted to the Greeks by the Phrygians.

One of the most spectacular of all the Neo-Hittite sites is Karatepe. Here the orthostats have been preserved *in situ*, giving the modern visitor an idea of the layout of the city and its decoration. The reliefs and the long bilingual inscription of King Azitawanda in hieroglyphic Luwian and Phoenician illustrates the blending of Hittite and Phoenician elements at Karatepe.

The history of the Neo-Hittite period is one of many small city-states, heirs at least in part to Hittite culture, which maintained themselves as independent principalities but were never able to reunite the area as the Hittite empire had done. This made them susceptible to attack, and their history as independent states ended as each individual city was incorporated into the expanding Assyrian empire in the first half of the 1st millennium B.C. Thereafter their distinctive Hittite-Aramean character was lost and they were absorbed culturally as well as politically into the Assyrian empire. The period immediately after the Neo-Hittite states is thus for southern Anatolia one of Assyrian domination.

D. Urartians

The extremely mountainous E region of Anatolia was called by the Assyrians of the late 2d and 1st millennia Urartu or Uruatri. A number of Urartian sites have been discovered. These include Van, Toprakkale, Altıntepe, and Çavuștepe in Turkey and Karmir-Blur and Erin-Berd in the Soviet Union. Urartian cities follow the general pattern of utilizing the region's steep-sided hills as natural fortification, supplemented with defensive walls. The cities normally have huge cisterns cut in the rock and an extensive system of storage jars, for withstanding the sieges of the Assyrians mentioned below.

Archeology has also brought to light a number of monumental rock inscriptions of the Urartians, written in Assyrian cuneiform but in the Urartian language, which shows some affinities to Hurrian. Approximately 25 tablets have been found in addition to the rock inscriptions. Still, much of our understanding of Urartian political history comes from the Assyrian sources.

The Urartian homeland is well protected by mountains and rather inaccessible from Assyria, its main enemy. The Assyrians could only campaign in Urartu for a few weeks out of the year, because the passes through which they had to go were only open for a short time. This dictated the Urartian strategy for defending their homeland, which was simply to withdraw within their walled fortress towns and utilize their stored provisions to wait out the Assyrian siege. The development of Urartian political organization from a tribal system to a unified monarchy may be traced in the Assyrian sources over a period of several centuries. By the 9th century B.C., Urartu was the object of regular campaigns by the Assyrians. In the first half of the 8th century, Urartian power was at its zenith as they pushed west to the Mediterranean, coming into contact with the Neo-Hittite states. The Urartians managed to hold some of their conquered lands until Tiglath-pileser III reasserted Assyrian control and pushed the Urartians back into their mountainous homeland. Thereafter the history of Urartu is primarily one of defense against periodic campaigns of the Assyrians. Urartu as an independent kingdom in the written sources disappeared with its

conquest by the Medes in the later 7th century B.C. The Urartians are best known to us today through their excellent metalwork and ivory carving, their jewelry, and their armor.

E. Phrygians and Lydians

The Phrygians were contemporaries of the Urartians who lived in central Anatolia around the Halys River, the modern Kızıl Irmak. Primary written sources for their history are Greek legends, such as the Midas story, and Assyrian historical documents. The Phrygians had their own alphabetic writing system based on the Phoenician alphabet, but the corpus of Phrygian is very small and is limited mostly to monumental inscriptions. Their main site is the capital at Gordion. Outside the ancient city are several huge burial tumuli. The largest of these is referred to as that of Midas, but there is no evidence for this identification. Another site is a rock-cut building façade at Midas city in W Anatolia which includes an inscription.

The Phrygians may appear in written sources as early as the 11th century B.C., in the reign of the Assyrian king Tiglath-pileser I. Sargon II (8th century) records a military confrontation with the Phrygian king Mita (the Greek Midas) in Cilicia in S Anatolia. Soon after this clash with Assyria the Cimmerians ca. 690 B.C. swept into Anatolia and took Gordion, with Midas, according to tradition, committing suicide at the loss of his kingdom. After the Cimmerian invasion, Gordion was rebuilt, but although the architecture and material culture closely resemble that of the earlier city, the rebuilding was done by the Lydians, not Phrygians. The Phrygians worshiped the goddess Kubaba/Cybele, who in later periods became an important mother-goddess in Anatolia.

The Lydians, as noted above, added the Phrygian region to their own when Gordion was destroyed by the Cimmerians. The Cimmerians also attacked the Lydian capital of Sardis in W Anatolia, but King Alyattes managed to repel them. Written sources for the Lydians are meager, including a few texts in Lydian and mention of them in Homer and Herodotus. From Herodotus, we learn that Alyattes pushed his kingdom to the Mediterranean, destroying Smyrna (modern Izmir) at the beginning of the 6th century B.C. Excavation at Sardis has brought to light much of the material culture of the Lydians. They were in close contact with the Greeks throughout their history, and much of their art shows affinities with that of the Greeks of the Archaic period. Croesus, the last Lydian king, ca. 561–547 B.C., consulted the oracle at Delphi and attacked the Persians on the strength of the oracle's reply. The result of his attempt to expand his kingdom at the expense of the Persians, however, was that the Persians took Sardis and ended the Lydian kingdom.

F. Ionian City-States

The W coast of Anatolia of the 1st millennium is referred to as Ionia because of the many Ionian Greek city-states founded there during the migrations at the end of the Bronze Age. Important sites include Ephesus, Priene, Miletus, and Didyma. Greek literary sources supplement the extensive archaeological record.

Throughout the 7th century B.C. several Lydian kings in succession attacked various Ionian cities in their expansion to the west. Alyattes, mentioned above, laid siege to the important port city of Miletus for 12 years and succeeded in taking Smyrna. His successor Croesus is recorded as giving gifts to Ionian temples, especially the temple of Artemis at Ephesus, but he attacked that city as well. A number of the mainland Ionian cities were paying tribute to Lydia up until the fall of that kingdom to the Persians. The island cities were free of this burden as the Lydians had no fleet. The Ionian city-states are well known for their intellectual life; the pre-Socratic philosophers Thales, Anaximander, and Anaximenes all came from Ionian Anatolia.

G. Persian Period

Greek and Persian literary sources furnish the main evidence for the Persian occupation of Anatolia, as the Persians left little distinctive archaeological evidence. The Medes, a group associated with the Persians, are recorded in Anatolia early in the 6th century B.C., fighting with Lydia. In 546 the last Lydian king, Croesus, attacked the first Achaemenid (Persian) king, Cyrus. When Cyrus took the Lydian capital of Sardis the remainder of Anatolia rapidly followed. For the next two centuries the Persians ruled Anatolia from several different satrapies, or provincial administrative centers. One of the best-known

satraps was Mausolus of Halicarnassos, whose funerary monument was the Mausoleum, one of the 7 wonders of the world.

The Ionian city-states, taken by the Persians in the wake of their conquest of Sardis, revolted in 499 B.C., winning only a temporary freedom. After quelling the revolt, the Persians attempted to placate the Ionian cities in order to secure their flank before launching their invasion of the Greek mainland. The failure of Xerxes' Greek invasion weakened Persian control of the Greek cities in Anatolia as well, although it was not until Alexander the Great's campaigns through Anatolia in the middle of the 4th century B.C. that the Persians were expelled. The Persians ruled Asia Minor politically, but had little influence culturally, the various pre-Persian cultures of Anatolia remaining essentially the same.

H. Hellenistic Period

This is the period between Alexander's expulsion of the Persians and the coming of the Romans. Sources for this period include the various Greek historical sources on Alexander and his successors as well as archaeological evidence from many sites. Some parts of Anatolia were incorporated into the empire of Alexander and his successors, while other areas managed to escape conquest or reasserted their independence, forming small kingdoms. The north central region was never conquered by Alexander and remained independent until the Roman period.

An important kingdom of this period was that of Pergamon (modern Bergama), located on the W coast. The foundation of the kingdom dates to Philetaeros, 283–263 B.C. The remains of the city on its acropolis are still very impressive. Attalus I (241–197 B.C.) built the magnificent altar of Zeus, now on exhibit in Berlin, to commemorate a victory over the Gauls of central Anatolia. Pergamon's close cultural contact with mainland Greece is indicated by Attalus II's endowing of a stoa at Athes. The last Pergamene king, Attalus III, bequeathed the kingdom to Rome at his death in 133 B.C.

One of the best known of the independent Hellenistic kingdoms of Anatolia is that of Commagene, situated in SE Anatolia. It is justly famous for the funerary monument of its king, Antiochus I Epiphanes, deep in the mountains at Nemrud Dağı. The site contains a huge burial tumulus with pavilions facing both the rising and setting sun with colossal stone statues of Hellenistic gods, in which group Antiochus included himself. There are also other monuments and inscriptions in the area. The culture of Commagene as preserved shows a unique mixture of Greek and Iranian elements. The kingdom remained independent until A.D. 72, when it was incorporated into the province of Syria by Vespasian.

I. Roman Period

Rome began expanding into Anatolia in the 2d century B.C. and eventually took all of the region, splitting it into several provinces, the largest of which were Asia, Galatia, and Cappadocia. Besides the acquisition of Pergamon and Commagene mentioned above, a landmark in the Roman takeover was the final conquest by Pompey ca. 67 B.C. of the district of Pontus on the Black Sea after three wars with its last ruler, Mithridates VI. Abundant Roman sites in Anatolia have yielded archaeological evidence and many inscriptions in Greek and Latin. A number of Roman writers mention Asia Minor as well. Important sites include Ephesus (modern Selcuk), Hierapolis (modern Pa-mukkale), and Aphrodisias. The seven churches of Revelation are all located in Anatolia; some of them are at cities with extensive Roman remains; at others almost nothing is left today. For the archaeology of the seven churches, see the comprehensive study of Edwin Yamauchi cited in the bibliography.

Unlike the Persian rulers of Anatolia, who left little in the archaeological record, the Romans built cities in Anatolia which are distinctively Roman, with the normal elements of Roman cities such as baths, a forum, theater, and stadium. The culture was a mixture of Greek and Roman elements with an additional Anatolian admixture. Artemis of Ephesus was a syncretized deity distinctive to this Anatolian Greco-Roman city, and Cybele, attested (as Kubaba) from the Hittite and Phrygian periods, was worshiped throughout Roman Anatolia as a mother goddess. The last major influence on the culture was the advent of the new religion of Christianity, which revolutionized the beliefs of its formerly pagan converts and eventually led to the founding by Constantine of a new capital of the now Christian empire just across the Bosporus from the Anatolia where Christianity experienced much of its early growth.

ANATOLIAN MYTHOLOGY

Although many different peoples lived in Anatolia in ancient times, we know little about any Anatolian mythology outside of that preserved by the Hittites. A few myths for later Anatolian peoples are found in Greek and Latin sources. The cuneiform texts found in the Hittite archives at their capital of Ḫattuša, modern Boğazköy, include a number of mythological tales. Most of these mythological texts are in the Hittite language, but there are also some in Hattic, Hurrian, and Akkadian. As is the case with any archive of clay tablets, portions of the texts are often missing where the tablet has been broken or abraded away.

The mythology preserved in the Hittite archives reflects two main borrowed traditions: that of the Hattians (pre-Hittite inhabitants of Anatolia), and that of the Hurrians, a people of N Mesopotamia who exerted great cultural influence on the Hittites in their later history, transmitting elements both of their own and Mesopotamian culture to their northern neighbors. The Hattian myths are not independent literary creations; rather, each forms an integral part of a ritual and had a magical potency as it was recited at the performing of the ritual. These Hattian myths, reflecting a native Anatolian tradition, date from the Old Hittite period, when the influence of the Hattians was strongest on the developing Hittite culture. The foreign mythology borrowed from the Hurrians, and to a lesser extent the Mesopotamians and Canaanites, dates from the New Hittite or Empire period. A more complete treatment of Hittite mythology is available in the article, on which some of the following depends, by Güterbock (1961) (see also Goetze *ANET*[3], 120–28).

A. Old Hittite Mythology

Although the Hattian myths are preserved mostly in Hittite copies, their origins in the Hattian tradition may be seen in the Hattian names for all of the major deities and their location in the Hattian homeland in north central Anatolia. The motif running through most of the Old Hittite myths is that of a crisis in the Hittite lands caused by the disappearance or incapacitation of a deity. This requires the gods to convene and work out a solution to restore the missing god, a solution which often involves the assistance of a mortal. When the god once again assumes his proper place, the land is restored to full vigor and produces its bounty for the people.

The myth of the "Moon That Fell from Heaven" exists in a bilingual Hattic-Hittite copy. Its fragmentary condition renders its unclear story even more difficult to understand. All that we can understand from this myth is that the moon (i.e., the moon god) falls down from heaven and various deities then send messengers after it in an attempt to retrieve it and restore it to its proper place in the heavens. The accompanying ritual is designed to propitiate the storm god and is to be performed "when the storm god thunders." It is not clear how the myth's plot is related to the accompanying ritual.

The myth of the "Disappearing Deity" is actually a series of myths with more or less the same plot and different deities cast in the lead role. Although the extant copies of these myths are in Hittite, their locale and primary characters again indicate a Hattian origin. The main theme involves the disappearance of one deity in a fit of anger, the quest to find and bring him back, and his restoration to the company of the gods.

The best-known example of this myth is the one in which the god Telepinu disappears. When in anger he deserts the populated areas and goes out into the hinterland, the resultant cessation of fertility and growth threatens the people with famine. When the gods assemble, they realize that Telepinu is absent and, afraid of dying of hunger themselves (because the people cannot make sacrifices), send out a bee to find Telepinu. The bee finds the sulking god and stings him awake. Telepinu, further enraged, causes more havoc in the land, at which point Kamrušepa, the goddess of healing and magic, is commissioned to

bring him back. There follows a description of the ritual designed to appease the god, who eventually returns, restoring fertility to the land.

In other versions of the myth other gods, e.g., the sun god, Inara, disappear, and the methods used to find the absentee god vary somewhat. It is usually not specified what has caused the god to become so angry that he deserts his people. In the story of the disappearance of the storm god, the sin of his father is given as the reason for the god's leaving. It is interesting that the gods themselves must resort to magic to restore the missing deity to their company. The dependence of the gods on the offerings of man is reflected in the concern they feel for their own well-being when man's food supply is threatened. These Old Hittite disappearing deity myths should not be confused with the "dying god" myths of other ancient cultures. They exhibit marked differences from such myths; for example, the god does not die but only disappears. Unlike dying god myths, the disappearing deity myths are not related to any seasonal pattern.

Another myth from the Hattian tradition is that of Illuyanka. Unlike the other Old Hittite myths, which are integrated into a ritual procedure performed only as needed, the Illuyanka myth was recited as part of the state cult, at the yearly *purulli* festival. The word *illuyanka* is the Hittite noun "serpent, snake." There are two different versions of the story. In one the serpent defeats the storm god in battle, whereupon the storm god seeks assistance from the other gods to regain supremacy. To aid him the goddess Inara prepares a feast which includes an abundance of alcoholic refreshment and secures the assistance of a mortal, Ḫupašiya, who promises to help in return for Inara's love. Inara then invites the serpent to the feast, at the end of which he is too inebriated or too swollen to go back down into his hole. When Ḫupašiya has tied him up and rendered him harmless the storm god comes and kills him, thus restoring his supremacy. In the rather tragic conclusion, Ḫupašiya goes to live with Inara but finds that he misses his wife and children. After looking out the window and seeing his family, he is killed by Inara when he expresses his desire to rejoin them.

In the other version of the myth the serpent takes the eyes and heart of the storm god when he defeats him in battle. The storm god then marries a mortal woman and has a son, whom he gives to the serpent's daughter in marriage. Instructed by his father the storm god, the son, upon entering his new bride's house, asks for his father's heart and eyes from the serpent, which he then takes to his father. When the storm god has thus restored his body to full capacity, he is able to destroy the serpent and his family. Again the plot contains an element of tragedy, as the storm god's son, now a member of the serpent's family, tells his father to kill him along with his new father-in-law, the serpent. This second version must be understood in light of the *antiyant-* form of marriage, in which a man enters his bride's house and, in lieu of bringing a bride price, receives a gift from his new father-in-law for leaving his own family and becoming part of his bride's family. The storm god's heart and eyes are the marriage gift which the son requests, but as an *antiyant-* husband he has joined his life to that of his new family and must share their fate.

Other Old Hittite myths include that of "Telepinu and the Daughter of the Sea God," in which the sea god becomes angry, but instead of leaving the land, he carries off another god, the sun god. His anger is understandable, because he has given the sun god to Telepinu as a marriage gift in an *antiyant-* marriage, but Telepinu has not remained in his house as an *antiyant-* husband should, but has returned to the house of his father the storm god.

In a ritual for the erection of a new palace some mythological passages are included in the magical proceedings which give a rare glimpse into Hittite conceptions of the netherworld. Goddesses spinning the thread of life are depicted, and the ritual includes a prayer to them to give long life to the owner of the new palace. The story elements, as part of a magical procedure, were considered to have magical potency in securing the desired result.

B. New Hittite Mythology

The mythology of the New Hittite or Empire period reflects the strong influence of the Hurrians on the culture of the Hittite kingdom in its later period. As most of the myths are not preserved in Hurrian-language copies, we are fortunate to have these myths preserved in their Hittite versions. We do not know how closely these versions followed the Hurrian originals. The main characters, all Hurrian or

Mesopotamian deities, and the settings of the myths in the Hurrian homeland indicate the Hurrian origin of the material.

There is a cycle of Hurrian myths describing the struggle among the gods for supremacy in heaven, with different generations battling against each other to establish themselves as king. One of this cycle is the myth often referred to as "Kingship in Heaven." The plot involves Anu (the Mesopotamian sky god) deposing his lord Alalu, a lesser-known Mesopotamian god. Kumarbi, a Hurrian deity identified as the "father of the gods," serves Anu, but in his turn seeks to depose him. Kumarbi, as he chases Anu, swallows his "manhood" and eventually gives birth to the storm god (Hurrian Tešub), who as the issue of Anu's "manhood" is considered the son of Anu, not of Kumarbi. Ea, the Mesopotamian god of wisdom, becomes involved in the dynastic dispute, but the end of the text is missing. Although we do not have the resolution of the story we may infer from Tešub's position in the Hittite pantheon that he became king of the gods.

Another myth in this cycle of cosmic battles, the "Song of Ullikummi," tells more of the battle between Kumarbi and Tešub. Kumarbi, in plotting to regain his throne from the usurper Tešub, sleeps with a rock, the issue of which is the giant Ullikummi. He is placed on the shoulder of Ubelluri, the giant who supports the earth and seas on his shoulders. With so solid a foundation, the stone monster grows rapidly and in 15 days has reached the heavens. The first to notice him is the sun god, who reports the matter to Tešub. Tešub, Tašmišu, and Ištar, the Mesopotamian goddess of love, go out to observe the monster. When Ullikummi proves immune to Ištar's blandishments, Tešub is forced to battle the monster. Tešub is defeated, and Kummiya, his city, is threatened by the monster. Tešub's brother Tašmišu recommends getting help from Ea, the god of wisdom, who suggests weakening Ullikummi by cutting his bond with Ubelluri with the cleaver which was used at creation to separate the heavens from the earth. Again the ending of the tablet is broken away; we leave the story with the renewal of battle between Tešub and Ullik-ummi, the latter boasting of his prowess. The final result, however, must have been a victory for Tešub, again inferred from his position at the head of the Hittite pantheon. The cycle of succeeding generations of gods overthrowing their forebears and usurping the throne of heaven is thus broken with Tešub, who manages to take the throne from Kumarbi, but also successfully defends it from the next generation as represented by Ullikummi. The motif of generations of gods ruling successively in the heavens is seen in the Babylonian creation epic, *Enuma Eliš,* and was probably borrowed by the Hurrians. In turn the close parallels in these Hurrian-Hittite myths to Hesiod's *Theogony* may indicate influence from the Hittites on Greek cosmology.

The myth of the "Kingship of KAL" presents a similar story of the struggle for supremacy in heaven. Again Tešub's position is threatened, and he in fact loses the throne when Ea appoints KAL king of heaven. The god KAL becomes arrogant in his rule of heaven, causing Ea to regret his action. Ironically, Ea seeks help from Tešub's old rival Kumarbi in reinstating Tešub on the throne of heaven. The gods decide on action against KAL when his rebelliousness becomes contagious and the people stop providing food and drink offerings for them. Once again the tablet is broken before the end of the story, but it seems that Tešub was restored to the kingship and KAL was punished. In this story, as in that of Ullikummi, Ea is involved in dynastic disputes and seems to have some authority over who rules in heaven.

The myth of "Silver" is another Hurrian myth in which the protagonist, called Silver with no divine determinative, is upset because the gods do not recognize him. He pulls the sun and moon down to earth; when they worship him and ask for mercy he has pity on them. In another episode he hits an orphan with a stick, who responds by reminding Silver that he too was once an orphan. Silver is moved to tears by this and goes to his mother's house, apparently for comfort. In the next episode, probably related to the preceding one, Silver forces his mother to tell him who his father is. He learns that his father is Kumarbi and his brother is the storm god, Hurrian Tešub. Thus in this myth Kumarbi, not Anu, is the father of Tešub. In Urkiš, Kumarbi's home, Silver looks for his father but does not find him. Eventually the storm god (Tešub) goes to see Silver because he is agitating the land, at which point the text is lost.

The story shows some interesting points. Although Silver is obviously very powerful if he can pull down the sun and moon, he does not occur elsewhere among the gods of the Hittites. His name is written

without the divine determinative almost invariably used for names of gods. Silver's classification as an orphan offers an interesting insight into Hittite-Hurrian society. Although his mother is still alive, Silver is considered an orphan because he has no father, or at least he does not know his father and thus has no lineage. When he is told who his father is, he can recognize his ancestry and is therefore no longer an orphan. There is no character quite like Silver in other ancient Near Eastern mythology, and because he does not occur elsewhere in the Hittite corpus he remains a somewhat mysterious figure.

In the myth of the sun god, the cow, and the fisherman, the divine and mortal come into direct contact. The sun god observes the cow from the heavens and, overcome with desire, approaches and talks with her in the guise of a young man. In a very broken passage of the tablet he apparently sleeps with her, after which the counting of months signals a pregnancy, followed by the birth of a child. When the child is born the cow complains that her offspring looks human and not like a calf. What follows has been interpreted in two different ways. Friedrich in his early edition (1949) described the scene in which the cow opens her mouth like a lion and goes to her child as the cow's attempt to kill her child, which did not resemble the calf that she was expecting. More recently Hoffner (1981: 192–93), has suggested that the cow opened her mouth wide to lick the child as she cared for it. However we interpret the passage, the child lives, the sun god delights in his child, and he sends animals to protect it. Eventually a fisherman finds the child and somehow realizes that it is the sun god's child. When he brings it home his barren wife simulates birth pains for the benefit of the neighbors and then brings forth the baby as her own. The cow's attitude toward the child is not completely clear, but the fisherman and his wife consider it a blessing from the sun god.

The myth of Appu contains a strongly drawn moral lesson, beginning with a statement about the vindication of just men and retribution for evil men. Appu is a man of great wealth but no offspring. The reason becomes clear: he has never "taken hold" of his wife. When he tells the sun god of his childlessness, that deity suggests that he drink himself into a state of intoxication and then sleep with his wife. The result is two sons for Appu; the first he names Idalu, "evil one," and the second Ḫandanza, "just one."

After Appu dies, Idalu forces a division of the father's property, taking the good cow and giving Ḫandanza the bad one. The sun god intervenes, however, and makes the poorer cow prosper, which inspires Idalu to covet the beast which he maliciously assigned to his brother. The issue eventually goes to the gods to be resolved, with the sun god and then Ištar of Nineveh rendering judgment.

The myth, through the use of characters with allegorical names, makes it easy to understand the moral of the story. Ḫandanza the just one, despite the machinations of Idalu the evil one, prospers because of his righteousness. The sun god as the god of justice (an association going back to Mesopotamian antecedents) makes Ḫandanza's inferior cow surpass Idalu's good cow. The myth offers interesting insights into Hittite ideals of moral rectitude and justice being worked out in the earthly sphere through divine intervention.

Another Hurrian myth preserved in a Hittite version is that of Kešši. Kešši is a hunter who after his marriage to a beautiful woman neglects all of his former activities, the most notable of these being sacrifices of bread and wine to the gods, and hunting. His retirement from hunting angers his mother, to whom he had been in the habit of bringing part of the fruits of his hunting expeditions. He responds to his mother's resentment at the cessation of these gifts by going back out to the field to hunt. Unfortunately the gods in their anger at the loss of Kešši's sacrifices have hidden all the game. After wandering for three months, loath to return to the city empty-handed, Kešši eventually falls ill and has a series of dreams. Most of these dreams are lost in the broken portion of the tablet. The fourth dream involves a boulder which falls from the sky and crushes some servants. In the sixth dream, Kešši dreams that he has a collar on his neck and a woman's anklet on his foot. When he does return home, his mother interprets the dreams for him, but the interpretations, like most of the dreams, are broken away in the tablet. This particular myth is unusual in that it exists in a Hittite version, a Hurrian version, and an Akkadian version from the Amarna scribal school.

There are two other Hurrian myths which exist only in fragmentary Hittite versions. In one the protagonist is Gurparanzaḫ, a name derived from the Hurrian name for the Tigris River. We may infer

that the myth was borrowed from Mesopotamia by the Hurrians from the fact that the action of the story takes place not in the Hurrian homeland but in central Mesopotamia. Here again the Hurrians have transmitted a Mesopotamian theme to the Hittites. Another fragmentary Hurrian myth is that of the devouring serpent Ḫedammu who succumbs to Ištar's attractions.

A "Hittite" myth which has a Canaanite instead of Hurrian background, judging from the names of the divine characters, is that of Elkunirša. This name is a Hittite rendering of the Canaanite *ʾēl qônê ʾereṣ*, "El creator of the earth." In this myth Ašertu (Canaanite Ašerah), wife of Elkunirša, propositions Elkunirša's son, the Canaanite storm god Baal, who goes and tells his father about it. The significance of this appears to be Ašertu's questioning of her husband's virility and a consequent appeal to a younger generation's vitality. Elkunirša tells Baal to go ahead and sleep with Ašertu and humiliate her. When he does this she is angered and works her way back into Elkunirša's favor so that she can revenge herself on Baal, to which her husband eventually agrees. The goddess called Ištar in the text, representing the Canaanite Astarte or ʿAnat, overhears Ašertu's plans for revenge and warns her brother Baal so that he can protect himself. In the Hurrian myths Tešub the storm god was Ištar's brother, and we see the same sibling relationship in this Canaanite myth.

Güterbock (1961: 155) has identified a Syrian origin for another myth, that of Mt. Pišaiša. The text is fragmentary; we may discern that Mt. Pišaiša rapes Ištar and then asks for clemency when she exacts revenge.

In addition to the foreign Hurrian and Syrian myths preserved in Hittite versions from Boğazköy, the Mesopotamian Gilgamesh epic is also extant in copies from the Hittite capital. Güterbock (1961: 154) has pointed out that the Hurrian version of this epic from Boğazköy is evidence for the role of the Hurrians in transmitting this element of Mesopotamian culture to the Hittites. Hittite and Akkadian versions for Gilgamesh exist as well.

The two main streams of Hittite mythology reflect the two primary influences on their culture. In the early period the gods and the myths that define their relationships were adopted from their Anatolian predecessors, the Hattians. They thus preserve an older prehistoric mythological tradition. As the Hittite state matured it came increasingly into contact with the Hurrians to the S, who both served as transmitters of Mesopotamian cultural elements and also passed on their own characteristic culture. Although some of the characters are Mesopotamian, the myths preserved by the Hittites are distinctively Hurrian and provide a rare glimpse into the Hurrian world. The Hittites thus play their most important role as preservers rather than originators of Anatolian mythology.

C. Later Mythology

Mythological material concerning later Anatolian peoples is preserved in some Greek and Latin authors. With the political and cultural integration of Anatolia into the Greek and Roman world, it becomes increasingly difficult to define what is distinctively "Anatolian" mythology. Without wishing to impose a distinction between classical and Anatolian mythology which the ancients did not recognize, we may note several myths which appear to be based on Phrygian or Lydian originals. Further references to mythological passages in classical writers may be found in *The Oxford Classical Dictionary* sub Attis, Cycnus, Heracles, Laomedon, and Midas.

Several Phrygian myths revolve around the character of Midas. There is a historically documented Midas, a Phrygian king of the 8th century B.C. who appears in Assyrian sources. Uncertainty about the relation of this king to the Midas of legend is reflected in the separation of the two entries for Midas in the *OCD*. In one of the Midas stories the king, reflecting the classical tradition that satyrs are privy to valuable wisdom which they will divulge if forced to do so, plots the capture of a satyr who regularly visits his garden. By mixing wine with the water of the garden's well or spring where the satyr normally drinks, the king gets him too intoxicated to escape. Midas then questions his captive; various ancient authors differ on what wisdom the satyr imparted to the Phrygian king.

Another story about Midas told both in Hyg., *Fab.* 191.1 and Ov. *Met.* 11.146–93 describes the musical contest between Pan and Apollo. When Midas rejects the decision for Apollo by the judge, Mt. Timolus, Apollo punishes the king's preference for the pipes of Pan by giving him donkey ears. Although Midas

hides those ears beneath a cap, he cannot keep the secret from his barber. The barber, unable to contain the secret but bound not to reveal it to anyone, goes and whispers it in a hole in the ground, which he then covers up. The reeds which grow up on the spot are privy to the secret and whisper it as the wind blows them.

The most famous of the Midas stories (Ov. *Met.* 11. 84–145) is that of the Midas touch. In gratitude for the king's returning Silenus to him, Dionysius offers Midas whatever he wishes. The king requests that whatever he touches be turned to gold. After the first flush of excitement, as he sits down to a meal, he discovers that food and drink are also susceptible to his golden touch. Dionysius, answering Midas' prayer to be rid of the accursed gift, instructs him to wash it away in the headwaters of the Pactolus River. Thus this etiological myth explains why the Pactolus is such a rich gold-bearing stream. In one variation to the story Midas turns his daughter to gold before ridding himself of the "gift"; in another he dies of starvation because he cannot cleanse himself of the golden touch.

Another Anatolian myth of the Phrygian-Lydian milieu is that of Attis and Agdistis. Pausanias 7.17.9–12 relates two versions of the story, of which the first is probably Lydian. In this story Attis, born a eunuch of a Phrygian father, moves to Lydia where he officiates at Lydian rites for the mother goddess (Cybele). Zeus becomes angry at Attis' increased favor with the mother goddess and attacks the Lydians by sending a boar to ravage their crops. Among those killed by the boar is Cybele's favorite, Attis. Probably dependent on this version is the tale told by Hdt. 1.34–45, of Atys, son of the Lydian king Croesus, who was killed by a spear during a boar hunt.

In the second version, probably Phrygian, the demon Agdistis, who was the product of seed dropped on the ground by Zeus while asleep, is hermaphroditic. In their fear of Agdistis the gods castrate the demon. An almond tree grows up from the cut-off member, the fruit of which fertilizes a daughter of the Sangarius River, who bears Attis. Exposed at birth, the young Attis is nurtured by a billy goat, and when he reaches maturity, Agdistis falls in love with him. Attis meanwhile has been betrothed, but during the wedding ceremony Agdistis appears, causing Attis to go mad and castrate himself, as does his prospective father-in-law. Agdistis repents of the deed, and although the story does not state that Attis died, this is implicit in Agdistis' petition to Zeus to grant Attis' body immunity from decomposition. Ov. *Fast.* 4.221–44 tells a different version in which Cybele drives Attis mad in vengeance for his forsaking her for the nymph Sagaritis (whose name looks like the name of the river Sangarius, whose daughter bore Attis in the Phrygian version of Pausanias). In the insanity induced by Cybele, Attis castrates himself, which for Ovid explains why the devotees of Cybele and Attis castrate themselves while evoking the writhings of Attis in his madness. The similarity of these two versions and the later role of Attis as the consort of Cybele in the great Cybele cult indicates that we should see in Agdistis some form of Cybele. Note, however, that both Agdistis and Cybele appear in the myth as told by Arnobius (*Adv. Nat.* 5.5–7).

ANCESTOR WORSHIP. Ancestor worship and cults of the dead reflect acts directed toward the deceased, functioning either to placate the dead or to secure favors from them. See DEAD, CULT OF THE. The study of ancestor worship in the Bible was popular at the end of the 19th century among both anthropologists and biblical scholars who felt that death rites held the key to Israelite religion (see Spronk 1986: 3–83 for history of research). There has also been a resurgence of interest in ancestor worship and

related death rituals in recent scholarship (Heider 1985; Spronk 1986; Lewis 1989), which has attempted to set the biblical data within its ANE context. The Yahwism which became normative in ancient Israel was resolute in its condemnation of ancestor worship. Yet ancient Israel shared a solidarity with the other cultures of the ANE and it should not be surprising to find cults of the dead in some forms of popular religion.

A. Ancestor Worship in the ANE

In the ancient Near East the dead were perceived to be able to bestow blessings on those who provided them with the proper cult. Conversely, the dead might occasionally act malevolently if they were not accorded the proper services. Magical literature from Mesopotamia mentions the restless ghost who returns to haunt the living.

1. In Egypt. The cult of the dead in ancient Egypt is well known, owing to the fascination surrounding the pyramids, mummification, and the Book of the Dead. The Egyptian preoccupation with death has been described by many scholars (e.g., Gardiner 1935: 5–45; Frankfort 1948: 88–123). It is not the fear of the dead which takes center stage in ancient Egypt but rather the provision for the deceased. A great deal of resources were devoted to making sure that the dead, including royalty, nobility, and to a lesser degree commoners, would have everything they needed to exist comfortably in the hereafter. The tomb of Tutankhamen is our best example of how the pharaoh was provided with elaborate furnishings for his next life. The dead were also greatly dependent on others to continue to provide them with the essential offerings long after the initial interment (cf. the contractual agreements mentioned in Gardiner 1935: 27, 43–44).

2. In Mesopotamia. A concise example of ancestor worship in Mesopotamia is found in the following plea from a *kispu* text: "Come (O dead ancestors), eat this, drink this and bless Ammiṣaduqa, son of Ammiditana, the king of Babylon" (Finkelstein 1966: 96–97). In the Mesopotamian cult of the dead a "caretaker" (*pāqidu*) was responsible for the care of the ghost (*eṭemmu*) of his deceased ancestor. This care included essential services such as making funerary offerings (*kispa kasāpu*), pouring water (*mê naqû*), and invoking the name (*šuma zakāru*) (Bayliss 1973: 116). Newly published texts from the Kuyunjik collection have given us new insights into the intricate art of necromancy in ancient Mesopotamia (Finkel 1983–84: 1–17).

3. At Ugarit. Our understanding of Canaanite ancestor worship has been greatly enhanced by the publication of the Ugaritic texts. One text (*KTU* 1.161) describes a liturgy of a mortuary ritual directed toward the deceased royal ancestors, some of whom are called *rapiʾūma* (see REPHAIM). The deceased are invoked to assist in bestowing blessings upon the reigning king. Other texts (*KTU* 1.6.6.45–49; 1.113) refer to the deceased as "gods" (*ilu*). This was an attempt to describe the preternatural character of the deceased who were not "deified" in the sense that they became like one of the high gods of the Ugaritic pantheon. After all, even though King Keret is the god El's son, he still must die like a mortal.

Some scholars (e.g., Pope 1981: 176) have also argued that the *marzeaḥ* at Ugarit and elsewhere was "a feast for and with departed ancestors corresponding to the Mesopotamian *kispu*" (see Lewis 1989: 80–94 and BANQUETING HALL/HOUSE).

The importance of ancestor worship at Ugarit is also underscored by the frequent occurrences of *ilib,* the "divine ancestor," which occurs characteristically at the head of pantheon lists as well as various other genres such as epic texts and sacrificial and offering lists (Lewis 1989: 56–59).

All evidence points to a vibrant cult of ancestor worship at Ugarit as in Mesopotamia and Egypt. This is further confirmed by the archaeological excavations at Ras Shamra which have documented the use of pipes leading from ground level down into the tomb. These pipes (cf. Akk *arūtu*) were used to provide the deceased with water, which was one of the essential services (Schaeffer 1939: 50; cf. *mê naqû* above). Libations were also offered to the dead through openings in the top of corbel vaults (Schaeffer 1938: fig. 42).

B. Ancestor Worship in Ancient Israel

In the past, scholars were all too eager to emphasize the "uniqueness" of Israelite religion over against her pagan neighbors (see Miller 1985: 201–12). Thus, scholars of such stature as de Vaux (*AncIsr,* 60), Wright (*Deuteronomy IB,* 487) and Kaufmann (*KRI,* 312–16) asserted quite dogmatically that ancestor worship was nowhere to be found in the Bible. More recently scholars have started to appreciate the cultural solidarity which ancient Israel shared with her neighbors (e.g., *CMHE*). As it developed, Yahwism borrowed many Canaanite motifs while rejecting others. In its earliest periods it is difficult to distinguish between Israelite and Canaanite religion. As Yahwism progresses, we may talk of a "normative Yahwism" as reflected in the prophetic and Deuteronomistic literature. This Yahwism which became normative condemned ancestor worship. Yet a strong case can be made for the existence of ancestor worship in some forms of "popular religion" (for discussion of terminology, see Lewis 1989: 1–2). What emerges from various biblical texts is the picture of an ongoing battle throughout ancient Israel's history between adherents of what becomes normative Yahwism and those who practiced death rituals.

1. Deuteronomistic Literature. Deuteronomistic legal material contains clear restrictions against consulting one's dead ancestors (Deut 18:10–11), giving offerings to the dead (Deut 26:14) and engaging in self-laceration rituals (Deut 14:1) which were typical of Canaanite death cult practice. It can safely be inferred from these laws that cults of the dead existed and flourished in ancient Israel to the extent that they were considered a threat to what becomes normative Yahwism.

Deuteronomistic narrative material also preserves vestiges of death cult practices. The *locus classicus* for any examination of necromancy in the Hebrew Bible is Saul's encounter with the necromancer at Endor in 1 Samuel 28. Despite Deuteronomistic editing, the efficacy of the practice of necromancy is left intact. The dead Samuel who is conjured from the netherworld in this narrative is called an *ʾĕlōhîm* "god," or better yet, a "preternatural being" as elsewhere in the ancient Near East. Other passages which may contain vestiges of death cult practices are 2 Sam 12:15–24; 18:18; 2 Kgs 9:34–37; 13:20–21 (see Lewis 1989: 99–127).

2. Prophetic Literature. The prophets also encountered the practice of consulting one's deceased ancestors within some segments of Israelite society. Isaiah of Jerusalem and the person(s) responsible for collecting the oracles against the nations used necromantic imagery with pejorative overtones (Isa 8:19; 29:4; 19:3). Halpern (1986: 118–19) also places Isaiah 28 in the context of the ancestral cult.

Jer 16:5–8 speaks against those who go to the funeral banquet house (Heb *marzēah;* see BANQUETING HALL/HOUSE) and those who lacerate themselves for the dead. Ezek 43:7–9 refers to an abominable practice done by kings upon their death. It seems that they had engaged in the practice of placing either their corpses or their royal mortuary steles in close proximity to the temple precinct, resulting in its defilement. Isa 57:6 and 65:4 (cf. 45:18–19) also contain a good deal of death cult imagery, including libations and offerings given to the dead ancestors and all-night vigils in tombs (Lewis 1989: 143–60; 1987: 267–84).

In summary, the prophetic literature supports the picture we get from the Deuteronomistic literature. Necromancy and other death cult practices involving ancestor worship seem to have been so common in

certain segments of ancient Israelite society that the prophets could freely pick up on this imagery in their critiques.

3. The Holiness Code and Other Priestly Material. The HOLINESS CODE contains prohibitions against conjuring and consulting one's dead ancestors (Lev 19:26–32; 20:6, 27) which were being practiced in certain "nonorthodox" segments of Israelite society. Other priestly material seems almost preoccupied with the defiling nature of the corpse, the bones, and the grave. It has been suggested that this too is a reflection of an attempt to combat a cult of the dead (Meyers 1983: 102, 104).

4. Psalms. Spronk (1986: 249, 334–37) has argued that the "holy ones who are in the earth" in Ps 16:3 is a reference to deified ancestors. Ps 106:28 also makes mention of "sacrifices to dead ancestors" (*zibḥê mētîm*) in its description of the Baal Peor incident (cf. Num 25:1–5).

5. Wisdom Literature. The attitude of the wisdom tradition toward ancestor worship is represented in Job 14:21 and Qoh 9:4–6, 10. These passages provide a remarkable contrast to 1 Samuel 28 (see above). In the latter, the dead are represented as having knowledge about the affairs of the living and necromancy is portrayed as an efficacious practice. The wisdom tradition, as represented by these two passages, gives no credence to necromancy. The deceased are not knowledgeable about the affairs of the living. Ancestor worship would prove fruitless because the dead do not have the ability to grant favors to the living.

6. Archaeological Data. We can never be too cautious when it comes to drawing inferences from physical remains. Albright (1957: 242–58) hypothesized that the "high places" (*bāmôt*) were funerary in character, yet the archaeological and textual material with which he supported his thesis has not borne up under closer scrutiny (Barrick 1975: 565–95). Ribar (1973: 45–71) has identified several tomb installations which, he believes, suggest that offerings were made to deceased ancestors on a repeated basis and hence qualify as denoting a cult of the dead. What is of particular interest in this regard is the practice of cutting apertures into the ceilings of tombs through which offerings for the dead were introduced. Storage jars were often placed directly over the heads of corpses. Cooley (1983: 47–58) has recently published more of the material from Dothan, one of the most important sites relating to ancestor worship and secondary burials. In short, the archaeological evidence corroborates the hints we glean from the textual material, namely, that cults of the dead existed in ancient Israel despite the best efforts to eradicate their existence.

C. Conclusions

Ancient Israelites shared a cultural solidarity with their neighbors with regard to their attitude toward ancestor worship. The texts mentioned above (apart from the Wisdom Literature) support the notion that there was an ongoing battle by the Yahwism which emerges as normative against the practice of necromancy and other death rituals such as self-laceration and presenting offerings to one's deceased ancestors. This Yahwism condemned ancestor worship as blatant acts of disobedience against Yahweh, whose sovereignty was challenged when one looked elsewhere to control human destiny.

In priestly phraseology, when one dies he is "gathered to his kin" (*ne›ĕsap ›el ‹ammāyw*). In Deuteronomistic terminology one "sleeps with one's fathers" (*šākab ‹im ›ăbôtāyw*) (Alfrink 1943: 106–18; 1948: 118–31). Such usage regarding joining one's ancestors in the underworld is closely tied to clan solidarity (cf. *qabūṣī didāni*, "the 'gathered ones' of the Didanu tribe" [*//rapi›ī arṣi*] in *KTU* 1.161.3, 10). This solidarity was strengthened and promoted by ancestor worship, which was practiced despite efforts to the contrary.

ANCIENT VERSIONS. See VERSIONS, ANCIENT.

ANDREW (PERSON) [Gk *Andreas* (Ἀνδρεας)]. The NT shows little interest in Andrew. His name occurs only twelve times, four of these merely in lists of apostles (Mark 3:18; Matt 10:2; Luke 6:14; Acts 1:13). According to Mark, Jesus called Andrew and his brother Peter to leave their nets to "become fishers of men" (1:16–18); at their home in Capernaum Jesus healed Peter's mother-in-law (1:29–31); and Andrew—along with Peter, James, and John—heard Jesus predict the destruction of the temple (13:3). Matthew adds nothing to Mark's picture of Andrew, and in fact omits the name in his redacting of Mark 1:29–31 and 13:3 (cf. Matt. 8:14 and 24:3). Outside of lists of apostles, the author of Luke/Acts omits reference to Andrew altogether.

Andrew fares somewhat better in the fourth gospel. He is the first of the apostles called by Jesus (1:35–40). He brings his brother Simon Peter to Jesus (1:41–42), and he informs Jesus concerning the lad with the expandable lunch (6:8–9) and about Greeks who wanted to see him (12:22). None of these narratives appears in the Synoptic Gospels, and some of the information in them in fact contradicts the Synoptics. According to John, Andrew's home was not Capernaum but Bethsaida (1:49), and he was called not from fishing but from the retinue of John the Baptist (1:35–40).

Andrew also appears in the *Gospel of the Ebionites* (Epiph. *Haer.* 30.13), the *Gospel of Peter* (14[60]), *Epistula apostolorum* (2), *Pistis Sophia* (e.g., 96 and 136), but none of these apocrypha develops the portrait of the apostle beyond that already in the NT. Andrew is little more than Peter's shadow and Jesus' occasional interlocutor. The *Muratorian Fragment* adds only that Christ told Andrew that John would write his gospel.

This near silence stands in stark contrast to the late 2d century *Acts of Andrew,* one of the five major apocryphal Acts of Apostles. Although the book no longer survives in its entirety, it must have been expansive. Gregory of Tours (6th century) epitomized the *Acts of Andrew* in order to rescue it from rejection by many "because of its excessive verbosity." According to Gregory, the *Acts of Andrew* narrated Andrew's departure from Jerusalem to missionize Achaea, but he soon left Achaea to rescue Matthias from cannibals. After doing so he returned to Achaea by northern Anatolia, Thrace, and Macedonia, converting pagans, exorcising demons, healing the sick, raising the dead, and breaking up

families with his preaching of mandatory celibacy. When he arrived in Patras, Achaea, he converted Maximilla, the wife of the proconsul Aegeates; she thereafter forswore sex with her husband. Aegeates crucified the apostle next to the sea (see ANDREW, ACTS OF).

This explosion of interest in the apostle issues not from a latent Andrean tradition that simply had found no earlier expression but from the author's decision to write a Christian *Odyssey,* for which Andrew was well qualified. He once was a fisherman, he had brought Greeks to Jesus, and his very name resonated with the Greek word for courage (*andreia*). Like Odysseus, Andrew sails from Achaea to rescue Matthias from Myrmidons. Myrmidons appear in Homer as allies to Achilles, but a contrived etymology later generated a myth that Zeus once transformed ants (Gk *myrmēkes*) into humans, who retained their former, formic traits. Andrew returns to Achaea through a series of dangerous adventures and in the end dies at the edge of the sea, tied to his cross like Odysseus at the mast. The apostle thus returns to his heavenly home beyond the flux, temptations, and dangers of this world. Patras, the place of his execution, was the closest major Achaean city to Ithaca, Odysseus' island home. In addition, the *Acts of Andrew* contained a visit to the netherworld, danger at sea, and Christianized counterparts to Penelope and Telemachus, Odysseus' wife and son. The proconsul who ordered Andrew's crucifixion is Aegeates ("one from Aegae"), a figure inspired by Odysseus' nemesis, Poseidon, whose Homeric home was Aegae.

Even after the composition of the *Acts of Andrew,* the apostle remained relatively obscure for nearly six centuries. Because of its popularity among Manicheans, the *Acts of Andrew* itself was poorly transmitted except for the Myrmidon story, which soon circulated independently as the *Acts of Andrew and Matthias in the City of the Cannibals.* In 357, Constantius II deposited the apostle's putative remains in the Church of the Holy Apostles in Constantinople, along with those of Luke and Timothy. By the 6th century, Patras and Sinope boasted of having been evangelized by Andrew, but there is little evidence that Christians elsewhere gave the apostle special attention.

Sometime in the 8th century, however, Andrew was pressed into service to legitimate Byzantine claims to apostolicity. For centuries, the church in Rome had claimed Peter as its founder. On the other hand, Byzantium, largely the product of Constantine's relocation of the imperial capital to the E, could claim no founding apostle. This was not so problematic when Rome and Byzantium were on good terms, but when the two great ecclesiastical centers parted ways, Byzantium was in desperate need of apostolic pedigree. Andrew was perfectly suited for the purpose. According to the gospel of John, he was the first of the apostles to come to Jesus, and later he brought his brother Peter, Rome's favorite, to the Lord. The *Acts of Andrew* and traditions derived from it had placed Andrew's ministry in the region of the Black Sea, and if one can trust the epitome of Gregory of Tours, the Acts in fact sent the apostle to Byzantium. Furthermore, from the time of Constantius II, Andrew's relics reposed in Constantinople's Church of the Holy Apostles.

Such long-standing associations between Andrew and the city generated a legend that when Andrew, the *Protokletos* (First-Called), visited Byzantium he appointed as bishop Stachys (cf. Rom 16:9), who inaugurated an unbroken line of bishops. In the 9th century, soon after the origin of this legend, several versions of his passion appeared along with three different Byzantine "Lives" of Andrew. A monk named Epiphanius, the author of one of these "Lives," claimed that virtually every tribe on the shores of the Black Sea appealed to Andrew as the founder of its church: the Scythians, the Sogdians, the Gorsini, the Iberi, the Sousi, the Phousti, the Alani. Andrew also allegedly visited Amisus, Trapezunta, Iberia, Phrygia, Ephesus, Bithynia, Laodicea, Mysia, Odyssopolis, Chalcedon, Heraclea, Amastra, Zalichus, Neocaesarea, Sebastopolis Magna, Zecchia, and Sinope. His reputation in the East now was secure. He remains the patron of Russian Orthodoxy by dint of a legend that he preached as far north as Kiev.

Andrew also became popular in the West. In 1204, crusaders stole Andrew's relics from Constantinople and took them to Amalfi, Italy. According to ancient Celtic tradition, St. Regulus (4th century) took the apostle's arm to St. Andrews, Scotland, where the archdiocese still celebrates the event each May 9. The Anglo-Saxon epic *Andreas,* a poetic recasting of the *Acts of Andrew and Matthias,* shows the importance of the apostle in the British Isles at an early date.

In iconography, Andrew often appears with unkempt hair and a long beard, attended by a ship, a fish, or a net. His most distinctive signature is his X-shaped cross, a feature not attested prior to the 7th century. Andrew's feast day is November 30.

ANDREW AND MATTHIAS, ACTS OF. An early Christian apocryphal tale featuring two of the disciples of Jesus. The *Acts of Andrew and Matthias* begins with the apostles casting lots to see where they will preach. Andrew goes to Achaea and Matthias to the city of the cannibals, which the Latin and Anglo-Saxon witnesses (along with one Greek manuscript) name Myrmidonia. Myrmidonia is home to Myrmidons, Achilles' allies in Homer. After Homer there arose a myth that Myrmidons once were ants (Gk *myrmēkes*), who retained some formic traits even after becoming human. Some authors emphasized the positive qualities of ants, e.g., thrift, industry, organization, while others emphasized their imperialism, might, and ferocity. Even the Greek versions of the *Acts of Andrew and Matthias* that lack the word "Myrmidonia" witness to the cannibals' ancestry from ants. In the middle of the city they had built a large furnace (Gk *klibanos*) for roasting their victims. (Such furnaces were mud structures reminiscent of anthills.) When Matthias arrives, they drug him and incarcerate him for thirty days of fattening. Andrew leaves Achaea to rescue Matthias and floods the cannibals as one might flood ants. They repent, and Andrew stops the flood but plunges the worst of the cannibals into an abyss in the middle of the city, like so many ants down an ant hole. In the abyss they see places of eternal bliss and torment, but Andrew promises to return to raise them up again.

Insofar as Andrew never returns to raise the Myrmidons, the *Acts of Andrew and Matthias* obviously is incomplete. Originally it seems to have continued in the late 2d-century *Acts of Andrew.* The best surviving witness to the *Acts of Andrew,* a 6th-century epitome by Gregory of Tours, begins by narrating Andrew's rescue of Matthias from Myrmidonia. Three Byzantine "Lives" of Andrew likewise attest to this story near the beginning of Andrew's career. The *Acts of Thomas* and the *Acts of Philip,* both of which borrowed extensively from the *Acts of Andrew,* likewise knew of the Myrmidon story. On the other hand, chaps. 11–15 of the *Acts of Andrew and Matthias* could not have been written prior to the 4th century. Here Andrew narrates how Jesus refuted Jewish high priests by making a sphinx in a pagan temple summon Abraham from his tomb to witness to Jesus' divinity. These chapters also seem to anticipate the transformation of pagan temples into churches, a practice not common until the 5th century. Not only do these chapters come from a later period, they are foreign to the content and narrative flow of the rest of the *Acts of Andrew and Matthias* and are poorly attested in textual and in external witnesses.

One therefore should assume that the frame-story of the *Acts of Andrew and Matthias* first appeared at the beginning of the 2d-century *Acts of Andrew,* just as it does in the epitome by Gregory of Tours. In the 5th century, someone detached the story from the rest of the *Acts of Andrew* and inserted chaps. 11–15 in order to support the controversial Christian reappropriation of pagan temples. Later, the Greek manuscript tradition dropped all references to Myrmidonia because of its associations with pagan mythology. The story was popular in the Middle Ages: it exists in Syriac, Coptic, Armenian, Old Slavonic, Latin, and Anglo-Saxon as well as in Greek. It received its most famous expression in the Anglo-Saxon heroic epic, *Andreas,* but it also inspired episodes in the *Acts of Thomas, Acts of Philip, Acts of Mark, Acts of Peter and Andrew, Acts of Andrew and Philemon,* and the *Martyrdom of Matthew.*

Bibliography

The Greek text of the *Acts of Andrew and Matthias* appears in *Acta apostolorum apocrypha,* ed. R. A. Lipsius and M. Bonnet, 2/1.65–116. DENNIS R. MACDONALD

ANDREW, ACTS OF. The *Acts of Andrew* is an important account of Andrew's travels, beginning in Pontus and ending in Patras, Achaea, where the apostle is martyred. Andrew goes from city to city, performing miracles, preaching the word of salvation, and converting the crowds.

He travels by way of Amasia, Sinope, Nicea, Nicodemia, Byzantium, Thrace, Perinthus, Philippi, and Thessalonica. On arriving in Patras, he converts the city (including the proconsul Lesbios) and performs many miracles. Then he visits several Achaean cities: Corinth, Megara, and perhaps Sparta. He then is warned by a vision about returning to Patras. Upon his return to this city, he heals and converts Maximilla, the wife of Aegeates, the new proconsul. He performs many healings and then converts Stratocles, Aegeates' brother. After her conversion Maximilla becomes celibate, which provokes the furor of Aegeates such that he arrests Andrew. The converts reconvene in the prison to hear the apostle's preaching. It is here that the martyrdom of Andrew begins. Because Maximilla refuses to return to conjugal life, Aegeates, out of revenge, crucifies the apostle. He dies after having preached from his cross to the assembled inhabitants of Patras for three days.

The *Acts of Andrew* is an original and homogeneous work insofar as it was composed from start to finish by the same author, who had no need to introduce or to compile preexisting literary materials. The apostle's speeches, which are important in this work, are rich in content and betray signs of educated style and composition. They transmit the basic features of the author's theology.

A. Transmission of the Text

The *Acts of Andrew* was written in Greek, but unfortunately has not come down to us in its original form. There are, however, five types of documentation that allow partial reconstruction.

1. The *Liber de miraculis* (Gregory of Tours) (Bonnet 1884: 821–46). The Gallic bishop, Gregory of Tours (6th century) held in his hands the complete text of *Acts Andr.*, most likely in Latin translation. His Latin summary of this book preserves the basic features of the narrative framework, and for this reason it is priceless: it is the only document that now permits one to recognize the general layout of the work and of the collective accounts of Andrew's travels. A comparison with the sources that represent some of the primitive content of the *Acts Andr.* (especially Coptic papyrus *Utrecht 1*, *Laudatio*, and JS) show that Gregory (1) omitted the speeches, (2) often modified the structure of the text, and (3) twisted the meaning of the work to make it more acceptable to Catholic conscience. After chap. 36, he very briefly summarized the account of the martyrdom by referring to a Latin *Passio* which already existed (surely *Passio sancti Andreae Apostoli* known by the title *Conversante et docente*; Bonnet 1894: 374–78).

2. Coptic papyrus *Utrecht 1* (Quispel 1956: 129–48). This papyrus contains the translation of an excerpt from *Acts Andr.* corresponding to chap. 18 of *Liber de miraculis*, an episode located in Philippi. It was not transmitted together with other sections of *Acts Andr.*, for it ends with the title "The Act of Andrew." The excerpt occupies pp. 1–15 in the manuscript, but the first eight pages as well as pages 11 and 12 are lost.

3. The *Armenian Passio* (Tcherakian 1904: 146–67; Leloir 1986: 228–57). This translation dates to the 6th century and is a complete version of the end of *Acts Andr.* comprising the martyrdom of Andrew in Patras and part of the speech spoken in prison just prior to the martyrdom. It preserves some of the sections of the text omitted by all of the Greek witnesses. The translator sometimes bends the text to make it more "orthodox" and more biblical.

4. Five Gk recensions of the end of the *Acts Andr.* The end of *Acts Andr.* is preserved in five Gk recensions. The problem here is that the documents reproduce the primitive text of *Acts Andr.*, but they do not cover the same portions of the text, and they do not always preserve the same elements.

a. The *Passio of Andrew* preserved in two manuscripts: Sinai *gr. 526* (fol. 121v–132) and Jerusalem, *Saint Sabas* 103 (fol. 155–168v) (Detorakis 1981–82: 325–52). This *Passio,* designated by JS, is the longest. It begins well before the *Armenian Passio,* narrating what Andrew did and said in Patras before his martyrdom. It begins with an account of the healing of a servant of Stratocles, Aegeates' brother, and continues to the end of *Acts Andr.* A comparison with the *Armenian Passio* and other Gk witnesses shows that it has not preserved all the elements of the text. The scribe who initiated this version was particularly fond of abbreviating the speeches.

b. The excerpt of *Acts Andr.* preserved in Vatican *gr. 808* (fol. 507–12) (Bonnet 1898: 38–45). This fragment of *Acts Andr.* is mutilated at the beginning and end. It takes place in the narrative sequence of JS, ending just prior to the beginning of the martyrdom. It reproduces faithfully the portion of the *Acts* that it covers.

c. The *Passio of Andrew* preserved in Ann Arbor 36 (fol. 60v–66v). This unedited *Passio* covers the narrative of Andrew's martyrdom. It begins immediately after the mutilated ending of the Vatican *gr. 808.* Like JS, it has not preserved all the elements of the primitive text. The speeches in particular fell victim to abbreviation, but these lacunae are not the same as those in JS, demonstrating that Ann Arbor 36 did not derive from JS, but that they are two text types derived from a common ancestor: the *Acts of Andrew.*

d. The *Passio of Andrew* attested to by Paris, *B.N. 770* (fol. 43v–46), and by Jerusalem, *Saint Sabas 30* (fol. 154v–156v), known as *Martyrium alterum A* (Bonnet 1898: 58–64). Like Ann Arbor 36, this recension covers all of the martyrdom, but with some deletions, much more numerous and significant than in the recensions treated above.

e. The *Passio of Andrew* contained in Paris, *B.N. 1539* (fol. 304–305v), known as *Martyrium alterum B* (Bonnet 1898: 58–64). Like the two *Passio* below, this version preserves the whole of the martyrdom, but with even more numerous deletions.

5. Some excerpts of *Acts Andr.* are preserved in Gk revisions. There exist Lives or *Passio* of Andrew, dependent on *Acts Andr.*, which preserve some Gk extractions from the apocryphon:

a. A Gk version of the *Letter of the Presbyters and Deacons of Achaea* (Bonnet 1898: 1–37). This letter, originally written in Latin, was translated into two major Gk versions. One of them, which begins with *haper tois ophthalmois hēmōn,* also included in chaps. 10–15 some important excerpts from the primitive *Acts Andr.* These excerpts, found at the end of the martyrdom, without exception can be identified in the other Gk witnesses.

b. Two versions that derive from the same recension of the *Acts Andr.* These are *Martyrium prius* (8th century) (Bonnet 1898: 46–57) and a work of Nicetas the Paphlagonian known as *Laudatio* (9th–10th century) (Bonnet 1894: 311–52). They report the conversion of Patras and of the proconsul Lesbios (*Martyrium prius* 3–8; *Laudatio* 34–37) and Andrew's speech to the cross (*Martyrium prius* 14; *Laudatio* 46). *Laudatio,* however, also contains the account of the healing of Stratocles' servant (chap. 43), which conforms to the beginning of JS. It also contains some lines (chap. 48, p. 348, ll. 8–22) identifiable in Gk witnesses to the martyrdom. It presents also an account of a healing at Patras (chap. 41) that correlates with chap. 33 of *Liber de miraculis.*

From these five Gk recensions of the ending of *Acts Andr.* and from the excerpts preserved by the three Gk revisions identified above, it is possible to reconstruct a single text. The reconstruction does not try to reproduce the exact text of *Acts Andr.*; a comparison with the *Armenian Passio* demonstrates that some passages remain lost in all of the Gk witnesses. Rather, the reconstruction seeks to establish the original text as much as possible, and thus enlarges considerably a basis from which to study the theology of this apocryphon.

One should add to these five types of witness a second Sahidic Coptic fragment (4th century) of two badly preserved folios (Barns 1960: 70–76). It contains a conversation between Jesus and Andrew in which the apostle presents a short balance sheet for his apostolic activity. Barns proposes to attach it to an

apocryphal gospel or better to *Acts Andr.* The hypothesis concerning the appropriateness of this fragment for *Acts Andr.* appears reasonable enough, although one cannot demonstrate it with certainty.

B. The Author's Theological Perspective

The author of *Acts Andr.*, even though he tells a story of Andrew's travels and martyrdom, has little interest in writing a biography. His intent, rather, is to transmit a message of salvation. The *Acts of Andrew* is propagandistic, meant for anyone who wished to hear and receive that message.

This salvation consists of liberation by means of self-realization, a realization that the soul (or "new man"), which is of divine origin, is captive in the body—a prey to the vicissitudes inherent in this condition, deceived and dominated by demonic forces. As soon as a person becomes aware of this fact, he or she is liberated from constraints bound to the corporeal and demonstrates this by adhering to sexual abstinence, dietary frugality, and rejection of worldly honors. The believer lives spiritually with those who have experienced the same liberation and who are of the same nature. He or she awaits death as the definitive liberation from all corporeal bounds, when he or she will return to God, will meditate on Him, and be united with Him insofar as they share the same nature.

The apostle (see Prieur 1981: 121–39) is the one who bears this revelation of salvation. His words which resonate in the "new man" are like a mirror in which one recognizes one's true nature.

The incarnate Christ, the dead and risen one, the preacher of God's reign, plays no role in this process of salvation. The *Acts of Andrew* makes virtually no distinction between the Father and the Son. It is one and the same divinity who is in turn named God, Father, Jesus, Christ. The Holy Spirit is absent. The *Acts of Andrew* contains no reflections on the origin of the world or of evil: everything focuses on human salvation.

C. Origin of *Acts Andr.*

1. Gnosticism. The *Acts of Andrew* displays certain obvious affinities to Gnosticism. Lipsius considered it a gnostic writing, like the other apocryphal Acts (1883: I, 543–622). Flamion combatted this idea by arguing that the author of *Acts Andr.* moved within the context of the Great Church (1911: 145–77). Quispel returned to the alleged gnostic character of *Acts Andr.*, but claimed more precisely that one could have professed the ideas contained in it without leaving the Catholic Church (1956: 129–48). Hornschuh, though recognizing the gnostic traits in *Acts Andr.*, did not believe it was possible to label it gnostic (1964: 270–97).

The affinities between *Acts Andr.* and Gnosticism obtain especially to dualism. They also concern salvation. But dualism does not determine what the human essence is in terms of natural inherent properties. In the context of the message of salvation, one must make a decision to align oneself on the side of the light or on the side of darkness. However, *Acts Andr.* offers no explanation for the fall of the soul. It appeals neither to the notion of the Pleroma nor to that of the Aeons. It offers no gnostic cosmogony. Properly speaking, *Acts Andr.* is therefore not a gnostic text; rather it shares a gnosticizing mentality current at the time.

2. Platonism. Several features relate *Acts Andr.* to Platonism: the discovery of the interior human essence presented as a spiritual childbirth; Andrew presented as a master of maieutics, whose death resembles that of Socrates; the spiritual mirror: the liberation and flight of the soul; and God presented as the good and the beautiful.

Flamion (1911) thought that *Acts Andr.* was Neoplatonic, but that would place it in the 3d century, which is too late. Hornschuh, however, saw affinities between *Acts Andr.* and Middle Platonism on the one hand and with the thought of Tatian on the other.

3. Stoicism. The *Acts of Andrew* also exhibits some stoic characteristics, especially in matters of morality. Andrew exhorts his listeners not to be carried away by their passions but to unify their behavior with their interior disposition. He is unflinching in the face of death, not because he was insensitive to sorrow, but by virtue of his spiritual elevation.

4. Reflections of the Mentality of the Age. It would seem impossible to relate *Acts Andr.* to a particular philosophical or religious milieu. We already have seen several different currents of thought to which one might compare the *Acts*, though without being able to identify it with any of them precisely. It

is better to try to see in these various currents witnesses to an age. It is a spiritual atmosphere, influenced by Platonism and Neopythagorism, which blossomed in the 2d and 3d centuries.

5. Time and Place of Origin. The *Manichean Psalter,* which contains some allusions to the content of *Acts Andr.* (Allberry 1938: 142, 143, 192), establishes the 3d century as the *terminus ad quem* for the redaction of the apocryphon, but the *Acts* had to have originated earlier, between 150 and 200, closer to 150 than to 200. The distinctive christology of the text, its silence concerning the historical and biblical Jesus, and its distance from later institutional organization and ecclesiastical rites militate for an early dating. Moreover, its serene tone and unawareness of any polemic against some of its ideas as heterodox, particularly in the area of the christology, show that it derived from a period when the christology of the Great Church had not yet taken firm shape. One might repeat here the line of argumentation employed by Junod and Kaestli for locating the *Acts of John* in the same period (1983: 695). Moreover, *Acts John* displays several affinities with *Acts Andr.*, such as the literary genre, structure, and theological orientations.

Concerning the place of origin, there is nothing that can settle the matter in favor of one region over another. The text could have been drawn up as easily in Greece or in Asia Minor, in Syria or in Egypt. Alexandria in particular commends itself for the spiritual and intellectual milieu where a text like *Acts Andr.* might first have seen the light of day.

JEAN-MARC PRIEUR

ANDREW, FRAGMENTARY STORY. See ANDREW, ACTS OF.

ANDRONICUS (PERSON) [Gk *Andronikos* (Ἀνδρονικος)]. **1.** A deputy of Antiochus IV Epiphanes (2 Macc 4:31, 32, 34, 38). According to the account in 2 Macc 4:30–38, when a revolt broke out in Tarsus and Mallus, Antiochus left Andronicus, a Friend of the King (v 38), in charge as his deputy. Menelaus used this opportunity to bribe Andronicus with gold vessels stolen from the temple in Jerusalem. After Onias exposed this episode publicly, he fled to the temple of Daphne at Antioch for sanctuary. On the advice of Menelaus, Andronicus brought Onias out of the temple by deceit and murdered him. Learning of this murder upon his return, Antiochus stripped Andronicus of his rank, publicly humiliated him, and put him to death at the very spot of Onias' death. Classical sources (Diodorus Siculus 30.7.2–3 and John of Antioch) state that the reason for Andronicus' death was his murder of Antiochus, son of Seleucus IV,

on behalf of Antiochus IV. A number of solutions for the differing accounts of Andronicus' death have been proposed: (1) the date of Andronicus' death was the same year as Onias' (170/169 B.C.) and may have suggested to the writer of 2 Maccabees a cause-and-effect relationship; (2) the author of 2 Maccabees may have fabricated the story for his own theological reasons (Hengel 1974: 2: 183 n. 132; 185 n. 142); Antiochus IV may have used this incident as a pretext for silencing Andronicus before he could implicate Antiochus IV in the murder of the younger Antiochus (Goldstein *2 Maccabees* AB, 238–39).

2. Official of Antiochus IV Epiphanes (2 Macc 5:23). Andronicus was placed over the temple on Mt. Gerizim after Antiochus IV invaded Judea and Samaria. If Andronicus' position was the same as Philip's in v 22, then he was commander of a garrison stationed on Mt. Gerizim. Goldstein (*2 Maccabees* AB, 261) further proposes that Andronicus may have been the predecessor of Apollonius, a military commander (1 Macc 3:10) or governor of Samaria (*Ant* 12.5.5 §261).

3. A Christian apostle in the time of Paul, born a Jew. Both Andronicus and Junia, who were apostles prior to Paul (Rom 16:7; cf. 1 Cor 15:7–8), belonged to the limited number (but exceeding "twelve") of early Christian apostles who had seen the resurrected Christ (cf. 1 Cor 15:5–9; 9:1, 5–6; Gal 1:17). Because of their Greek names they may have belonged to the Greek-speaking Jewish-Christian group in Jerusalem (Acts 6; Cranfield *Romans* ICC, 190), and later to the early missionaries based in Antioch who initiated the mission to the gentiles (11:20) and whom Paul joined (13:1; 11:19–26; Gal 1:21; cf. Lüdemann 1987: 144 for the historicity of the Acts traditions). In any case, Andronicus and Junia at some point worked with Paul in the missionary effort to the gentiles, because all three of them went to prison together (Rom 16:7; Lampe *StadtrChr*, 58, 148–49). As Rom 15:24, 16–20, 30–32 presume, they also consented to Paul's program of a worldwide mission to the gentiles.

Andronicus and Junia, who possibly was his wife and had accompanied him as an active missionary (Rom 16:7; cf. 1 Cor 9:5), moved to Rome before Paul did. Paul greets both of them in Rom 16:7 and calls them "outstanding among the apostles" (not "in the eyes of the apostles"). This compliment served at the same time as a recommendation for Paul himself, who no doubt was trying to establish himself in Rome: being highly controversial in the east because of his law-free gentile mission, Paul could point out that these outstanding Jewish-Christian apostles were close to him.

PETER LAMPE

ANEM (PLACE) [Heb *ʿānēm* (עָנֵם)]. A town in the inheritance of Issachar assigned to the Gershomite clan of the Levites as a levitical city (1 Chr 6:58—Eng6:73). Another list of levitical cities is preserved in Joshua 21, where in v 29 Anem is replaced by En-gannim.

Most researchers have concluded that the two OT lists of levitical cities were derived from a single original. As a result, a number of attempts have been made to equate Anem and En-gannim. Albright argued (1926: 231), using evidence from the LXX, that both Anem and En-gannim obscured an original Heb form of *ʿnʿnm,* which he located at Olam (M.R. 197230). While a number of scholars have accepted Albright's identification, Kallai (*HGB,* 425) has noted that Albright's argument requires a series of scribal errors to be correct, and has rejected it.

Kallai has suggested that the consonantal *ʿnm* is either an abbreviation or merely a shortened form of the toponym En-gannim, *ʿngnm.* If this theory is correct, Anem/En-gannim should be located at Jenin (M.R. 178207). See also EN-GANNIM (PLACE).

It remains a possibility that Anem is a distinct location, unrelated to En-gannim. Abel (*GP*, 244) has suggested Khirbet Anim (M.R. 202231) as a likely location for an independent Anem.

MELVIN HUNT

ANER (PERSON) [Heb *ʿānēr* (עָנֵר)]. A brother of Mamre and of Eshkol (Gen 14:13), all three of whom are described as Abram's allies (Gen 14:24). The latter verse belongs to the passage vv 17, 21–24 about the contest in generosity between the king of Sodom and Abram, which contradicts v 10 (that the kings of Sodom and Gomorrah had perished in asphalt pits) and vv 14–15 (that Abram routed the army of the four eastern kings with just his own 318 house-born men), and is obviously an interpolation. From there, the names of Aner and Eshkol were added by an editor to v 13 along with the ethnic "Amorite" for Mamre. Elsewhere in the OT, Eshcol and Mamre are names of places near Hebron and not persons; it is therefore probable that Aner was originally also a toponym in the same area. (*ʿnr* in the list of levitical cities in the territory of Manasseh, 1 Chr 6:55, is a miscopy of *tʿnk* "Taanach" in Josh 21:25.) The divergent forms of the name in LXX, Samuel, and QL raise a doubt about the correctness of its writing in the MT, but its original form and etymology cannot be reconstructed.

MICHAEL C. ASTOUR

ANER (PLACE) [Heb *ʿānēr* (עָנֵר)]. A town of the tribe of Manasseh assigned as a levitical city to the Kohathites of the tribe of Levi (1 Chr 6:55—Eng6:70). In a second list of levitical cities (Josh 21:25), Aner is replaced by Taanach. Most scholars have concluded that both OT lists reflect a single original, so attempts have been made to equate the two toponyms.

The generally accepted solution has been the proposal that Aner was derived from Taanach (Heb *taʿnak*) because of two simple scribal errors. The initial *taw* of Taanach was lost to the preceding word, while the final *kap* was changed to a *reš* (the form of both letters being similar in antiquity). If this hypothesis is correct (*HGB*, 470), then Aner should be equated with Taanach (M.R. 171214).

If Aner is an independent town, unconnected with Taanach, then its location is not known.

MELVIN HUNT

ANGELS. In modern usage the term "angels" refers to heavenly beings whose function it is to serve God and to execute God's will.

———

A. General Matters

1. Terminology. Although no single term corresponding precisely to the English word "angels" occurs in the Hebrew Bible, there is a rich vocabulary for such beings. Some of the expressions either denote their divine status (e.g., *bĕnê (hā) ĕlōhîm,* lit., "sons of God" [such grammatical constructions identify generic categories (divine beings), not genealogical relationships], Gen 6:2, 4; Job 1:6; 2:1; 38:7; *bĕnê ʾēlîm,* "sons of gods, divine beings," Ps 29:1; 89:7—Eng 89:6; *ʾĕlōhîm,* "gods," Ps 82:1) or denote their special sanctity (*qĕdōšîm,* "holy ones," Ps 89:6, 8—Eng 89:5, 7). Other terms refer to their functions (*měšārĕtîm,* "ministers," Ps 103:21; *śār,* "commander," Josh 5:14; *ṣĕbāʾôt,* "hosts, army," Ps 89:9—Eng 89:8; 103:21). The most common of these functional terms if *malʾāk,* "messenger, envoy." It is from the translation of *malʾāk* in the LXX (Gk *aggelos*) that the English word "angel" derives. As terms denoting functions, both *aggelos* and *malʾāk* can refer equally to human or angelic beings. Consequently, there are occasionally passages in which it remains disputed whether the reference is to a heavenly being or a human one (see Judg 2:1; Mal 3:1). It was only with the Vulgate that a systematic distinction was made between angelic emissaries (Lat *angelus*) and human ones (Lat *nuntius*). Nevertheless, there are indications that already in the LXX *aggelos* was beginning to take on the quasi-technical meaning of heavenly being. In several instances *aggelos* is used for terms such as *bĕnê (hā) ʾĕlōhîm* (Gen 6:2; Deut 32:8; Job 1:6; 2:1; 38:7), *ʾĕlōhîm* (Ps 8:6; 97:7; 138:1), and *śār* (Dan 10:21; 12:1), and in one case *malʾāk* is translated as *theos* (Qoh 5:5—Eng 5:6). There is even one instance in the Hebrew Bible (Judg 13:6) in which a character implies a distinction between a "man of God" (*ʾîš ʾĕlōhîm*) and a "messenger/angel of Yahweh" (*malʾāk yhwh*).

Extrabiblical literature from the late Second Temple period (3d century B.C.E.–1st century C.E.) reflects many additional terms for angels. These include "watchers" (Aram *ʿîrîn,* Dan 4:10, 14, 20; *Jub.* 4:15, 22; *1 En.* 1:5); "spirits" (Heb *rûḥôt,* 1QH 1:11; 1QM 12:9; *Jub.* 15:31; *1 En.* 15:4; cf. 1 Kgs 22:21); "glorious ones" (Heb *nikbĕdîm,* 1QH 10:8; *2 En.* 21:1, 3; "thrones" (Gk *thronoi, T. Levi* 3:8; *2 En.* 20:1); "authorities" (Gk *exousiai, 1 En.* 61:10; *T. Levi* 3:8); "powers" (Gk *dynameis, En.* 20:1); and many other descriptive and functional terms.

2. Historical Development. Any survey of the concept of angels has to take account of the growth and development of the idea over the centuries, the different literary genres in which references occur, and the different social contexts from which the ideas emerge. Although references to angels occur in the oldest strata of the OT (in pentateuchal narratives and in early poetry), there is a clear increase in speculation about the heavenly world in prophetic writings from the exilic and early postexilic periods. It is in the late Second Temple period, however, that the most developed speculations occur. Why there should have been such a development in lore about heavenly beings is not fully understood. Increasing contact with Babylonian and Persian religious traditions may be one element (Russell 1964: 257–62), though most of the features of the developed angelology have clear antecedents in preexilic Israelite tradition. Perhaps much of the speculation on the heavenly world was not really new but represents old Israelite popular religion which only finds its way into literary sources in the postexilic writings (Collins 1977: 101–4). Be that as it may, the increase in discourse about angels in the later sources indicates that those authors found the speculation on the heavenly world a useful way to explore serious religious and theological issues—the weakness of Israel in a world of empires, the difficulty of understanding cosmos and history, the existence of evil, the failure of human religious institutions, the hope and experience of transformation, and so on.

B. Preexilic Concepts

1. The Divine Council. In Israel, as in the ANE in general, the underlying conception of the heavenly world was that of a royal court. Yahweh was envisioned as a king, and at his service were divine beings who served as counselors, political subordinates, warriors, and general agents. These divine beings were often referred to as a collective group (Gen 28:12; 33:1–2; Pss 29:1; 89:6–9) and were understood to

constitute a council ("the council of El," *ʿădat ʾēl,* Ps 82:1; "the conclave of Yahweh/Eloah," *sôd yhwh,* Jer 23:18; *sôd ʾĕlôah,* Job 15:8), "the conclave/assembly of the holy ones" (*sôd/qāhāl qĕdōšîm,* Ps 89:6, 9). Similar expressions occur in ANE sources (Phoen: *mpḫrt ʾil gbl qdšm*; Ug: *pḫr ʾilm, pḫr bn ʾilm, dr ʾil,* etc.; Akk: *puḫur ilāni;* see Mullen 1980). The most extensive description of the council and its tasks in the OT is found in 1 Kgs 22:19–22. There, the prophet Micaiah ben Imlah sees the enthroned Yahweh with "all the host of heaven standing about him on his right and on his left." When Yahweh poses a question to the council, there is general discussion ("and one said one thing and another said another"), until a specific proposal emerges ("then a spirit came forth and stood before Yahweh and said …"). Prophets might stand in the council of Yahweh to receive a word (Jer 23:18, 22; Isaiah 6). The council was also a place of accusation and judgment (Psalm 82). Perhaps because of their privileged place in the divine council, angels were considered to be paragons of knowledge and discernment (2 Sam 14:17, 29; 19:28).

According to Deut 32:8 (LXX and 4QDeut), when God organized the political structure of the world, each of the nations was assigned to one of the angels/minor deities, with Israel reserved for Yahweh's own possession. Psalm 82 assumes a similar setup but describes the revocation of the arrangement. In that text God brings accusation before the divine council concerning the failure of these minor deities to ensure justice, for which they are to be ousted and killed. See DIVINE ASSEMBLY.

2. The Heavenly Army. In Deut 33:2, Yahweh is said to be accompanied by ten thousand holy ones as he advances from the southland (cf. the reference in Ps 68:18 to the many thousands of chariots with Yahweh at Sinai). These are undoubtedly the angelic armies that are referred to in the common divine title Yahweh of Hosts. In one of the rare instances in which an individual angelic being with a clearly defined office is mentioned, Joshua encounters a mysterious figure with a drawn sword who identifies himself as "the commander of the army of Yahweh" (*śār ṣāba yhwh,* Josh 5:14). When the prophet Elisha was besieged, he was given protection by "horses and chariotry of fire," invisible to all whose eyes were not opened by Yahweh (2 Kgs 6:17).

3. Agents and Messengers. a. Role and Significance. In addition to the various roles that the angelic beings play as a group, there are many texts which describe the actions of a single angelic figure. Almost always in these instances the term *malʾāk* ("messenger") or *malʾāk yhwh/ (hā) ʾĕlōhîm* ("messenger of Yahweh/God") is used. The term "messenger" should not be construed too narrowly, however, for these divine beings carry out a variety of tasks. They do announce births (of Ishmael, Gen 16:11–12; Isaac, Gen 18:9–15; Samson, Judg 13:3–5), give reassurances (to Jacob, Gen 31:11–13), commission persons to tasks (Moses, Exod 3:2; Gideon, Judg 6:11–24), and communicate God's word to prophets (Elijah, 2 Kgs 1:3, 15; a man of God, 1 Kgs 13:18; cf. 1 Kgs 22:19–22; Isaiah 6; Jer 23:18, 23). But the angel may also intervene at crucial moments to change or guide a person's actions (Hagar, Gen 16:9; Abraham, Gen 22:11–12; Balaam, Num 22:31–35; the people of Israel, Judg 2:1–5) and may communicate divine promises or reveal the future in the course of such intervention. In addition angels may be the agents of protection for individuals or for Israel as a whole (Gen 24:7, 40; 48:16; Exod 14:19–20; 23:20, 23; 32:34; Num 20:16; 1 Kgs 19:5–8; 2 Kgs 19:35=Isa 37:36; Pss 34:8—Eng 34:7; 91:11). But they may also be Yahweh's agents for punishment (Genesis 19; Num 22:33; 2 Samuel 24=1 Chronicles 21; Pss 35:5–6; 78:49).

In contrast to later writings, these texts exhibit almost no interest in the heavenly messengers themselves. They are not individuated in any way. They do not have personal names or definite offices (though see Josh 5:14). It is generally argued that the term *malʾāk yhwh* should not be translated "*the* messenger of Yahweh," as though referring to a particular divine being, but simply "*a* messenger of Yahweh" (Hirth 1975: 25–31). Either translation is grammatically possible. The messengers are not described (see Judg 13:6 for a partial exception) and are often not even recognized. When human beings do realize the identity of the one who speaks with them, the reaction varies. In some narratives no reaction at all is described (e.g., Genesis 19), while in others the reaction is reverence (Josh 5:14–15) or fear (Judg 13:21). In short, these texts show no speculative interest in the divine messenger whatever. The messenger is of significance solely for the sake of the message (Westermann 1985: 244).

b. Relationship to Yahweh. Many of these narratives about the *mal›āk yhwh* pose a long-standing problem of interpretation: what is the relationship between the messenger/angel of Yahweh and Yahweh? In many of the narratives the *mal›āk* initially appears to be a distinct figure. But at some point in the account it appears as though Yahweh were personally present instead of the *mal›āk yhwh*. In Gen 16:7, for example, when Hagar has run away from Sarai's cruel treatment, the text says that "a *mal›āk yhwh* found her by a well in the wilderness." The two converse and the narrator again identifies the one who speaks with Hagar as a "*mal›āk yhwh* " in vv 9, 10, and 11. But the words which the *mal›āk yhwh* speaks in v 10 ("I will multiply your descendants …") appear rather to be the first-person speech of Yahweh himself. In the following verse, however, the *mal›āk yhwh* again speaks of Yahweh in the third person. Yet v 13 begins, "Hagar called the name of Yahweh who spoke with her, 'You are a God of seeing.' …" The end of the verse is textually corrupt but is probably to be translated "I have indeed seen God after He saw me." The apparent interchangeability of the *mal›āk yhwh* and Yahweh cannot be resolved by assuming a clumsy merging of two traditional stories. The same ambiguity occurs in many narratives (e.g., Gen 21:15–21; 22:11–12; 31:11–13; Exod 3:2–6; Judg 6:11–24). Numerous suggestions have been put forward to account for this peculiar feature (e.g., that the *mal›āk yhwh* is a sort of hypostasis of the deity; that a functional identity exists between messenger and sender; that the phrase *mal›āk yhwh* is a late, pious interpolation; that the alternation between Yahweh and *mal›āk yhwh* has to do with point of view; etc. See the review in Hirth 1975: 13–23). But the explanation that seems most likely is that the interchange between Yahweh and *mal›āk yhwh* in various texts is the expression of a tension or paradox: Yahweh's authority and presence in these encounters is to be affirmed, but yet it is not possible for human beings to have an unmediated encounter with God (cf. *TWAT* 4: 901; Hirth 1975: 83–84). Hagar is correct—she has seen God. But the narrator is also correct that the one who appeared to her was a *mal›āk yhwh*. The unresolved ambiguity in the narrative allows the reader to experience the paradox. It would be misleading, however, to suggest that this perspective was a dogmatic belief of ancient Israelite religion. There are other narratives in which God appears and converses with human beings, with no reference to a *mal›āk yhwh* (e.g., Genesis 15), and yet others in which the *mal›āk yhwh* is consistently distinguished from Yahweh (e.g., 1 Kings 19). Religious beliefs and forms of expression were probably no more uniform in ancient Israel than in any other age.

The quality of ambiguity which attaches to the *mal›āk yhwh* allows it to be used to stress either God's presence or distance, as in the various traditions that a *mal›āk* accompanied the Israelites on the exodus from Egypt (Exod 14:9; 20:20–23; 32:34; Num 20:16). In Exod 14:9 the *mal›āk* is associated with the pillar of cloud and, like it, functions as a manifestation of the presence of Yahweh with the people. There is a degree of theological speculation in Exod 23:20–23 in the subtle way in which the presence of Yahweh is understood to be manifest. Yahweh speaks of sending the *mal›āk* before the people to protect and guide them and warns the people to obey the *mal›āk,* "because my name is in him." Deuteronomistic theology uses the same concept of the name of God to describe the way in which Yahweh is present in the Jerusalem temple (1 Kgs 8:16, 29; 9:3; cf. Jer 7:12). By contrast, Exod 33:2–3 uses the image of the *mal›āk* to describe Yahweh's absence. The passage follows the account of the apostasy with the golden calf. "I will send a *mal›āk* before you … for I will not go up in your midst, because you are such an obstinate people that I might consume you on the way."

c. Relations between Angels and Humans. Although speculation about the angelic world or the relation between divine and human beings does not seem to have attracted much attention in preexilic writings, there is one brief text which raises such questions, Gen 6:1–4. There the interbreeding between divine beings (*bĕnê hā ›ĕlōhîm*) and human women is described. Although the passage is obscure in many respects, the offspring of the union become the ancient warriors of reknown (LXX, *gigantes*, "giants"). Although not presented as a rebellion in heaven or as a "fall" of divine beings, the results of the mating are troubling to Yahweh, who decrees a limit to the human life span as a consequence. It has recently been argued that this passage preserves an old alternate introduction to the flood story, in which the flood was sent to eliminate these half-human/half-divine beings who threatened the order of creation (Hendel

1987: 13–26). Whatever role the tradition may have played in ancient Israel, it became the source of intense speculative development in later centuries.

C. Exilic and Early Postexilic Developments

It is probably not accidental that the 6th century saw a considerable increase in speculation about the heavenly world and its angelic inhabitants, especially in the prophetic literature. The problem of the destruction and the reconstitution of Judah's national institutions required a mode of thinking that could encompass the disaster in some coherent and meaningful structure and provide confidence in the possibility of reconstruction.

1. Ezekiel. Ezekiel's vision of the coming destruction of Jerusalem (Ezekiel 8–11) begins with the appearance of an angelic being who is described in terms derived from the account of the glory of Yahweh (*kābôd yhwh*) in 1:27. The destruction of Jerusalem is carried out at Yahweh's command by other angelic figures described only as six armed men (9:2). An angelic scribe ("a man clothed in linen who had a writing case at his side," 9:3) marks those who are to be spared. Ezekiel's vision of the angelic destroyers provides a graphic reassurance that the destruction, terrible as it is, remains under the direct control of the God of Israel and does not simply represent the triumph of the Babylonians (cf. *2 Baruch* 6–8, written after the destruction of the Second Temple by the Romans). Corresponding to Ezekiel's vision of the destruction of Jerusalem is his vision of the temple as it is to be rebuilt (Ezekiel 40–48). Ezekiel is guided through the structure by an angel ("a man whose appearance was like that of bronze," 40:3) who measures the various structures for Ezekiel and explains the purposes of some of them (e.g., 42:13–14).

The cherubim or living creatures (*kĕrûbîm; ḥayyôt*) described in Ezekiel 1 and 10 are not, properly speaking, angels. The description in Ezekiel and the graphic depictions of similar figures from the ANE indicate that they were winged creatures combining human and animal features. Indeed, they may be described as the animals of the heavenly world. Unlike the "messengers" or the "sons of God," cherubim have only limited functions. They serve as watchdog-like guardians (Gen 3:24; Ezek 28:14), as winged mounts (2 Sam 22:1; Ps 18:11—Eng18:10), and as bearers of the throne chariot (Pss 80:1; 99:1; Isa 37:16; Ezekiel 1; 10). Perhaps because of their protective role, they were frequently used as decorative motifs in temples and on cultic furnishings (Exod 25:18–20; 26:31; 1 Sam 4:4; 1 Kgs 6:23–36). Similarly, the seraphim of Isaiah 6 are not angels but winged serpentine figures associated with the iconography of the Yahwistic cult (Isa 14:29; 30:6; cf. Num 21:6–9; 2 Kgs 18:4). Isaiah has partially assimilated them to the role of members of the divine council. Later tradition interpreted both seraphim and cherubim as classes of angels.

2. Zechariah. Faced with serious issues of social restructuring and institutional restoration, Zechariah, one of the early postexilic prophets, articulated his message largely in terms of angelic visions. According to Petersen (*Haggai and Zechariah 1–8* OTL, 115–16), "rather than proposing, as had Haggai, that the temple needed to be rebuilt, or that Zerubbabel was to be anointed as king, Zechariah experienced Yahweh's angelic agents and discerned how the new religious and social order was to be initiated. What Zechariah reports in these visions is initial restoration within the cosmic order … Yahweh's steeds and angelic host are busy with the work of creating a new social and religious structure that will affect the entire world, not just Judah." Zechariah's message is made particularly authoritative through his claim that he is not only announcing what should be done on earth but what is already being done in heaven and will soon become evident on earth.

Zechariah concretizes the ancient notion of the army of Yahweh by describing the horses, riders, and chariots which roam the earth, returning to report to the angel of Yahweh and to present themselves before Yahweh (Zech 1:7–17; 6:1–8). The chariots are identified with the four winds (Zech 6:5; cf. Ps 104:4). It appears that in Zechariah's visions the figure identified as the *mal·āk yhwh* has become a distinct and powerful figure in the heavenly world. He has several functions in the visions: guide and interpreter for Zechariah (Zechariah 1–6 *passim*); intercessor for Israel, who receives words of consolation that he commands Zechariah to proclaim (1:12–17; cf. Isa 40:1–9); presider and judge in the divine council (Zechariah 3); and commander of the angelic patrols (Zech 1:11; 6:7).

3. The *Śāṭān.* The angelic figure of the *śāṭān* in Zech 3:1–2 is not to be understood as the cosmic enemy of God of later angelology. The word is a common noun ("opponent, accuser") and is related to the verb *śāṭan,* "to accuse." Both noun and verb can be used of human beings as well as of angelic ones (Num 22:22; 1 Sam 29:4; Zech 3:1; Ps 109:4). Here one should translate, "He showed me Joshua the high priest standing before the *mal›āk yhwh,* and the accuser was standing at his right hand to accuse him." The accuser is simply a member of the divine council who has brought to judgment a high priest who is cultically impure. The picture is very close to that of Job 1–2. "At the time when the sons of God came to present themselves before Yahweh, the *śāṭān* also came among them" (1:6; see also 2:1). There, too, the *śāṭān* raises questions about a person whom he suspects of self-interested piety. The only other contemporary text which mentions this figure is 1 Chr 21:1. A comparison with the parallel text, 2 Sam 24:1, shows that "the anger of Yahweh" in 2 Samuel has been concretized by the Chronicler as the action of a member of the divine council. While the *śāṭān* is not depicted as an enemy of God in any of these texts, the fact that in Zechariah and Job his view is repudiated by God and *mal›āk yhwh* indicates the beginning of the development of the *śāṭān* as a sinister figure (see Petersen (*Hagai and Zechariah 1–8* OTL, 189–90). The notion of an angel who has particular responsibility for an individual, guiding and interceding on behalf of that person, is developed in Job 33:23–26 (cf. 5:1; 16:19). A close parallel to this conception is the "personal god" of Mesopotamian religion (Jacobsen 1976: 147–64).

4. Other. In general, 1–2 Chronicles tends to be somewhat more vivid in its description of angelic figures than parallel texts in Samuel-Kings (compare 2 Sam 24:16–17 with 1 Chr 21:15–30). The idea of heavenly beings as a chorus of praise, reflected already in Psalm 29, is associated with God's act of creation in Job 38:7 (see also *11QPs^a Creat* 26:13; Neh 9:6). In Ps. 148:2 the angelic chorus (*mal›ākîm//ṣĕbā›ôt*) is the first in a chain of praise embracing all creation (cf. Ps 103:20–22).

D. Second Temple Period

It is in the late Second Temple period that speculation about the heavenly world and its inhabitants becomes fully developed. There are some new developments in angelology, the most significant being the dualistic notion of evil angels opposed to God, but most of the beliefs about angels are essentially expansions and concretizings of older notions. Numerous references to angels can be found in many genres of literature produced in different social settings, suggesting that a general body of lore concerning angels was common to the popular religion of the era. But the concentration of extensive angelological speculation in certain genres of literature (esp. apocalypses) and in the literature of certain communities (e.g., Qumran) reminds one that the religious and intellectual significance of angelology differed among various Jewish groups.

1. Functions and Appearance of Angels. The general function of the angel as the agent of God's will is widely attested. Retellings of OT narratives (especially *Jubilees* and *Pseudo-Philo*) tend to introduce angels where they did not occur in the OT, oftentimes as performing some act which the OT attributes directly to God (e.g., *Jub.* 38:10; 10:22–23; 14:20; 19:3; 32:21; 41:24; 48:2; *Ps-Philo* 11:5; 15:5; 19:12, 16; 61:5). In the book of Tobit the belief in a protecting angel (cf. Gen 24:7) is dramatized with all the ironic and humorous potential of the situation richly realized (*HBD,* 791–803). Angels help and protect the pious and bring their prayers before God (Dan 3:25, 28; *1 En.* 100:5; *1QM* 13:10; *T. Jud.* 3:10; *T. Dan.* 6:5; *T. Naph.* 8:4; *T. Jos.* 6:7; *T. Benj.* 6:1; *Ps-Philo* 38:3; 59:4; *3 Macc.*6:18–19; *Vita* 21). Angels also decree and execute punishment in accordance with God's will (Dan 4:13–26; *T. Naph.* 8:6; *1 Enoch* 56). An angelic scribe keeps records which are opened at the time of judgment (Dan 7:10; *1 En.* 89:61–77; 90:14–20; *2 En.* 19:5; *Ap. Zeph.* 3; 7).

The angel as teacher and mediator of revelation is a well-attested motif, even in nonapocalyptic texts (*Joseph and Asenath* 14–15; *Jub.* 1:27–29; 10:10–14 [cf. *1 Enoch* 8]; *T. Reu.* 5:3; *T. Levi* 9:6; *T. Iss.* 2:1; *T. Jos.* 6:6). In apocalyptic writings, the angelic revealer, heavenly guide, and interpreter of mysteries and visions becomes a standard feature (e.g., Daniel 7–12; *1 Enoch* 17–36; *Apocalypse of Abraham* 10–18; *4 Ezra* 3–14). The appearance of the angel often evokes an acute emotional reaction from the person who sees it (Dan 10:7–9; *2 En.* 1:3–8; *Ap. Ab.* 11:2–6).

Certain angels are identified by personal names, the most frequently named being Michael, Gabriel, Raphael, and Uriel (Dan 9:21; 10:13; Tob 12:15; *1 En.* 9:1; 21:10; *4 Ezra* 4:1; *Sib. Or.* 2:215; *1QM* 9:15–16). For various lists of other angels, see *1 En.* 8; 20; 82:13–20. Frequently, the angel's appearance is described in terms of light, fire, shining metals, or precious stones, a tradition based on Ezekiel's description of the glory of God (Dan 10:5–6; 2 Macc 3:25–26; *Jos. As.* 14:9; *2 En.* 1:3–5; *Ap. Ab.* 11:1–3; *Ap. Zeph.* 6:11–15). Their garments are white linen or white with golden sashes (Dan 10:5; 12:6; 2 Macc 3:26; 11:8; *T. Levi* 8:2; but see *Ap. Ab.* 11:2). Angels are assumed to be spiritual creatures whose physical manifestations and apparent eating and drinking are shams (Tob 12:19; *Ap. Ab.* 13:4; *T. Ab.* 4:9–10; Philo, *Quest. Gen.* 4:9; Jos. *Ant.* 1.11.2 §197). There was even speculation on special angelic food and its qualities (*Jos. As.* 16:12–16; Wis 16:20; *Vita* 4:2; cf. Ps 78:23–25). Although angels are spirits and may be called "gods" (*ʾēlîm, ʾĕlōhîm*), they are created beings (*Jub.* 2:2). There is some evidence that certain Jewish groups believed the angels to have assisted God in the creation of the world (Fossum 1985: 192–213). Rabbinic Judaism found the notion theologically dangerous and vigorously rebutted it (Segal 1977). In *Jubilees,* even though angels are created on the first day, they have no role in the creation of the world except to praise the work of God (*Jub.* 2:3; cf. *11QPs*^{a} *Creat* 26:13; Job 38:7).

2. The Heavenly Court/Temple. The old notion of the divine council continued to be central for the image of the angelic world. In QL in particular the language of council (*ʿēdāh*), assembly (*qāhāl*), and conclave (*sôd*) is prominent (esp. in *Hodayot; ŠirŠabb*). Graphic depictions of the heavenly court are frequent in apocalypses, though the emphases differ from those of OT sources. The splendor and magnitude of the scene are stressed, but the deliberative role of the council is all but eliminated (Dan 7:9–10; *1 En.* 14:19–23; 40:1–7; *2 Enoch* 20; *4 Ezra* 8:21–22). Rather, it is a place of judgment (Dan 7:10–14; *1 En.* 60:2–6), of revelatory pronouncements (Dan 7:13–14; *1 Enoch* 15–16), and of praise (*1 En.* 61:9–13; *2 En.* 20:4–21:1; *Ap. Ab.* 10:9; 18:11–14; *Ps.-Philo* 18:6). According to some sources, the praise is sung in a special angelic dialect (*T. Job* 48–50; cf. *Ap. Zeph.* 8:4).

Not only royal court but also temple imagery informs the picture of the heavenly world (*1 Enoch* 14). Consequently, the angels may be described as priests who serve in the heavenly temple (*Jub.* 30:18; 31:14; *T. Levi* 3:5–6; *1QSb* 4:24–26; *ŠirŠabb, passim*). In *Jubilees* the angels of the presence and the angels of holiness observe the Sabbath and the Feast of Weeks and are said to have been created circumcised (*Jub.* 2:17–18; 6:18; 15:27). Later rabbinic tradition rejected the notion that the Torah is observed by the angels (see Schäfer 1975: 111–59, 229).

3. The Angelic Hierarchy. The angels are organized in a hierarchical manner. There may be a single superior angel and/or a small group of archangels (usually four or seven), sometimes designated as the angel(s) of the presence (Tob 12:15; *T. Levi* 8:2; *Jub.* 1:27, 29; 2:1–2, 18; 15:27; *1 En.* 9:1; 20:1–7; 40:1–10; 71:9–13; 90:21; *1QM* 9:15–16; *1QSb* 4:25; *1QH* 6:13; cf. Isa 63:9). Where a single angel heads the hierarchy, he is sometimes identified as Michael, the angel who has particular responsibility for the people of Israel (Dan 12:1; *Vita* 13–15). The figure known as the Angel of Truth (*1QS* 3:24) or the Prince of Light (*CD* 5:18; *1QS* 3:20; *1QM* 13:10) in Qumran literature is in all probability to be identified with Michael (compare *1QM* 13:10 with 17:6–8), as is Melchizedek in *11QMelch.* Many sources also identify various groups and classes of angels (*Jub.* 2:2, the angels of the presence and the angels of holiness; *ŠirŠabb*^{d} [4Q403 1 i 1–29] and *ŠirŠabb*^{f} [4Q405 13 4–7], seven chief and deputy princes; *1 En.* 61:10, cherubim, seraphim, ophanim, angels of power, angels of the principalities; *2 Enoch* 20, ten classes of angels in the seventh heaven; *T. Levi* 3:5–8, archangels, messengers, thrones, authorities; etc.). In some texts the classes of angels are assigned to different heavens (e.g., *T. Levi* 3; *2 Enoch* 3–20). There also developed the notion that all the physical processes of the cosmos (e.g., the movement of sun, moon, and stars; the phenomena of fire, wind, rain; the growth of plants and animals; etc.) are all under the control of particular angels or groups of angels (*Jub.* 2:2; *1 En.* 60:16–22; 82:9–20; *2 Enoch* 19; *1QH* 1:10–11).

For apocalyptic literature, the detailed speculation about the heavenly world, its angelic beings, and their functions is not mere window dressing for the historical and eschatological message which the seer often receives. Rather, such knowledge in itself serves the purpose of theodicy, inasmuch as it provides insight into a system of order and purposive power.

4. War in Heaven. The angels are also closely related to the historical process and its outcome. Just as there are angels over the natural workings of the cosmos, so there are angelic leaders of the nations. Their actions are sometimes directed by God, but on occasion they exceed their orders (*1 En.* 89:59–64) or act to oppose the angels God has assigned to help Israel (Dan 10:13, 20; 12:1). The notion that Israel was aided in times of crisis by angelic warriors was widely shared (2 Macc 3:25–26; 11:8; 15:22–23; cf. Jos. *JW* 6.5.3 §298), but received a distinctive development in apocalyptic and related literature. While older Israelite tradition had described the conflict between Yahweh and the kings of nations opposed to Israel, apocalypses imagine a two-tiered, mirror-image conflict. The conflict on earth between Israel and its enemies is the counterpart of the conflict in heaven between angelic armies. Victory will mean the establishment of the kingdom of Michael among the angels and of Israel among the nations (*1QM* 17:6–8; *As. Mos.* 10:1–10; cf. Dan 7:13–14, 26–27). Although references to angelic armies are very frequent in the apocalypses, the most detailed account of the eschatological battle and the role of the angels is to be found in the Qumran War Scroll (*1QM*).

5. Angelic Dualism. The development of the old notions of the angels of the nations and of God's angelic army is probably one source of the dualistic thinking characteristic of much of the angelology of this period. The influence of Iranian religion is also usually assumed, though it is difficult to demonstrate in detail. In some texts the opposition between an angelic ruler of the forces of light and an angelic ruler of the forces of darkness is made explicit (*4Q ʿAmram*; *1QS* 3:13–4:14). Various names attach to the leader of the evil angels: Melchiresha (*4Q ʿAmram*^{b} 2 3′; *4QṬeharot*^{d} [*4Q280*] 2 2); Belial (*1QM* 1:1; 13:11; *1QS* 2:4–5; *CD* 5:17–19); Beliar (*Jub.* 1:20; *T. Reu.* 2:2; *T. Jud.* 25:3); Mastema (*Jub.* 10:8; *1QM* 13:11); Satan (*1QH* fr. 4, line 6; *Vita* 9–16). In retellings of biblical narrative he is depicted as the enemy of Israel's ancestors (*CD* 5:17–19; *Jub.* 17:15–18; 48:2, 9, 17).

The speculative reinterpretation of Gen 6:1–4 was another important aspect of dualistic theology. In the Enoch literature the angels who mate with women corrupt the earth and its inhabitants, prompting the intercession of the archangels. Although the immediate consequences of the breach are resolved, the mating produces a race of evil spirits subject to Mastema (*1 Enoch* 6–16; *Jub.* 10:1–14; cf. *Genesis Apocryphon* 2). Only in the eschatological victory and final judgment would the rebellious angels, the evil spirits, and their human allies be completely destroyed (*1 En.* 90:17–27; *As. Mos.* 10:1–10; *T. Sim.* 6:3–6).

6. Communion with the Angels. While the angelic armies figure prominently in eschatological visions of salvation, access to the heavenly world and the company of angels during one's lifetime or at death was also desired as a form of deliverance. Enoch's sojourn with the angels was a special case (*Jub.* 4:21–26; *2 En.* 1:8–10). But the tradition that Enoch and other seers were clothed with heavenly garments and became like the angels may describe a kind of transformation which was sought by apocalyptic communities (*2 Enoch* 22; *Ap. Zeph.* 8:3; cf. *1QS* 4:6–8). According to some sources, the righteous dead will dwell with the angels (*1 En.* 39:4–8; cf. Rev 6:9–11). The literature of the Qumran community, however, speaks of enjoying present communion with the angels as part of the blessedness of membership in the community of the new covenant (*1QS* 11:7–8; *1QSa* 3:3–11; *1QH* 3:21–22; 6:12–13; 11:10–14).

CAROL A. NEWSOM

NEW TESTAMENT

The NT conception of angels (Gk *aggeloi*) is derived from that of the OT and Judaism and does not make any important modifications or innovations of its own (see above). The NT does not provide a systematic discussion of angels. Rather, angels are incidental characters in the story of redemption. Consequently references to them are concentrated in the accounts of Jesus' birth and resurrection in the Synoptic Gospels, the account of the founding of the Church in Acts, and the account of the final consummation in Revelation.

A. Their Nature

Angels are supernatural heavenly beings created by God (Col 1:16). They are described as spirits (Heb 1:7, 14) and as holy (Mark 8:38; Luke 9:26; Acts 10:22; Rev 14:10). They are presented as robed in white garments (Matt 28:3=Mark 16:5; John 20:12; Acts 1:10; Rev 19:14) and radiating great light (Matt 28:3; Luke 24:4; Acts 10:30; Rev 10:1; 15:6; 18:1). By their very nature they also radiate the glory of God (Luke 2:9; 9:26; Acts 12:7; 2 Pet 2:10; Jude 8; cf. Acts 6:15) and praise him (Luke 2:13–14; Rev 5:8–14; 7:11–12; 19:1–8).

In form they are akin to humankind and are often referred to as men (Mark 16:5; Luke 24:4; Acts 12:15; Heb 13:2), but are different enough to evoke fear in (Matt 28:1–8; Mark 16:5–8; Luke 1:11–12; 2:9–10; 24:5; Acts 10:4) and worship from (Rev 19:10; 22:8–9) human beings. Angels are asexual (Matt 22:30 par.) and transcend time (Luke 20:34–36). Their knowledge is more comprehensive than humankind, but not unlimited (Matt 24:36=Mark 13:32; Eph 3:10; 1 Pet 1:12). Their strength is also a notable feature (2 Thess 1:7; 2 Pet 2:11; Rev 5:2; 10:1; 18:21). They possess their own languages (1 Cor 13:1) and are intently concerned with the salvation of humankind (Luke 15:10; Eph 3:10; 1 Tim 5:21; Pet 1:12; cf. 1 Cor 4:9), offering the prayers of the saints on the golden altar (Rev 5:8; 8:3–4), observing worship (1 Cor 11:10), and ministering to the Christian (Heb 1:14).

There are myriads and legions of angels (Matt 26:53; Luke 2:13; Heb 12:22; Jude 14; Rev 5:11; 9:16), but only two are named, the archangels Gabriel (Luke 1:19) and Michael (Jude 9; Rev 12:7). Gabriel is a messenger and Michael a warrior. An archangel is referred to in 1 Thess 4:16 and possibly others in 1 Tim 5:21. In Revelation there appear to be vestiges of the Jewish notion of four or seven archangels in the references to seven spirits (1:4; 3:1; 4:5; 5:6) or angels (8:2) before the throne, four living creatures waiting on the throne (4:6; 5:6), and four angels who preside over the four corners of the earth (7:1). The latter indicates a job differentiation among angels as well, for there are angels over the elements, including water (Rev 16:5; cf. John 5:4 var), fire (Rev 14:18; cf. Heb 1:7), and wind (Rev 7:1; cf. Heb 1:7). The elemental spirits (*stoicheia tou kosmou*) of Gal 4:3 and Col 2:8, 20 may be a reference to demonic angels ruling the world. See ELEMENT, ELEMENTAL SPIRIT.

The category of archangels is indicative of a hierarchy among angels, a hierarchy which is also found among evil angels with Satan as their head (Matt 25:41). Unlike other Jewish works, in the NT these hierarchies remain unelaborated, but are implied in the designation "principalities and powers" (Rom 8:38; 1 Cor 15:24; Eph 1:21; 2:2; 3:10; 6:12; Col 1:16; 2:10, 15; 1 Pet 3:22).

Angels have free will, and those in heaven chose to obey (Matt 6:10) while others chose to rebel (Jude 6; 2 Pet 2:4). The latter are led by Satan (Matt 25:41; Rev 12:7–9) and he seeks to imitate the angels of light (2 Cor 11:14). In the final conflagration, Michael and his angelic host will fight and defeat Satan and his angelic hosts (Rev 12:7–9). Their fate is to be cast into the lake of fire (Matt 25:41).

In the early christological debates, the superiority of Christ over the angels was stressed (Eph 1:21; Col 2:15; Heb 1–2; 1 Pet 3:22) and worship of angels strictly prohibited (Col 2:18; Rev 19:10; 22:8–9). In fact, angels are said to worship Christ (Heb 1:6). Evil angels are to be judged by the saints (1 Cor. 6:3).

B. Their Function

Angels also serve as guardians of individuals and churches. The angels of children in Matt 18:10 are apparently guardian angels. The seven angels of the seven churches in Revelation 2–3 have been identified by some as guardian angels. Belief in a guardian angel underlies Acts 12:15 where Peter is mistaken for his angel. In a guardian capacity, an angel releases the apostles (Acts 5:19–20) and Peter (Acts 12:6–11) from prison.

In part functioning as guardians and in their role as servants which they share with humankind (Rev 19:10; 22:8–9), angels minister to Jesus while he was accomplishing his mission. During the temptation, Satan points to the extremes to which the angels will go to keep Jesus from harm (Matt 4:6=Luke 4:10–11), and angels come and minister to Jesus after the temptation (Matt 4:11; Mark 1:13). They also minister to Jesus in Gethsemane once he has accepted his fate (Luke 22:43 var). Twelve legions of angels are readied for Jesus' defense at his arrest (Matt 26:53), and angels roll the stone from the entrance of the tomb at the resurrection (Matt 28:2). In short, Jesus spoke of them as "ascending and descending upon him" (John 1:51).

A major function of angels is as messengers and instructors. The thought of angels speaking to someone was not foreign to the audience of the NT (John 12:29). As well as by a direct presence, angels often deliver their message in a dream (Matt 1:20–21; 2:13, 19–20, 22) or a vision (Acts 10:3–6; Rev 1:10).

Moses received the Law from an angel (Acts 7:38, 53; Gal 3:19; Heb 2:2). Angels were witnesses to the incarnation (1 Tim 3:16). Paul assumes that angels can preach a gospel (Gal 1:8) and the Pharisees assume that an angel could have spoken with Paul (Acts 23:9). Angels are harbingers of the births of John the Baptist (Luke 1:11–20) and Jesus (Luke 1:26–38). They advise Joseph about the nature of Mary's child (Matt 1:20–21). They proclaim the birth of Jesus to the shepherds (Luke 2:8–14). They warn Joseph to flee to Egypt with Mary and Jesus (Matt 2:13) as well as when to return (Matt 2:20). They give instructions to the women at the tomb (Matt 28:5–7=Mark 16:6–7=Luke 24:4–7). Two angels speak to the disciples at Christ's ascension (Acts 1:10). An angel speaks to Moses in the burning bush (Acts 7:30, 35, 38), advises Philip where to travel (Acts 8:26) and Cornelius to send for Peter (Acts 10:3–6, 22, 30–32; 11:13–14), and reassures Paul that he would stand before Caesar (Acts 27:23–24). As typical of apocalyptic writings, an angel escorts John through his visions (e.g., Rev 17:7).

Angels are integrally involved in judgment, both ongoing and at the final consummation. In an ongoing capacity, angels killed Herod because he accepted the worship of the crowd (Acts 12:20–23). In the final consummation an archangel announces Christ's descent at the parousia (1 Thess 4:16) and other angels announce phases of the final judgment (Rev 10:1–7; 14:6–7), begin its initial processes (Rev 5:1–2; 14:14–16), and are active in it (Rev 8–9; 15–16; 20:1–3). They will accompany Christ at his parousia (Matt 16:27; 25:31; Mark 8:38=Luke 9:26; 2 Thess 1:7; Jude 14–15), will gather the elect (Matt 24:31=Mark 13:27), and will separate the evildoers for destruction in the fire (Matt 13:39–42, 49–50; 25:31–46; Jude 14–15). Possibly as a council, they will witness Christ's denial of those who denied him (Mark 8:38=Luke 9:26; 12:8–9; Rev 3:5; cf. Rev 14:10). The role of angels is often portrayed in military fashion (Rev 19:14, 19), as warriors at Christ's bidding (Matt 26:53).

ANGELS OF THE SEVEN CHURCHES

(Gk *aggeloi tōn hepta ekklēsiōn* (ἀγγελοι των ἑπτα ἐκκλησιων)). This expression is found only in Rev 1:20 in the preparatory vision of the risen Lord (1:9–20). Here the angels of the seven churches are equated with the seven stars in the Lord's right hand (cf. 1:16). The identity of the seven angels is uncertain, with both human and superhuman identifications being possible (see Hemer 1986: 32–34; McNamara 1966: 192–98).

A. Human Identifications

It has been proposed that the angels are messengers from the seven churches sent to John and/or the messengers from John entrusted to deliver the letters. Although virtually always being a reference to a heavenly messenger, *aggelos* is used occasionally in both the OT (Mal 2:7; 3:1) and the NT (Matt 11:10; Luke 7:24; 9:52; Jas 2:25) to refer to a human messenger. The leaders of the church, perhaps their bishops, is also a possible identification. However, elsewhere in the NT *aggelos* is never used to designate a church leader.

Against both of these identifications is the fact that the content of the letters of chaps. 2–3 pertain to the churches themselves, not to a third party, whoever the angels may be. Against any identification of the angels with any human being is the fact that all of the other 66 occurrences of *aggelos* in Revelation and virtually all other known occurrences refer to supernatural beings. Also, the use of angels to represent human beings or churches is virtually unknown in apocalyptic literature.

However, it should be noted that *Tg. Ps.-J.* on Exod 39:37; 40:4 identifies the seven lamps of the lampstand of the tabernacle as the seven stars or planets, and the latter in turn as "the just that shine unto eternity in their righteousness." This equation supports a human identification for angels and corresponds to the symbolism of Revelation in which the lampstands represent churches.

B. Superhuman Identifications

The seven angels have been identified as the guardian angels of the seven churches. Nations (Deut 32:8 LXX; Dan 10:13, 20; 12:1; Sir 17:17) and individuals (*Jub.* 35:17; Matt 18:10; Acts 12:15) are portrayed as having guardian angels. However, this identification is not satisfactory because of the difficulty of the resulting scenario in which Christ directs John to write a letter to the churches, but John in turn addresses it to their guardian angels instead (1:11).

Widely accepted is the position that the angels are personifications of the prevailing spirit of the churches, the spiritual counterpart of the earthly reality. This would make the angels akin to the Persian *fravashis,* heavenly counterparts of earthly individuals and communities. The difficulty that the letters are addressed to the angels but pertain to the churches is thus eliminated, for both can be addressed simultaneously. However, although the stars and the lampstands are distinguished in Revelation as angels and churches respectively, in this solution they are now virtually equated. Ultimately no identification has as yet been totally satisfactory.

ANGER. See VIRTUE/VICE LISTS; WRATH OF GOD.

ANGLE, THE (PLACE) [Heb *hammiqṣōaʿ* (הַמִּקְצֹעַ)]. "Place of corner-structure," "corner buttress": corner of a building (Exod 26:24; 36:29); corner of a court (Ezek 46:21); corner post of the altar (Ezek 41:22). Particularly, an important and well-known part of the defense structure of Jerusalem, built by Uzziah king of Judah when he fortified the city by constructing towers at the Corner Gate, at the Valley Gate, and at the angle (2 Chr 26:9). Destroyed in the conquest of Jerusalem by Nebuchadnezzar, this section (Neh 3:19–20, 24–25) and other sections of the wall were repaired by Nehemiah, ca. 430 B.C. Being mentioned in the vicinity of the Water Gate (3:26), the wall of Ophel (3:27), and the East Gate (v 29), "the Angle" seems to have been located along the E wall of Jerusalem, somewhere near the Water Gate (which may have led to the Gihon Spring) and the earlier house (palace) of David (Mare 1987: 123–26).

W. HAROLD MARE

ANIAM (PERSON) [Heb *ʾănîʿām* (אֲנִיעָם)]. The fourth son of Shemida (1 Chr 7:19) in the genealogy of Manasseh (7:14–19). His name occurs only once in the Bible and may have meant "people's lament" (*ʾānâ* + *ʿam*) or "I am kinsman" (*ʾănî* + *ʿam*). Noth (*IPN,* 237) suggested that the name is a scribal mistake for Noah, one of the five daughters of Zelophehad (Num 26:33).

1 Chr 7:19 is a genealogical fragment whose relationship to the rest of the Manassite genealogy (7:14–18) is unclear. The verse records the names of Shemida and his four sons, but it does not link them to the Manassites who were listed earlier. Consequently, a number of proposals have been made to integrate the verse more effectively into the rest of the Manassite genealogy. Curtis and Madsen (*Chronicles* ICC, 152)

have proposed, for example, that Shemida was the fourth son of Hammolecheth (v 18); this would make Aniam her grandson. Others, however, have argued that Gilead was the father of Shemida, just as Num 26:30–32 indicates (cf. Josh 17:1–3). In this case, Aniam would have been Gilead's grandson. Rudolph (*Chronikbücher* HAT, 69–71) is the most persuasive of those who favor this position, and his presentation involves a comprehensive emendation of the Manassite genealogy in 1 Chronicles 7 on the basis of Num 26:28–34.

M. PATRICK GRAHAM

ANIM (PLACE) [Heb *ʿānîm* (עָנִים)]. A town situated in the SW hill country of Judah (Josh 15:50), within the same district as Debir. The only OT reference to this settlement, whose name means "springs," occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). Anim may be the same place as Hawini of the Amarna Letters (Boling and Wright *Joshua* AB, 388). Eusebius (*Onomast.* 26.9) associates Anim with the Christian town of Anaia, situated nine Roman miles S of Hebron. Anim is most probably to be identified with Khirbet Ghuwein et-Tahta (Aharoni *LBHG* 300; M.R. 156084), located approximately 20 km S of Hebron and 4 km S of es-Samu (ancient Eshtemoh?). Khirbet Ghuwein et-Foqa, just to the northeast, may be the location of Christian Anaia (Gold *IDB* 1: 300).

ANIMAL. See ZOOLOGY.

ANKLETS [Heb *ʿākāsîm* (עֲכָסִים)]. The word *ʿekes,* found only in the plural in the Hebrew Bible, indicates a piece of jewelry worn around the ankle, as are bracelets worn encircling the wrist. The only biblical text mentioning anklets is Isa 3:18, in which the decadent garb of self-indulgent Israelites is listed in considerable quantity. Twenty-one items are presented, and anklets head the list. Perhaps their position at the top of the list, where they are followed by "headbands," is meant to indicate that the items that follow are those that adorn the entire body, from foot to head.

Anklets were usually made of metal, although some glass examples have been found. Of the metal ones, bronze examples are most common, but the existence of gold, silver, and iron specimens can be established either through the discovery of actual examples or through analogy with the more commonly found bracelets or rings. All of these circular metal items of adornment were made by bending straight wires or bands into a rounded shape. Sometimes the ends were left open; on some examples they have been welded or twisted together. Metal anklets were usually undecorated except for the occasional clubbing or flattening of the free ends in unclosed examples.

Although bracelets, armlets, necklaces, and rings were apparently worn by both men and women, it is difficult to determine whether the same can be said for anklets. In graphic art from the ancient Semitic world, depictions of human figures tend to be those of upper-class individuals, clad in ceremonial garb. This means that long cloaks or outer garments cover the lower legs and obscure the areas in which anklets would be worn. However, certain renderings of deities, especially those depicted nude or semi-nude, are instructive. Although such figures are often very simple and stylized, the use of jewelry as adornment stands out in the absence of items of clothing. A comparison of female and male Canaanite gods rendered in metal (see Negbi 1976) shows a number of examples of female figures with anklets but only one or two possible males so adorned.

The graphic information is valuable in showing the way the anklets were worn. Several examples of single anklets, that is, one on each ankle, can be seen. But in the preponderance of instances, anklets were worn in sets of three and four, and probably also in sets of five and maybe even six (Seibert 1974: pls. 41,

54, 56, 59, 63). The fact that anklets were worn in groups informs the meaning of Isa 3:16, in which the prophet mocks the haughty daughters of Zion, who strut about wantonly, "tinkling with their feet." The verb in this passage is derived from the word for anklet and indicates the jingling noise produced by the movement of the feet of a person wearing anklets.

CAROL MEYERS

ANNA (PERSON) [Gk *Hanna* (Ἀννα)*; Anna* (Ἀννα)]. **1.** The wife of Tobit and mother of Tobias. Anna serves three roles in the story of Tobit. First, she is the object of piety for Tobit and Tobias. Tobit marries Anna, who is a member of his paternal clan, and thereby provides a good example for Tobias and other Jews in the Diaspora (1:9). Tobit instructs Tobias to honor his mother after Tobit's death and to bury her in Tobit's grave (4:3–4), which Tobias does (14:10).

Second, she is the ideal wife. When Tobit no longer hides from Sennacherib, he returns to Anna and Tobias (1:20). Later, when Tobit is blinded by the sparrow droppings, Anna takes up "women's work," which the Vg explains as weaving cloth (2:11 LXX—2:19 Vg). Thus she exemplifies the ideal wife of Prov 31:10–31. She values Tobias more than any riches he can bring back from his dangerous journey (5:18–23), and she watches the road for his return (11:5–6, 9).

Her third role is to be a foil to Tobit's piety. When her employers give her a kid as a bonus, Tobit accuses her of theft. Her retort in LXX questions the value of his piety if it makes him such a blind know-it-all (2:14). In Vg, which explicitly compares Tobit to Job (2:15 Vg), Anna says his piety is vain (2:22 Vg), making her more like Job's wife. Whereas Tobit trusts that God's angel will take care of Tobias (10:1–3), Anna rejects his belief and despairs of Tobias' life with fasting and lament (10:4–7). Yet it is Anna who watches for Tobias daily (11:5–6, 9) and who sees him first, so even her despair was not without hope.

2. An elderly and especially devout Jewish widow portrayed in Luke 2:36–38 who should not be confused with the Anna of Tobit, a deuterocanonical book. Strikingly, Anna is the only woman in NT called a prophetess (using the Greek noun form of the word). Thus, she is to be understood in the light of such OT figures as Deborah and Huldah. Comparisons should also be made with the intertestamental figure of Judith who, like Anna, was devout, lived to about the same age (105), and did not remarry after her husband died (Judith 16:23). The Lukan material raises the question of whether or not there was some sort of Jewish order of widows who had specific functions in the temple, for example, to pray (Witherington 1988: 140–41). This might explain her apparently constant presence in the temple. It should also be noted that, according to Luke's portrait of Anna, she, unlike Simeon, goes forth to proclaim the good news about the Messiah (Plummer *Luke* ICC, 71). This foreshadows one of the roles assumed by female believers in Luke's 2-vol. work (cf. Priscilla in Acts 18). It is also possible that Luke intends for the reader to see parallels between Luke 1–2 and Acts 1–2, in which case Anna anticipates what will happen when the spirit is poured out on all flesh, and both sons and daughters prophesy (Stahlin *TDNT* 9:451). There may also be some truth in the suggestion that Anna is portrayed by Luke as one of the ʿ*anawim*, i.e., the pious Jewish poor (Brown 1977: 446). Luke does seem to have a special interest in such people, and in view of his theme of reversal of fortunes (cf. Luke 4:17–19), he seems to promote women like Anna as examples of how the gospel affects human lives. Anna may also be seen as a model of faith in action, one who responds positively and properly to the coming of the Messiah.

BEN WITHERINGTON III

ANNAN (PERSON) [Gk *Annan* (Ἀνναν)]. See HARIM.

ANNAS (PERSON) [Gk *Hannas* (Ἅννας)]. High priest in Jerusalem between ca. A.D. 6, when he was appointed by Quirinius, and A.D. 15, when he was removed by Valerius Gratus (*Ant* 18.2.1, 2 §§ 26–35; Luke 3:2). Annas' later prominence, long after his deposition, and the success of his family in high priestly office, make it seem unlikely that he was deposed as a result of official displeasure; he served the accommodation with Rome very well (Smallwood 1976: 155–56, 159). Although, as we shall see, there are references in the gospels to his being high priest during the capital proceedings against Jesus, that claim is incorrect: Caiaphas was high priest at the time, and—in chronological terms—he was the most successful high priest of the period (see CAIAPHAS). But the influence of Annas survived his personal high priesthood. Five of his sons—Eleazar, Jonathan, Theophilus, Matthias, and the younger Annas—all held that office (*Ant* 20.9.1 §198; Enelow *JEnc* 1: 610), and the claim is made in John 18:13 that Caiaphas was actually his son-in-law.

The continuing influence of Annas makes certain misstatements in the NT explicable. The odd reference to the joint high priesthood of Annas and Caiaphas, in Luke 3:2, and the unqualified reference to him alone as high priest in Acts 4:6, are perhaps the most obvious instances. But the latter case might give us pause, before we dismiss it as a simple error. The scene in Acts 4 represents an inquisition of Peter and John by the Sanhedrin in Jerusalem, following their healing of a lame man at the Beautiful Gate of the temple (Acts 3:1–26). The mention of Annas occurs within a description of the assemblage of the council (4:5f), which is specifically said to include, not only priests, but "rulers, and elders, and scribes" (v 5). After referring to Annas as high priest, v 6 mentions "Caiaphas, and John, and Alexander, and as many as were from high priestly stock." It seems quite clear that Acts refers to Annas' position of leadership within a vital faction of the Sanhedrin, to his driving force behind the inquisition. The primary opposition to Jesus is priestly (cf. vv 1–3), and Annas appears to be leading the opposition. The usage of the term "high priest" is therefore loose (and technically incorrect), but scarcely incomprehensible.

The family of Annas appears in consistent, sometimes deadly, opposition to Jesus' movement during its early years. Aside from Annas' personal involvement in the condemnation of Jesus, to which we shall turn below, we see in Acts 4 a formality of opposition, which hardens Jesus' movement in its tendency toward a formal break with Judaism. Peter boldly proclaims, "Let it be known to you, and all Israel, that by the name of Messiah Jesus of Nazareth—whom you crucified, but whom God raised from the dead—this man stands before you whole" (4:10); that amounts to a stinging, personal statement of judgment against Annas, Caiaphas, and anyone else who had anything to do with Jesus' execution. The presentation of Acts therefore uses Annas as emblematic of the distinction between the rulers who crucified Jesus and those Jews who decided to follow him (cf. v 4 and see GAMALIEL). The "John" mentioned in v 6 may be Annas' son, a future high priest (cf. the full spelling, "Jonathan," in representatives of the so-called Western text; Lake and Cadbury 1933: 42; and Jeremias 1969: 197 n. 161). In ca. A.D. 62, Annas' son and namesake took the opportunity of a hiatus in Roman rule to arrange the death of James, the brother of Jesus (*Ant* 20.9.1 §§ 197–203; Smallwood 1976: 279–80). That the very name "Annas" should have become something of an inverted icon within the NT, a symbol of hierarchical opposition to Christianity, is therefore quite understandable.

It is nonetheless surprising to find the uniquely Johannine scene of the session at Annas' house (18:12–24). Annas is insistently called "high priest" (vv 15, 16, 19, 22) despite the fact that Caiaphas is as well (cf., above all, the confusion caused by the usage in v 24); indeed, Jesus is struck for answering Annas as high priest sharply (v 22). Annas' very residence is said to be high priestly (v 15), and Jesus is brought there by a contingent of Roman and Jewish forces (v 12). Moreover, the Johnannine scene poses the gravamen against Jesus in terms quite different from the Synoptics': Annas is concerned about Jesus' disciples and teaching, while Caiaphas' focus in the Synoptics is the temple and christology. It seems obvious that Annas features in John, at least to some extent, as typological of Jewish enmity toward Jesus and his movement.

Behind the text of John, however, there may be an important trace of historical reminiscence. The issue which mortally opposed Caiaphas to Jesus had been Jesus' inflammatory action of occupying the temple. The immediate occasion of Jesus' act was his opposition to the placement of vendors of sacrificial animals in the precincts of the temple. Given that such an arrangement was unusual, and could have caused opposition, the question arises, why would Caiaphas have permitted it? It has become conventional, among Christian scholars of the NT, to claim that references in rabbinica to "the sons of Ḫanan," merchants of such animals, should be identified with Annas' family (cf. Jeremias 1969: 20, 49; Edwards *ISBE* 1: 128).

A full acceptance of the suggested identification would provide a picture in which Annas opposed Jesus for economic, not simply theological, reasons. A certain amount of evidence might be said indirectly to support it. The family of Ḫanan is decried for its conniving practices in Talmud (*Pesaḥ.* 57a), and problems of extortionate pricing by merchants of sacrificial animals are addressed in Mishnah (*Ker.* 1.7). But to make of Annas a 1st-century equivalent to Shylock on the basis of such evidence is more to indulge the rhetorical reference to Annas in the NT than to describe it. The fact is that Ḫanan is a common name in rabbinica; indeed, the name is used to refer to a real or fictitious scoundrel on some occasions (cf. *B.Qam.* 37a, 115a). To ascribe the sitting of the merchants, the resulting occupation of the temple by Jesus, and the complicated proceedings against him all to Annas' venal motives, and simply because he bore a common name which was also associated with vendors, appears tendentious in the extreme. The very prominence of Annas and his family during the period, and his possible relationship to Caiaphas, suggest that the sitting of the merchants (and their subsequent removal) occurred with his approval. But to speculate on his character—and especially to suggest that his motivation was economic—is to proceed far beyond the evidence and to desert exegesis in favor of a long-discredited, apologetic stance.

BRUCE CHILTON

ANNIAS (PERSON) [Gk *Annias* (Ἀννιας)]. Ancestor of a family who returned from Babylon with Zerubbabel (1 Esdr 5:16). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:17; Neh 7:23). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

ANNIUTH (PERSON) [Gk *Anniouth* (Ἀννιουθ)]. See BANI.

ANNUNUS (PERSON) [Gk *Announos* (Ἀννουνος)]. One of the priests or Levites recruited upon Ezra's request to return with him to Jerusalem and serve in the temple (1 Esdr 8:47—Eng8:48; not included in the parallel list in Ezra 8:19).

There is a discrepancy between Ezra 8 and 1 Esdras 8. Ezra 8 says that Ezra assembled only Levites missing from the first group to return to Jerusalem (8: 17–19). Ezra takes measures to secure the "ministers" (*mšrtym*), apparently for menial work. In 1 Esdras, both priests and Levites are absent, and Ezra sends for priests (*tous hierateusontas*; 1 Esdr 8:45—Eng8:46).

The list of the priests and the temple servants in 1 Esdr 8:46–48—Eng vv 47–49 seems to be excerpted from a complete list. In Codex Alexandrinus, Annunus is identified as the brother of Jeshaiah, another priest in the same list. Codex Vaticanus omits the first half of 1 Esdr 8:47—Eng v 48, where both Annunus and Jeshaiah (his brother) are mentioned.

The absence of the name in Ezra 8:19 leads C. T. Fritsch (*IDB* 1: 138) to suspect that a corruption of *wĕʿittô,* "and with him," in Ezra 8:19 gave rise to the name Annunus.

SIEGFRIED S. JOHNSON

ANTHROPOLOGY AND THE OT. As an academic discipline, anthropology is organized differently in different countries. In North America the subject is often called cultural anthropology. It is interested in the comparative study of societies and cultures, seeking to formulate general theories about how culture changes in response to such things as alterations in the environment, population increase and control, and the introduction of new technologies. In Britain it is usually called social anthropology, focusing on the study of single societies. The aim is not to produce general theories of culture, but to show how in each given case a society's beliefs, kinship system, exercise of power, etc., form a coherent set of symbols which reflect and constitute that society's understanding of the world.

A. The Interface with OT Study

The way in which anthropology is organized in different parts of the world has affected the way in which it has been used in OT studies. Thus, recent attempts in North America to reconstruct the origin of the Israelite tribes and the emergence of the Israelite state have depended on general theories of culture change. In Britain attention has been focused upon OT sacrifice and ritual as part of a set of coherent symbols. The continent of Europe has been more influenced by the British than by the North American approach; indeed, the French sociologist E. Durkheim exerted considerable influence upon the development of British social anthropology in the present century.

Twenty years ago there was broad agreement in OT study on a number of issues that overlapped with anthropology. With regard to Israel's origins, it was believed that the Israelites were seminomads who had entered Canaan either forcefully or peacefully, and had then settled down (sedentarized). The intellectual life of the ancient Israelites was thought in many ways to resemble that of "primitives": they could not distinguish easily between the individual and the group, and the personality of one person could merge into that of another so that, for example, a messenger was simply an extension of the personality of whoever had given him the message. It was held that in matters of worship the Israelites used sacred drama which differed little from magical beliefs, and that, by enacting the humiliation of the king and his restoration, the Israelites sought to influence the agricultural cycle for the coming year. It was also believed that the Israelites had little idea of scientific causation and therefore readily regarded as miraculous what modern observers would explain in natural terms.

In the past twenty years the picture has changed considerably. The view that the Israelites were sedentarizing seminomads has been strongly challenged by an alternative theory: that they were peasants who had rebelled against their Canaanite overlords and had established an alternative, egalitarian society. The previous view of the intellectual life of the Israelites has been shown to rest upon ideas about primitives that hardly apply to the Israelites, who, culturally, were far more advanced.

In Britain the impetus for a new evaluation came from anthropologists themselves. E. R. Leach applied to the opening chapters of Genesis the interpretation of myths then being pioneered by the French sociologist C. Lévi-Strauss, and he followed this up with a paper entitled "The Legitimacy of Solomon" (1969). However, Leach believed that OT narratives had no historical value whatsoever, and that they were texts which sought to resolve the paradox that Israel was a separate people yet in full contact with other peoples. At the same time, by inviting refutation, Leach's articles forced British OT scholars to become familiar with the type of anthropology to which Leach was indebted. Probably the most influential work at this time was that of anthropologist Mary Douglas, which was both an attack on the idea of "primitive mentality" and an attempt to show that the animals listed in Leviticus 11 were

prohibited because they were anomalies with respect to the classification of the world implied in Genesis 1 (see below).

In North America the impetus came not from anthropologists but from OT scholars, arising from their strengths in archaeology and in the study of the ANE in general. The mention of nomads in the Mari correspondence, of *šasu* and *sutu* nomads in Egyptian and Akkadian texts respectively, not to mention the *ḫabiru* of the Amarna and other texts, made it necessary to turn to anthropology to try to discover the precise nature of these groups. G. E. Mendenhall was the first scholar to question the seminomad "sedentarization" hypothesis on the basis of studies derived from anthropology (1962), although his contribution was overlooked until it was restated in his *Tenth Generation* (1973). Since then, especially in North America, there has been an explosion of interest in anthropology among OT scholars, although most of the attention has focused on Israel's origins and the nature of Israelite prophecy.

B. Israel's Self-awareness

As noted above, Mary Douglas' essay "The Abominations of Leviticus" (1966: 41–58) argued that certain creatures are prohibited in the OT because they are anomalous. According to Genesis 1, the world is divided into heavens, earth, and seas; and the creatures appropriate to these areas are, respectively, those with wings and two legs, those with two legs who walk or four legs who go on all fours, and those with fins. Other creatures, such as those with wings and four legs, or land creatures with no legs at all, do not fit the classification and are therefore prohibited. Although Douglas' explanation can be faulted at a number of points, her intention was to see these prohibitions as something essentially logical, given the Israelite world view. The prohibitions were part of a complex set of social mechanisms that ordered the world and marked off the sacred from the secular.

This sort of approach was taken further by Douglas Davies (1977) and applied to Israelite sacrifice. The complicated ritual for the rehabilitation of the "leper" in Leviticus 14 shows how the Israelites divided the world into sectors with strong barriers, that needed powerful social rituals to enable them to be crossed. The restored leper, for example, after shaving off all his hair, washing all his clothes, and bathing, had to spend seven days in a sort of social limbo, inside the camp but outside his own tent. On the eighth day he again shaved, washed his clothes, and bathed, so that the final offerings for his full restoration to society could be made. In the Day of Atonement ceremony, there are very powerful rituals used to counterbalance the social effects of individual and corporate wrongdoing during the previous year. The entire sanctuary is cleansed by means of blood sprinkling, and a goat over whom all the sins of the people have been confessed is led across boundaries, from the sanctuary through the camp and out into the wilderness, symbolizing and effecting the removal of what is socially disruptive from the ordered relationships of the camp.

It becomes clear that, if Israelite self-awareness begins to be approached in this sort of manner, a quite different picture emerges from that of the "primitive" living in a mystical sort of communion with nature and fellow Israelites. Reality for the Israelite, in fact, was carefully ordered and structured; therefore, the task of future research should be directed toward elucidating this order more thoroughly. There remains, however, a different problem. When was Israelite self-awareness ordered in this manner? Was this self-awareness held by all the people, or just some of them? Leach was able to avoid this problem by supposing that OT narratives were devoid of historical (diachronic) value, resembling the (synchronic) data collected by a field anthropologist. Douglas Davies qualified his study by saying that views he described were those of the Israelite leaders after the Exile. It is obvious from the OT itself, however, that diverse self-conceptions existed in Israel: the common people and their rulers often refused to accept the prophetic interpretation of Israel's religion, and many Israelites found the fertility religion of Canaan more attractive than the ethical monotheism of the prophets. Thus, for all its value, study of the mental life of the Israelites in terms of a single coherent system of symbols cannot deal with the diverse religious conflicts recorded in the OT.

C. Israelite Prophecy

Recent work on Israelite prophecy from an anthropological perspective has been able to make a start on this matter of religious conflict. Whereas older scholarship dealing with prophecy was interested in the

mental states of the prophets (esp. the role of "ecstasy"), the anthropological approach has sought to identify the part played by society in the processes by which people become prophets and act out their prophetic roles. Petersen (1981) divides Israelite prophecy into two main types: peripheral possession prophecy and central morality prophecy. The former is common among groups who are at the margins of society, their leaders have support groups, and their god is sometimes amoral. Central morality prophets are active in times of national difficulty, often lack support groups, and affirm the standard morality of the state. This typology certainly makes sense of some OT material. The prophetic groups led by Elijah and Elisha resemble peripheral possession prophets, while Isaiah and Jeremiah resemble central morality prophets. Undoubtedly there is more to the matter than this, but the anthropological approach immediately sets up a typology unavailable to approaches simply asking questions that ignore social dimensions. Long (1981) has investigated the matter of conflict between prophets and regards such conflict as common, if not normal. In the case of such prophetic conflict, Wilson (1980) suggests that the outcome is often determined by the relative strengths of the prophets' support groups. This is an area where much remains to be done.

D. Israel's Origins and Early Social Organization

Work on Israel's origins has engendered keen debate and posed fundamental questions of method. Mendenhall (1962; 1973) and Norman Gottwald (1979), whose somewhat similar but different accounts of Israel's origins in terms of a peasants' revolt have challenged the seminomad immigration theory, are dependent upon a type of American cultural anthropology which assigns an important role to factors such as technological innovation and population growth and response in the development of societies. This is one reason why both have eschewed the idea of Israel's origins in terms of the immigration implied in the book of Joshua in favor of an explanation in terms of developments within Canaanite society itself. On the other hand, Niels Peter Lemche (1985), in what is the most comprehensive discussion in this area so far, has insisted that OT scholars must be as widely read as possible in the anthropological literature, and must be aware of the differing schools in anthropology and their assumptions. He maintains that the aim of such reading must be to circumscribe the use of common sense by indicating how societies actually function and what manifestations are likely and unlikely.

Lemche shows that nomadism is a very complex phenomenon encompassing peoples without leaders as well as peoples with princely families that traditionally offer leadership. Nomads may well be related to settled peoples in nearby villages. Some may become day laborers out of necessity and be forced to settle down. Others may settle down because they become rich, investing their surplus in land. There is no particular type of land especially suited to nomadism, and sedentarization is not something particularly desired by nomads. Settling down involves losing freedom to move around, and it may bring the likelihood of having to pay taxes. Nomadism is a multi-resource phenomenon which adapts to the prevailing political circumstances.

Lemche rejects the idea that farmers and cities are often in conflict, a view central to Gottwald's work. He cites examples of farmers living in close harmony with cities. Indeed, cities may be best defined as geographical collections of disparate units. On segmentary and egalitarian societies, Lemche shows that segmentary societies are not necessarily egalitarian, and that societies that have an egalitarian ideology do not necessarily have egalitarian praxis. He rejects on anthropological grounds the views of Mendenhall and Gottwald, and although he does not himself subscribe to an immigration type view of Israelite origins, he indicates that it cannot be ruled out on anthropological grounds.

Lemche also devotes a section to an analysis of early Israelite social structure. In the late 1970s a consensus seems to have emerged according to which Israelite society consisted of three major elements: family, clan, and tribe, indicated by the Hebrew terms *bêt ʾab, mišpaḥâ* and *šebeṭ.* Tribes were geographical associations of groups. Lemche convincingly challenges this consensus and establishes an alternative. He argues that the term *bêt ʾab* designates both the family and the lineage, the difference between the two being that a family is a residential group while the lineage is a descent group that links families. He also argues that *mišpaḥâ* overlaps with *bêt ʾab* in designating a lineage, and that it probably also designates a maximal lineage, that is, a reckoning of descent from a family to a founder of a tribe or

major group. Lemche notes that *mišpaḥâ* is much less frequent in the OT than *bêt ʾab,* and that no leader comes from a *mišpaḥâ.* On the evidence available to us from the book of Judges, Israelite tribes were not segmentary egalitarian societies. They were territorial groups with potential for united action under single leaders. Even the so-called "minor judges" of Judges 10:1–5 and 12:8–15 seem to have been wealthy and powerful individuals, with large families. In the case of three of them, it is noteworthy that a tribal area is called a land (Heb *ʾereṣ;* cf. Judg 10:4; 12:11, 15).

On the matter of the origin of the tribes, anthropology does not give much assistance. It seems likely that Gottwald's view cannot be established on anthropological grounds, namely, that Israelite tribes were not "true" tribes, but were secondary formations in response to the oppressive policy of Canaanite cities. Although some of the tribal names, e.g., Judah and Ephraim, may be geographical designations taken over by groups living in those areas, this is not true for all tribal names, some of which are clearly personal names. Some sort of nomadic origin cannot be ruled out in these cases, although it is difficult to say when and under what circumstances these groups became sedentary. Another difficult question is that of the origin of the twelve-tribe system. Granted the now widespread rejection of Noth's theory that Israel was a twelve-tribe amphictyony in the period of the judges, it may be necessary to look for the origin of the twelve-tribe system in the united monarchy of David and Solomon, intended to be a legitimation of the rule of Judah over a group of tribes that had not previously been united, unless they had united under Saul in the face of the Philistine threat. It is clear from texts such as Genesis 49 and Deuteronomy 32 that tribal fortunes varied and that some tribes, for example Simeon, were absorbed into other tribes. It is usually held that these adjustments must have taken place before the monarchy; but this assumes that we know more about Israelite tribes than we actually do. If tribal adjustments involved shifts in inner loyalties that posed no threat to the state and its administration, then adjustments could have taken place during the monarchy, and may have been reflected in texts such as Genesis 49 and Deuteronomy 33.

In fact, the way in which anthropology is used in connection with Israel's origins will depend on the view that individual scholars take of the date and manner of composition of the Pentateuch and the Deuteronomic History. If the trend toward dating the "Yahwist" source to the postexilic period becomes anything like a consensus, this will have important consequences for the use of anthropology in determining Israel's origins. In short, anthropology can indicate what is likely and what is not likely in the structure and function of societies, but it cannot be a substitute for historical critical study of the OT text.

E. Emics and Etics in OT Study

A fundamental difference between Mendenhall and Gottwald concerns the place of Israel's religious ideology in the formation of the Israelite people. For Mendenhall, the revolt that brought Israel into being was inspired by the ideology of the God who had redeemed a group of slaves from Egypt and had made a covenant with them. For Gottwald, religious ideology was the *product* of economic and social circumstances, not the cause; therefore, Israel's religious ideology resulted from the formation of an egalitarian society in the period 1250–1050 B.C. In taking this view, Gottwald has put the issue of "emics" and "etics" on the agenda of OT study.

One of the main sources for this part of Gottwald's approach is the American anthropologist Marvin Harris, who has provided a persuasive presentation of what is known as cultural materialism (1979). Following Marx, Harris maintains that the mode of production in the material life of a society determines the general character of its social, political, and spiritual processes. If society is divided into infrastructure, structure, and superstructure (with the first term designating mode of production, population size, patterns of work, etc.; the second term designating kinship systems and political life, etc.; and the third term designating myths, symbols, magic, and religion), then changes in the infrastructure will affect the structure and superstructure, but not vice versa. (For example, if an animal is hunted to near extinction, it will be necessary for a society to hunt a different animal. This may entail changes in social organization and may also result in myths that explain why the near extinct animal is "taboo.") Harris' approach is etic, that is, he wishes anthropology to make quasi-scientific generalizations about societies that can be verified or falsified. Emic explanations, on the other hand, which Harris eschews, are

explanations of societies in terms of what their members think about themselves. As such, emic explanations are not open to verification or falsification.

The difference between etic and emic explanations is well illustrated by Harris' disagreement with Mary Douglas about why pigs are unclean animals in the OT. Douglas' explanation is emic, that is, in terms of the world view of the OT itself. Pigs do not fit the classification system in which four-legged animals must chew the cud and part the hoof. Harris' explanation is etic, that is, in terms of a general theory of culture. According to him, the pig is prohibited because its natural habitat—forests and the edge of swamps—was not readily available in Israel and in other parts of the NE, whereas it was available, for example, in Europe (where there was no such prohibition). Harris therefore makes a good case for etic explanations and attacks the sort of British social anthropology described above (see B). While taking Harris' point, however, it is difficult to see how Israelite sacrifice could be explained in purely etic terms. There are parts of human life, such as uncertainty, illness, and death, that are essentially questions of human existence, and which demand answers that belong to the realm of religion and symbolism.

Gottwald identifies himself as a cultural materialist (1979: sec. 50–51) and at the end of his book he makes a plea for a biblical sociology. This would investigate the infrastructure of ancient Israel at every stage of its development, with a view toward establishing how changes in the infrastructure led to changes in social organization and religious belief. There is also a hermeneutical dimension to this. Biblical sociology would investigate the fortunes of what Gottwald holds to be the pristine manifestation of Yahwism, namely, the establishment of a liberated egalitarian society, which was eventually eclipsed when power was centralized under the monarchy. The OT approached in this way becomes a challenge to establish today a liberated egalitarian society appropriate to our world.

Etic studies are already beginning to become a feature of OT scholarship, especially with the investigation of Iron Age agriculture in Israel. In the matter of the formation of the Israelite state, it is recognized that environmental factors played a part which, compounded with the Philistine threat, brought about the need for a new type of social organization (see Frick 1985). Yet etic approaches must be combined with the fact, attested in the anthropological literature, that individuals such as Saul and David played a part in facing crises, and can substantially affect their outcome.

Serious anthropological study of the OT is only just beginning; but, compared with the situation twenty years ago, OT scholars now have available to them resources that should enable considerable progress to be made.

ANTHROPOMORPHISM. See YAHWIST ("J") SOURCE.

ANTILEBANON (PLACE) [Gk *Antilibanos* (Ἀντιλιβανος)]. Geographical region NE of Galilee situated between Lebanon and Damascus, the major feature of which is a range of mountains running SW to NE (Jdt 1:7). The region of Antilebanon is separated from Lebanon by the Al-Biqaʿ Valley (known as Coele-Syria in antiquity), the N extension of the Rift Valley. Mt. Hermon (2750 m), known as Sirion to the Sidonians and Senir to the Amorites (Deut 3:9), dominates the S part of the Antilebanon region and the range of mountains which also has this designation.

The Antilebanon region receives mention in the biblical tradition only in Jdt 1:7 within a list of regional names which includes Cilicia, Lebanon, and Damascus. The Vulgate translation, which generally is shorter than the Greek text, omits any reference to it. In the story of Judith the "Assyrian" king, Nebuchadnezzar, seeks assistance from the W part of his empire in a war against King Arphaxad. Antilebanon, part of Nebuchadnezzar's empire, refuses along with many other W regions to send him assistance. Because of this challenge to his authority Nebuchadnezzar initiates a military campaign to enforce his rule, and this sets the scene for the story of Judith's heroic feat.

Although Antilebanon is not mentioned by name in the OT, presumably reference is made to this region or portions of it under other names such as Lebanon and Mt. Hermon.
L. J. PERKINS

ANTI-MARCIONITE (GOSPEL) PROLOGUES. Short prefixes to the gospels of Mark, Luke, and John (if one existed for Matthew, it has been lost) which at one time were widely believed to have an anti-Marcion bias. The anti-Marcionite Prologues were found together for the first time in the 8th century Latin ms T (Toletanus) and later in the mss FNS. They were designated "anti-Marcionite Prologues" by Donatien de Bruyne (1928), who argued that these prefixes formed a single literary unit, were anti-Marcion in sentiment, and were written in the last half of the 2d century (ca. 160–180). He also claimed that Irenaeus, ca. 180 C.E., was acquainted with them and that the *Monarchian Prologues,* ca. 4th century, depended on their Latin translations. It is generally agreed, as De Bruyne claimed, that all of these prologues were originally written in Greek even though the only surviving Greek ms is of the Lukan prologue (*Athens 91* or *=A*). The Mark and John prologues are only found in Latin.

Although many leading scholars after De Bruyne (e.g., Julicher, Lietzmann, and especially Harnack) agreed with his conclusions, more recently scholars have moved away from those views, contending that, with the exception of the prologue to John, the prologues are neither anti-Marcion in sentiment nor is there a common literary thread which links them together. Further, some scholars argue that they may have originated sometime after the mid-4th century and perhaps followed the *Monarchian Prologues,* though others continue to believe that the Markan and Lukan prologues stem from a time before Irenaeus. The evidence is inconclusive. What is more certain is that the Lukan prologue circulated at first independently of other prologues as is obvious from its inclusion of other writings (the Apocalypse and the gospel of John), its manifestly different style, and its considerably longer length than the prologues to Mark and John.

The prologue to John continues to be the most disputed of the prologues because of its claims that John the apostle dictated his gospel to Papias and that he (John) both opposed and condemned Marcion. Most scholars today agree that this prologue is both anachronistic and historically false. It appears that its author based some of his comments on a faulty reading of Tertullian's *Adv. Marc.* 4.5,3. The current lack of confidence in the prologue to John, however, does not carry over to those of Mark and Luke, whose importance for critical studies should be examined separately.

The prologues support the widespread traditions of the Church regarding the authorship of the canonical gospels and they also suggest the importance of these gospels in the life and worship of the Christian

churches at least by the end of the 4th century. Their value for canonical questions is, however, limited because of the difficulty of dating them with precision.

LEE MARTIN MCDONALD

ANTINOMIANISM. The conviction that believers are freed from the demands of God's law by depending upon God's grace for their salvation (thus *anti* "against" + *nomos* "law"). Although the word "antinomian" is not found in Scripture, Scripture's own history tells of the struggle to maintain balance between law and grace—between an appreciation of God's merciful and unconditional response toward God's people on the one hand, and their obliged and obedient response to God's law on the other. Believers, who emphasize the unconditional promises that God makes when covenanting with His people, but then downplay what God expects of His people, tend toward an antinomistic faith; the opposite emphasis leads to legalistic faith.

The OT does not speak of an antinomistic threat to Israel's covenant with God. It does, however, speak of two different covenant traditions, sometimes placing them in tension (Hillers 1969; Brueggemann 1979): the Davidic tradition which emphasizes God's unconditional commitment to Israel, and the Mosaic which emphasizes Israel's obligations to its God. When Israel understood itself primarily in Davidic terms, as God's prophets were inclined to point out, it was inclined to depreciate God's Torah both as gospel and as demand.

Earliest Christianity's antinomistic struggles are clearly envisioned by the NT (Wall 1987). Paul battled legalistic religion by emphasizing the importance of what God does through Christ to fulfill the promise of salvation. According to Paul's "theologic," moral righteousness is the *anticipated* outcome of God's justification of those who depend upon Christ's death and resurrection rather than works in keeping with the Law (Torah). Such faith places the redeemed community "in Christ"—a place where God's spirit can now lead God's people to ethical fruit (Gal 5:16–25), and where the "righteousness of God" has now released them from the obligation to obey Torah as a condition of covenant blessings (Rom 7:1–8:17; cf. 2 Cor 5:21). This moral calculus, which clearly subordinates ethical concerns to theological convictions, led some of his converts to lawlessness (1 Corinthians) and his opponents to accuse him of a disregard for ethical conduct (Rom 3:1–8).

In response, Paul clarified that God's grace brings liberty from sin and not liberty to sin (Rom 6:1–11). However, the antinomian trajectory, first sounded within some gnostic communions of the 1st and 2d centuries (e.g., Valentinians) with continuing echoes in some charismatic communions today, finds most of its biblical warrants from Paul (and to a lesser extent from John, who always refers to *nomos* in a pejorative way). Thus, one must look to the non-Pauline corpus for Scripture's own built-in corrective. The writer of Hebrews reminds the reader that salvation itself is jeopardized if the demand of the gospel is forsaken (5:11–6:8). James speaks of the eschatological banishment (2:12–13) of the "worthless religion" (1:26) which confesses right faith but fails to obey God's law of mercy (2:14–26); eschatological Israel is justified by works, not by *sola fide* (2:24). 2 Peter condemns a Pauline group for promising moral freedom (2:19) when virtue is what saves (1:5–11). Finally, 1 John was no doubt written against gnosticizing Christian teachers who claimed to have a sinless nature (1:10) and so lived without sin (1:8). According to 1 John, to act upon their moral claims would yield a life of "lawlessness"—an indifference to Christ's death (2:1–2) and to sin, and thus to God's law of love (3:4–15).

While the synoptic evangelists depict Jesus as a Torah-observant Jew (Moo 1984), Luke's emphasis is on the risen Jesus, who viewed the Law primarily as God's *promise,* not His demand (Wilson 1983)—an antinomistic disposition. Matthew's emphasis, on the other hand, is on a scribal Jesus who viewed obedience to his rigorist interpretation of Torah as necessary for salvation (5:17–20). Further, the evangelist's use of the word group *anomia/anomos* polemicizes against antinomians in his own church (Barth 1963).

Thus, these self-correcting, canonical "conversations" call the Church from the margins of the gospel to its center, where both God's grace and God's demand are found.

ROBERT W. WALL

ANTIOCH (PLACE) [Gk *Antiocheia* (Ἀντιοχεια)]. A number of cities built by various Seleucid kings bore the name "Antioch." The two that had the most important impact on the peoples of the Bible were the Antioch in Pisidia (south central Turkey) and the Antioch on the Orontes River in Turkey near the modern border with Syria.

ANTIOCH OF PISIDIA

Pisidian Antioch was a city in south central Turkey founded in the 3d century B.C. by one of the Seleucid kings, probably Antiochus I or Antiochus II, and initially occupied by settlers from Magnesia on the Maeander in Ionia. The city has been identified with ruins just east of the modern town of Yalvaç (38°17′N; 31°11′E). Around the middle of the 2d century B.C. a fine Ionic temple was built at the extramural sanctuary of Mên Askaênos, an Anatolian deity and the most important god of the city (Mitchell and Waelkens fc., chaps. 2–3). Little else is known of Antioch's history in the Hellenistic period, but it became prominent in 25 B.C. when the Roman emperor Augustus annexed the central Anatolian province of Galatia, to which it belonged, and refounded the city as a Roman colony populated by veterans from the Roman legions V and VII (Levick 1967: 29–41). It swiftly became an important and successful commmunity. Between 15 B.C. and A.D. 35 three members of the imperial household—Drusus, brother of the future emperor Tiberius; C. Domitius Ahenobarbus, the father of the emperor Nero; and L. Cornelius Sulla Felix, son-in-law of Germanicus—as well as two Augustan generals, P. Sulpicius Quirinius and M. Servilius, held honorary magistracies in the colony. At the same time the city center was adorned with a magnificent series of buildings connected with the imperial cult: a Roman-style podium temple set in front of a semicircular portico at the head of a large colonnaded square, a colonnaded street named after the emperor Tiberius, a triple arched gateway, which was completed in A.D. 50, and a staircase linking the street with the imperial sanctuary (Robinson 1926; Mitchell and Waelkens fc., chap. 4). Also during this period members of Antioch's leading families began to hold important positions in the Roman military and administrative hierarchy, and the elite of the colony were among the first easterners to enter the Senate at Rome (Levick 1967: 103–20; Halfmann 1979). The colony continued to prosper through the 2d and 3d centuries and under Diocletian became the metropolis of the newly constituted province of Pisidia. An early 4th-century governor, Valerius Diogenes, was responsible for an important building program and was also active in the persecution of Christians (*MAMA* 1 no. 170; Calder 1920), but by the end of the century Antioch had an orthodox bishop in correspondence with St. Basil, and had witnessed the construction of several major churches (Mitchell and Waelkens fc., chap. 2 and appendix 1; Kitzinger 1974).

The time of Antioch's greatest prosperity came during the 1st century after its refoundation by Augustus, and it is against this background that the most famous episode in its Christian history, St. Paul's mission, should be viewed. Paul visited Antioch three times (Acts 13:13–52; 16:1–6; 18:23—on

the last two occasions Antioch is not named but a visit may be presumed). On his first missionary journey Antioch was his first stopping point in Asia Minor, and the first place where he proselytized among both gentiles and Jews (Acts 13:42–49). This visit, perhaps in A.D. 47, occurred precisely as the great building program for the city center was nearing completion. The choice of Antioch reveals much about the character and strategy of Paul's mission. He had come from Perga in Pamphylia, on Turkey's south coast, where he had not stopped to preach, and before that from Paphos on Cyprus, where he had won over, at least temporarily, his most distinguished convert, the governor Sergius Paulus (Acts 13:5–12). We now know that Sergius Paullus (as his name should be written) himself came from Pisidian Antioch: members of his family received honors there and intermarried with another prominent local family, the Caristanii. They also acquired large estates in central Anatolia (Halfmann 1979; Mitchell, *ANRW* 2/72: 1073–4; Mitchell 1981). It is overwhelmingly likely that Paul, who had almost certainly adopted the Latin name in place of the Hebrew Saul in recognition of the meeting with Sergius Paullus (Dessau 1910), was directed to Antioch by his recent convert. There were other reasons why Antioch should have been an attractive destination. The clear purpose of Paul's journeys was to visit major cities in the eastern parts of the Roman Empire: colonies such as Alexandria Troas, Philippi, and Corinth; or leading provincial cities like Thessalonica, Beroea, Athens, and Ephesus. The ultimate goal, demonstrated not only by events but by the early Epistle to the Romans, was Rome itself. Although in the event most of Paul's known converts came from lower-class backgrounds (Meeks 1982), he clearly had ambitions to win over the leaders of society in the cities. Pisidian Antioch was a natural target for his activities. It not only contained a large population of Roman citizens, but was even divided, following Roman practice, into wards (*vici*) which were named after prominent landmarks or institutions of the city of Rome itself (Levick 1967: 76–78). The splendid buildings associated with the imperial cult were on a scale that could hardly be paralleled in the Greek part of the empire and emphatically underlined these associations. Antioch would have appeared to Paul as a model of the capital itself.

Paul's first addresses in Antioch and nearby Iconium were in the synagogues, which may have had their origins in the Hellenistic period when the Seleucid Antiochus III is known to have settled Babylonian Jews in Phrygia (Josephus *Ant* 12 § 147). He reminded them of the tradition to which they belonged and identified Jesus as the savior descended from David whose coming had been prophesied to the Jews. The address contains one of Paul's most explicit descriptions of the crucifixion and resurrection as proof of the fulfillment of those prophecies. According to Acts, the mission attracted so much attention that on the Sabbath following the first address almost the whole city, Jew and gentile alike, turned out to hear Paul, causing the leaders of the Jewish community to turn against him. They looked for support from leading persons in the city and from highborn women who were "god-fearers" (*sebomenai*). This expression distinguishes the group from the *Ioudaioi,* Jews in the full sense, and it is illuminated by other passages in Acts which separate Jewish sympathizers from Jews, and by inscriptions from Asia Minor which make clear that these divisions were characteristic of most of the communities of the Diaspora (Millar and Vermes 1986: 150–77). Since the leading women of Antioch were certainly members of the Roman colonial families settled by Augustus, it is clear that, as in contemporary Rome, Judaism was winning converts among the aristocracy of the period.

Some twenty years after Paul's visit to Antioch, the Phrygian city of Acmonia, which also had a prominent Roman community, had a synagogue built with funds provided by a highborn woman of Galatian descent, Iulia Severa. She had close associations with the locally established Roman family of the Turronii, one of whom was the leading member of the synagogue, another a high priest of the Roman imperial cult (*MAMA* 6 nos. 264–65). This cultural milieu is strikingly similar to that implied by the account in Acts of Paul's experience in Antioch.

In the longer term the mission failed. Apart from the information that can be extracted from the apocryphal 2d-century *Acts of Paul and Thecla,* relating the martyrdom of one of Paul's notable converts, there is virtually no trace of Christianity in Pisidian Antioch before the peace of the Church in the 4th century A.D.

STEPHEN MITCHELL

ANTIOCH OF SYRIA

Antioch of Syria was built on the Orontes River (36°14′N; 36°07′E; now in modern Turkey) about 300 B.C.E. by Seleucus I. It continued to grow in size and influence during the Hellenistic period. Legends and some archaeological remains suggest that pioneering Greeks had settled in the area before the city was founded. Its lush river valley and the plain to the north—which included a lake—normally provided ample supplies of grain, olives, grapes, and fish. From springs to the south in Daphne, the favored summer home of the wealthy, fresh water reached the city via two aqueducts. Antioch flourished, despite its vulnerable military position between the mountains north of it and the broad valley around it. Seleucia Pieria, its port, lay less than a day's walk from Antioch. The two cities were connected by the Orontes, which usually carried cargo from the port to the metropolis. A break in the Lebanese mountains fostered trade with the East. Chinese porcelain was discovered in the excavations and a silk industry still exists in the village of Samandağı, not far from the site of Seleucia. Antioch also became an important military center after it was incorporated into the Roman Empire in 64 B.C.E. and served as a staging area for wars between Rome and its eastern adversaries.

When Seleucia Ctesiphon was destroyed in 165 C.E., Syrian Antioch ranked as the third largest city of the Roman world next to Rome and Alexandria. Ancient and modern estimates of its size vary. Ancient sources range from 600,000 (Pliny *HN* 6.122 for Seleucia Ctesiphon's population) to 200,000 (Chrysostom *Pan. Ign.* 4). Modern historians suggest about 100,000 in the 1st century C.E., but if the metropolitan region as well as slaves are included, the number well may exceed this conservative estimate.

The site is still breathtaking. On a clear day one can see from Mt. Casius southwest of Antioch all the way to Cyprus. Temperatures are moderate and rainfall is usually sufficient. But frequent earthquakes and the shifting trade routes led to rapid decline after the Arab invasions. Modern Antakya is a bustling small city that occupies much of the ancient site. Ruins of the walls, the hippodrome, a large structure that might be the foundation of Diocletian's palace, masonry works to control flooding, and portions of the aqueducts can still be seen. The most important artifacts, however, are the magnificent mosaics found during the 1932–39 excavations (Princeton University and the Sorbonne). Most of them are displayed in the Antakya museum (others at Princeton and the Louvre). They form perhaps the best single collection in the world.

Seleucus I built Antioch on the SE side of the Orontes, setting up the streets in a normal grid pattern, except for the main one. This thoroughfare, complete with temples and shops, baths and beggars, ran NNE from the S gate to a central point within the city and then NE to the E gate. It was finished in the Roman period when Herod the Great paved it with marble, and Tiberius later built the colonnades. Thus, in the 1st century C.E. Antioch was a beautiful, important center of commerce, culture, and political power.

A. Judaism

No specific piece of literature about Jews in Antioch was written in the city or addressed to the Jewish community there. But a number of sources important for the history of the city, including not only the Talmud and Josephus, but also the *Chronographia* of Malalas, contain information about Antiochene Jewry.

The earliest settlers of Seleucus' city—aside from the native Syrians and perhaps Greek pioneers—were his own soldiers, which included Cretans, Cypriots, and Jews. Josephus claims that the Jews were granted rites as a *politeuma,* a "political state," by Seleucus, but corroborating evidence for such early status is lacking (*AgAp* 2 §39, *Ant* 12 § 119, *JW* 7 § 43). The situation of the Jewish community in Antioch during the reign of Antiochus Epiphanes (175–163 B.C.E.) was apparently quite difficult. Epiphanes' successors returned brass votive offerings, previously sent by Antiochene Jews to Jerusalem and confiscated there, but large-scale repression of Jews at Antioch is unknown. 2 Macc 4:33–38 speaks of a former Jewish high priest, Onias II, who lived in greater Antioch, most likely at Daphne. He came to the metropolis after Jason had assumed the high priesthood. When Antiochus Epiphanes marched away from Antioch, he left a man named Andronicus in charge. Onias discovered that a certain Menelaus had stolen vessels of gold from the Jerusalem temple and sold them. Overwhelmed with anger, Onias made the deed public but, fearing for his life, he fled to a place of refuge in Daphne, possibly the temple of Apollo. Antiochus' deputy Andronicus agreed to give him protection but then killed him when he left the sanctuary. Andronicus' reason was simple: he had in his possession some of the golden pieces Menelaus stole.

Even though its size warranted respect, the Jewish community often did not fare well with the general populace of Antioch. A rebellion under Demetrius II (145–139 B.C.E.) was put down not only by the ruler's Cypriot mercenaries, but also by troops he requested from Jonathan of Israel. Thus Jewish soldiers were among those who ravaged the city and killed a number of its Jewish citizens. Alexander Jannaeus of Israel later refused to recruit Syrian troops for his army, perhaps because of their hatred for Jews (Josephus *Ant* 13 §137; 1 Macc 11:45–47).

After the coming of the Romans, Jews at Antioch showed their continued importance, a power that both exalted their position and made them objects of envy. Between 30 and 20 B.C.E. Herod the Great used his enormous wealth to demonstrate his allegiance to Rome by paving the main street of Antioch with marble (Josephus *JW* 1 §425; *Ant* 16 §148). In 9–6 B.C.E. a Jewish emir, a "military commander," from Babylon named Zamaris was allowed to take up residence in greater Antioch. Because he brought 100 relatives and 500 mounted bowmen, he was settled north of the walled city in the plain. That decision implies that some Jews were already living there, perhaps as farmers (Josephus *Ant* 17 §23–27).

When Caligula decided to have a statue of himself as Zeus made and set up within the Jerusalem temple, he ordered the governor of Syria, Petronius, to carry out his will. The statue was constructed at Sidon. Either there or at Ptolemais Jews offered their first protests. But a strange account of an Antiochene circus riot between Blues and Greens during the governorship of Petronius (39–41 C.E.), may be related to Caligula's plan. Petronius supported the Greens and so did the Jews. The Blues were angered by the games, became violent, eventually burned at least one synagogue, and killed a number of Jews. Perhaps the Jewish community wanted to influence Petronius quietly through the available city institutions by supporting his party. Whatever their intention, they became the target of the riot (Malalas 244.15–245.1).

In the sixties, Antiochus, the son of a Jewish leader, rushed into a crowded theater and shouted that the Jews were plotting to burn the city. He led the angered crowd in making various Jews sacrifice to pagan gods or die, and was given command of troops who forced his people to break the Sabbath by working as they did on other days. A few years later, when fire broke out in the business and administrative center of the city and Antiochus repeated his charges, only the intervention of C. Pompeius Collega, the governor of Syria, prevented a pogrom (Josephus *JW* 7 §46–62).

The Roman general and future emperor Titus received much political attention with his triumphal entry into Antioch after the fall of Jerusalem in 70 C.E. A mass of Antiochene citizens pleaded with him to destroy their Jewish community, but he refused to annihilate the Jews, to expel them, or to withdraw their rights as a *politeuma.* Yet to please the citizens he took some of the booty from Jerusalem, bronze cherubim from the temple, and placed them at the Daphne Gate. At a higher place on the gate itself he put up statuary that probably depicted Aeternitas and thus reminded everyone of Rome's victory in Jerusalem. Since most of Antioch's Jews lived in the southern quarter around the Daphne Gate, they were continually

humiliated by these strong symbols of their defeat (Josephus *JW* 7 §96–111; *Ant* 12 §121–124; Malalas 281.4–5).

Both the influence and the financial position of Jews within the city waned even into the early part of the second century. When Rabbis Akiba, Eliezar, and Jehoshua came to collect support for Jewish scholars, the assembled funds were meager, nothing like the gold sent to Jerusalem in the earlier periods (*j. Hor.* 3, 48a). But by the end of the century, there is some evidence that the Jewish community was recovering. The Jew Asabinos was an owner of important property and a member of the city Senate (Malalas 290.14–20).

B. Christianity

No biblical literature explicitly claims that it was composed in Antioch; neither is any Scripture specifically addressed to Christianity in the city. Many NT scholars suppose that Matthew was written in Antioch. Meier, following Streeter (1924), has argued that Matthew originated in the city but, like Streeter, he offers only conjectural argument (Brown and Meier 1983). The claims rest on Streeter's contention that no gospel could have gained wide acceptance had it not come from a major center. Matthew was used by Syrian writers such as Ignatius of Antioch, but no point in the text of the gospel demands that it was written in Antioch. Kingsbury (1977) claims on the basis of internal evidence that Matthew must have come from a wealthy urban church, and thus from Antioch, the great Syrian center. History does not require that wealth, culture, and influence exist only in great urban centers. But, given those strictures, Antioch is the best candidate for the place where Matthew was composed.

Shepherd (1956) argued that the letter of James was written in Syria, but he did not claim it came from Antioch. Following patristic citations, Fitzmyer supports Antioch as the city in which Luke wrote his gospel (Fitzmyer *Luke 1–9* AB). No clear detail in the gospel or Acts demands that they were composed in Antioch. Harnack (1908) proposed a written Antiochene source for the book of Acts. Jeremias (1966) and Bultmann (1967) basically agreed, but Dupont (1960) and Haenchen (1968) have disputed that suggestion.

The only firsthand report of events in Antiochene Christianity comes from Paul (Gal 2:11–14). The conflict between Peter and Paul focused on gentile and Jewish Christians eating together, perhaps celebrating agape feasts. They ignored either the strict laws about food or those concerning table fellowship, rules important to both conservative Judaism and conservative Jewish Christianity. According to Paul's account, Peter agreed to these meals and participated in them until men "sent by James" from Jerusalem challenged his position. Although Gal 2:11–14 provides the basis of this report, the entire letter forms Paul's defense of Christian freedom against the demands of Judaizers.

Peter's position deserves closer attention. Paul claims that "the rest of the Jews [i.e., Jewish Christians] and Barnabas" accepted Peter's decision. This acceptance evidently was based on the concern Jewish Christians had for their counterparts in Palestine. With Judaism still well established in that region, there would be difficulty recruiting new members were the initiates called upon to break the established customs. Peter's reversal may have been affected by his concern for evangelism in Palestine and unity in the whole Church.

If that description of the conflict between Peter and Paul is correct, then perhaps the following relationship between Galatians 1–2 and Acts 15 makes sense. The conference in Jerusalem debated the validity of gentile mission and probably occurred before Paul's confrontation with Peter. It decided that missions to Jews and to gentiles were appropriate. But the leaders did not foresee that areas of overwhelming gentile populations might lead to congregations including both Jewish and gentile Christians. In that atmosphere, all the food laws and the rules for table fellowship would come under pressure.

The relationship between Galatians and Acts 15 remains confused. The reported letter from the Jerusalem conference indicates that Jewish Christians compromised but did not sacrifice what was in their view necessary for Jewish mission and Christian unity. If Paul accepted such a decision, which is itself uncertain, he did not allow it to dictate his sense of growing gentile mission or his understanding of practice within Jewish-gentile congregations.

The background for this interpretation is provided by Acts 11:19–20. Haenchen (1968) and others find these comments to be editorial transitions of questionable historical value. But if a group of Jewish Christians fled the persecution in Jerusalem and preached in Antioch *only* to Jews, then an audience ready to hear Peter's position and that of James' representatives was in place. Paul was prepared to do almost anything consistent with the gospel to win followers to Christ (Philippians and Romans), but some Jewish Christians in Antioch originally were willing only to continue the tradition they knew. For them, Jesus was the Messiah of Jews. Yet others rejected such restrictions; they preached also to Greeks. The stage was set for conflicts not debated at the Jerusalem council.

Perhaps the early problems in Jerusalem concerning Jewish and Hellenistic widows had demanded discussions about the nature of the community in the midst of such cultural variations (Acts 6). Judaism had partially solved the problems by organizing itself into various synagogues; at least, we know that in Jerusalem there were synagogues of Cypriots and Hellenists. The earliest Christians, however, found such separations difficult. They apparently appointed functionaries to deal with the problems, one of whom, Nicolaus, had come from Antioch. But the details are slight, and the accounts questioned by many careful scholars.

Acts 11:26 indicates that the term "Christians" was first used in Antioch. No evidence suggests that it arose elsewhere. Tacitus, Suetonius, Pliny, and other non-Christians found some form of the word to be descriptive. Among the so-called Apostolic Fathers it occurs only in Ignatius' letters, and appears again in Theophilus' apology. The verb form in Acts 11:26 does not specify whether the Antiochene Christians gave themselves that name or it was given to them by outsiders. Malalas (252.8–13) reports that Evodius, the bishop who followed Peter, created the term, but his account primarily indicates that later Christians found it important to claim they chose the name for themselves. Bikerman (1949) has argued persuasively for the name being the Christians' choice, yet Downey (1961), who brilliantly connected the incident with the circus conflict during the reign of Caligula, saw the term as a Roman creation. If this word arose in a time when Jews were suffering a pogrom, the Christians' need to distinguish themselves from Jews and the authorities' need to identify them as non-Jews well may have coincided.

The reference to a large famine under Claudius (Acts 11:27–30) forms the context of yet another story about Antiochene Christianity. Some historians take the reference seriously as an attempt by Luke to tie his account to important events. Within the NT, the visit of Paul and Barnabas to Jerusalem with relief creates problems of chronology. Textual variants for Acts 12:25 demonstrate the difficulties early Christians had with this sequence. In various manuscripts Paul and Barnabas return "to Jerusalem," "from Jerusalem," or "to Antioch." Paul specifically claims in Gal 1:18 and 2:1 that he did not go to Jerusalem until 14 years after his conversion. That amount of time does not appear to elapse between Acts 11:29–30 and 14:25–15:35. Although it is plausible that Antiochene Christians aided Jerusalem Christians during a famine, the chronology is indecipherable.

In Acts 13:1 the mention of prophets and teachers as leaders suggests the earliest organizational pattern for the Christian community in Antioch. It is they who send Paul and Barnabas on a mission to the wider world. Those named are of interest. Symeon and Manaen bear Semitic names while Symeon's name *Niger* is ambiguous. Although it might refer to his skin coloring, in ancient literature it can also refer to temperament or some important event in the bearer's life.

Manaen, the *suntrophos* of Herod the Tetrarch, most probably was a man of position, who worked within the inner circle of Herod Antipas' court. The word *suntrophos* could mean only that he was the child of a wet nurse or a household servant, one who was a companion of the king during his youth. But it is unlikely that Luke would have emphasized that connection. Herod the Great had paved the central street of Antioch and doubtless had an embassy in the city to oversee the project. Perhaps his son also placed prominent people in the metropolis.

Lucius of Cyrene indicates another interesting relationship. The North African city of Cyrene had a large Jewish colony. Perhaps Lucius came directly from that city. He might have heard the gospel there or he might have become a Christian as a result of evangelization of a synagogue like that of the Cyrenes in Jerusalem or some other city. We cannot tell. At best we know that Lucius considered Cyrene to be his

home and that he was a Christian leader in Antioch. His Latin praenomen, Lucius, perhaps like that of Paul, suggests important Roman connections.

Acts does not speak of the confrontation between Paul and Peter at Antioch. But if Barnabas remained convinced of Peter's position as Paul describes it in Gal 2:13, his disagreement with Paul about John Mark in Acts 15:36–41 may have involved another issue. Barnabas and John Mark might represent a team that intended to preach more to Jews than to gentiles, or at least a twosome that was willing to leave the decisions of the Jerusalem council intact, and thus avoid the problems Antiochene Christianity presented for Jerusalem Christians.

Such an explanation strengthens the interpretation that Antioch developed into a center of Jewish Christianity led by people who did not agree with Paul's position. Some have found Acts 18:22–23 to imply that Paul returned, argued his case once more, and was again rejected. Yet that well may be a misinterpretation. According to Acts 15:40, when Paul and Silas left Antioch on the so-called second missionary journey, the church at Antioch supported their mission.

In Gal 2:13 Paul did not say that gentile Christians in Antioch had disagreed with his views. Furthermore Paul praises Barnabas in 1 Cor 9:6. The event described in that passage occurred after the disagreement in Antioch. Perhaps Paul and Barnabas were eventually reconciled. At least no one should claim that Pauline Christianity definitely lost its place in Antioch during the apostle's lifetime.

Ignatius, who flourished in Trajan's reign, turned certain Pauline positions upside down; others he kept fundamentally intact. He argued for monepiscopacy and his own personal authority, but fought both docetic and Judaizing treatments of christology. During the last half of the 2d century, various gnostics taught in the metropolis. Menander, Saturninus, Cerdon, Tatian, and Axionicus have all been associated with Antioch (Just. *Apol.* 1.26; Iren. *Haer.* 1.22; Eus. *Hist. Eccl.* 4.10–5.2; Epiph. *Anac.* 46.1; Tert. *Adv. Valent.* 4.3).

The Jewish Christian character of Antiochene Christianity is apparent. About 180 C.E. Theophilus, the bishop of Antioch, wrote a Christian apology so marked by Hellenistic Jewish arguments that it might almost pass for Jewish literature. And Eusebius (*Hist. Eccl.* 3.22, 36) employed lists of bishops for the metropolis that begin with Peter and fail to mention Paul. Even the later history of Antiochene Christianity often indicates the strength of gentile appeal, rooted in an appreciation for and appropriation of Jewish tradition and hermeneutic.

The metropolis served as a crucible in which more than one understanding of Christianity took shape. There Christianity became a world religion. It supported a mission to gentiles, insisted upon close connections to Judaism, and formed a Jewish-gentile Christian community.

C. Other Religions

In the process of founding Antioch, Seleucus I apparently offered sacrifices to Zeus Kasios in Seleucia Pieria, to Zeus Keraunios in Iopolis, and to Zeus Battiaios on the site (Malalas 198.23–201.3). The importance of Zeus is indicated by the various names under which he was represented in the city: Epikarpios, Nemean, Nikephoros, Philios, Soter, as well as the Olympian Zeus (Lib. *Ep.* 11.51; Just. *Epit.* 39.2.5–6; Julian *Mis.* 346B–D; Malalas 275.10; 283.4–9 [Jeffreys et al. 1986]). Only the Tyche of Antioch has a similar significance in the fragmentary remains from the metropolis. Her statue was created early and dominated Antiochene life (Malalas 201.1–2; 276.6–9). Statuettes and coins depict her presence. Apollo was worshipped at Daphne in a marvelous temple that burned in the 4th century C.E. (Lib. *Ep.* 11.94–99; Sozom. *Hist. Eccl.* 5.19). A beautiful statue of Artemis graced the city from Hellenistic times (Lib. *Ep.* 11.59–65).

The metropolis had an Isis cult; lamps, statuary, inscriptions, and mosaics, as well as the ruins of a temple, evidence its presence. The Romans built temples to their pantheon and set up statues to honor their former rulers. By the time of Augustus, deified emperors were well represented in the city. In 7/6 B.C. he appears on coins issued in Antioch as the high priest of his own cult. About 117 C.E., Hadrian built a small but lovely shrine to the deified Trajan and constructed a temple to the nymphs that included a statue of himself represented as Zeus (*Suda* s.v. Iobianos).

Julian (*Mis.* 346B–D), Libanius (*Ep.* 11.16–27), Livy (41.20.9), and Malalas (29.15–16; 30.2–3; 235.6–7; 246.10–19; 263.11–17; 283.4–9; 302.6–9; 307.5–20) also speak of temples or shrines built to honor Aphrodite, Ares, Asclepius, Athena, Calliope, Demeter, Dionysus, Hecate, Herakles, Hermes, Io, Jupiter Capitolinus, Kronos, Minos, the Muses, and Nemesis as well as statuary honoring many other gods. Most of these worship centers were active during the Roman period.

The famous Antiochene Olympic games always involved Greek and Roman gods. A Syrian Maiuma festival was incorporated into the celebrations for Dionysus and Aphrodite (Malalas 284.21–285.11). Mosaics and the visit of Apollonius of Tyana indicate the influence of magic within the city in the 1st century C.E. (Philostr. *VA* 6.38). Euphrates of Tyre, a popular Stoic preacher, may also have been in the metropolis during that period (Pliny *Ep.* 1.10).

Many of these religions had declined by the 4th century C.E., as Libanius and Julian indicate, but they continued to be influential. In the 6th century two Antiochenes were prosecuted in Constantinople for pagan practices (Michael the Syrian 2:271). Thus Syrian Antioch was a center of many Greco-Roman religions well beyond the period of interest to biblical students.
